OVERVIEW:

Since 2005, CCMR has conducted ten bilateral and eighteen regional mobile maritime security related programs around the world.

Since 2009, CCMR has conducted a global, week-long course entitled “Responses to Maritime Violence.” The course was held biannually (April and September) at CCMR headquarters.

As of December 2014, the course was extended to two weeks and titled “Civil-Military Approaches to Maritime Security.” In-residence courses are now held in January, April, July, September, and December at the Naval Postgraduate School (NPS) in Monterey, California.

CCMR CONCEPT:

- Build capacity in friendly governments through custom-built short courses at three levels
  - Global (Monterey)
  - Regional (Identified by Combatant Commands)
  - Bilateral (all CTFP and IMET countries)
- Emphasize interagency and multinational (preferably regional) approaches
- Use presentations, case-studies, and exercises
- Allow participants to teach other participants
- Partner with other community providers (DIILS, APCSS, USCG, etc)
- CCMR does not conduct tactical-level training; we will refer countries and ODCs to qualified maritime security training providers, e.g., USCG, USN and IMB programs

PRINCIPLES:

Every government faces similar maritime security challenges – but:

- Each country has its own unique history, laws, culture, threats, resource endowment, and political climate that it must operate in.
- US model works for the US; not a model for others
- Education is the key to developing civilian officials and military officers capable of collective action against maritime challenges.
- Participants must think about what will work in their countries and share their experiences and ideas with others.
CCMR APPROACH

• Marketplace of ideas
• Theory and Practice
• Challenges and Opportunities
• Honest Self-Assessment of Capabilities and Weaknesses
• ‘Intellectual Interoperability’ with Partners and Colleagues
