QUICK FACTS

The School
The Naval Postgraduate School is America’s national security research university. The mission of the University is to provide high-quality, relevant and unique advanced education and research programs that increase the combat effectiveness of the Naval Services, other Armed Forces of the U.S. and our partners, to enhance our national security.

The Campus
Located in Monterey, California on the Pacific Ocean, 120 miles south of San Francisco, the Naval Postgraduate School campus covers 627 acres of land. The site, home to NPS since 1951, houses state-of-the-art laboratories, numerous academic buildings, an award-winning library, government housing and impressive recreational facilities.

The Students
The student body consists of officers from all branches of the U.S. uniformed services, civilian employees of the federal, state and local governments, as well as officers and civilians from one hundred foreign countries. A limited number of defense contractors and enlisted personnel are also enrolled. Selection for graduate education at NPS is based upon outstanding professional performance, promotion potential, and a strong academic background.

The Faculty
Drawn from a broad array of educational institutions, the faculty represent a prestigious collection of scholars, the majority of whom are civilians. Faculty interaction with students is high and every class is taught directly by a faculty member. All tenure and tenure-track faculty hold a doctoral degree. Other faculty are credentialed experts in their fields of study.

The Degrees
The Naval Postgraduate School confers the following advanced degrees: Master of Arts Degree, Master of Business Administration, Master of Science Degree, Engineer's Degree, Doctor of Philosophy, and Doctor of Engineering.

For more information on admission, contact:
Naval Postgraduate School
Admissions Office
1 University Circle, He-022
Monterey, CA 93943
Telephone: (831) 656-3093 / DSN 756-3093

e-mail: admissions@nps.edu

Printed catalogs:
For a printed catalog, send a request to the address above and include a check or money order for $10 per catalog to cover shipping and handling. Make payable to U.S. Treasurer.
The online edition of the School's catalog is updated quarterly and located at: www.nps.edu/Academics/Admissions/Registrar/Academic Catalog/.
Distinguished Alumni and Hall of Fame

NPS Hall of Fame

The Naval Postgraduate School Hall of Fame is a place reserved for the School’s most notable alumni and friends, recognizing their achievements and attainment of positions at the highest levels of public service. NPS’ Hall of Fame members have made the greatest contributions to society, their nations and to the Naval Postgraduate School.

The following individuals have received Hall of Fame awards:
- Admiral Stanley Arthur (Ret.) (Presented 2 Dec 11)
- Dr. Jack London (Presented 2 Dec 11)
- Vice Admiral Pat Tracey (Ret) (Presented 3 Dec 10)
- Admiral T. Joe Lopez (Ret) (Presented 3 Dec 10)
- Vice Admiral Tom Hughes (Ret) (Presented 3 Dec 10)
- General Apichart Penkitti (Presented 30 July 10)
- Admiral Michael G. Mullen (Presented 11 Aug 09)
- General Michael W. Hagee (Presented 23 May 09)
- Honorable Dan Albert (Presented 23 Feb 07)
- Admiral Wayne E. Meyer (Ret) (Presented 23 Feb 06)
- Admiral James D. Watkins (Ret) (Presented 20 Apr 05)
- General John A. Gordon (Ret) (Presented 16 Sep 04)
- Admiral Henry Mauz (Ret) (Presented 19 Nov 03)
- Vice Admiral Arthur Cebrowski (Ret) (Presented 13 Jan 03)
- Professor Pao Chuen Lui (Presented 28 Mar 02)
- The Honorable James Roche, Captain USN (Ret) (Presented 27 Sep 01)
- The Honorable Thomas White (Presented 27 Sep 01)

Learn more about our NPS Hall of Fame recipients at www.nps.edu/Alumni/hof.html.

Distinguished Alumni Award Program

The Naval Postgraduate School recognizes our alumni whose outstanding accomplishments and contributions have made a significant impact on our nation, its military force, and the world. The following individuals have been recognized as some of NPS’ standout alumni and have been presented with NPS Distinguished Alumni awards.

The following individuals have received Distinguished Alumni awards:
- General Keith Alexander, USA
- Admiral Stanley Arthur, USN (Ret)
- Captain Jeffrey Bacon, USN (Ret)
- Vice Admiral Roger F. Bacon, USN (Ret)
- Vice Admiral Phillip Balisle, USN (Ret)
- Rear Admiral Stanley Bozin, USN
- Rear Admiral Michael A. Brown, USN
- Vice Admiral Nancy E. Brown, USN
- Captain Daniel W. Bursch, USN (Ret)
- Vice Admiral Arthur Cebrowski, USN (Ret)
- Commander Sandra K. Chachula, USN (Ret)
- Rear Admiral Philip J. Coady Jr., USN (Ret)
- Rear Admiral Dan W. Davenport, USN
- Rear Admiral Patrick W. Dunne, USN (Ret)
- Vice Admiral Mark E. Ferguson, III, USN
- Captain Stephen Frick, USN (Ret)
- Rear Admiral James B Greene Jr. USN (Ret)
- Vice Admiral Lee F. Gunn, USN (Ret)
- Rear Admiral Charles S. Hamilton II, USN
- Rear Admiral Cecil E. Haney, USN
- Rear Admiral Elizabeth A. Hight, USN
- Colonel David Hilmers, USMC (Ret)
- Captain Sam Houston, USN (Ret)
- Vice Admiral Thomas J. Hughes, USN (Ret)
- Captain Wayne P. Hughes, Jr., USN (Ret)
- Vice Admiral Harvey E. Johnson, Jr., USCG (Ret)
- Rear Admiral John M. Kelly, USN (Ret)
- Lieutenant General Richard S. Kramlich, USMC (Ret)
- Vice Admiral William Landay III, USN
- Lieutenant Commander Marvin Langston, USN (Ret)
- Captain Donald M. Layton, USN (Ret)
- Lieutenant General Chan Lee, ROKAF
- Vice Admiral Michael A. LeFever, USN
- Vice Admiral Keith W. Lippert, USN (Ret)
- CAPT Michael Lopez-Alegria, USN (Ret)
- Professor Pao Chuen Lui (Ret)
- Rear Admiral Archer M. Macy, Jr., USN
- Vice Admiral Justin McCarthy SC, USN
- Rear Admiral Timothy J. McGee, USN
- Rear Admiral Wayne Meyer, USN (Ret)
- Admiral Michael Mullen, USN
- Lieutenant Colonel Carlos Noriega, USMC (Ret)
- Vice Admiral Eric T. Olson, USN
- Captain Alan Poindexter, USN
- Captain Kenneth Reightler, Jr., USN (Ret)
- The Honorable James Roche, Captain, USN (Ret)
- Rear Admiral Conrad J. Rorie, USN (Ret)
- CDR Carter "Buzz" Savage, USN (Ret)
- Captain Winston Scott, USN (Ret)
- Rear Admiral Kenneth Slaght, USN (Ret)
- Vice Admiral Stanley Szemborski, USN
- Rear Admiral Jan Tigh, USN
- Vice Admiral Patricia A. Tracey, USN (Ret)
- Rear Admiral David Titley, USN
· Lieutenant General Thomas R. Turner, USA (Ret)
· Lieutenant General Michael A. Vane, USA
· General William S. Wallace, USA (Ret)
· The Honorable Thomas White, Secretary of the Army
· COL Jeff Williams, USA (Ret)
· Rear Admiral Edward Winters III, USN
· Captain John A. Zangardi, USN (Ret)
· Vice Admiral John Scott Redd, USN (Ret)

Distinguished Professors

"Distinguished Professor" is an honorary title conferred upon certain faculty members in recognition of meritorious scholarly accomplishments and sustained, significant contributions to the educational mission of the Naval Postgraduate School. Their research or scholarly contributions while at the Naval Postgraduate School have had a significant impact on their fields of expertise.

The School

To meet its advanced educational requirements, the Navy has a unique academic institution at the Naval Postgraduate School (NPS) with specially tailored academic programs and a distinctive organization tying academic disciplines to naval and joint war fighting applications.

The student body consists of officers from all branches of the U.S. uniformed services, officers and civilians from approximately 60 other countries and civilian employees of both the federal government and state and local governments. A limited number of defense contractors and enlisted personnel are also enrolled. Selection for graduate education at NPS is based upon outstanding professional performance, promotion potential, and a strong academic background. Students receive graduate degrees as a result of successful completion of programs designed primarily to prepare them for future career assignments. Degrees are awarded on the basis of the same high academic standards that prevail at other accredited institutions.

As an academic institution, NPS emphasizes study and research programs that are relevant to the Navy's interests, as well as the interests of other branches of the Department of Defense (DoD). The programs are designed to accommodate the unique requirements of the military, defense department and other federal agencies, including requirements for Defense Acquisition Certification.

Mission

The Naval Postgraduate School is America's national security research university. The mission of the University is to provide high-quality, relevant and unique advanced education and research programs that increase the combat effectiveness of the Naval Services, other Armed Forces of the U.S. and our partners, to enhance our national security.

Vision

As a naval/defense-oriented research university, the Naval Postgraduate School will operate as a geographically distributed educational system that provides a broad range of high-quality graduate education in support of national and international security. Chartered originally to focus on science and technology, NPS has evolved from a single engineering department at the U.S. Naval Academy into an institution that serves naval, defense and national security related interests by providing current and future readiness, advances in technology, and educational and operational programs that directly support all facets of national defense and homeland security.

Accreditation

WASC
The Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC) accredits the Naval Postgraduate School.

ABET
In addition to regional accreditation, the Graduate School of Engineering and Applied Science's Electrical, Mechanical and Astronautical Engineering degree programs are accredited by the Accreditation Board for Engineering and Technology (ABET).

AACSB
The Graduate School of Business and Public Policy programs are accredited by the Association to Advance Collegiate Schools of Business (AACSB).

NASPAA
The Master of Business Administration program is accredited by the National Association of Schools of Public Affairs and Administration (NASPAA).

Degrees Conferred

Meeting the highest academic standards, the curricula are tailored to address defense and national security requirements and are developed within the framework of classical academic degrees.

Master of Arts
- Identity Management and Cyber Security
- Security Studies

Master of Science
- Applied Mathematics
- Applied Physics
- Applied Science (Acoustics)
- Applied Science (Operations Research)
- Applied Science (Physical Oceanography)
- Applied Science (Signal Processing)
- Astronautical Engineering
- Combat Systems Technology
- Computer Science
- Computer Engineering
- Contract Management
- Cost Estimating and Analysis
- Cyber Systems and Operations

**Doctor of Engineering**
· Astronautical Engineering
· Engineering Acoustics
· Mechanical Engineering

*Apart from institutional accreditation, the Graduate School of Engineering and Applied Science’s Electrical, Mechanical and Astronautical Engineering degree programs are accredited by the Engineering Accreditation Committee of the Accreditation Board for Engineering and Technology, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 – telephone: (410) 347-7700.

**Board of Advisors**

The Board of Advisors is composed of distinguished professionals, including highly qualified civilian educators, prominent citizens from business, the professions and other vocations, and active and retired military officers. The Board meets to assess the effectiveness with which the Naval Postgraduate School is accomplishing its mission and evaluates its future plans. Board Members shall be appointed on an annual basis by the Secretary of Defense, and shall serve terms of four years. Following their initial four-year tour, Board Members may, at the discretion of the President, Naval Postgraduate School, be considered for additional terms on the Board.

The Board meets semi-annually.

**Federal:**

*Federal members serve by virtue of their position.*

Mark E. Ferguson III, VADM, USN
Nevin Carr, RADM, USN
Raymond C. Fox, MG, USMC
Gregg F. Martin, MG, USA
David S. Fadok, MG, USAF
Ann E. Rondeau, VADM, USN

Deputy Chief of Naval Operations (Total Force)
Chief, Office of Naval Research
Commanding General, Training & Education Command
Commandant, Army War College
Commander, Air University
President, National Defense University
Non-Federal:
Walter Anderson  President, Novium Learning
Honorable Michael Bayer President & CEO, Dumbarton Strategies
Honorable Jack Borsting, Ph.D. Professor and Dean Emeritus, University of Southern California
Elisabeth Pate-Cornell, Ph.D. Professor and Chair, Stanford University
Robert Fossum, Ph.D. (Ret.) Independent Consultant
David E. Frost, VADM, USN (Ret.) President, Frost & Associates
Lee Gunn, VADM, USN (Ret.) President, Institute for Public Research, CNA Corp
Graham B. Spanier, Ph.D. President, Penn State University
Timothy J. Keating, ADM, USN (Ret) Independent Consultant
Honorable G. Kim Wincup Independent Consultant

Administration

The President of the Naval Postgraduate School is the academic coordinator for all graduate education programs in the Navy. The President administers fully-funded graduate educational programs at the Naval Postgraduate School, other service graduate schools and civilian universities.

Leadership

President
Daniel T. Oliver

Ronald E. Franklin

Academic Organization
The Naval Postgraduate School has four graduate schools as well as several research and education institutes and centers. Academic departments and faculty are organized within four schools. Institutes and centers provide groups of faculty an additional structure for collaborative and interdisciplinary teaching and research activities. The Naval Postgraduate School also has a number of interdisciplinary committees and groups that oversee and advise education programs.

Research Institutes
In addition to the Schools, the Naval Postgraduate School includes the following research centers and interdisciplinary institutes that combine education and research.

Cebrowski Institute for Innovation and Information Superiority
www.nps.edu/cebrowski
In a world dominated by distributed communication networks, the Cebrowski Institute for Innovation and Information Superiority facilitates cross-discipline studies in how information processes and technologies can strengthen national security. Main areas of concentration are hastily formed networks, network centric operations, cross-sector collaborations, worldwide consortium for the grid (W2COG), mobile devices and communications, information operations, counterterrorism and irregular warfare, information assurance, information security, and the skills of innovation. The Institute operates as a federation of research centers and projects serving a community of students and faculty.

Wayne E. Meyer Institute of Systems Engineering
www.nps.edu/research/meyer
The Meyer Institute conducts a program of systems research dedicated to the understanding of systems for defense applications. Research programs conducted by the Meyer Institute respond primarily to the needs of military sponsors. Current thrusts include Warfighting Capability Engineering, Enterprise Systems Engineering, Model Based Systems Engineering, and System of Systems Engineering & Integration.

The Meyer Institute also provides support for the education of officers of all services, including international students. This educational focus is on Engineering Leadership, addressing the development of professional engineering knowledge, skills, and abilities as competent and proficient engineering leaders, and the development of engineering leaders throughout the Department of Defense who are strategic system thinkers.

MOVES Institute
www.movesinstitute.org
The Modeling, Virtual Environments, and Simulation Institute is the nation's Institute for Defense Modeling and Simulation focusing on enhancing the operational effectiveness of our joint forces and our allies by providing superior training and analysis products, education, and exemplary research. The Institute manages graduate degree programs in Modeling and Simulation in support of all the
services and our allies. The Institute’s research focus is in the areas of combat modeling, visual simulation, training and human systems, intelligent agents, and adaptive systems.

Center for Executive Education
www.nps.edu/academics/centers/cee/

The Center for Executive Education is exclusively dedicated to enhancing the knowledge and understanding of leaders within the Department of Navy and Department of Defense and those who are in partnership with the leaders who will be making critical decisions affecting the nation’s readiness in this complex and rapidly changing environment. Tailored courses in executive education for leaders and their staffs are available and may be delivered on campus or at the requesting command’s location. CEE spaces are also available for executive symposiums and off-site conferences. Please contact the CEE by calling (831) 656-3334 or visiting our Web site.

National Security Institute
www.nps.edu/NSI/Index.html

The National Security Institute (NSI) is collaboration between Lawrence Livermore National Laboratory, the Naval Postgraduate School, and the University of California Santa Barbara, focused on research and education in the areas of national security and homeland security. By combining the outstanding talents and facilities of these world-class institutions, the NSI endeavors to work on difficult problems with meaningful consequences. Examples of research areas include field demonstration experiments of technology insertion, innovative ad-hoc networks in support of operations, directed energy systems, software engineering in systems, remote sensing applications, and persistent surveillance. The education initiative focuses on the NSI Scholars program which allows students who wish to have careers in the federal government or at national laboratories to pursue cost-free Ph.D. degrees at NPS in exchange for year-for-year service after graduation. More information about the NSI is available at (831) 656-3411.

International Graduate Programs Office
www.nps.edu/academics/centers/cee/

The International Graduate Programs Office is responsible for the cultural, social and academic integration of the international community. The office is charged with interacting with outside agencies, military and civilian to accomplish the goals of the Joint Security Cooperation Education and Training (JSCET) Program and the Field Studies Program (FSP). Additionally, it is responsible for the International Sponsor Program and acts as the Command Sponsor to the International Executive Committee.

Since 1954, over 5,300 International officers and government sponsored civilians from 101 countries have graduated from NPS. Many have gone on to achieve positions of prominence within their military services, governments, and private industry. The International Program at NPS serves as an integral link in establishing the long-term military-to-military relationships between our U.S. and international officers. The International Graduate Programs Office sponsors the following courses:

**IT1500 Informational Program Seminar for International Officers (4-0)**
Provides international students with an awareness and functional understanding of internationally recognized human rights and the American democratic way of life. Areas of emphasis introduced during the seminar include civil-military relations, human rights, relationships in a democratic society, and a comparative look at the U.S. free enterprise system.

**IT1600 Communication Skills for International Officers (3-0)**
Provides the opportunity to enhance English speaking and listening skills by taking part in organized oral exercises, group discussions, and instructional briefings on a variety of subjects. The course addresses pronunciation by incorporating language software programs to improve speaking. Building reading and writing skills is part of the course but not the main focus.

**IT1700 Academic Writing for International Officers (3-0)**
IT1700 prepares international students for the task of writing a thesis or research paper for an American institution of higher-education. The course deals with Change Description the rhetorical styles of an academic paper and, to that end, examines appropriate organization, content, audience consideration, voice, and source citation. Students produce both in-class and out-of-class work. The course also covers strategies for thesis preparation. Analysis and discussion of sample articles and essays by published professionals and by the class members-are important elements of the D learning experience. So is a vigorous dedication to the writing process, which includes pre-writing, writing, revision, and proofing. For these reasons, students should expect to devote to the course up to six (6) hours each week over and above the three (3) hours of class contact time.

The point of contact for requests to the International Graduate Programs office is:
Gary Roser, Col, USMC (Ret.)
Assistant Dean of the School of International Graduate Studies
Commercial: (831) 656-2186
DSN 756-2186
Fax: (831) 656-3064

Library

Dudley Knox Library contributes to learning, research and teaching, anytime/anywhere, through relevant and evolving collections, tools, services, and spaces designed for NPS patrons of today and tomorrow. The Library provides patrons in Monterey or at remote locations with: a portal
to open-access and limited distribution (to SECRET) information; physical and virtual places for individual and group study, research and learning; and a tailored mix of traditional and progressive library services delivered by friendly, knowledgeable staff and supported by intuitive, seamless technology interfaces.

The Library website is the gateway to carefully selected scholarly information such as print and electronic books, databases, journals maps, NPS dissertations/theses/reports, and much more. Librarians have created topical bibliographies, instructional tutorials, and subject guides pertinent to the military and national defense needs of NPS faculty, students (resident and distance learners), and staff. Off-campus access to licensed e-resources is available to authorized users 24 hours a day, 7 days a week. Patrons can also request materials from other libraries and many of these items are delivered to a web portal that is accessible 24/7.

The Library collection includes: more than 130,000 full-text online books and journals; approximately 635,000 print volumes; about 500,000 microforms; access to more than 140 online databases; plus special collections and archives that include: NPS historical archives, the Christopher Buckley, Jr. collection of naval and maritime history books, and selected maps. The Library is a selective depository for government documents and information distributed through the Federal Depository Program. The Restricted Resources and Services library provides staff, collections, and services in support of limited distribution and classified needs, including: limited/classified documents; research and instruction; online catalog; research support services; classified network access; and secure conference facility with audio visual display capabilities.

For more information, please visit www.nps.edu/library.

Information Technology and Communication Services

The ITACS (Information Technology and Communication Services) organization incorporates all communication services, telephone support, and network support into the core computing functions that have been provided by the Naval Postgraduate School since 1953. Website: www.nps.edu/Technology.

Accounts

All faculty, students, staff, and contractors of the Naval Postgraduate School may have a network access account. Upon written request, users with a legitimate academic need can also get a Unix or a Mainframe account. All computer accounts are for official use only, for the sole and private use of the account holder. All new resident students, faculty, staff, and contractors must check in at the Office of Student Services in the basement of Herrmann Hall to register in the "Python" Student Information System and to get a computer account. Student Services is located in Herrmann Hall, Room 039. Phone 831.656.3815

Software Availability

Many different software programs are installed and supported by ITACS. A few of these products are site licensed and can be installed at home for those with valid NPS accounts. The software currently available can be found at the software download page: www.nps.edu/Technology/SoftwareLib/index.htm.

Virus Protection

All email messages are scanned for viruses and for prohibited executable attachments on the exchange servers. Although anti-virus programs are remotely administered to on campus systems by the Technology Assistance Center ("TAC"), users are responsible for keeping non-NPS systems that connect to the network clean of viruses. Anti-virus software is available for installation on home computers at the software download page: www.nps.edu/Technology/SoftwareLib/index.htm.

Wireless Computing

For wireless-capable laptops that need to connect to the NPS wireless network, please visit the TAC self-help site at http://wiki.nps.edu/tac. As always, if further assistance is needed, please bring the laptop to the TAC in Ingersoll Hall, Room 151.
# GENERAL ACADEMIC INFORMATION

## Course Codes

Courses are designated by an alphanumeric symbol consisting of two letters and four numbers. The first two letters designate the academic department, committee or group that offers the course and are defined as follows:

<table>
<thead>
<tr>
<th>Course Prefix</th>
<th>Academic Group Name</th>
<th>Dept or Academic Group Prefix</th>
<th>Administered by</th>
</tr>
</thead>
<tbody>
<tr>

## Course Credit Value

Following the course designator are two numbers in parentheses separated by a hyphen, which indicate the hours of instruction per week in the classroom and in the laboratory, respectively. When calculating quarter-hours for the credit value of the course, laboratory hours are assigned half the value shown. Thus a (3–2) course, having three hours lecture and two hours of laboratory, will be assigned a credit value of four-quarter-hours.

Courses are assigned numbers in accordance with their level of academic credit:

- 0001-0999: No credit
Course Descriptions

For the most up to date course descriptions, access the online catalog at www.nps.edu/admissions/catalog/. The online catalog is updated online quarterly.

Requirements for the Master of Arts Degree and the Master of Science Degree

The master's degree may be awarded for successful completion of a curriculum which has the approval of the Academic Council as meriting the degree. Such curricula shall conform to current practice in accredited institutions and shall contain a well-defined major.

General Naval Postgraduate School minimum requirements for the master's degree are as follows:

- 32 quarter-hours of graduate level credits of which at least 20 quarter-credits must be earned from NPS*.
- A thesis or its equivalent is required.

*NPS generally allows a maximum of 12 graduate-level, quarter-credits to be transferred for purposes of earning a graduate degree. However, an additional 12 quarter-credits may be transferred from the Air Force Institute of Technology (AFIT) in Dayton, Ohio. This is in addition to the normal transfer allowed (12), bringing the total to a maximum of 24 quarter-credits transferable from AFIT to NPS. Permission to transfer a specific course to serve as a substitute for a degree requirement will be determined by the Department Chairman or equivalent person responsible for nominating candidates for degrees at NPS and must be pre-approved in a coherent plan of study for the student. Regardless of transfer credits allowed, all NPS master's degrees still require at least 20 quarter-credits be earned directly from NPS.

To be eligible for the master's degree, the student must attain a minimum average quality point rating of 3.00 in all of the 3000 and 4000 level courses in his/her curriculum a 2.75 in all courses of the curriculum.

Thesis Format Requirements

Dual Degree Programs

Students who wish to pursue a dual degree program must satisfy QPR and other curricular/departmental requirements, as set forth in the Academic Policy Manual.

A dual degree program is one in which a student pursues two distinct master's degrees simultaneously. Any program which can lead to the award of two master's degrees is, in its entirety, a special program that must be approved by the Academic Council.

A student is qualified to enter a dual degree program if the Program Officer and Academic Associate certify that the student possesses a Total Quality Point Rating (TQPR) which is at least 3.75 and in the top 25% of the TQPRs of the students in the last four graduating sections of his/her curriculum.

The special dual degree program will be terminated if the student does not maintain a performance which places him within the top 50% of each program. The Program Officers and Academic Associates will monitor the student's performance each quarter and will report to the Academic Council if such a performance is not being maintained.

The program which leads to two graduate degrees must satisfy the requirements of both degrees. Course validations early in the program will allow the student to take the additional 3000 and 4000 level courses as required for the dual degree program.

A single thesis may be used to satisfy the requirements of both departments provided it shows relevance to and mastery of both fields, is permitted by the policy of both departments, and is co-advised by a member of each Department.

The dual degree program must satisfy the enrollment limitations cited in the Academic Policy Manual. If a student requires waivers for enrollment limitations, the request for waiver must be included in the application for the special program.

The Academic Council requires a written endorsement of the dual degree program from the student's sponsor or a written attestation by a Department Chair, Academic Associate, or Program Officer that the sponsor has been notified of the student's proposal and approves of the program.
Educational Skill Requirements

The majority of NPS curricular programs are developed based on Education Skill Requirements (ESRs). Education Skill Requirements define the fundamental concepts required in the graduate education curriculum as directed by each curriculum sponsor and Subject Matter Expert (SME). These ESRs represent the criteria essential for successful performance in billets requiring each subspecialty.

The Program Officers and academic staff at the Naval Postgraduate School coordinate biennial curriculum reviews with the curriculum sponsors for each curriculum. These reviews are conducted to ensure that the ESRs are current and relevant to the needs of the military, that programs meet the knowledge, skill and competencies of the ESRs, and that the changing needs of the sponsors are reflected in each curriculum. The ESRs for each curriculum offered at Naval Postgraduate School are included in this catalog at the end of each curriculum listing as applicable.

Curriculum content is continually updated to maintain pace with changes in each field of study. The Naval Postgraduate School Program Officers and faculty maintain a continuous dialogue with curriculum sponsors and Subject Matter Experts. These dialogues culminate in the biennial curriculum reviews. Curriculum sponsors and SMEs are active in each curriculum in areas such as providing current and relevant material and speakers for classes, forwarding potential thesis topics that are of interest to the military, and providing opportunities and financial support for student experience tours and travel.

These partnerships between the Naval Postgraduate School and the curriculum sponsors ensure that the educational needs of each subspecialty community are continually met through relevant education in each curriculum at NPS.

Half-Quarter Math Refresher

This is a sequence of courses developed specifically to provide a refresher of subject material pertinent to the curriculum to be studied. The number and types of courses, which comprise the technical refresher, are developed by the Program Officer and Academic Associate for the student’s primary curriculum. The purpose of the technical refresher is to reacquaint students with technical material and at the same time help them build good study habits.

The Six-Week Math Refresher begins during the first half or second half of the quarter and typically consist of:

Math Refresher I (first half of quarter)
MA1113
MA1115

Math Refresher II (last half of quarter)
MA1114
MA1116

Prospective students are encouraged to contact the Program Officer regarding the specifics of their particular Six-Week Technical Refresher course sequence.

Technical Refresher Quarter

This is a sequence of courses developed by the Program Officer and the Academic Associate to better prepare incoming students for entering a technical curriculum.

This course sequence is designed for prospective students who:
1. have an APC that indicates a deficiency in mathematics and/or scientific and technical subject matter (i.e., their APC does not qualify them for direct entry to a technical curriculum),
   or
2. in completing their review of the prospective student’s academic record, the Program Officer and Academic Associate have concluded that sufficient time has expired since the student’s most recent college experience and as such, the student would benefit from the Technical Refresher Quarter.

For some students, this may also include courses from the Six-Week Math Refresher.

The refresher sequence is normally twelve weeks in length; however, there are occasions when a student may be assigned two quarters of refresher prior to entering a technical curriculum.

Typical course sequences for refresher quarters are shown in these examples:

Space Systems Operations
MA1113
MA1114
PH1001
PH1102

Operations Analysis
MA1113
MA1114
MA1025
OA1600

Mechanical Engineering
EC1010
MA1113
MA1114
PH1121
Computer Science
CS1100
MA2025
MV1000
NW3230

Prospective students are encouraged to contact the Program Officer regarding the specifics of their particular refresher course sequence.

Grading

Student academic performance is evaluated in terms of quality points assigned to the letter grade achieved in a course. Based on the level of achievement associated with each letter grade, the corresponding quality point values range from a maximum of 4 to a minimum of 0 as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Point Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1</td>
</tr>
<tr>
<td>X</td>
<td>0</td>
</tr>
</tbody>
</table>

Letter designations for which no quality points are assigned are given as follows:

I Incomplete
W Withdrawn
N Ungraded
P Pass
F Fail
T Thesis Research

The grade of Incomplete is given when an identifiable portion of the course remains unaccomplished at the end of the quarter. One additional quarter is granted to submit the delinquent work. If the “I” is not removed within the twelve weeks following the end of the term in which it was assigned, it becomes an “X.”

A student may withdraw from a course up to the end of the second week of the quarter without any record of it showing on the transcript. Subsequent withdrawals may be made up to the end of the eighth week of the quarter, but a grade of “W” is entered for the course on the transcript. No withdrawals can be made after the eighth week.

Courses may be designated for “P” and “F” grading when approved by the Academic Department and the Academic Council. A student in a degree program who wishes to take courses not in his or her normal program may also elect to take them in the Pass/Fail mode. Approval must be granted by the student's cognizant Program Officer and Department Chairman. It is the responsibility of the student to exercise the P/F option by informing the instructor in writing at the time of enrollment that a P/F grade is desired. A copy of the approval request shall be forwarded to the Registrar. Students electing to receive the P/F grade in letter graded courses may not apply the hours toward the degree and curriculum requirements of any program.

Quality Point Rating (QPR)

When the quarter-hour credit of a course is multiplied by the point value of the student’s grade, a quality point value for the student’s work in the course is obtained. Example: A student receives a grade of B in a course with three hours lecture and two hours lab. The course credit value of four quarter-hours is multiplied by the point value assigned to the grade of B, resulting in 12.0 quality points for the course.

The sum of the quality points for all courses divided by the sum of the quarter-hour credit of these courses gives a weighted numerical evaluation of the student’s performance, termed the Quality Point Rating (QPR). A student achieving a QPR of 3.0 has maintained a “B” average in all courses undertaken with a proper weight assigned for course hours.

Pass/Fail Grading

Courses may be designated for “P” and “F” grading when approved by the Academic Department and the Academic Council. A student in a degree program who wishes to take courses not in his or her normal program may also elect to take them in the Pass/Fail mode. Approval must be granted by the student's cognizant Program Officer and Department Chairman. It is the responsibility of the student to exercise the P/F option by informing the instructor in writing at the time of enrollment that a P/F grade is desired. A copy of the approval request shall be forwarded to the Registrar. Students electing to receive the P/F grade in letter graded courses may not apply the hours toward the degree and curriculum requirements of any program.

“T” Thesis Grade: a “T” grade indicates that satisfactory progress is being made on dissertation (XX 5810) thesis (XX 810) or project (XX 4090), but evaluation depends on completion of the research, thesis, project or dissertation, at which time the instructor, Academic Department, or Academic Council shall change the “T” grade to one reflecting the Pass/Fail evaluation.

Withdrawing from a Course

A student may withdraw from a course up to the end of the second week of the quarter without any record of it
showing on the transcript. Subsequent withdrawals may be made up to the end of the eighth week of the quarter, but a grade of “W” is entered for the course on the transcript. No withdrawals can be made after the eighth week.

Course Registration and Credit

Each student must be registered in each course in which he/she is a candidate for credit not later than the tenth school day the quarter (holidays excluded). No student will receive credit for a course unless registration in that course has been approved by one of the following: the student’s Program Officer or Academic Associate, the Chairman of his/her doctoral committee or the Vice Provost for Academic Affairs.

Repetition of Courses

A student may repeat a course for the purpose of improving a grade provided such course repetition is offered by the Naval Postgraduate School. Approval must be granted by both the Program Officer and the Department or Group Chairman concerned and the Registrar is to be notified.

For record purposes, both the original and the repeated courses are to be shown on the transcript. For Quality Point Rating computation, the credit hours of the course shall be counted once, using the grade received from the most recent time that the student enrolled in the course.

Overload

Without special permission, a student may enroll for no more than 17 total credit hours or more than four 3000 level and/or 4000 level courses per quarter.

A student may enroll in more than 17 and less than 21 total credit hours with explicit permission of the Vice Provost for Academic Affairs and for more than 21 hours only with explicit permission of the Provost.

If an established degree program’s course matrix includes a quarter with more than 17 hours, the students in the program need not apply for a course enrollment limitation waiver. This limit is automatically waived in these cases.

Auditing

Eligible persons will be allowed to audit courses on a space-available basis with the approval of the professor teaching the course. When approval is obtained to audit, students may attend classes, but they have no entitlement to submit papers, questions, or tests for grading nor consume the instructor’s time outside of class. Auditors will receive no grade for the course, no credit toward graduation, and no formal recognition of accomplishment for courses they have audited.

Credit by Examination

The award of credit solely on the basis of examination for any 1000 or 2000 level course is permissible. Grades for such courses shall be awarded on a Pass/Fail basis.

Validation

A student with the appropriate background may validate a course that is required for his/her curriculum. Validation will allow the student to omit that course from the program of study; however, no credit will be granted for a course that has been validated. The basic purpose of course validation is to make optimal use of the student’s time at the Naval Postgraduate School. Every validation must be justified by documented evidence of prior work in the area of the course to be validated.

The validation of a course must be approved in writing by the Chairman of the department offering the course or a designated representative. Specific criteria for validation (e.g., review of the student’s transcripts or examination on the material of the course) are left to the discretion of the cognizant Department Chairman.

After validating one or more courses, it may be possible for a student to complete the program in less than the maximum time allowed.

Veteran’s Benefits

For the purpose of determining eligibility for veteran’s benefits, full-time enrollment is a minimum of ten credit hours per academic quarter. Both lecture and lab credit hours are applicable to the minimum full load.

Transfer of Credits

Upon entry to the Naval Postgraduate School, each student’s academic record will be evaluated for possible transfer of credit or for exemption from portions of the curricular program by validation of course work previously completed. Students may utilize knowledge gained through self-study or experience of service-related education to seek validation. They may also take a departmental examination to gain credit for curricular courses.

Twelve hours of graduate-level courses previously completed may be accepted for transfer credit. These include graduate-level courses taken after completion of the baccalaureate degree and those taken in the last term before award of the baccalaureate if certified to be in excess of degree requirements.

NPS generally allows a maximum of 12 graduate-level quarter-credits to be transferred for purposes of earning a graduate degree. However, an additional 12 quarter-credits may be transfer from the Air Force Institute of
Technology (AFIT) in Dayton, Ohio. This is in addition to the normal transfer allowed (12), bringing the total to a maximum of 24 quarter-credits transferable from AFIT to NPS. Permission to transfer a specific course to serve as a substitute for a degree requirement will be determined by the Department Chairman or equivalent person responsible for nominating candidates for degrees at NPS and must be pre-approved in a coherent plan of study for the student. Regardless of transfer credits allowed, all NPS master's degrees still require at least 20 quarter-credits be earned directly from NPS.

Questions on transfer credit should be directed by letter to the appropriate curricular Academic Associate as listed in this catalog.

Academic Counseling

The Naval Postgraduate School provides academic counseling services to assist officers in developing individual educational plans. Officers who have chosen specific curricula or who have been selected or detailed for graduate education in programs at Naval Postgraduate School, are advised to contact the appropriate Program Officer listed in the Program Offices and Programs section of this catalog. Other prospective students seeking general information about the curricula offered at the school or the fully-funded graduate education selection process are advised to contact the Director of Admissions (Code 01C3), Naval Postgraduate School, or telephone (831) 656-3093, DSN 756-3093, email: grad-ed@nps.edu.

Medical and Operational Military Absences

The academic record of a student may be deleted completely for a given term when the student is absent for a portion of the term for medical or operational reasons. The transcript will show, “Excused for the term for medical reasons” or “for operational military reasons.” The student shall not be permitted to delete only a portion of the courses for this reason. The grade “W” shall be used when it is necessary to withdraw from only a part of the student’s program. Such excusals shall be requested by the Program Officer and approved by the Vice Provost for Academic Affairs.

Honor Code

NPS students are expected to uphold the highest standard of honesty and integrity and must follow the academic honor code at all times. Plagiarism, fraud, cheating, and verbal or written misrepresentation constitute violations of the Academic Honor Code. Instructor-authorized group activities/projects should rightly acknowledge the efforts of all respective participants. Unless faculty clearly state that consultation/cooperation in an assignment or course is permissible, all work must be exclusively from the student(s) listed on the document for all graded work. Any restrictions placed by the instructor on the materials that may be used by a student in preparation for and performance of all graded work, must be followed.

While no single list can identify and define all types of academic honor code standards, the following are cited as examples of unacceptable behavior:

1. **Cheating** - Using unauthorized notes, study aids, or information on an examination; looking at another student’s paper during an examination; altering a graded work after it has been returned, then resubmitting it for re-grading; allowing another person to do one's work and submitting it under one’s own name; taking a longer time period than was authorized to complete a take-home exam.

2. **Plagiarism** - Submitting material that in part or whole is not entirely one’s own work without attributing those same portions to their correct source. Student shall ensure all references are properly cited.

3. **Fabrication** - Falsifying or inventing any information, data, or citation.

4. **Obtaining an Unfair Advantage** - Gaining access to examination materials prior to the time authorized by the instructor; unauthorized collaboration on an academic assignment; possessing, using or circulating previously given examination materials where those materials clearly indicate that they are to be returned to the instructor at the conclusion of the examination.

Appropriate disciplinary action may include disenrollment, fitness report comments, and/or a letter to appropriate government agencies or official service branches. Individuals suspecting Academic Honor Code violations are required to inform the appropriate academic/curricular officials.

Grievance Procedures

Complaints of discrimination and sexual harassment require the continual attention of the President on how they are handled by the chain of command. A complaint consists of issues or concerns related to race, religion, sex, national origin, age, or retaliation brought to the attention of the proper authority related to the known, suspected, or probable offense under UCMJ, a violation of civil law, or other inappropriate conduct. A complaint may be made orally or in writing with the Command Deputy Equal Opportunity Officer or Dean of Students. Any service member, officer or enlisted, may initiate a complaint.

The procedures an individual must follow to present a complaint are divided into three categories:

1. **Informal**
2. **Formal**
3. Alternative avenues

All procedures for each of these courses of action are located in the NPS Military Equal Opportunity Policy Guidance and Discrimination Grievance Procedure Manual available from the Office of the Dean of Students.

Transcript Requests

To request a copy of your transcript please visit the Registrar’s website at http://www.nps.edu/Academics/Admissions/Registrar/Transcripts/Transcripts.html.

If you have any questions or concerns please call or email the Registrar’s Office at (831) 656-2591 or registrar@nps.edu.

Recent graduates: Please note that it takes 2-3 months after graduation for your diploma and final transcripts to be generated.
For admission to either a degree or a non-degree program, whether on campus or by distance learning, the minimum qualification is a regionally accredited baccalaureate degree with appropriate preparation for the proposed program. Each program has its own admissions criteria. The Academic Profile Code (APC) is only one element of the admissions criteria used to evaluate applicants for admission to NPS. The school requires submission of official transcripts covering all college work (undergraduate and graduate) completed to date. It is recommended that applicants apply and submit all required materials at least six months prior to the estimated arrival date, or corresponding graduate education selection board. Any delay in the arrival of necessary documentation to include official transcripts will impede the evaluation for admissions.

Master's Program Admissions

A candidate entering any master's degree program must possess a baccalaureate degree from a regionally accredited institution – or in the case of foreign students, a recognized institution – with a minimum grade point average of 2.2 on a 4.0 system, of which 75 semester hours/112 quarter hours must be letter-graded. If the candidate does not possess an undergraduate degree, the following are standards for admission to a program leading to a graduate degree:

1. A minimum of 75 semester hours/112 quarter hours of letter-graded undergraduate work must have been completed at regionally accredited institution with an average grade of "B." Any course with a "C-" grade or lower will not be counted in the total. Courses which have been duplicated on various transcripts should be counted only once in arriving at the number of semester hours to be credited.

2. The general education requirements prescribed for the Naval Postgraduate School baccalaureate degree must be satisfied as specified in the Academic Policy Manual.

3. No more than 20 semester hours may be credited for work done in non-degree granting service schools.

4. Final approval of the applicant will be made by the appropriate academic unit Chair.

All applicants must submit an online application at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html to be considered for entry into any NPS program. All undergraduate and graduate work to date (degree and non-degree) is required for academic evaluation. Please print the confirmation page displayed upon submission of the completed application. It contains further instructions regarding transcripts. Failure to comply with the instructions will delay the processing of the application.

U.S. Naval Officers

Selection for the Navy's fully funded graduate education program is based on outstanding professional performance, promotion potential and a strong academic background. Officers interested in this program should contact their assignment officers to determine professional qualification status. All applications for APC calculation should be initiated at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html.

Upon determination of academic qualification (by NPS), individuals are eligible for assignment. Officers who are professionally qualified but lack academic qualifications should contact the Director of Admissions at admissions@nps.edu for information on ways to improve their academic backgrounds.

U.S. Army Officers

Army officers applying to NPS should request an Academic Profile Code (APC) evaluation online at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html for the purpose of pre-screening prior to applying to Army Advanced Civil Schooling (ACS). Requesting an APC review in advance of applying to an ACS training agency will assist in the selection process and will expedite the formal NPS admissions process after an officer has been selected by the Army. Officers interested in fully funded education at NPS should provide their training agencies a copy of their NPS conditional acceptance letter when submitting their ACS applications.

Army officers applying for admission to the Department of National Security Affairs must include scores from the Graduate Record Examination, taken within five years of the date of application.

U.S. Air Force Officers

Selection for the Air Force's fully funded graduate education program (assigned to AFIT as a full-time student wherein all tuition costs are paid by the Air Force) is based upon professional performance, promotion potential, and academic background. Interested Air Force officers must contact their assignment team at Air Force Personnel Center (AFPC) to determine professional qualification status and potential AFIT-sponsored graduate education opportunities available in their career fields. Air Force officers wishing to apply for an AFIT-sponsored graduate program must make their desires known to AFPC and follow AFPC application procedures.
To determine eligibility for an NPS curriculum, Air Force officers should apply online at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html, requesting an Academic Profile Code (APC) evaluation for the purpose of pre-screening from the NPS Admissions Office prior to applying to AFPC. Officers should submit a copy of their NPS conditional acceptance letters along with their AF Form 3849 application to AFPC and also maintain a copy in their personal records for future use if selected. Air Force officers applying for admission to the Department of National Security Affairs must include scores from the Graduate Record Examination, taken within five years of the date of application.

U.S. Marine Corps Officers

NPS opportunities for Marine Corps officers fall under two categories: 1) Special Education Program (SEP) and 2) International Affairs Officer Program.

The Marine Corps holds selection boards for both programs that are announced annually by a MARADMIN message. Marine officers interested in these programs should consult the latest MARADMIN for board details and contact HQMC, MMOA-3 for any additional questions. Prospective applicants should also discuss the timing of NPS attendance with the Career Counseling Branch at HQMC. All Marine Corps officers must apply to NPS for academic eligibility at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html as well as applying to HQMC per the appropriate MARADMIN.

U.S. Coast Guard Officers

Each year, a message is promulgated by the USCG canvassing USCG program managers to nominate officers for graduate education. If you are interested, read the Education and Training Manual on the USCG intranet and speak with your program manager.

Military and Civilian Staff of NPS, Tenant and Local Commands

NPS, tenant command staff and staff of local commands, such as DLI, MIIS, NOAA, and DMDC are permitted to attend classes on a "space available" basis. "Local command" is defined as located on the Monterey Peninsula. Employees of a local command may enroll in up to two classes per quarter with written approval from their supervisors and prospective academic associate. NPS employees are guided by the Civilian Academic Development Program NAVPGSCOLINSTRUCTION 12410.1A.

Most students seeking official admission into NPS require some time to establish which degrees they want to pursue. It is recommended that the student use the first two quarters (or up to four classes) to decide on a program before completing the application for admission. If the staff member has decided on a program prior to attending classes, it is highly recommended that the staff member apply online for that specific program.

In order for a degree to be granted, a staff member must be formally accepted and admitted to a degree program. This formal acceptance and admittance can only come from the Director of Admissions. All applications must be submitted online. Please note that even after being formally admitted, staff members are still required to register for classes through the Registrar's office on a space available basis. The Staff/Employee Registration form can be found at the Registrar's office and online. The forms must be submitted each quarter to the Registrar's office during the Add/Drop period, which usually ranges from two weeks before to two weeks after the start of classes each quarter.

There is no longer a requirement to submit paperwork to the Academic Council for approval of a staff matrix. Once a student has been accepted, the Admissions Office will send an acceptance letter to the applicant and have the Registrar's office register the student into the approved curriculum.

International Students

Military officers and government civilian employees from other countries may be admitted to most curricula. The procedures for application are available from the Security Assistance Office or Defense Attaché Office of the U.S. Embassy, the MLO, MAAG, OMC or ODC, as appropriate. Correspondence must be processed through official channels; requests from individual prospective students should not be sent directly to the School.

All candidates must satisfy the curriculum academic standards, as described in this catalog. International candidates from non-English speaking countries will also be required to validate their fluency in English through the Test of English as a Foreign Language (TOEFL). Minimum TOEFL score required for direct entry to NPS is 83 IBT (Internet Based Test and 560 Written Test. Candidates for PhD Programs or Accelerated Programs need to score at least 100 on the IBT. Waivers will be considered on a case by case basis for scores between 90 and 100 based on the overall application package. (For candidates applying for entry into the Department of National Security Affairs, an IBT score of 90 is required.) If a candidate fails to achieve the 83 IBT or 560 Written score, but does achieve a score of 70 IBT or 523 Written or higher, he/she is eligible to attend the TOEFL Preparatory Academic Writing Course, MASL P177022 (16 weeks) at the Defense Language Institute in San Antonio, Texas.

The only countries exempted from TOEFL testing are those countries who are exempted from all ECL testing.
requirements as determined by the Defense Security Cooperation Agency (DSCA) Policy memorandum 11-67 dtd 27 Dec 11 (Antigua, Australia, Bahamas, Barbados, Belgium, Belize, Brunei, Canada, Dominica, Grenada, Guyana, India, Ireland, Jamaica, Malta, Mauritius, Netherlands, New Zealand, Norway, Singapore, St. Kitts, St. Lucia, St. Vincent, Trinidad, and the United Kingdom).

When applying for a TOEFL exam, the NPS identification code is 4831. This code should be included on the registration application so a copy of the results can be sent directly to NPS. TOEFL test results are valid for two years from the test date and must be valid when the student reports to NPS. Questions regarding available programs or admission procedures may be telephoned to (831) 656-3093 or DSN 756-3093 or e-mailed to admissions@nps.edu.

Please note: The online application is a means of determining academic eligibility to attend programs offered at NPS and is not a scholarship application.

You must submit a separate scholarship application in addition to the NPS online application to be considered for a scholarship. Links to the Scholarship program applications currently accepted by NPS are found at www.nps.edu/Academics/Admissions/ScholarPrograms/.

Civilian Employees of U.S. Government

A civilian who is an employee of, or sponsored by, an agency of the United States Federal Government may be admitted for study upon request and sponsorship of the agency. Federal civilian employees are not required to pursue the curricula designed for officer-students as described in this catalog but instead determine, with the guidance from the assigned Academic Associates, the combination of courses that will best meet their needs.

A civilian who is expecting agency sponsorship should apply online requesting evaluation for admission at least six months prior to expected commencement of studies. A completed application should indicate the desired curriculum and degree intentions and be accompanied by a complete set of official transcripts of all previous college work to date (degree and non-degree). GRE and/or GMAT scores are required for consideration for admission to any doctoral program.

All official supporting documents should be directed to the Director of Admissions, Naval Postgraduate School, 1 University Circle, He-022, Monterey, CA 93943. Questions about available programs or admission procedures may be telephoned to (831) 656-3093 or DSN 756-3093 or e-mail: admissions@nps.edu.

The individual’s employing agency is expected to meet the tuition expense for regular on-campus enrollment.

Civilian Scholarship-for-Service Programs

The Naval Postgraduate School offers several Scholarship-for-Service programs in which civilians, who are U.S. citizens, are supported with a full salary, generous government benefits, and full tuition waiver while working toward a master’s or doctoral degree. Upon degree completion, these students are required to fulfill an obligated service commitment with the Defense Department or in certain programs of other federal agencies. These are highly competitive programs that require an outstanding academic record. GRE and/or GMAT scores are required for consideration for admission to any doctoral program. Current government employees are eligible for some of these programs.

To find program specific information go to Scholarship for Service at the NPS website. Questions about available programs or admission procedures may be telephoned to (831) 656-3093 or DSN 756-3093 or e-mailed to admissions@nps.edu.

Please note: The online application is a means of determining academic eligibility to attend programs offered at NPS and is not a scholarship application.

You must submit a separate scholarship application in addition to the NPS online application to be considered for a scholarship. Links to the Scholarship program applications currently accepted by NPS are found at www.nps.edu/Academics/Admissions/ScholarPrograms/.

Programs available to civilian students can be classified as follows:

Regular Curricula: The School’s numerous curricula are designed to meet service-specific education requirements for military officers. These curricular requirements typically exceed the requirements to earn the degree alone. For example, military students may be required to take more courses than civilian students. Civilian students may enter any curriculum at the point at which they are qualified and complete the curriculum along with regular officer students.

Degree Programs: Civilian students may enter programs designed to award a graduate degree, while meeting the educational goals of the individual or the sponsoring agency. To minimize the residency requirement, an off-campus preparatory program may be developed in consultation with a school advisor. If the available time in residence is insufficient to complete degree requirements, the thesis-project portion of the program may be completed off-campus.

Non-Degree Programs: Civilian employees may desire to pursue a program for professional advancement without a degree objective. NPS certificate programs are one such option available to civilians. These typically comprise four courses taken over one year. Certificate Program Managers are the initial point of contact for admission. Alternatively, for groups of employees from an agency, special courses can be offered to meet particular requirements, provided the demand is in an area of expertise of the school.
Civilian Employees of DoD Contractors

NPS accepts a limited number of employees of corporations that are contractors for the Department of Defense (DoD) in programs related to systems engineering and defense product development. Specifically, the following master's degree programs are open to employees of DoD contractors:

Graduate School of Engineering and Applied Sciences
- 311 - Systems Engineering (DL)
- 316 - Space Systems Operations (DL)
- 366 - Space Systems Operations
- 372 - Meteorology
- 373 - Meteorology and Oceanography (METOC)
- 374 - Operational Oceanography
- 380 - Applied Mathematics
- 440 - Oceanography (Master’s-only)
- 525 - Undersea Warfare
- 533 - Combat Systems Sciences & Technology
- 535 - Underwater Acoustic Systems (DL)
- 570 - Naval/Mechanical Engineering
- 580 - Systems Engineering
- 590 - Electronic Systems Engineering
- 591 - Space Systems Engineering
- 592 - Electronic Systems Engineering (DL)
- 721 - Systems Engineering Management-PD21 (DL)

Graduate School of Operations and Information Sciences
- 356 - Information Systems & Operations
- 360 - Operations Analysis
- 361 - Joint Operational Logistics
- 362 - Human Systems Integration
- 363 - Systems Analysis (DL)
- 365 - Joint Cmd, Cntrl, Comm, Comp/Int (C4I) Sys
- 368 - Computer Science
- 369 - Software Engineering (Resident & DL)
- 370 - Information Systems & Technology
- 376 - Computer Science (DL)
- 399 - Modeling, Virtual Environments & Simulation
- 475 - Remote Sensing
- 595 - Information Warfare

Joint GSEAS/GSOIS
- 308 - Systems Engineering & Analysis

Graduate School of Business and Public Policy
- 805 - Executive Master of Business Administration (DL)
- 814 - Transportation Management
- 815 - Acquisitions & Contract Management
- 816 - Systems Acquisition Management
- 819 - Supply Chain Management
- 827 - Material Logistics Support Management
- 835 - Contract Management (DL)
- 836 - Program Management (DL)
- 837 - Financial Management

School of International Graduate Studies
- 686 - Stabilization and Reconstruction
- 687 - Defense Decision-Making and Planning
- 691 - Homeland Security and Defense
- 693 - Combating Terrorism: Policy and Strategy

For enrollment information on these programs, please visit our Web site at: www.nps.edu/Academics/Admissions/Programs/.

Contractor Application Process

Application packages should include:
1. Submittal of a completed online application. The online application can be accessed at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html.
2. Certified transcripts from ALL undergraduate and graduate institutions attended.
3. Letter from employer stating its willingness to pay tuition for the program and supply salary and benefits during your time at NPS, if a resident program.
4. Contractors applying for admission to the Department of National Security Affairs must include scores from the Graduate Record Examination, taken within five years of the date of the application.

Applications should be submitted online, and all official required documents should be mailed to the Naval Postgraduate School, Director of Admissions, 1 University Circle, He-022, Monterey, CA 93943. If you have questions about available programs or admission procedures please call (831) 656-3093 or e-mail: admissions@nps.edu.

Doctoral Program Admissions

The Navy Doctoral Program

This program typically selects a limited number of Navy officers each year for doctoral studies. Generic details are provided in a NAVADMIN message that addresses curriculum/subspecialty quotas, service obligation, and Naval Personnel Command application procedures for this program. NPS applicants must additionally submit an online application at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html. Upon submission of your application online, you will receive a confirmation page outlining the fuller requirements necessary for a complete Ph.D. application to NPS. Applications for doctoral study at NPS under this program are first reviewed by the Admissions Office to ensure all necessary information has been received. Only then is the application package...
forwarded to the appropriate Departmental Ph.D. committee for consideration. Note: Incomplete applications will not be forwarded -- it is the responsibility of the applicant to ensure the Admissions Office has received all necessary information as outlined in the confirmation page of the online application form. Doctoral admission requirements are set by the academic units -- the Admissions Office does not have the authority to waive these requirements. Selected officers are notified by their detailers after the Navy Personnel Command conducts an annual Doctoral Program Selection Board.

The Permanent Military Professor (PMP) Program

This program is designed to prepare Navy officers to become military instructors at the U.S. Naval Academy (USNA), the Naval War College (NWC), and the Naval Postgraduate School (NPS). These officers serve a critical role in the education of the Navy's Officer Corps by combining fleet experience with advanced academic preparation to convey relevant knowledge to USNA midshipmen and officers attending NWC or NPS. Applicants for the PMP program must have attained the rank of 0-5 (select) and 0-6s may apply only if in possession of a completed doctorate in the discipline they propose to teach. The Navy Personnel Command announces the program and publishes generic application procedures through an annual NAVADMIN message. NPS applicants must additionally submit an online application at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html. Applications for doctoral study at NPS must additionally submit an online application at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html. Applications for doctoral study at NPS under this program are first reviewed by the Admissions Office to ensure all necessary information has been received. Only then is the application package forwarded to the appropriate Departmental Ph.D. committee for consideration. Note: Incomplete applications will not be forwarded -- it is the responsibility of the applicant to ensure the Admissions Office has received all necessary information as outlined in the confirmation page of the online application form. Doctoral admission requirements are set by the academic departments -- the Admissions Office does not have the authority to waive these requirements. The Navy Personnel Command conducts the selection board and notifies selected officers. Once selected, the officers are obligated to serve as a PMP until their statutory retirement date.

Individual Doctoral Programs - All Services, Civilians, and Internationals

NPS doctoral programs are available to officers of all U.S. services, civilian employees of the government, and to individuals sponsored by selected allied nations. Applications may be submitted at any time. An individual applying for admission to a Ph.D. program must hold a bachelor's degree qualifying the student for graduate status in the department of his/her major study, or shall have completed an equivalent course of study. All U.S. applications shall be submitted to the Director of Admissions, who will be responsible for processing them. International applications shall be submitted to the International Graduate Programs Office. All completed applications are forwarded to the Chair of the academic unit of the proposed major subject area for determination of acceptability by the Departmental Ph.D. Program Committee. The Chair will recommend appropriate action to the Director of Admissions, who will notify applicants.

NPS PhD applicants must submit an online application at http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html. Once submitted, an application will only be considered complete if the following materials are submitted:

1. Official copies of all undergraduate and graduate transcripts. (Transcripts from NPS are not necessary.)
2. Results of a Graduate Record Examination (GRE) General Test taken within the past five-years.
3. A brief outline (200 words or fewer) of specific areas of interest within the proposed major field of study.
4. Two letters of recommendation regarding academic potential (three for Information Sciences, Curriculum 474).
5. Applicants to the Ph.D. in Security Studies, Curriculum 694, must provide a writing sample.
6. International applicants not currently enrolled at NPS whose native language is other than English, or whose primary language of instruction was other than English, must submit current results of the Test of English as a Foreign Language (TOEFL). Applicants need to score at least 100 on the Internet-Based Test (IBT). Waivers will be considered on a case by case basis for scores between 90 and 100 based on the overall application package.
7. Attestation by the student’s sponsoring agency or nation that they are committed to tuition and salary support during the student’s residence at NPS will be required before enrollment.

Applicants should review the NPS catalog for specific application and admission timelines pertaining to their intended Ph.D. program. In particular, applicants for the Ph.D. in Security Studies should note that although the program accepts applications for its program year-round, admissions decisions are made twice yearly; in March and the last week in September. Furthermore, applicants for
the Ph.D. in Security Studies must now possess a Master's degree in Security Studies or a closely allied field.

The mailing address and contact information for the Director of Admissions is:

Naval Postgraduate School  
Admissions Office  
1 University Circle, He-022  
Monterey, CA 93943  
Telephone: (831) 656-3093 / DSN 756-3093  
E-mail: admissions@nps.edu

The mailing address and contact information for the International Government Programs Office is:

Naval Postgraduate School  
International Programs Office  
1 University Circle, Rm B-047  
Monterey, CA 93943-5025  
Telephone: (831) 656-2186  
www.nps.edu/Adminsrv/IGPO/index.html

Threshold for Admission

Each curriculum at the Naval Postgraduate School has a specified Academic Profile Code (APC) threshold for admission. See the Curriculum Listing in this catalog for specific APC requirements for each curriculum. Officers with deficient APCs may still qualify for entry into these curricula by completing suitable courses from any regionally accredited institution. In certain instances, NPS offers a technical refresher quarter for applicants whose APC does not qualify them for direct entry into a technical curriculum. Transcripts (not grade reports) of work done at civilian schools must be forwarded to the Director of Admissions, Naval Postgraduate School, 1 University Circle, He-022, Monterey, CA 93943, to effect an APC change. The grades in all courses completed will be used to revise an officer’s APC.

Academic Profile Codes

The NPS Admissions office evaluates applicants based on three criteria. The result is the assignment of an Academic Profile Code (APC). This is a three-digit code, which summarizes pertinent portions of a student’s prior college performance. The three independent digits reflect an individual’s cumulative grade-point average (Quality Point Rating), exposure to and performance in calculus-related mathematics courses and exposure to and performance in selected science/engineering areas.

First Digit

The first digit indicates overall academic performance based on a recalculated* GPA from all previous college transcripts. The first digit is derived from the following table:

<table>
<thead>
<tr>
<th>Code</th>
<th>QPR Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>3.60–4.00</td>
</tr>
<tr>
<td>1</td>
<td>3.20–3.59</td>
</tr>
<tr>
<td>2</td>
<td>2.60–3.19</td>
</tr>
<tr>
<td>3</td>
<td>2.20–2.59</td>
</tr>
<tr>
<td>4</td>
<td>1.90–2.19</td>
</tr>
<tr>
<td>5</td>
<td>0.00–1.89</td>
</tr>
</tbody>
</table>

*Failures and repeated courses are included in the GPA calculation.

Second Digit

The second digit represents mathematical background according to the following criteria:

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Math Major/Minor, Quantitative Economics Degree with B or better average; math taken less than or equal to 7 years ago.</td>
</tr>
<tr>
<td>1</td>
<td>Lower Level, Upper Level, Linear Algebra with a GPA of at least a 3.5; math taken less than or equal to 5 years ago.</td>
</tr>
<tr>
<td>2</td>
<td>Lower Level, Upper Level with average between C+ and B+; math taken less than or equal to 5 years ago. No Linear Algebra.</td>
</tr>
<tr>
<td>3</td>
<td>Lower Level Calculus Sequence with a C or better, or if math taken greater than 5 years ago.</td>
</tr>
<tr>
<td>4</td>
<td>Calculus for Business/Social Sciences with a C or better. 1 Lower Level Calculus Course with at least a C-. 2 pre-Calculus Courses with a B+ or better.</td>
</tr>
<tr>
<td>5</td>
<td>At least one pre-Calculus with C- or better grade.</td>
</tr>
<tr>
<td>6</td>
<td>No pertinent college-level math with a grade of C- or better.</td>
</tr>
</tbody>
</table>

*All math courses from calculus through post-calculus are considered when evaluating the transcripts for the second digit. A minimum calculus sequence is Calculus I and II.

Third Digit*

The third digit represents previous course coverage in science and technical fields according to the following criteria:

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Significant pertinent upper-division technical courses with B+ or better average.</td>
</tr>
<tr>
<td>1</td>
<td>Significant pertinent upper-division technical courses average between C+ and B.</td>
</tr>
<tr>
<td>2</td>
<td>Complete calculus-based physics sequence with B+ or better average.</td>
</tr>
<tr>
<td>3</td>
<td>Complete calculus-based physics sequence with average between C+ and B.</td>
</tr>
<tr>
<td>4</td>
<td>At least one calculus-based physics course with C or better grade.</td>
</tr>
</tbody>
</table>

*
No pertinent technical courses.

*The third digit is currently under revision for added accuracy. The changes will be posted when they are officially implemented.

A first digit code of 0, 1, 2 or 3 (as appropriate) will be assigned only if transcripts provided exhibit at least 100 semester-hours or 150 quarter-hours of actual graded classroom instruction. Grades of Pass/Fail, Credit/No Credit will not count toward the 75/112 hour requirement.

A technical code of 1 or 0 ordinarily is assigned only to an officer whose undergraduate major was Physics, Aeronautical, Electrical, Mechanical or Naval Engineering, or whose undergraduate technical major is consistent with the officer’s designated occupational specialty. General Engineering degrees and Engineering Technology degrees are specifically excluded from this list of engineering degrees.

**Example**

An APC of 231 indicates a total grade point average for all college courses in the interval 2.60-3.19, a complete sequence in Calculus with a C or better for both courses and a major in Physics or pertinent engineering area with upper-division courses with an average between C+ and B.

**Catalogs**

The point of contact for the Naval Postgraduate School catalog is:

Naval Postgraduate School  
Office of the Registrar  
1 University Circle, He-022  
Monterey, CA 93943

registrar@nps.edu

**Printed catalogs:**

For a printed catalog, send a request to the address above and include a check or money order for $10 per catalog to cover shipping and handling. Make payable to U.S. Treasurer.

The online edition of the University’s catalog is updated quarterly and is located at: www.nps.edu/admissions/catalog/

The point of contact for requests for printed catalogs and admissions for international students is:

The Graduate School of Business and Public Policy
includes:
Acquisition Management Academic Area
Financial Management Academic Area
Manpower and Economics Academic Area
Operations and Logistics Management Academic Area
Organizations and Management Academic Area
Enterprise and Information Academic Area

Vision
To be recognized as the nation's premier school for
defense-focused business management and public policy
education and research. To be the institution that national
leaders look to for education, research, information, and
innovation in the management of the business of defense.
To be recognized by our students, alumni, and other
stakeholders for our excellence in defense-focused
education and research.

Mission
To serve our Nation by educating US and allied military
officers as well as defense civilians in defense-focused
business and public policy, by conducting research in
defense management and public policy, and by providing
intellectual resources for leaders and organizations
concerned with defense business management practices
and policies.

Means
We pursue our vision and perform our mission through
graduate education, research, and professional service.

· In Education: Through resident and distance learning
degree and non-degree programs, we develop students'
abilities to analyze, think critically, and take intelligent
actions so they can more effectively carry out their
future professional responsibilities to manage
organizations, resources, people, and programs in
complex, sometimes life-threatening environments.

· In Research: Conduct research, using the scholarships
of discovery, application, integration, or teaching, that
supports defense enterprise decision-making, problem
solving, and policy setting; improves business
management processes and practices; contributes
knowledge to academic disciplines via dissemination in
high-quality refereed research journals or suitable
practitioner-oriented journals; and advances the
development of graduate education.

· In Professional Service: Provide professional expertise
that advances knowledge and business management
within GSBPP, NPS, the Department of Navy, the
Department of Defense, and other government
agencies, as well as in our professional and academic
organizations.
Areas of Excellence

The Defense-Focused MBA Program: “Business Management Knowledge for DoD”

GSBPP at NPS offers the only MBA program specifically designed to provide a defense-focused, graduate business education. The objectives of the MBA program are both to provide professional knowledge and skills to prepare officers for management positions within DoD and to develop broad critical thinking and analytical abilities of benefit throughout an officer’s career. Designed to satisfy both current and future management competencies of active duty military officers and government civilians, the MBA program consists of:

- A Business Management Core, with a distinct defense focus
- A Mission-Related Core, comprised of unique defense management courses
- Alternative Curricular Concentrations, each providing advanced study in military sub-specialty areas
- An Applications Project or Thesis, designed for students to address significant defense problems and issues.
- Professional Certification Programs, in both military and management areas

The GSBPP MBA is one of only two MBA programs in the world to hold dual accreditation from both AACSB, the premier accrediting agency for schools of business, and NASPAA, the premier accrediting agency for schools of public administration. The hallmark of the MBA program is the melding of private-sector and public-sector management education relevant to the defense community.

Distance learning Programs: “Reaching out to Serve Defense Community Needs”

GSBPP is a leader in developing and providing off-campus education for the Defense community. GSBPP has developed faculty, facilities and capabilities to deliver graduate programs using VTE, off-site, and Web-enhanced modes of instruction. Currently, GSBPP offers three unique distance learning degrees to serve Defense community needs.

Executive MBA: Developed initially to serve the needs of the Aviation community, the EMBA provides graduate business education to experienced naval officers expected to become future leaders in their military community. The program consists of broad management education coupled with a Financial and Acquisition specialization.

Master of Science in Program Management: Developed to respond to the need for professional education for the Defense Acquisition workforce, the MSPM meets Defense Acquisition Workforce Improvement Act (DAWIA) training requirements within the context of a graduate-level degree program.

Master of Science in Contract Management: Developed to respond to the need for professional education for the Defense Acquisition workforce, the MSCM meets Defense Acquisition Workforce Improvement Act (DAWIA) training requirements within the context of a graduate-level degree program.

Management Development Programs “Continuing Education for Professional Success”

GSBPP provides Continuing Education in the form of Executive and Management Development programs. Programs are provided in residence, via VTE; and internationally, by GSBPP faculty with both academic and professional experience in discipline areas. GSBPP offers unique programs to serve Defense community needs.

Practical Comptrollership Course (PCC): A mid-career course sponsored by the Assistant Secretary of the Navy (Financial Management & Comptroller) that provides graduate-level financial management education to DoD civilians and military officers. Primarily offered in Monterey and is also taught at major Navy concentration areas such as San Diego and Norfolk.

Advanced Acquisition Program (AAP): The AAP provides education and DAWIA certification to DoD’s acquisition workforce, including Army, Navy and Air Force acquisition commands.

Acquisition Management Distance Learning Program (AMDLP): GSBPP provides this educational outreach program to the Defense acquisition community, offering acquisition management courses to Defense agencies across the country. These courses satisfy certain DAU mandatory training requirements and DAWIA requirements for business subjects, and may also be taken for continuing education.

International Defense Acquisition Resource Management (IDARM): This international program focuses on the development of strategies for establishing or improving a country’s defense acquisition resource management in a manner that contribute to both national security and economic well-being. The IDARM program involves needs assessment, curriculum development, and course delivery, providing tailored executive education in Strategic Planning, Contracting, Logistics, Financial Management, and Program Management. This program is managed in the School of International Graduate Studies.

Executive Education: NPS’ Center for Executive Education (CEE) provides courses for executive-level military officers and defense civilians, including the Executive Business Course, the Navy Corporate Business Course, Strategic Planning Seminar and Leading Transformational Change. GSBPP supports CEE on business education requirements.
Defense Specialty Curricula:
“Education Responsive to Sponsor Requirements”

GSBPP provides graduate management education in six curricular areas of direct relevance to military educational needs. All curricula have a senior leader from one of the services who sponsors the program. Sponsors are actively involved in the design and review of programs. These reviews, in conjunction with NPS and GSBPP assessments, result in high quality, unique, and military-relevant programs. Collectively, the curricula encompass all aspects of Resource Management, including the management of Human Resources, Physical Resources, Financial Resources, and Information Resources.

Logistics Management: Designed for military officers who will be responsible for managing the various segments of a military system’s life cycle from initial planning for support to fielding the system, through sustaining operations to phase-out. Emphasizes all of the aspects of providing integrated logistics support of military systems.

Acquisition Management: Develops the knowledge, skills and competencies necessary for graduates to assume leadership roles in the acquisition workforce and efficiently manage the resources allocated to the acquisition process.

Manpower Management: Serves the Navy Human Resource Community of Interest by developing leaders in the design, analysis, and management of Manpower, Personnel, Training and Education Systems to maximize fleet readiness.

Financial Management: Designed to prepare military officers for effectively managing financial resources to achieve the goals and objectives of the defense forces. Graduates are prepared for assignment to positions in budgeting, accounting, business and financial management, cost management, cost analysis, internal control and auditing, and financial analysis.

Defense Management and Analysis: Designed to prepare military officers broadly for positions of leadership and management responsibility in defense organizations, and to develop the knowledge and abilities necessary for the analysis of policies and problems in defense organizations.

Information Systems Management: Designed to provide both technical skills and business acumen. This curriculum provides the knowledge to: acquire and manage information systems and infrastructure; address IS engineering and management problems; assimilate new technologies and transform organizations, processes, and strategies to compete in the marketplace or on the battlefield in the constantly changing digital world.

Faculty:
“A Unique Blend to Perform GSBPP’s Academic Mission”

The GSBPP faculty is unique in its composition, combining individuals with varying academic, professional, practitioner, and service backgrounds to provide relevant graduate instruction and research programs.

Academics and Professionals: GSBPP has 66 full-time faculty who are drawn from a wide variety of academic disciplines. A majority of the faculty holds doctoral degrees from the nation’s more distinguished universities. In addition to the academics, practitioners are an integral part of the faculty. In keeping with our mission, we employ highly qualified practitioners on a full-time basis to enhance the relevance and quality of our programs. All full-time practitioners have at least a master’s degree and have been recognized as accomplished professionals in their fields.

Civilian and Military: A combination of top notch civilian faculty combined with active and retired military officers provides BPP with expertise both within and beyond the DoD. The civilian faculty provides the theoretical and academic expertise enhanced by numerous contacts throughout the Navy and Defense community, while the military faculty provides recent DoD experience, and professional and operational expertise.

Business and Government: The GSBPP faculty blends backgrounds from both the private and public sectors. More than half of the faculty come with academic and/or professional experience from the business world. More than half come with academic and/or professional experience in the public sector.

Instruction and Research: GSBPP faculty are expected to excel in teaching as well as conduct significant research that is relevant to the Department of Defense. Faculty members maintain high degree of connectivity with sponsors of instructional and research programs. Almost all faculty work year round, teaching two quarters and conducting research and/or engaging in administrative work for the other two quarters.

Business and Public Management Research:
“Scholarship Analysis Relevant to Defense Problems”

Research Mission: Research is an important component of GSBPP’s mission. The primary goal of GSBPP’s research programs are to provide the Navy and DoD with the capability of managing defense organizations, systems, and processes both efficiently and effectively. GSBPP recognizes the importance of both basic and applied research to the Navy and DoD; and seeks to create a balance of both types of research in its research program. GSBPP’s research programs can be grouped into six functional areas:
Acquisition and Contracting  
Logistics and Transportation  
Financial Management  
Manpower Systems and Human Resources  
Organization and Management  
Economic and Policy Analysis

**Research Relevance:** In-depth knowledge of military problems allows the faculty to provide assistance to DoD decision makers. Expertise in private sector business practices enables the faculty to assist DoD organizations in adopting best business practices. Research in military-relevant issues additionally allows the faculty to develop unique and relevant instructional material for education of military officers.

DoD sponsorship of GSBBP research comes from several commands and areas, such as: ONR, OSD, SPAWAR, NAVSUP, AIRPAC, DAU, NETSAFE, NPRST, PERSEREC, USMC, N82, Manpower, Acquisition, and Logistics.

**Research Excellence:** GSBBP faculty include nationally/internationally recognized experts in simulation modeling, supply chain management, work motivation, knowledge management, military manpower, public sector management, change management, public budgeting, managerial communications, conflict management, acquisition, defense economics, information technology and other defense-relevant fields.

**Research Centers and Programs**

**Acquisition Research Program:** Established in 2002, Naval Postgraduate School’s Acquisition Research Program provides leadership in innovation, creative problem solving and an on-going dialogue, contributing to the evolution of Department of Defense acquisition strategies. Objectives of the NPS Acquisition Research Program include: Establishing NPS acquisition research as an integral part of policy-making for Departments of Defense and Navy officials. Creating a stream of relevant information concerning the performance of DoD acquisition policies with viable recommendations for continuous process improvement. Preparing the workforce to participate in the continued evolution of the defense acquisition process, Collaborating with other universities, think tanks, industry and Government in acquisition research.

**Center for Defense Management Reform:** The Center serves three purposes: First, as a forward-looking source of research to support current and future Defense leaders who embark upon management reform agendas; second, as a resource where knowledge of the history, theories, themes, successes and failures of past Defense reforms can help to inform and guide the design and execution of future reform; and third as a point of intellectual coordination for academic, professional and governmental entities engaged in the topic of defense management reform.

**Center for Innovation:** The mission of the Center for Innovation is to help embed innovation thinking and entrepreneurial action—taking more broadly throughout the Navy in order to help the Navy meet its goal of “Readiness at Cost”. In service of this mission, the Innovation Chair will 1) develop strategies, programs, courses, conduct research, and produce publications, and deliver programs as required, 2) establish an Innovation Research Initiative that will serve as a repository of innovation knowledge and “best practices” across the Navy and other sources, and 3) establish an Innovation Collaboration Group involving the four schools at NPS, the purpose of which will be to increase collaboration, create an enhanced capability for innovation with Navy-wide relevance, explore new applications that integrate technology, processes, and people, and support an environment that will foster innovation throughout the Navy.

**Human Resources Center of Excellence:** Established in October 2007 by the Chief of Naval Personnel, the Human Resources Center of Excellence (HRCOE) serves as a focal point for the lifelong career learning for the Human Resources (HR) community. In support of this goal, the Center is responsible for the development and execution of programs that promote professional development for all active duty and reserve HR officers to include formal education opportunities for new and experienced HR officers, a robust mentoring program, and a resources and learning tools repository. Center activities and efforts to enrich the professional development and abilities of the HR Community will be aligned with the Manpower, Personnel, Training and Education mission to anticipate warfighting needs, identify associated personnel capabilities, and recruit, develop, manage and apply those capabilities in an agile and cost effective manner.

**Programs Offered**

The Graduate School of Business and Public Policy (GSBPP) has responsibility for seven graduate academic programs and awards seven graduate degrees. The largest program is the resident defense-focused Master of Business Administration (MBA) program. GSBPP also offers a non-resident Executive MBA program and a resident Master of Executive Management program. In addition, GSBPP offers three specialized Master of Science degree programs focused on particular defense management fields, and non-degree professional development programs. These programs are:

**Master of Business Administration Degree Program**  
- Defense-Focused MBA

**Executive Management Degree Programs**  
- Executive MBA  
- Master of Executive Management
Master of Science Degree Programs

- MS in Management
- MS in Program Management
- MS in Contract Management

Professional Development Programs

- Advanced Acquisition Program
- Practical Comptrollership Course
- Acquisition Management Distance Learning Program

Master of Business Administration Degree (MBA)

This is a Defense-Focused MBA which encompasses five curricular areas: Acquisition Management, Financial Management, Logistics Management, Information Management and Defense Management. Graduates of curricula in the MBA program are awarded the degree Master of Business Administration. This degree is accredited by the Association to Advance Collegiate Schools of Business - International (AACSB) and by the National Association of Schools of Public Affairs and Administration (NASPAA). The MBA is a full-time resident program, open to all services, with curriculum lengths typically 18 months. The curricula within the Defense-Focused MBA program include: Acquisition and Contract Management (815), Systems Acquisition Management (816), Financial Management (837), Transportation Management (814), Supply Chain Management (819), Material Logistics Support (827), Information Systems Management (870), Defense Systems Management (818), Defense Business Management (809), and Resource Planning and Management (820).

Executive Master of Business Administration (EMBA)

The Executive Master of Business Administration (EMBA) is a defense-focused general management program with emphasis in financial management and acquisition for more senior DoD officers and civilians. The program design and coursework capitalize on the current managerial and leadership experience of program participants. The EMBA is a 24 month, part-time, distance learning degree program.

Master of Executive Management (MEM)

The Master of Executive Management (MEM) is a 1-year, full-time resident program providing a defense-focused general management graduate education. The program additionally provides the opportunity for some focus on a concentration area: financial management, acquisition, contracting, program management, logistics, manpower, information technology, among others. This program was developed to serve the needs of USAF Intermediate Development Education (IDE) officers, but is open to officers from other services with similar qualifications.

GSBPP Programs and Curricula

Defense-Focused MBA Program

Brief Overview

The Master of Business Administration (MBA) is a defense-focused MBA program designed to provide officers and DoD civilians an advanced education in interdisciplinary approaches to problem solving and policy analysis by applying quantitative, financial, economic, information technology, and other state-of-the-art management techniques and concepts to military management and policy issues. Graduates of the MBA program will know the latest management theories and practices, including leadership, communication, organization design, and planning, and how to apply them within large public and private sector organizations, as well as military sub-units and activities.

The MBA degree program has been designed to meet four objectives:
- To provide a defense-focused graduate management education program of specific relevance to U.S. military officers and DoD civilians.
- To satisfy educational requirements for military subspecialties or occupational and functional areas.
- To meet the Association to Advance Collegiate Schools of Business International (AACSB) and the National Association of Schools of Public Affairs and Administration (NASPAA) accreditation requirements.
- To allow officers to complete JPME requirements, if desired.

To satisfy these objectives, the MBA program consists of four parts:
- Business Core (35 credit hours)
- Mission-Related Core (17 credit hours)
- Curricular Concentration (24+ credit hours)
- Master's Application Project or Thesis

Requirements for Entry

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Entry Dates

January and/or July, depending on curriculum.

Degree

Requirements for the degree of Master of Business Administration are met by:
1. Completion of all required courses in the business core.
2. Completion of all required courses in the mission-related core.
3. Completion of an approved sequence of courses in a concentration area with a minimum of 24 graduate-level credit hours.
4. Completion (excluding by validation) of a minimum of 58 credit hours of graduate-level courses, at least 22 of which are at the 4000 level.
5. Completion of an acceptable application project or thesis.
6. Approval of the candidate's program by the Dean, Graduate School of Business and Public Policy.

*** Not required for International students. International students take American Life and Institutions (IT1500) and Communication Skills for International Officers (IT1600) in quarters 1 and 2.
**** Students may elect to complete a thesis.

Curricular Areas and Curricula

Students in the MBA program complete a specialization curriculum in one of the following areas of particular importance to DoD:

Logistics Management
814 Transportation Management
819 Supply Chain Management
827 Material Logistics Support

Acquisition Management
815 Acquisition and Contract Management
816 Strategic Purchasing
816 Systems Acquisition Management

Financial Management
837 Financial Management

Information Management
870 Information Systems Management

Defense Management
809 Defense Business Management
818 Defense Systems Management - International
820 Resource Planning and Management for International Defense

Logistics Management Curricula

The Logistics Management curricula provide education in all aspects of the logistics function. The curricula are comprised of management core and logistics concentration subjects. The management core of the Logistics Management curricula provides study in mathematics, accounting, economics, communications, marketing management, risk analysis, DoD mission, structure and resource determination, strategy making, and the global defense marketplace. The logistics curricula subjects are significant components of the military supply chain and each provides unique and relevant education that meets the critical needs of the armed services. The specialized logistics courses concentrate on studies in operations and project management, business modeling for decision making, inventory management, integrated logistics support, procurement and contract administration, systems acquisition, and logistics strategic planning. The logistics curricula are rounded out by including education in national, international, and defense transportation systems. The educational skills in these curricula prepare those responsible for managing the various elements of total life cycle support from requirements determination through sustainment.

Transportation Management - Curriculum 814
Supply Chain Management - Curriculum 819
Material Logistics Support - Curriculum 827

Brief Overview

The Logistics Management curricula are interdisciplinary, integrating mathematics, accounting, economics, management theory, operations analysis, and the specialty concentration into an understanding of the process by which the defense mission is accomplished. The curricula are designed to provide the officer with fundamental interdisciplinary techniques of quantitative problem-solving methods, operations management, behavioral and management science, economic analysis, and financial management. Furthermore, they are intended to provide the officer with a Navy/Defense Systems-oriented graduate management education and to provide the officer with the specific functional skills required to effectively manage in these subspecialty areas. The objective of these curricula is to prepare officers for naval logistics system positions. The Logistics Management curricula emphasize all of the aspects for providing integrated logistics support of military systems. Skills resulting from the curricula will
prepare those responsible for managing the various segments of a military system’s life cycle from initial planning for support to fielding the system, through sustaining operations to phase out. These curricula additionally emphasize the management of military owned inventories at the three levels of wholesale, intermediate and retail customer support, and worldwide transportation and distribution systems.

Requirements for Entry

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Entry Date

January/July

Program Length

Six Quarters

Degree

Requirements for the Master of Business Administration (MBA) degree are met en route to satisfying the Educational Skills Requirements.

Subspecialty

Completion of these curricula provides a naval officer with a specialization in Supply Chain Management (1302P), Material Logistics Support Management (subspecialty code 3121P), or Transportation Management (subspecialty code of 3122P). U.S. Marine officers receive MOS 9662.

Typical Subspecialty Jobs (various positions at each Command)

Naval Air Stations, Naval Bases and other installations

Naval Supply systems Command, Naval Air Systems Command, Naval Sea Systems Command, Space and Naval Warfare Systems Command (Headquarters and components)

Fleet and Industrial Supply Centers

DLA Defense Supply Centers: Dayton, OH, Philadelphia, PA, and Richmond, VA

DLA Distribution Depots

Fleet Commands

Aircraft Intermediate Maintenance Departments (ashore and afloat)

Air Terminals and Detachments

NAVCHAPGRU

MSCHQ offices and MSC field activities

Military Surface Deployment and Distribution Command

Naval Submarine Support Facility, New London, CT

Unified Combatant Commands and Defense Agencies

Bureau of Medicine, Washington, DC

Marine Corps Logistics Base, Albany, GA

Marine Corps Systems Command, Quantico, VA

MAJCOM or HQ USAF level: A7 (Mission Support) staff action officer

MAJCOM or HQ USAF level: A4 (Logistics) staff action officer

Maintenance or Logistics Readiness Squadron commander, operations officer, or flight commander

Joint Staff or Joint Command (TRANSCOM, CENTCOM, etc.): J4 staff action officer

Curriculum Sponsors

Naval Supply Systems Command Headquarters (819)

Naval Air Systems Command Headquarters (827)

Navy Military Sealift Command Headquarters (814)

Typical Course of Study: Curricula 814, 819, 827

Quarter 1

GB3014 (1-0) Ethics for Public Managers

GB3010 (4-0) Managing for Organizational Effectiveness

GB3020 (4-0) Fundamentals of Information Technology

GB3040 (4-0) Managerial Statistics

GB3051 (3-0) Cost Management

GB4052 (3-0) Managerial Finance

GB4053 (4-0) Economic Analysis & Defense Resource Allocation

GB3070 (4-0) Economics of the Global Defense Environment

GB1000 (0-3) Quantitative Skills for Graduate Management Studies

Quarter 2

GB3040 (4-0) Managerial Statistics

GB3051 (3-0) Cost Management

GB4052 (3-0) Managerial Finance

GB4071 (4-0) Economic Analysis & Defense Resource Allocation

GB3042 (4-0) Operations Management

GB4043 (3-0) Business Modeling Analysis

GB3014 (4-0) Strategic Management

GBXXX (3-0) MBA Core Elective **

GB4480 (4-0) Supply Chain Management
**Acquisition Management Curricula**

The Acquisition Management Curricula are designed to develop the knowledge, skills, and competencies necessary to effectively lead the acquisition workforce and efficiently manage the resources allocated to the acquisition process. The curricula focus on problem solving and decision-making in a variety of acquisition situations demanding critical thinking and a balanced approach in the application of management principles and practices.

1. **Management Fundamentals - Quantitative Analysis:** The graduate will have the skills to apply mathematical, statistical, accounting, economic, and other state-of-the-art quantitative techniques and concepts to the solving of day-to-day military management problems as well as the capability to use these skills as a participant in the long-range strategic planning efforts of the Navy and DoD.

2. **Management Fundamentals - Organization and Management:** The graduate will have a thorough knowledge of basic management theory and practices, embracing leadership, communication, organizational design, staffing, directing, planning, and controlling of military organizations.

3. **Integrated Logistics Support Management:** The graduate will have a detailed understanding of the processes associated with designing an integrated logistics support system for a new weapon system. The graduate will also have detailed knowledge about the DoD processes for contracting for and acquiring a new weapon system. The graduate will be able to serve as an assistant program manager for logistics (APML) for a major weapon system.

4. **Budgeting and Financial Controls:** The graduate will have an understanding of the financial management practices of DoD, will be able to conduct cost/benefit analyses, and participate in the budgetary planning by a hardware systems command for the support of both old and new weapon systems.

5. **Production/Operations Management:** The graduate will be able to apply the techniques of production/operations management at Naval Aviation Intermediate Activities and Depots, Navy Fleet Industrial and Support Activities, and other DoD maintenance and maintenance support activities.

6. **Materials and Physical Distribution Management:** The graduate will be able to apply the techniques of materials management and physical distribution management in designing and operating of fleet and troop support systems, both during peacetime and during rapidly developing wartime contingencies. This will include acquiring material and transportation assets to ensure that the distribution of material is both cost-effective and efficient. The graduate will also have an in-depth understanding of domestic, international, and defense transportation systems including the various modes, types of carriers within each mode, and the regulations affecting material movement by each type of carrier.

7. **Joint and Maritime Strategic Planning:** The graduate will have knowledge of the development and execution of military strategy and the effects of technical effects on warfare, an understanding of the means of formulation of U.S. policy, the roles of military forces and joint planning, and current issues in the defense organization. The graduate will also have a detailed understanding of the plans and processes of the DoD for providing support of strategic sealift and mobilization.

8. **Thesis/Project:** The graduate will demonstrate the ability to conduct independent research and analysis, and proficiency in presenting the results in writing by means of a thesis appropriate to this curriculum.

**Graduate School of Business and Public Policy (GSBPP)**

* May be replaced by appropriate concentration course (MN3331 or GB3031)

** Selected from three or four available courses offered in the 4th quarter.

*** Required for USN and USMC only. International students take American Life and Institutions (IT1500) and Communication Skills for International Officers (IT1600) in quarters 1 and 2. USN students may add JPME classes Communication Skills for International Officers (IT1600) and American Life and Institutions (IT1500).

**** Students may elect to complete a thesis.

**Educational Skills Requirements (ESR)**

**Transportation Management - Curriculum 814 Subspecialty code 3122P**

**Supply Chain Management - Curriculum 819 Subspecialty code 1302P**

**Material Logistics Support Management - Curriculum 827 Subspecialty code 3121P**

1. **Management Fundamentals - Quantitative Analysis:** The graduate will have the skills to apply mathematical, statistical, accounting, economic, and other state-of-the-art quantitative techniques and concepts to the solving of day-to-day military management problems as well as the capability to use these skills as a participant in the long-range strategic planning efforts of the Navy and DoD.

2. **Management Fundamentals - Organization and Management:** The graduate will have a thorough knowledge of basic management theory and practices, embracing leadership, communication, organizational design, staffing, directing, planning, and controlling of military organizations.

3. **Integrated Logistics Support Management:** The graduate will have a detailed understanding of the processes associated with designing an integrated logistics support system for a new weapon system. The graduate will also have detailed knowledge about the DoD processes for contracting for and acquiring a new weapon system. The graduate will be able to serve as an assistant program manager for logistics (APML) for a major weapon system.

4. **Budgeting and Financial Controls:** The graduate will have an understanding of the financial management practices of DoD, will be able to conduct cost/benefit analyses, and participate in the budgetary planning by a hardware systems command for the support of both old and new weapon systems.

5. **Production/Operations Management:** The graduate will be able to apply the techniques of production/operations management at Naval Aviation Intermediate Activities and Depots, Navy Fleet Industrial and Support Activities, and other DoD maintenance and maintenance support activities.

6. **Materials and Physical Distribution Management:** The graduate will be able to apply the techniques of materials management and physical distribution management in designing and operating of fleet and troop support systems, both during peacetime and during rapidly developing wartime contingencies. This will include acquiring material and transportation assets to ensure that the distribution of material is both cost-effective and efficient. The graduate will also have an in-depth understanding of domestic, international, and defense transportation systems including the various modes, types of carriers within each mode, and the regulations affecting material movement by each type of carrier.

7. **Joint and Maritime Strategic Planning:** The graduate will have knowledge of the development and execution of military strategy and the effects of technical effects on warfare, an understanding of the means of formulation of U.S. policy, the roles of military forces and joint planning, and current issues in the defense organization. The graduate will also have a detailed understanding of the plans and processes of the DoD for providing support of strategic sealift and mobilization.

8. **Thesis/Project:** The graduate will demonstrate the ability to conduct independent research and analysis, and proficiency in presenting the results in writing by means of a thesis appropriate to this curriculum.
of theory and practical solutions. Graduates of the curricula are expected to assume leadership positions in the acquisition workforce.

**Acquisition and Contract Management Curriculum 815**

The Acquisition & Contract Management Curricula are designed to develop the knowledge, skills and competencies necessary to effectively lead the acquisition workforce and efficiently manage the resources allocated to the acquisition process. The curricula focus on problem solving and decision making in a variety of acquisition situations demanding critical thinking and a balanced approach in the application of theory and practical solutions. Graduates of the curricula are expected to assume leadership positions in the acquisition workforce.

**Program Officer**

(831) 656-3464, DSN 756-3464  
rgrendon@nps.edu

**Brief Overview**

The Acquisition and Contract Management curriculum is an interdisciplinary program which integrates management theory, accounting, economics, finance, behavioral science, management theory, operations/systems analysis, and specific courses in acquisition and contracting. The 815 curriculum includes a concentration option in strategic purchasing. Student input includes officers and civilians from all DoD services, other federal agencies and allied nations. The curriculum is designed to provide officers and civilians with the skills to serve effectively in systems buying offices, field contracting offices, contract administration offices, and contracting policy offices.

**Requirements for Entry**

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

**Entry Date**

January and July.

**Program Length**

Six Quarters.

**Degree**

Requirements for the Master of Business Administration (MBA) degree are met en route to satisfying the Educational Skills Requirements.

**Acquisition and Contract Management Subspecialty**

Completion of this curriculum qualifies naval officers as Acquisition and Contract Management Subspecialists with a subspecialty code of 1306P, Army officers as Functional Area 51C, and Marine Corps officers with a 9656 MOS. The curriculum satisfies mandatory Defense Acquisition University (DAU) contracting courses required by the Defense Acquisition Workforce Improvement Act (DAWIA).

**Typical Subspecialty Jobs**

**Contracting Officer:**

- Naval Inventory Control Point, Philadelphia, PA;  
- Air Force Major Weapon System Program Offices  
- Hardware Systems Commands (NAVAIR, NAVSEA, SPAWAR)  
- Air Force Major System Centers (Aeronautical System Center, Space and Missiles System Center)  
- Army Material Command  
- Major Subordinate Commands (CECOM, AMCOM)  
- Business/Financial Manager (BFM)  
- Defense Contract Management Agency (DCMA)  
- Superintendent, Shipbuilding, Conversion and Repair (SUPSHIP)  
- Air Force Commodity Council Contracting Officer  
- Air Force Regional Contracting Center Contracting Officer  
- Procuring Contracting Officer (Product or Logistic Center)  
- Administrative Contracting Officer (Defense Contract Management Agency)  
- Contract Negotiator (Product or Logistic Center)  
- Flight Commander, Major Command Headquarters Contracting Squadron Commander (IDE graduates)  
- Key Staff (HQ USAF, Joint Command) (IDE graduates)

**Director of Contracts:**

- Marine Corps Field Contracting System, Fleet and Industrial Supply Centers, Army and Navy Laboratories, Naval Regional Contracting Centers

**Contracts and Business Policy:**

- Staff of Assistant Secretary of the Navy (Research, Development and Acquisition)
Staff of Assistant Secretary of the Army (Acquisition, Logistics and Technology)
Staff of Assistant Secretary of the Air Force (Acquisition)
Staff of Under Secretary of Defense (Acquisition, Technology and Logistics)

**Curriculum Sponsor**
Deputy Assistant Secretary of the Navy (Acquisition)

**Typical Course of Study: Curriculum 815**
Within the 815 curriculum, students may substitute specialty courses in strategic purchasing at the approval of their service and the academic associate.

US Navy students also complete an additional four courses leading to the Naval War College Command and Staff program diploma.

International students take IT1500 American Life and Institutions and IT1600 Communication Skills for International Officers in Quarters one and two.

**Quarter 1**
- GB3014 (1-0) Ethics for Public Managers
- GB3010 (4-0) Managing for Organizational Effectiveness
- GB3020 (4-0) Fundamentals of Information Technology
- GB3050 (4-0) Financial Reporting and Analysis
- GB3070 (4-0) Economics of the Global Defense Environment
- GB1000 (0-3) Quantitative Skills for Graduate Management Studies

**Quarter 2**
- GB3040 (4-0) Business Statistics & Data Analysis
- GB3051 (3-0) Cost Management
- GB4052 (3-0) Managerial Finance
- GB4071 (4-0) Economic Analysis & Defense Resource Allocation
- MN3331 (5-1) Systems Acquisition and Program Management

**Quarter 3**
- GB3012 (3-0) Communications for Managers
- GB3042 (4-0) Operations Management
- GB4043 (3-0) Business Modeling Analysis
- GB4053 (4-0) Defense Budget and Financial Management Policy
- MN3303 (4-0) Principles of Acquisition and Contract Management

**Quarter 4**
- GB4014 (4-0) Strategic Management
- GBXXXX (3-0) MBA Core Elective *
- MN3315 (4-0) Acquisition Management and Contract Administration
- MN3312 (4-0) Contract Law

**Quarter 5**
- MN3318 (3-0) Contingency Contracting
- MN4304 (2-0) Defense Systems Contracting
- MN3304 (5-2) Contract Pricing and Negotiations
- GB4090 (0-6) Application Project or Thesis

**Quarter 6**
- NW3230 (4-2) Strategy & Policy**
- MN4371 (4-0) Acquisition and Contracting Policy
- GB4090 (0-6) Application Project or Thesis
- MN3306 (3-0) Strategic Purchasing***
- MN3384 (5-1) Principles of Acquisition Production and Quality Management****

* Core Elective will be selected from four available courses offered in Q4
** USN and USMC only; students may complete three additional War College classes for JPME certification
*** USN and USAF only
**** USMC and US Army only

**Educational Skills Requirements (ESR)**

**Acquisition Management - Curriculum 815 Subspecialty Code 1306P**

1. **Management Fundamentals:** The graduate will understand the theory of and have an ability to apply accounting, economic, mathematical, statistical, managerial, and other state-of-the-art management techniques and concepts to problem solving and decision-making responsibilities as military managers.

2. **Advanced Management Concepts:** The graduate will have the ability to apply advanced management and operations research techniques to defense problems. This includes policy formulation and execution, strategic planning, defense resource allocation, cost benefit and cost effectiveness analysis, federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated decision making.

3. **Acquisition and Contracting Principles:** The graduate will have an understanding of and will be able to apply the principles and fundamentals of acquisition and contracting within the federal government, including knowledge of the acquisition laws and regulations, particularly the Federal Acquisition Regulation (FAR) and the DoD FAR Supplement (DFARS); the unique legal principles applied in government contract law and the Uniform Commercial Code; and the application of sound business principles and practices to defense contracting problems. Further, the graduate will be able to apply innovative and creative approaches not only to resolve difficult acquisition and contracting issues but to significantly influence the legal and...
regulatory structure within which acquisition decision making occurs. Finally, the graduate will have the ability to conceptualize, develop and execute strategic business alliances and relationships necessary to the successful acquisition of goods and services.

4. **Acquisition and Contracting Policy:** The graduate will have an ability to formulate and execute acquisition policies, strategies, plans and procedures; a knowledge of the legislative process and an ability to research and analyze acquisition legislation; and a knowledge of the government organization for acquisition, including Congress, the General Accounting Office, the Office of Federal Procurement Policy, the federal and military contracting offices, the Boards of Contract Appeals, and the court system.

5. **Contracting Process:** The graduate will understand the theory of and have the ability to manage the field contracting, contingency contracting, supplies and services contracting, system acquisition, and contract administration processes. This involves a knowledge of the defense system life cycle processes, including requirements determination, funding, contracting, ownership, and disposal; an ability to evaluate military requirements, specifications, and bids and proposals; an ability to utilize the sealed bid, competitive proposals and simplified acquisition methodologies; a comprehensive knowledge of all contract types and their application in defense acquisition; an ability to conduct cost and price analyses; and an ability to negotiate various contracting actions, including new procurement, contract changes and modifications, claims, equitable adjustment settlements, and noncompliance issues.

6. **Business Theory and Practices:** The graduate will have an understanding of the business philosophy, concepts, practices, and methodologies of the global commercial industrial base, and the ability to apply these to the federal government acquisition environment.

7. **Federal and Defense Budgeting:** The graduate will have an ability to apply economic and accounting principles, including monetary and fiscal theories, to defense acquisition and contracting issues.

8. **Program Management:** The graduate will have an understanding of the basic principles and fundamentals of Program Management, with particular emphasis on the Procuring Contractor Officer’s and Administrative Contracting Officer’s roles and relationships with the Program Manager.

9. **Acquisition Workforce:** The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory contracting courses required by the Defense Acquisition University (DAU) at Levels I, II, III.

10. **Ethics and Standards of Conduct:** The graduate will have an ability to manage and provide leadership in the ethical considerations of military acquisition, including the provisions of procurement integrity, and to appropriately apply defense acquisition standards of conduct.

11. **Strategy and Policy:** Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s policies and goals and the ways military power may be used to achieve them. This is fulfilled by completing the first of the Naval War College course series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.

12. **Analysis, Problem Solving, and Critical Thinking:** The graduate will demonstrate the ability to conduct research and analysis, and proficiency in presenting the results in writing and orally by means of an applied project and a command-oriented briefing appropriate to this curriculum.

**Systems Acquisition Management - Curriculum 816**

Code GB, Ingersoll Hall, Room 336  
(831) 656-2650, DSN 756-2650  
jtdillar@nps.edu

**Brief Overview**
The Systems Acquisition Management curriculum is an interdisciplinary program designed to integrate business principles, program leadership and management theory, operations analysis, and systems engineering applications. It is uniquely tailored to federal government acquisition management and intensive exposure to the fundamental principles of the acquisition environment. The courses in this curriculum apply business analysis and problem solving techniques essential to effective major system program management within the structure of DoD acquisition management. It further focuses on the decisions and problems facing the acquisition manager, the various forces
at work within industry and government, and the impact of acquisition policies and strategies. Student input includes officers and civilians from all DoD Services, other federal agencies, and allied nations.

Requirements for Entry
A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Entry Dates
January and July

Program Length
Six Quarters

Degree
Requirements for the Master of Business Administration (MBA) degree are met en route to satisfying the Educational Skills Requirements.

Systems Acquisition Management Subspecialty
Completion of this curriculum qualifies an Army officer for Functional Area 51 and a Marine Corps officer for MOS 9657. Department of Defense civilians are typically members of the acquisition work force as specified by the Defense Acquisition Work force Improvement Act (DAWIA). This curriculum satisfies the mandatory Defense Acquisition University (DAU) program management education required by the Defense Acquisition Work force Improvement Act (DAWIA) for Program Management through Level III and provides up to 14 additional DAU equivalencies in other functional areas.

Typical Subspecialty Jobs
Program Manager/Deputy Program Manager/Program Office:
Army/Air Force/Navy/Marine Corps Acquisition Category I through III (ACAT I - III) Programs
Program Executive Officer (PEO) staff
Matrix Organization Staff
Army Materiel Command (AMC)
Naval Air Systems Command (NAVAIR)
Naval Sea Systems Command (NAVSEA)
Air Force Systems Command
Army Communications - Electronics Command (CECOM)
Marine Corps Systems Command (MARCORSYSCOM)
Force Development Officer

Test and Evaluation Officer
Acquisition Logistics Officer

Curriculum Sponsor
Director, Acquisition Career Management, Office of the Assistant Secretary of the Army (Acquisition, Logistics and Technology): ASA/ALT (DACM)

Typical Course of Study: Curriculum 816
The 6-quarter matrix below is for US Army and USAF students.

USN, USMC and international students follow a 7-quarter program. USN students may add JPME courses.

International students also take IT1500 American Life and Institutions and IT1600 Communication Skills for International Officers in quarters one and two.

Quarter 1
GB3014 (1-0) Ethics for Public Managers
GB3010 (4-0) Managing for Organizational Effectiveness
GB3020 (4-0) Fundamentals of Information Technology
GB3050 (4-0) Financial Reporting and Analysis
GB3070 (4-0) Economics of the Global Defense Environment
GB1000 (03) Quantitative Skills for Graduate Management Studies

Quarter 2
GB3040 (4-0) Business Statistics & Data Analysis
GB3051 (3-0) Cost Management
GB4052 (3-0) Managerial Finance
GB4071 (4-0) Economic Analysis & Defense Resource Allocation
MN3331 (5-1) Principles of Systems Acquisition and Program Management

Quarter 3
GB3012 (3-0) Communication for Managers
GB3042 (4-0) Operations Management
GB4043 (3-0) Business Modeling Analysis
GB4053 (4-0) Defense Budget and Financial Management Policy
MN3303 (4-0) Principles of Acquisition and Contract Management

Quarter 4
GB4014 (4-0) Strategic Management
GB6XXX (3-0) MBA Core Elective *
SE4011 (3-2) Systems Engineering for Acquisition Managers
MN3384 (5-1) Principles of Acquisition Production and Quality Management

Quarter 5
MN3309 (4-1) Acquisition of Embedded Weapon
Educational Skills Requirements (ESR)

**Systems Acquisition Management - Curriculum 816**

1. **Management Fundamentals:** The graduate will understand the theory of and have an ability to apply accounting, economic, mathematical, statistical, managerial, and other state-of-the-art management techniques and concepts to problem solving and decision-making responsibilities as Department of Defense managers. The graduate will have the ability to think creatively, addressing issues and problems in a dynamic, challenging environment.

2. **Advanced Leadership and Management Concepts:** The graduate will have the ability to apply advanced leadership, management and operations research techniques to defense problems. This includes policy formulation and execution, strategic planning, defense resource allocation, project leadership, cost benefit and cost effectiveness analysis, federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated leadership abilities.

3. **Program Leadership and Management Principles:** The graduate will have an understanding of and will be able to apply the principles, concepts, and techniques of Program Leadership and Program Management to the acquisition of major defense weapon systems. This includes the principles of risk management and tradeoff decision analysis using Total Ownership Cost, schedule and performance dynamics from a total life cycle management perspective.

4. **Program Management Policies:** The graduate will have an ability to formulate and execute defense acquisition policies, strategies, plans and procedures; an understanding of the policy-making roles of various federal agencies of the executive, legislative and judicial branches of the U.S. government, particularly the Department of Defense (DoD), the General Accounting Office (GAO), congressional committees, the Office of Management and Budget (OMB); and an understanding of the strategies necessary to influence policy development and implementation.

5. **Systems and Acquisition Process:** The graduate will understand the theory of and have an ability to lead program teams and manage the systems acquisition process. This involves the system life cycle process for requirements determination, research and development, funding and budgeting, procurement, systems engineering, including systems of systems, test and evaluation, manufacturing and quality control, integrated logistics support, ownership and disposal; the interrelationship between reliability, maintainability and logistics support as an element of system effectiveness in defense system/equipment design; and embedded weapon system software, particularly related to current policies and standards, software metrics, risk management, inspections, testing, integration, and post-deployment software support.

6. **Contract Management:** The graduate will understand the role of the contracting process within the acquisition environment, including financial, legal, statutory, technical, and managerial constraints in the process.

7. **Business Theory and Practices:** The graduate will have an understanding of the business and operating philosophies, concepts, practices and methodologies of defense industry with regard to major weapon systems acquisition, particularly the application of sound business practices.

8. **Government and Industry Budgeting and Financial Management:** The graduate will have an understanding of and an ability to apply the principles of government and private organizational financing, including corporate financial structures, cost and financial accounting, capital budgeting techniques, financial analysis, and Defense financial management and budgeting processes to include the Planning, Programming, Budgeting Execution System (PPBES).

9. **Acquisition Work force:** The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory program management courses required by the Defense Acquisition University (DAU) at Levels I, II, and III.

10. **Ethics and Standards of Conduct:** The graduate will have an ability to manage and provide leadership in the ethical considerations of defense acquisition, including the provisions of procurement integrity, and to appropriately apply defense acquisition standards of conduct.

11. **Analysis, Problem Solving, and Critical Thinking:** The graduate will demonstrate the ability to conduct...
research and analysis, and proficiency in presenting the results in writing and orally by means of an applied project and a command-oriented briefing appropriate to this curriculum.

Financial Management - Curriculum 837

Brief Overview

The objective of the Financial Management Curriculum is to prepare officers for business, financial, and analysis positions within the DoN and DoD. Financial Managers assist the DoN’s decision-making processes at all levels by providing accurate, timely and relevant information and analysis. They are concerned with the optimal allocation of human, physical and financial resources to achieve the DoN’s goals and objectives while assuring efficient and effective expenditure of public funds. Graduates of the Financial Management Curriculum will be prepared for assignment to positions in strategic planning, business analysis, financial analysis, budgeting, accounting, business and financial management, and internal control systems and auditing.

Graduate courses cover topics such as financial reporting standards, cost standards, cost analysis, budgeting and financial management, internal control, auditing, management planning and control systems, strategic resource management, quantitative techniques used in planning and control, system acquisition and program management, and the Planning Programming, Budgeting Execution System (PPBES) used within the Department of Defense.

Requirements for Entry

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Degree

Requirements for the Master of Business Administration (MBA) degree are met en route to satisfying the Educational Skills Requirements.

Financial Management Subspecialty

Completion of this curriculum qualifies a U.S. Navy officer as a Financial Management Subspecialist, subspecialty code 3110P. Completion qualifies a U.S. Marine Corps officer for MOS 9644.

Typical Subspecialty Jobs

Comptroller: Naval Bases/Naval Air Stations/SYSCOMs
Budget Analyst: Office of Budget, N-82 SYSCOMS, U.S. STRATCOM
Public Works Officer: CONUS/OUTCONUS
Comptroller: Naval Hospitals
Business Financial Managers: Program Offices
Action Officer/Program Analyst: OSD
Budget Analyst: OPNAV
Fiscal Officer: BUMED
Budget Officer: CINPACFLT/CINCLANTFLT

Curriculum Sponsor

N-82, Director, Office of Budget and Fiscal Management Division.

**Selected from four available courses offered in the 4th quarter.**

**Not required for International students, US Army or USAF. International students take American Life and Communication Skills for International Officers (IT1500) and Communication Skills for USAF.**

**Students may elect to complete a thesis.**

### Educational Skills Requirements (ESR)

#### Financial Management - Curriculum 837 Subspecialty Code 3110P

1. **Management Fundamentals:** The graduate will have the ability to apply quantitative techniques, accounting, economics, finance, organization theory, information technology, and other state-of-the-art management techniques and concepts to military management problems. Also, the graduate will know basic management theory and practice, embracing leadership, ethics, written and oral communication, organization design, team building, human resource management, conflict resolution, quality assurance, cost-benefit analysis, risk analysis, stakeholder analysis, and planning within military organizations, as well as military sub-units and activities. This ensures internal and external constituencies are considered in resource management.

2. **Strategic Vision and Defense Budgeting:** The graduate will understand the roles of the executive and legislative branches in strategic planning, setting federal fiscal policy, allocating resources to national defense, budget formulation, budget negotiation, budget justification, and budget execution strategies, including the principles of Federal Appropriations Law. In addition, the graduate will have knowledge of all aspects of the federal, Defense, and Navy budget cycles including the Planning, Programming, Budgeting, and Execution System with emphasis on budget formulation and execution.

3. **Funds Management:** In support of approved programs, the graduate will be able to manage appropriated, revolving, and non-appropriated funds in compliance with regulations of the Comptroller of the Navy and the federal government. Also, the graduate will be able to develop and review financial reports, analyze budget execution against operating and financial plans, develop alternate plans based on analyses of an activity's financial performance, and prepare recommendations or make decisions regarding the reallocation or reprogramming of funds. The guidelines of the Defense Finance and Accounting System and the Federal Accounting Standards Advisory Board are relevant.

4. **Accountability, Control, and Auditing:** The graduate will be able to acquire and analyze financial data and communicate the results to a diverse audience, including maintaining an integrated financial information system and appropriate internal controls to ensure timely, accurate, and consistent financial information. In accordance with the auditing standards of the U.S. Government Accountability Office, the Defense and Navy audit organizations, and the professional standards of the American Institute of Certified Public Accountants, the graduate will learn to apply audit techniques that enforce sound internal accounting and administrative controls, safeguard defense assets, and assure the completeness and integrity of financial reports.

5. **Acquisition and Program Management:** The graduate will understand the purpose and concepts, fundamentals and philosophies of the defense systems acquisition process, and the practical application of program management methods within this process. This includes systems acquisition management; the systems acquisition life cycle; user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing, and controlling. This satisfies the Defense Acquisition University education equivalency requirements for
defense acquisition professionals as specified in Congress’ Defense Acquisition Workforce Improvement Act (DAWIA)

6. **Economy, Efficiency, and Effectiveness**: The graduate will have the skills for solving complex and unstructured management problems in which alternatives must be identified, evaluated, and selected in accordance with economical procurement of resources, efficient utilization of resources, and effective accomplishment of overall Defense and Navy goals and objectives. This includes cost/benefit analysis, systems analysis, cost estimation, value engineering, business process reengineering, and application of relevant OMB and Defense regulations.

7. **Cost Management and Analysis**: The graduate will be able to design, implement, and evaluate different costing systems encountered within Defense and Navy organizations and activities, as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand the application of Defense unit costing guidelines to functional business areas, and the Office of Management and Budget’s Cost Accounting Standards for major suppliers of goods and services to the federal government.

8. **Strategic Resource Management**: The graduate will have knowledge of strategic vision and strategic core competency concepts for setting long-range goals and objectives; designing programs to achieve objectives; assigning individual responsibility for resource management, actions, and decision making; measuring performance; reporting results; and evaluating and rewarding performance. This includes assessing customer needs and customer satisfaction, making recommendations, and implementing improvements in the effective delivery of goods and services to customers or users.

9. **Innovation and Creativity**: The graduate will demonstrate innovation and creativity in developing solutions to complex financial, budget, and program management issues that increase program effectiveness and customer satisfaction, while controlling the efficient utilization of financial, physical, and human resources. This involves the ability to identify problems and potential concerns, providing leadership, and teaming with others in the decision making process, and obtaining support for recommended decisions or courses of action.

10. **Strategy and Policy**: Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s policies and goals and the ways military power may be used to achieve them. Fulfilled by completing the first of the Naval War College series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.

**Curriculum Sponsor and Educational Skill Requirements Approval Authority:**

Financial Management (837):
Chief of Naval Operations (N8/N82)

**Information Management Curriculum**

The Information Age has generated a revolution in the means in which we conduct business and warfare. New technologies have changed the traditional views of the marketplace, supply chain management, and logistics. As the range and complexity of computer applications have grown, the need to manage and exploit those resources has increased. This curriculum provides both the technical skills and business acumen to deal with a constantly evolving digital world.

**Program Officer**

Jefferson E. McCollum, CDR, SC, USN
Code GB, Ingersoll Hall, Room 201
(831) 656-3953, DSN 756-3953
jemccoll@nps.edu

(831) 656-2778, DSN 756-2778
grcook@nps.edu

**Information Management - Curriculum 870**

**Brief Overview**

The Information Systems Management graduate shall have the knowledge skills and competencies to: 1) Manage the acquisition of Information Systems; 2) Manage Information Systems and infrastructure support afloat and ashore; 3) Solve Information Systems engineering and management problems individually and in teams; 4) Effectively manage and lead in today’s constantly changing digital world; 5) Develop and implement effective strategies and policies to take advantage of technological opportunities and mitigate risk; 6) Assimilate new technologies and transform organizations, processes, and strategies to compete in the marketplace or on the battlefield. These general education skill requirements are
supported by the following topical educational skill requirements.

**Requirements for Entry**

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

**Entry Dates**

January and July

**Program Length**

Six Quarters (no P-Code); Seven Quarters (1309P with JPME I)

**Degree**

Requirements for the Master of Business Administration (MBA) degree are met en route to satisfying the Educational Skills Requirements.

**Subspecialty**

Completion of this curriculum qualifies a U.S. Navy officer as a Logistics - Information Technology subspecialist (subspecialty code 1309P). The 1309P code is applicable only to Supply Corps Officers (3100/3105/3107).

**Typical Subspecialty Jobs**

Project /Program Manager, Hardware Systems Command

NAVSISA, Project Officer

Business Manager, PEO

CIO, Acquisition Office

**Curriculum Sponsor**

Naval Supply Systems Command

**Typical Course of Study: Curriculum 870**

* NW3230 required for USN and USMC; students completing JPME take all four Naval War College classes.

**Selected from four available courses offered in the 4* quarter.

*** Students may elect to complete a thesis.

International students take American Life and Institutions (IT1500) and Communication Skills for International Officers (IT1600) in quarters 1 and 2.

**Educational Skills Requirements for Information Systems Management - Curriculum 870**

**Subspecialty 1309P**

1. **Management Fundamentals:** The graduate will have the ability to apply quantitative accounting, economics, information technology, and other management techniques and concepts to military management problems. Also, the graduate will know management theory and practices, including leadership, communications, organizational design, staffing, quality and planning within large public and private sector organizations with a focus on military sub-units and activities.

2. **Information Systems Technology:** The officer will have a thorough knowledge of information systems management to include: 1) computer system components; 2) computer networks: network
architectures, protocols and standards; 3) database management systems: database technologies, object-oriented databases, data warehouses, OLAP, technical and administrative issues involved in the design, implementation and maintenance of database management systems.

3. Decision Support and Knowledge Management Systems: The student will have a thorough knowledge of problem identification, formulation, and application of systems to support decision making. The student will understand the purpose of executive information systems, group decision support systems, and contingency management systems and their potential impacts on public organizations and missions. The student will also be familiar with knowledge collection technologies designed to capture, categorize, store, retrieve and present knowledge.

5. Information Systems Analysis and Management: The officer will have a thorough knowledge of the following concepts to effectively manage the application of information systems to organizational goals: 1) Managerial Concepts: decision-making theory, microeconomics, marketing, operations analysis, statistics, financial management, organizational development, and research methodologies; 2) Evaluation of Information Systems: cost-performance (effectiveness) analysis; selection, evaluation, acquisition, installation and effective utilization of information systems hardware and software risk assessment; 3) Systems Analysis and Design: information systems feasibility, life cycle management, system requirements determination, system performance evaluation, conversion and maintenance of legacy systems, post-implementation evaluation; 4) Management of Information Systems: metrics evaluation, monitoring, capacity planning, human resource management, budgeting and financial control of computer centers, design of effective organization structure, understanding architectural constraints, control and security (INFOSEC) policies, and training requirements for both the user and support staff; 5) Adapting to Technological, Organizational, and Economic Changes: Evaluation of potential impacts of new technology on information systems and organizational strategy.

6. Military Applications: The officer must be able to combine analytical methods and technical expertise with operational experience for effective military applications to include: 1) DoD Decision-Making Process on Information Systems: DoD, DoN, OMB, and congressional decision making on information systems matters; 2) Information Technology Acquisition Management: Acquisition policies and procedures of the DoD, including: statutory framework, acquisition planning, contracting, and the planning, programming, and budgeting system; 3) Joint Professional Military Education (JPME) Level 1.

7. Independent Research: The graduate will demonstrate the ability to conduct independent research analysis and proficiency in communicating the results in writing and orally by means of a field application study. The research in information technology and its management will include problem formulation, decision criteria specification, decision modeling, data collection and experimentation, analysis, and evaluation.

Defense Management Curricula

The Defense Management Curricula serve U.S. and international officers. The overriding objective of the curricula is to provide students with the analytical skills and critical thinking ability to solve problems and make decisions they confront in both operational and staff jobs. Students may design their own concentrations to meet their organizations’ unique staffing and operational needs. International officers in the Resource Planning and Management for International Defense curriculum blend courses from the Graduate School of Business and Public Policy and the National Security Affairs Department into an integrated Defense Resource program of study.

Defense Business Management - Curriculum 809

Academic Associate
James Suchan, Ph.D.
Code GB/Su, Ingersoll Hall, Room 313
(831) 656-2905, DSN 756-2905
jsuchan@nps.edu

Brief Overview
This interdisciplinary curriculum integrates within the defense context coursework in accounting, economics,
mathematics, communications, management theory, and operations/systems analysis. As a result, students develop the analytical, critical thinking, and problem-solving skills not only to understand and critically assess the processes by which management in a defense organization is accomplished, but also to manage and allocate wisely defense resources, evaluate written research, and analyze products of others throughout their careers.

In addition, this curriculum permits students to design their own concentration. Students work with their Academic Associate to determine the concentration areas and courses that meet their sponsoring agency needs. Students are free to choose among any of the specific management areas available. For example, a student may elect to specialize in the relevant portion of a functional area, such as financial management, logistics, human resources and organization management, acquisition, or manpower and personnel analysis. Or, the student may choose to follow a general management program, which would include an overall balance of courses from many functional areas.

Requirements for Entry

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Entry Dates

January and July

Program Length

Six Quarters

Degree

Requirements for the Master of Business Administration degree are met en route to satisfying the Educational Skills Requirements.

Subspecialty

Determined in consultation with the Academic Associate.

* Selected from four available courses offered in the 4th quarter.

** Students may elect to complete a thesis.

Educational Skills Requirements (ESR)

Defense Business Management - Curriculum 809

1. **Management Fundamentals:** The graduate will have the ability to apply quantitative techniques, accounting, economics, finance, organization theory, information technology, and other state-of-the-art management techniques and concepts to military management problems. Also, the graduate will know basic management theory and practice, embracing leadership, ethics, written and oral communication, organization design, team building, human resource management, conflict resolution, quality assurance, cost-benefit analysis, risk analysis, stakeholder analysis, and planning within military organizations, as well as military sub-units and activities. This ensures internal and external constituencies are considered in resource management.
2. **Strategic Vision and Defense Budgeting**: The graduate will understand the roles of the executive and legislative branches in strategic planning, setting federal fiscal policy, allocating resources to national defense, budget formulation, budget negotiation, budget justification, and budget execution strategies, including the principles of Federal Appropriations Law. In addition, the graduate will have knowledge of all aspects of the federal, Defense, and Navy budget cycles including the Planning, Programming, Budgeting, and Execution System with emphasis on budget formulation and execution.

3. **Funds Management**: In support of approved programs, the graduate will be able to manage appropriated, revolving, and non-appropriated funds in compliance with regulations of the Comptroller of the Navy and the federal government. Also, the graduate will be able to develop and review financial reports, analyze budget execution against operating and financial plans, develop alternate plans based on analyses of an activity's financial performance, and prepare recommendations or make decisions regarding the reallocation or reprogramming of funds. The guidelines of the Defense Finance and Accounting System and the Federal Accounting Standards Advisory Board are relevant.

4. **Accountability, Control, and Auditing**: The graduate will be able to acquire and analyze financial data and communicate the results to a diverse audience, including maintaining an integrated financial information system and appropriate internal controls to ensure timely, accurate, and consistent financial information. In accordance with the auditing standards of the U.S. Government Accountability Office, the Defense and Navy audit organizations, and the professional standards of the American Institute of Certified Public Accountants, the graduate will learn to apply audit techniques that enforce sound internal accounting and administrative controls, safeguard defense assets, and assure the completeness and integrity of financial reports.

5. **Acquisition and Program Management**: The graduate will understand the purpose and concepts, fundamentals and philosophies of the defense systems acquisition process, and the practical application of program management methods within this process. This includes systems acquisition management; the systems acquisition life cycle; user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. This satisfies the Defense Acquisition University education equivalency requirements for defense acquisition professionals as specified in Congress' Defense Acquisition Workforce Improvement Act (DAWIA).

6. **Economy, Efficiency, and Effectiveness**: The graduate will have the skills for solving complex and unstructured management problems in which alternatives must be identified, evaluated, and selected in accordance with economical procurement of resources, efficient utilization of resources, and effective accomplishment of overall Defense and Navy goals and objectives. This includes cost/benefit analysis, systems analysis, cost estimation, value engineering, business process reengineering, and application of relevant OMB and Defense regulations.

7. **Cost Management and Analysis**: The graduate will be able to design, implement, and evaluate different costing systems encountered within Defense and Navy organizations and activities, as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand the application of Defense unit costing guidelines to functional business areas, and the Office of Management and Budget's Cost Accounting Standards for major suppliers of goods and services to the federal government.

8. **Strategic Resource Management**: The graduate will have knowledge of strategic vision and strategic core competency concepts for setting long-range goals and objectives; designing programs to achieve objectives; assigning individual responsibility for resource management, actions, and decision making; measuring performance; reporting results; and evaluating and rewarding performance. This includes assessing customer needs and customer satisfaction, making recommendations, and implementing improvements in the effective delivery of goods and services to customers or users.

9. **Innovation and Creativity**: The graduate will demonstrate innovation and creativity in developing solutions to complex financial, budget, and program management issues that increase program effectiveness and customer satisfaction, while controlling the efficient utilization of financial, physical, and human resources. This involves the ability to identify problems and potential concerns, providing leadership, and teaming with others in the decision-making process, and obtaining support for recommended decisions or courses of action.

10. **Strategy and Policy**: Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to
future joint and combined operations, in order to
discern the relationship between a nation’s policies and
goals and the ways military power may be used to
achieve them. Fulfilled by completing the first of the
Naval War College series leading to Service
Intermediate-level Professional Military Education
(PME) and Phase I Joint PME credit.

Defense Systems Management-International -
Curriculum 818

Academic Associate
Alice W. Crawford
Code GB/Cr, Ingersoll Hall, Room 331B
(831) 656-2481, DSN 756-7646
acrawford@nps.edu

Brief Overview
This curriculum is designed for international students. It
provides international officers with the core MBA
interdisciplinary techniques of quantitative problem-
solving methods, management theory, management
science, economic analysis, and financial management.
These skills enable the officers to manage and allocate
defense resources, evaluate written research, and analyze
products of others throughout their careers. The
curriculum will further provide the officers with the
specific functional skills required for effective leadership
and defense resources management.

This curriculum permits students the opportunity to design
their own concentration. Concentration areas and courses
are determined after consultation with the Academic
Associate. The 818 program allows students to design a
program of course work specific to management
effectiveness in the host country’s military system. The
student may elect to specialize in the relevant portion of a
functional area, such as financial management, logistics,
human resources and organization management, or
manpower and personnel analysis. Or, the student may
choose to follow a general management program, which
would include an overall balance of courses from many
functional areas. International students are free to choose
any of the specific management curricula available.

Requirements for Entry
A baccalaureate degree with above-average grades is
required. Completion of at least two semesters of college
algebra or trigonometry is considered to be the minimum
mathematical preparation. An APC of 345 is required for
entry. International students should refer to the
Admissions section for current TOEFL and entrance
requirements.

Resource Planning and Management - International - Curriculum 820

Academic Associate
Alice W. Crawford
Code GB/Cr, Ingersoll Hall, Room 331B
(831) 656-2481, DSN 756-7646
acrawford@nps.edu

Brief Overview
The Resource Planning and Management for International Defense curriculum is an interdisciplinary program designed exclusively for officers and civilian employees in defense agencies of other countries. The program focuses on economic analysis, the management of financial, material, and human resources, domestic and international political institutions, civil-military relations, and the role of international law. The curriculum includes a combination of existing courses within the Graduate School of Business and Public Policy and the Department of National Security Affairs, and courses especially designed for this program. In the majority of courses, international students will study and learn with U.S. students from several other management and national security affairs curricula.

Requirements for Entry
A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Program Officer
Jefferson E. McCollum, CDR, USN, SC
Code GB, Ingersoll Hall, Room 201
(831) 656-3953, DSN 756-3953
jemccoll@nps.edu
The Master of Science in Management program prepares graduates to manage in complex defense organizations and to conduct rigorous analyses of organizational problems, policies and operations. To accomplish these goals, the program places particular emphasis on developing students’ mathematical and statistical skills and their ability to analyze and model complex phenomena. Program graduates will:

- Be well grounded in fundamental areas of management, including accounting, financial management, operations, economics, acquisition, strategy and organizational management.
- Understand the economic, political, governmental, defense and organizational environments that influence their decisions and the organizations in which they work.
- Possess the specialized knowledge, skills and abilities to serve in positions of significant responsibility within a specified Defense Management field (Manpower Systems Analysis, Defense Systems Analysis).
- Be able to apply advanced quantitative, statistical and modeling methodologies to analyze significant defense-related problems in a rigorous manner.
- Be capable of think in a critical, creative, integrative and strategic manner.

The Master of Science in Management degree requires:

1. Completion or validation of the Management Fundamentals program, which consists of a total of 32 quarter-hours of 2000 and 3000 level courses, including a minimum of the following hours by discipline:
   - Accounting and Financial Management (6)
   - Economics (6)
   - Organization and Management (6)
   - Quantitative Methods (8)
2. In addition to the above, completion of a minimum of 48 hours of graduate-level courses, at least 12 hours of which are at the 4000 level.
3. Completion of an approved sequence of courses in the student’s area of concentration.
5. Approval of the candidate’s program by the Dean, GSBPP.

**Defense Systems Analysis - Curriculum 817**

**Academic Associate**

Donald E. Summers, M.S.
Code GB/Ds, Ingersoll Hall, Room 337
(831) 656-3632, DSN 756-3632
desummer@nps.edu

**Brief Overview**

This curriculum provides officers with the fundamental interdisciplinary techniques of quantitative problem-solving methods, behavioral and management science, economic analysis, and financial management. The curriculum educates students to evaluate others' research and analysis and to develop in them sound management and leadership skills. This curriculum is an interdisciplinary program that integrates mathematics, accounting, economics, behavioral science, management theory, operations/systems analysis, and a subspecialty into an understanding of the process by which the defense mission is accomplished.

**Requirements for Entry**

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements.

1. **Management Fundamentals:** The graduate will have the ability to apply quantitative techniques, accounting, economics, finance, organization theory, information technology, and other state-of-the-art management techniques and concepts to military management problems. Also, the graduate will know basic management theory and practice, embracing leadership, ethics, written and oral communication, organization design, team building, human resource management, conflict resolution, quality assurance, cost-benefit analysis, risk analysis, stakeholder analysis, and planning within military organizations, as well as military sub-units and activities. This ensures internal and external constituencies are considered in resource management.

2. **Strategic Vision and Defense Budgeting:** The graduate will understand the roles of the executive and legislative branches in strategic planning, setting federal fiscal policy, allocating resources to national defense, budget formulation, budget negotiation, budget justification, and budget execution strategies, including the principles of Federal Appropriations Law. In addition, the graduate will have knowledge of all aspects of the federal, Defense, and Navy budget cycles including the Planning, Programming, Budgeting, and Execution System with emphasis on budget formulation and execution.

3. **Modeling and Analysis:** The graduate will be well-versed in applications of probability and statistics to the modeling, simulation, and analysis of military decision problems. The graduate will have gained knowledge in all aspects of analytical studies, including reviewing, critiquing, highlighting critical assumptions, recognizing strengths and weakness of applied analytical methodologies, and evaluating study recommendations. In addition, the graduate will be able to design and conduct analytical studies. This includes formulating problems, using the analytical process to define study requirements, applying appropriate analytical methodologies, and presenting the results effectively both orally and in writing.

4. **Acquisition and Program Management:** The graduate will understand the purpose and concepts, fundamentals and philosophies of the defense systems acquisition process, and the practical application of program management methods within this process. This includes systems acquisition management; the systems acquisition life cycle; user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. This satisfies the Defense Acquisition University education equivalency requirements for defense acquisition professionals as specified in Congress' Defense Acquisition Workforce Improvement Act (DAWIA).

5. **Economy, Efficiency, and Effectiveness:** The graduate will have the skills for solving complex and unstructured management problems in which alternatives must be identified, evaluated, and selected in accordance with economical procurement of resources, efficient utilization of resources, and effective accomplishment of overall Defense and Navy goals and objectives. This includes cost/benefit analysis, systems analysis, cost estimation, value engineering, business process reengineering, and application of relevant OMB and Defense regulations.
6. **Cost Management and Analysis**: The graduate will be able to design, implement, and evaluate different costing systems encountered within Defense and Navy organizations and activities, as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand the application of Defense unit costing guidelines to functional business areas, and the Office of Management and Budget's Cost Accounting Standards for major suppliers of goods and services to the federal government.

7. **Strategic Resource Management**: The graduate will have knowledge of strategic vision and strategic core competency concepts for setting long-range goals and objectives; designing programs to achieve objectives; assigning individual responsibility for resource management, actions, and decision making; measuring performance; reporting results; and evaluating and rewarding performance. This includes assessing customer needs and customer satisfaction, making recommendations, and implementing improvements in the effective delivery of goods and services to customers or users.

8. **Innovation and Creativity**: The graduate will demonstrate innovation and creativity in developing solutions to complex financial, budget, and program management issues that increase program effectiveness and customer satisfaction, while controlling the efficient utilization of financial, physical, and human resources. This involves the ability to identify problems and potential concerns, providing leadership, and teaming with others in the decision-making process, and obtaining support for recommended decisions or courses of action.

9. **Strategy and Policy**: Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation's policies and goals and the ways military power may be used to achieve them. Fulfilled by completing the first of the Naval War College series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.

**Brief Overview**

The Manpower Systems Analysis Curriculum (MSA) leading to the MSM degree is designed for U.S. and international officers. Officers enrolled in the Manpower Systems Analysis curriculum at the Naval Postgraduate School undertake the challenge of an academic program designed to fill leadership and analytical roles in military manpower personnel, training, and education management. MSA subspecialists are responsible for developing and analyzing policies to ensure that the Navy and DoD are recruiting, training, utilizing and retaining personnel in the most efficient and effective ways possible. MSA is an analytical curriculum intended to develop skills necessary to perform and evaluate manpower analyses and manage the Navy's Human Resource community of interest. As such, the curriculum emphasizes mathematical, statistical, and other quantitative and qualitative analysis methods. Successful completion of the curriculum yields an officer skilled in conducting manpower personnel, training, and education policy analysis. The areas covered in the MSA curriculum include an understanding of manpower, personnel, training, education policy development, managing diversity, compensation systems, enlistment supply and retention models, manpower training models, manpower requirements determination processes, career mix, enlistment and reenlistment incentives, training effectiveness measures, and hardware/manpower trade-offs. Students gain familiarity with current models and methods of manpower analysis and economics as well as military manpower organizations, information systems and issues. The curriculum directly supports the Navy Human Resource Community of Interest.

**Requirements for Entry**

A baccalaureate degree with above-average grades is required. Completion of at least two semesters of college algebra or trigonometry is considered to be the minimum mathematical preparation. Additional preparation in calculus and statistics is advisable. An APC of 345 is required for entry. International students should refer to the Admissions section for current TOEFL and entrance requirements. Prospective students electing MSA as a curriculum must be adequately prepared by their undergraduate course work and comfortably oriented to a quantitatively and analytically rigorous graduate curriculum.

**Entry Date**

July

**Program Length**

* Not required for International students, US Army or USAF. International students take American Life and Institutions (IT1500) and Communication Skills for International Officers (IT1600) in quarters 1 and 2. USN students can complete JPME by taking four Naval War College courses.

Educational Skills Requirements (ESR)

Manpower Systems Analysis - Curriculum 847 Subspecialty Code 3130P

1. Management Fundamentals - Organization and Management: The graduate will have the ability to apply contemporary management principles, organizational theory, and social science methodology to the development, implementation, and management of effective MPT&E policies and programs throughout DoN/DoD. The graduate will have the ability to use and understand computer systems in...
problem solving and will have a basic understanding of management information systems and E-Business.

2. **Budgeting and Financial Controls:** The graduate will have an understanding of basic financial management practices of DoN/DoD and will be able to conduct cost benefit analyses and participate in the budgetary planning of commands and/or DoN programs. The graduate will have an understanding of the Planning, Programming, Budgeting Execution System (PPBES) and the ability to analyze the impact of budgetary changes on DoN/DoD manpower and personnel programs and policies.

3. **Automated Data Analysis:** The graduate will possess the skills in data manipulation, statistics, and exploratory data analysis to be able to formulate and execute analyses of a wide variety of manpower, personnel, and training issues. The graduate will have proficiency in computing and interactively apply a variety of methods to large-scale DoN and DoD databases. The graduate will have a working understanding of the manpower information systems.

4. **Management Fundamentals - Analytical Techniques:** The graduate will be able to apply mathematical, statistical, accounting, economic and other analytical techniques and concepts to day-to-day military management issues. The graduate will be able to gather and analyze qualitative data. The graduate will also be able to use these techniques and concepts as a participant in the long-range strategic planning efforts of the Navy and DoD.

5. **Advanced Quantitative and Qualitative Analysis:** The graduate will have the ability to apply a wide range of advanced organizational, economics, statistical, and mathematical techniques and concepts to manpower and personnel policies and issues. These include the use of econometric techniques in the quantitative analysis of large-scale DoN/DoD manpower and personnel databases, of qualitative techniques in the analysis of survey and personnel data, of manpower decision support systems, and of Markov models in the analysis of force structure and manpower planning, forecasting, and flow models.

6. **Manpower Systems Analysis Fundamental Concepts:** The graduate will have an understanding of the fundamental concepts and basic functional areas of manpower, personnel, training, and education (MPT&E) within DoN/DoD as listed below, as well as an understanding of the MPT&E systems and their interrelationships.

7. **Manpower:** Requirements determination; billet authorizations; billet costs; end strength planning; and total force planning and programming.

8. **Personnel:** Recruiting; accession plans and policies; officer and enlisted community management; attrition; retention; compensation; and readiness.

9. **Training:** Applications of theories of learning; instructional technologies; the systems approach to training; evaluation of training effectiveness and cost; and the relationship between training and fleet readiness.

10. **Manpower Systems Policy Analysis:** The graduate will have the ability to analyze critically the strengths and weaknesses of proposed manpower, personnel, and training policies and to suggest alternatives that recognize the potential impact on DoN/DoD program planning, resources, and objectives.

11. **Joint Military Strategic Planning:** The graduate will have an understanding of the development and execution of military strategy, the effects of technical developments on warfare, and the processes for formulating U.S. policy, the roles of military forces, joint planning, and current issues in the defense organization. This understanding will include expertise on the combined use of active and reserve forces in joint warfare.

12. **Evaluation, Innovation, and Creativity:** The graduate will demonstrate individual initiative and creativity in the application of the skills and knowledge gained from the Manpower Systems Analysis program. The graduate will select a manpower, personnel, training, or education policy or management issue of importance to DoN/DoD, develop a plan to investigate the issue, analyze all of its aspects, suggest a solution as appropriate, and report the significant findings and recommendations in writing by means of a thesis.

Brief Overview
The Executive Master of Business Administration (EMBA) is a defense-focused general management program for more senior DoN officers (805) and senior DoN civilians (see 807 curriculum). The program design and coursework capitalizes on the current managerial and leadership experience of program participants. Specifically, the EMBA goals are to provide participants with:

- A solid background in management fundamentals
- Focus on financial management and acquisition knowledge and abilities
- Analytical and critical thinking skills to make decisions under conditions of extreme uncertainty
- Opportunities for interaction so that managers can learn from each other
- Projects and activities relevant for today's knowledge-driven, team-based environment

The EMBA is a 24-month, part-time, distance learning degree program. Classes meet once a week, approximately 6-7 hours per day, depending on course units.

Requirements for Entry
The program has the following admissions criteria:

- Lt Commander (O4) and above with Department Head tour completed, Lieutenants admitted by exception
- Civilians GS-12 and above or middle-level management experience - see 807 curriculum
- Undergraduate degree from an accredited four-year college or university
- APC of 245 (GPA > 2.6)

Entry Dates
The 805 EMBA program entry dates are March and September (807 entry date is January).

Degree
Completion of this program results in an Executive Master of Business Administration degree. Requirements for the degree are met by:

- Completing 37 hours of core EMBA courses and 17 hours of an approved sequence of BPP electives
- The 17 hours of approved electives can be tailored to meet student sponsor needs
- Remaining a student in "good academic standing" as defined by NPS criteria

Curriculum Subspecialty
Completion of the EMBA degree program qualifies an officer for subspecialty code 3100P, Resource Management-Defense Focus.

Educational Skills Requirements (ESR)
Executive MBA - Curriculum

805 Subspecialty Code 3100P

1. Business Ethics and Moral Development: The graduate will understand the ethical challenges of the global Defense business environment facing senior Navy corporate business leaders and resource managers, and develop the critical thinking and analytical skills required to address complex issues. In addition, the students will develop a personal approach to achieve ethical outcomes in the decision making process.

2. Complex Systems Thinking: The graduate will be able to diagnose complex Navy and DoD problems from a systems perspective and offer solutions that maintain system alignments.

3. Managing and Leading Complex Change: The graduate will understand the managerial and leadership levers required to institute and manage complex change and the implementation strategies necessary to ensure change initiatives reach all organizational levels.

4. Strategic Thinking: The graduate will have knowledge of senior-level decision-making processes under conditions of significant uncertainty within the unique context of DoD organizations. In addition, students will learn how to implement these decisions, evaluate their effectiveness, and determine steps to take if desired outcomes aren’t reached.

5. Analysis for Efficiency and Effectiveness: The graduate will be able to use various statistical methods to solve complex and unstructured problems in which alternatives will be evaluated and selected based on cost and systems analysis factors. This includes the use of probability theory, decision models and decision analysis, decision trees, forecasting, and simulation to make decisions under conditions of uncertainty with competing objectives.

6. Program Management Policies: The graduate will have an ability to execute Defense acquisition policies, strategies, plans and procedures; an understanding of the policy-making roles of various federal agencies of the executive, legislative and judicial branches of the Government, particularly the Department of Defense (DoD), the General Accounting Office (GAO), congressional committees, the Office of Management and Budget (OMB); and an understanding of the strategies necessary to influence policy development and implementation.

7. System Acquisition Process: The graduate will understand the theory of the systems acquisition process. This involves the major system life cycle process for requirements determination, research and development, funding and budgeting, procurement, systems engineering, test and evaluation, manufacturing and quality control, integrated logistics support, ownership and disposal; the interrelationship between reliability, maintainability and logistics support as an element of system effectiveness in Defense system/equipment design; and embedded weapon system software, particularly related to current policies and standards, software metrics, risk management, inspections, testing, integration, and post-deployment software support.

8. Federal and Defense Budgeting: The graduate will understand the roles of the executive and legislative branches in setting Federal/Defense fiscal policy, allocating resources to national defense, budget formulation, negotiation, and execution strategies. In addition, the graduate will have knowledge of all aspects of the Federal, Defense, and Navy budget cycles including the Planning, Programming, Budgeting and Execution (PPBE) process with emphasis on budget formulation and execution of the budget authority provided by Congress in response to DoD budget requests, including an evaluation of the expected benefits to be derived under funded programs.

9. Defense Financial Management: The graduate will understand how appropriated, revolving, and non-appropriated funds are to be managed in compliance with regulations of the Comptroller of the Navy and the federal government. Also, the graduate will understand and be able to review financial reports, ask pointed questions about budget execution against operating and financial plans, assess the quality of alternate plans based on analyses of an activity’s financial performance, and determine the quality of recommendations regarding the reallocation or reprogramming of funds. The graduate will be familiar with federal and private sector financial reporting systems, standards, and practices.
10. **Cost Management and Analysis**: The graduate will be able to understand and evaluate different costing systems encountered within Defense and Navy organizations and activities as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand cost accounting standards applicable to Federal organizations and to private sector suppliers of goods and service to the federal government.

11. **Defense Economics**: The graduate will be able to apply the fundamental tools of micro- and macroeconomic theory to Defense management and resource allocation decisions. Additionally, the student will understand markets and their interactions with Defense acquisition and contracting processes, the national security implications of globalization, and efficiency in Defense decision making.

12. **Operations/Supply Chain Management**: The graduate will understand the management of manufacturing and service operations and how Defense managers can effectively design and control operational processes to achieve world-class performance in these types of operations. The student will also have a knowledge of the use of strategic purchasing initiatives to derive a competitive advantage from Defense procurement and sourcing strategies to achieve increased efficiency and enhanced performance in the global Defense and commercial supply chain management environments.

13. **Evaluation, Innovation, and Creativity**: The graduate will demonstrate innovation and creativity in developing solutions to complex financial, budgetary, personnel, program management, or acquisition issues in response to the business need of a senior naval client/stakeholder. This involves the ability to identify and evaluate problems or opportunities, team with others to conduct in-depth analysis, and recommend courses of action for the client to better execute assigned Navy responsibilities. The solutions will be given to the client in a formal presentation and a technical report.

In addition, the graduate will have knowledge of all aspects of the Federal, Defense, and Navy budget cycles including the Planning, Programming, Budgeting and Execution (PPBE) process with emphasis on budget formulation and execution of the budget authority provided by Congress in response to DoD budget requests, including an evaluation of the expected benefits to be derived under funded programs.

9. **Defense Financial Management:** The graduate will understand how appropriated, revolving, and non-appropriated funds are to be managed in compliance with regulations of the Comptroller of the Navy and the federal government. Also, the graduate will understand and be able to review financial reports, ask pointed questions about budget execution against operating and financial plans, assess the quality of alternate plans based on analyses of an activity's financial performance, and determine the quality of recommendations regarding the reallocation or reprogramming of funds. The graduate will be familiar with federal and private sector financial reporting systems, standards, and practices.

10. **Cost Management and Analysis:** The graduate will be able to understand and evaluate different costing systems encountered within Defense and Navy organizations and activities as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand cost accounting standards applicable to Federal organizations and to private sector suppliers of goods and service to the federal government.

11. **Defense Economics:** The graduate will be able to apply the fundamental tools of micro- and macroeconomic theory to Defense management and resource allocation decisions. Additionally, the student will understand markets and their interactions with Defense acquisition and contracting processes, the national security implications of globalization, and efficiency in Defense decision making.

12. **Operations/Supply Chain Management:** The graduate will understand the management of manufacturing and service operations and how Defense managers can effectively design and control operational processes to achieve world-class performance in these types of operations. The student will also have a knowledge of the use of strategic purchasing initiatives to derive a competitive advantage from Defense procurement and sourcing strategies to achieve increased efficiency and enhanced performance in the global Defense and commercial supply chain management environments.

13. **Evaluation, Innovation, and Creativity:** The graduate will demonstrate innovation and creativity in developing solutions to complex financial, budgetary, personnel, program management, or acquisition issues in response to the business need of a senior naval client/stakeholder. This involves the ability to identify and evaluate problems or opportunities, team with others to conduct in-depth analysis, and recommend courses of action for the client to better execute assigned Navy responsibilities. The solutions will be given to the client in a formal presentation and a technical report.

---

**Master of Executive Management - Curriculum 808**

**Academic Associate**

Bryan J. Hudgens, Lt Col, USAF  
Code GB, Ingersoll Hall, Room 219A  
(831) 656-2039, DSN 756-2039  
bjhudgen@nps.edu

**Brief Overview**

The Master of Executive Management (MEM) degree program is a defense-focused, general management program for more senior DoD officers. The MEM goals are to provide participants with

- A solid background in management fundamentals
- Analytical and critical thinking skills to make decisions under conditions of uncertainty

**Requirements for Entry**

The program has the following admissions criteria:

- USAF Major (O4) and above, or analogous rank for other services.
- USAF selected for Intermediate Development Education (IDE), and analogous selectivity for other services.
- APC of 245 (GPA > 2.6)
Entry Dates
January and July

Program Length
One Year

Degree
Completion of this program results in the Master of Executive Management degree. Requirements for the degree are met by completing:
- Completion of a minimum of 54 credit hours of graduate level courses, at least 12 hours of which are at the 4000 level
- Completion of a MEM Core sequence consisting of a minimum of 37 credit hours of 3000 and 4000 level GB and MN courses.
- Completion of a specialty sequence of 3000 or 4000 level courses, totaling a minimum of 15 credit hours, as approved by the Academic Associate

Curriculum Sponsor
Deputy Assistant Secretary of the Air Force (Contracting), Assistant Secretary (Acquisition)

Typical Course of Study: Curriculum 808

Educational Skills Requirements (ESR)
Master of Executive Management - Curriculum 808

1. Complex Systems Thinking: The graduate will be able to diagnose complex DoD problems from a systems perspective and offer solutions that maintain system alignments.

2. Managing and Leading Complex Change: The graduate will understand the managerial and leadership levers required to institute and manage complex change and the implementation strategies necessary to ensure change initiatives reach all organizational levels.

3. Strategic Thinking: The graduate will have knowledge of senior-level decision-making processes under conditions of significant uncertainty within the unique context of DoD organizations. In addition, students will learn how to implement these decisions, evaluate their effectiveness, and determine steps to take if desired outcomes aren’t reached.

4. Understanding of Information Technologies: The graduate will be able to analyze critically, from a senior management perspective, their own organizations in light of electronic-business (e-Business) technologies, business models, and managerial techniques. Students also explore the relationship between Information Technologies (e-Business) strategy and Department of Defense Transformation, and how to integrate both theory and application to effectively organize and manage in the networked, paperless on-line enterprise of today and tomorrow.

5. Analysis for Efficiency and Effectiveness: The graduate will be able to use various statistical methods to solve complex and unstructured problems in which alternatives will be evaluated and selected based on cost and systems analysis factors. This includes the use of probability theory, decision models and decision analysis, decision trees, forecasting, and simulation to make decisions under conditions of uncertainty with competing objectives.

6. System Acquisition and Program Management Policies and Process: The graduate will understand the theory of the systems acquisition process. This involves the major system life cycle process for requirements determination, research and development, funding and budgeting, procurement, systems engineering, test and evaluation, manufacturing and quality control, integrated logistics support, ownership and disposal; the interrelationship between reliability, maintainability and logistics support as an element of system effectiveness. The graduate will have an ability to execute Defense acquisition policies, strategies, plans and procedures; an understanding of the policy-making roles of various Federal agencies of the...
Executive, Legislative and Judicial branches of the Government, particularly the Department of Defense (DoD), the General Accounting Office (GAO), Congressional committees, the Office of Management and Budget (OMB); and an understanding of the strategies necessary to influence policy development and implementation.

7. **Federal and Defense Budgeting**: The graduate will understand the roles of the executive and legislative branches in setting Federal/Defense fiscal policy, allocating resources to national defense, budget formulation, negotiation, and execution strategies. In addition, the graduate will have knowledge of all aspects of the Federal and Defense budget cycles including the Planning, Programming, Budgeting and Execution (PPBE) process with emphasis on budget formulation and execution of the budget authority provided by Congress in response to DoD budget requests, including an evaluation of the expected benefits to be derived under funded programs.

8. **Cost Management and Analysis**: The graduate will be able to understand and evaluate different costing systems encountered within Defense organizations and activities as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand cost accounting standards applicable to Federal organizations and to private sector suppliers of goods and service to the Federal government.

9. **Defense Economics**: The graduate will be able to apply the fundamental tools of micro- and macroeconomic theory to Defense management and resource allocation decisions. Additionally, the student will understand markets and their interactions with Defense acquisition and contracting processes, the national security implications of globalization, and efficiency in Defense decision making.

10. **Operations Management**: The graduate will understand the management of manufacturing and service operations and how Defense managers can effectively design and control operational processes to achieve world-class performance in these types of operations.

wowen@nps.edu

**Brief Overview**

The Master of Science in Contract Management (MSCM) degree is designed to provide civilians in the Department of Defense (DoD) and other federal government agencies an advanced education in the concepts, methodologies and analytical techniques necessary for successful management of acquisition and contracting within complex organizations. The curriculum focuses on problem solving and decision making within the acquisition environment utilizing case studies, teaming exercises, hands-on applications, active participation, and other similar activities. Lecture and laboratory tasks require the application of critical thinking to problem solving within actual situations. The MSCM Program embodies an interdisciplinary approach to problem solving and analysis, including quantitative financial analysis, economics, and public and private sector operations. The curriculum is designed to provide civilians with the knowledge, skills, and abilities to manage and lead effectively in systems buying offices, field contracting offices, contract administration offices, and contracting policy offices.

**Requirements for Entry**

Candidates for the program must have achieved the following: a baccalaureate degree with a minimum undergraduate quality point rating (QPR) of 2.20.

**Entry Dates**

January, April, July, October. (Dependent on cohort availability)

**Program Length**

Eight Distance-Learning Quarters

**Application Process**

Navy Department civilians may apply for the MSCM by submitting an online application, and adhere to your service or agency application process. For further
information, contact the Academic Associate for this curriculum or the Program Officer.

**Degree**

The Master of Science in Contract Management degree requires:

- Completion of a minimum of 48 credit hours of graduate-level courses, at least 12 that are at the 4000 level. (Credit hour requirement does not include 4 hours assigned for the Joint Applied Project.)
- Completion of an acceptable Joint Applied Project, with at least one advisor from the Graduate School of Business and Public Policy.
- Approval of the candidate's program by the Dean, Graduate School of Business and Public Policy.

**Typical Course of Study: Curriculum 835**

**Quarter 1**
- MN3012 (3-0) Communications Strategies for Effective Leadership
- MN3221 (3-0) Principles of Acquisition and Program Management (part 1)

**Quarter 2**
- MN3001 (3-0) Economics for Acquisition Managers
- MN3222 (3-0) Principles of Acquisition and Program Management (part 2)

**Quarter 3**
- MN3312 (4-0) Government Contracts Law
- MN4474 (3-1) Organizational Analysis

**Quarter 4**
- MN3172 (3-0) Resourcing National Security: Policy and Process
- MN3315 (4-0) Acquisition Management and Contract Administration

**Quarter 5**
- MN3304 (5-2) Contract Pricing and Negotiations

**Quarter 6**
- MN3318 (2-0) Contingency Contracting
- MN4105 (3-0) Strategic Management

**Quarter 7**
- MN4311 (3-0) Contracting for Services
- MN4090 (2-0) Joint Applied Project

**Quarter 8**
- MN4371 (4-0) Acquisition and Contracting Policy
- MN4090 (2-0) Joint Applied Project

---

**Educational Skills Requirements (ESR)**

**Contract Management - Curriculum 835**

1. **Advanced Management Concepts**: The graduate will have the ability to apply advanced management theory and techniques to problems in both the public and private sectors. This includes policy formulation and execution, strategic planning, resource allocation, federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated approaches. The graduate will have the ability to apply state-of-the-art management concepts and practices to problem solving and decision-making responsibilities as middle and senior managers.

2. **Acquisition and Contracting Principles**: The graduate will have an understanding of and will be able to apply the principles and fundamentals of acquisition and contracting within the federal government including knowledge of the acquisition laws and regulations, particularly the Federal Acquisition Regulation (FAR) and the Defense FAR Supplement (DFARS); the unique legal principles applied in government contract law and the Uniform Commercial Code; and the application of sound business principles and practices to Defense contracting problems. Further, the graduate will be able to apply innovative and creative approaches not only to resolve difficult acquisition and contracting issues but to significantly influence the legal and regulatory structure within which acquisition decision making occurs. Finally, the graduate will have the ability to conceptualize, develop and execute strategic business alliances and relationships necessary to the successful acquisition of goods and services.

3. **Contracting Process**: The graduate will understand the theory of and have the ability to manage the field contracting, system acquisition and contract administration processes. This involves a knowledge of the defense system life cycle processes, including requirements determination, funding, contracting, ownership, and disposal; an ability to evaluate military requirements, specifications, and bids and proposals; an ability to utilize the sealed bid, competitive proposals and simplified acquisition methodologies; a comprehensive knowledge of all contract types and their application in Defense acquisition; an ability to conduct cost and price analyses; and an ability to negotiate various contracting actions including new procurement, contract changes and modifications, claims, equitable adjustment settlements, and noncompliance issues.

4. **Acquisition and Contracting Policy**: The graduate will have an ability to formulate and execute acquisition
policies, strategies, plans and procedures; a knowledge of the legislative process and an ability to research and analyze acquisition legislation; and a knowledge of the government organization for acquisition, including Congress, the General Accounting Office, the Office of Federal Procurement Policy, the federal and military contracting offices, the Boards of Contract Appeals, and the court system.

5. **Business Theory and Practices**: The graduate will have an understanding of the business philosophy, concepts, practices and methodologies of the commercial industrial base (both domestic and global) and the ability to apply these to the federal government acquisition environment.

6. **Defense Financial Management and Budgeting**: The graduate will have an ability to apply sound financial management theories, principles and practices to defense acquisition and contracting issues, including fiscal and monetary policy.

7. **Production and Quality Management**: The graduate will have an understanding of principles and fundamentals of Production and Quality Management, with particular emphasis on the Procuring Contracting Officer’s and Administrative Contracting Officer’s roles and relationships with industry and the Government Program Manager.

8. **Analysis and Application**: The graduate will demonstrate an ability to apply acquisition, contracting and management principles in dealing with the significant issues encountered in managing the contracting process in one of the following areas: (1) major weapon systems acquisition, (2) research and development, (3) field procurement, and (4) facilities contracting.

9. **Ethics and Standards of Conduct**: The graduate will have an ability to manage and provide leadership in the ethical considerations of military acquisition, including the provisions of procurement integrity, and to appropriately apply Defense acquisition standards of conduct.

10. **Acquisition Workforce**: The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory contracting courses required by the Defense Acquisition University (DAU) at Level III.

11. **Analysis, Problem Solving and Critical Thinking**: The graduate will demonstrate the ability to conduct independent research and analysis, and proficiency in presenting the results in writing and orally by means of a thesis and a command-oriented briefing appropriate to this curriculum.

---

**Master of Science in Program Management (MSPM) - Curriculum 836**

**Academic Associate**
Brad R. Naegle  
Code GB/Nb, Ingersoll Hall, Room 206

(831) 656-2048 or (636) 925-2982, DSN 756-2048  
wowen@nps.edu

**Brief Overview**
The Master of Science in Program Management (MSPM) degree is designed to provide primarily civilians (officers may participate with sufficient time on station to complete the program) in the Department of Defense (DoD), other federal agencies, and a limited number of DoD contractor personnel, an advanced education in the concepts, methodologies and analytical techniques necessary for successful management of programs/projects within complex organizations. The curriculum focuses on leadership, problem solving and decision making within the acquisition environment utilizing case studies, teaming exercises, hands-on applications, active participation and integrative exercises. Lecture and laboratory tasks require the application of critical thinking to problem solving within notional and actual situations. Student input includes civilians (officers) from all DoD services and other federal agencies. The curriculum is designed to provide graduates with the knowledge, skills and abilities to manage and lead effectively in the federal government acquisition environment.

**Requirements for Entry**
Candidates for the program must have achieved the following: a baccalaureate degree with a minimum undergraduate quality point rating (QPR) of 2.20; full certification at Level II or higher in any discipline under the provisions of the Defense Acquisition Workforce Improvement Act (DAWIA) (or equivalent certification for non-DoD personnel). In addition to institutional funding support, students must also provide a command endorsement/letter of support from their command or home organization.

**Entry Dates**
April and October (dependent on sufficient demand)

**Program Length**
Eight Distance-Learning Quarters
Degree

The Master of Science in Program Management degree requires:

- Completion of a minimum of 48 credit hours of graduate-level courses, at least 12 which are at the 4000 level.
- Completion of an acceptable joint applied project, with at least one advisor from the Graduate School of Business and Public Policy.
- Approval of the candidate’s program by the Dean, Graduate School of Business and Public Policy.

Curriculum Sponsor

The Curriculum Sponsor is the Director, Acquisition Career Management (DACM) in the Office of the Assistant Secretary of the Army (Acquisition, Logistics and Technology). The curriculum satisfies the mandatory Level III Defense Acquisition University (DAU) in Program Management and provides numerous other DAU certifications satisfying requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and provides qualifying training and education for critical acquisition positions. (For those who have not already obtained certification in the Test & Evaluation; Systems Engineering; and Manufacturing/Production, Quality Assurance career fields, this program achieves Level II in these career fields, as well as satisfying Intermediate Software Acquisition Management (SAM 201)).

Educational Skills Requirements (ESR)

Program Management - Curriculum 836

1. **Management Fundamentals**: The graduate will understand the theory of and have an ability to apply accounting, economic, mathematical, statistical, managerial and other state-of-the-art management techniques and concepts to problem solving and decision-making responsibilities as Department of Defense managers. The graduate will have the ability to think creatively, addressing issues and problems in a dynamic, challenging environment.

2. **Advanced Leadership and Management Concepts**: The graduate will have the ability to apply advanced leadership, management and operations research techniques to defense problems. This includes policy formulation and execution, strategic planning, defense resource allocation, project leadership, cost benefit and cost effectiveness analysis, federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated leadership abilities.

3. **Program Leadership and Management Principles**: The graduate will have an understanding of and will be able to apply the principles, concepts, and techniques of Program Leadership and Program Management to the acquisition of major defense weapon systems. This includes the principles of risk management and tradeoff decision analysis using Total Ownership Cost, schedule and performance dynamics from a total life cycle management perspective.

4. **Program Management Policies**: The graduate will have an ability to formulate and execute Defense acquisition policies, strategies, plans and procedures; an understanding of the policy-making roles of various federal agencies of the Executive, Legislative and Judicial branches of the Government, particularly the Department of Defense (DoD), the General Accounting Office (GAO), Congressional
committees, the Office of Management and Budget (OMB); and an understanding of the strategies necessary to influence policy development and implementation.

5. **Systems Acquisition Process**: The graduate will understand the theory of and have an ability to lead program teams and manage the systems acquisition process. This involves the system life cycle process for requirements determination, research and development, funding and budgeting, procurement, systems engineering, including systems of systems, test and evaluation, manufacturing and quality control, integrated logistics support, ownership and disposal; the interrelationship between reliability, maintainability and logistics support as an element of system effectiveness in Defense system/equipment design; and embedded weapon system software, particularly related to current policies and standards, software metrics, risk management, inspections, testing, integration, and post-deployment software support.

6. **Contract Management**: The graduate will understand the role of the contracting process within the acquisition environment including financial, legal, statutory, technical and managerial constraints in the process.

7. **Business Theory and Practices**: The graduate will have an understanding of the business and operating philosophies, concepts, practices and methodologies of the defense industry with regard to major weapon systems acquisition, particularly the application of sound business practices.

8. **Government and Industry Budgeting and Financial Management**: The graduate will have an understanding of and an ability to apply the principles of government and private organizational financing including corporate financial structures, cost and financial accounting, capital budgeting techniques, financial analysis, and Defense financial management and budgeting processes to include the Planning, Programming, Budgeting Execution System (PPBES).

9. **Acquisition Workforce**: The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory Program Management courses required by the Defense Acquisition University (DAU) at Levels I, II, and III.

10. **Ethics and Standards of Conduct**: The graduate will have an ability to manage and provide leadership in the ethical considerations of defense acquisition, including the provisions of procurement integrity, and to appropriately apply defense acquisition standards of conduct.

11. **Analysis, Problem Solving and Critical Thinking**: The graduate will demonstrate the ability to conduct research and analysis, and proficiency in presenting the results in writing and orally by means of an applied project and a command-oriented briefing appropriate to this curriculum.

**Curriculum Sponsor and ESR Approval Authority**

836 U. S. Army ASA/ALT (DDACM)

**Non-Degree Professional Development Programs**

The Graduate School of Business and Public Policy also administers several non-degree professional development programs consisting of both graduate education and professional courses taught in residence or via distance learning modes. Below is a brief explanation of each program.

**Advanced Acquisition Program (AAP) - Certificate in Program Management - Curriculum 211**

**Program Manager**
John T. Dillard  
Code GB/Dj, Ingersoll Hall, Room 336  
(831) 656-2650, DSN 756-2650  
jtdillar@nps.edu

**Brief Overview**

The Advanced Acquisition Program (AAP) is a 12-month, part-time, distance learning graduate certificate program that can also earn graduate credit toward NPS master's degree programs. Designed for both the DoD acquisition workforce and other professionals working with system acquisition and program management processes, the Advanced Acquisition Program provides a flexible, on-site alternative for education and Defense Acquisition Workforce Improvement Act (DAWIA) Program Management Level III certification. The AAP provides Acquisition Professionals and those associated with the DoD acquisition process an education resource for achieving DAWIA Level III Certification in Program Management with no student travel. This program is funded by the student's parent command, and is designed to accommodate professionals who are unable to travel away from the office for weeks of education. Schedules are coordinated with sponsoring commands, avoiding conflicts with major projects and deadlines.

The AAP is a three-phased graduate certificate program of seven courses delivered over four NPS academic quarters. While the three phases must be completed in sequence,
there is no requirement to complete them in the normal one-year timeframe (four academic quarters). AAP is a graduate-level program of in-depth acquisition and program management education, earning successful students 19.5 graduate credit hours towards a master's degree. It also provides DoD students with up to 195 hours of Continuous Learning under the USD (AT&L) Continuous Learning Program (CLP), 31.5 Continuing Education Units (CEU), 6.33 Business Credits toward the requirement for 24 for the GS-1102 series. The combined courses are equivalent to Defense Acquisition University's ACQ101, ACQ201, PMT250 and PMT352.

Requirements for Entry
A baccalaureate degree with above-average grades is desired.

Entry Dates
At the beginning of any quarter throughout an academic year (Jan, Apr, Jul, Oct).

Program Length
Four Quarters

Graduate Certificate Requirements
Requirements for the graduate certificate in program management are met by successful completion of all seven courses. Graduate credit is obtained by maintenance of a 3.0 grade point average on a 4.0 scale. Should a graduate of the Advanced Acquisition Program matriculate into the Master of Business Administration degree program in the Systems Acquisition Management (816) curriculum, or the Master of Science in Program Management (836), graduate credit for AAP courses will be applied to the curricula as appropriate.

Past Sponsors
U.S. Army Tank Automotive Command, Warren, MI; U.S. Army Soldier Support Center, Natick, MA; U.S. Navy Undersea Warfare Center, Newport, RI; U.S. Navy Surface Warfare Center, Dahlgren, VA.

Program Phases
The program is administered with a phased approach:

- Phase I is a full-quarter distance-learning course taught via VTC (6 hours in class per week) concentrating on Acquisition and Program Management breadth. Students who have completed ACQ101, 201, and PMT250 can omit this phase.
- Phase II is a series of five one-week courses (40 hours in class per week) taught on-site at the command.
- Phase III is a full-quarter, distance-learning course taught via VTC (4 hours of class per week) concentrating on Program Leadership through examination of case studies from actual Defense systems, IPT exercises, and application and written analysis of program management concepts.

Required Courses: Curriculum 211

Quarter 1
MN3331 (5-1) Principles of Acquisition and Program Management

Quarter 2 and 3
MN3361 (2-0) Information Technology and Software Acquisition Management
MN3362 (2-0) Design Verification and System Assessment
MN3363 (2-0) Manufacturing and Quality Management
MN3364 (2-0) Business Financial Contract and Management
MN3365 (2-0) Acquisition Logistics Management and Program Sustainment

Quarter 4
MN4366 (4-0) Program Management and Leadership

Acquisition Management Distance Learning Program (AMDLP) - Curriculum 212

Program Manager
Walter E. Owen, D.P.A.
Code GB/On, Ingersoll Hall, Room 335
(831) 656-2048 or (636) 925-2982, DSN 756-2048
wowen@nps.edu

Brief Overview
The Naval Postgraduate School offers acquisition management distance education graduate acquisition courses that satisfy certain Defense Acquisition University (DAU) mandatory training requirements and Defense Acquisition Workforce Improvement Act (DAWIA) requirements for 24 semester–hours of business subjects. These courses can also be taken for continuing education that can lead to a master’s degree program. These courses are offered primarily by video tele-education (VTE) distance learning methods.

Requirements for Entry
Courses are offered to both military and federal civilians. Undergraduate degree is preferred. Courses must be sponsored in full by a federal organization. Organizations interested in sponsoring courses must have a standards-based H.320- compatible system with a dial-up network capability at 384KPS (3- ISDN lines). The NPS AMDLP program manager can help arrange cost sharing partnerships between various interested organizations.
Contact the AMDLP program manager for more information and the latest price list.

**Available Program of Courses**

NPS/DAU equivalent courses are listed in the below matrix.

**Advanced Principles of Defense Acquisition and Program Management**

**DAU:** ACQ101/201, PMT250  
**NPS:** MN3331 (5-1)  
**Available:** Every quarter

**Fundamental Principles of Defense Acquisition and Program Management**

**DAU:** ACQ101  
**NPS:** MN3221 (2-1)  
**Available:** Every quarter

**Advanced Principles of Defense Acquisition and Program Management**

**DAU:** ACQ201/PMT250  
**NPS:** MN3222 (3-0)  
**Available:** Every quarter

**Fundamental Principles of Government Acquisition and Contracting**

**DAU:** CON101  
**NPS:** MN3303 (4-0)  
**Available:** Fall/Spring

**Management Functions and Decision-making Techniques for Best Value Competitively Negotiated Contracts**

**DAU:** CON202  
**NPS:** MN3315 (4-0)  
**Available:** Fall/Spring

**Examination of the Federal Government Legal Structure for Contracts with Private Industry**

**DAU:** CON210  
**NPS:** MN3312 (4-1)  
**Available:** Winter/Summer

**Concepts, Processes and Methods of Strategic Logistics Planning and Execution**

**DAU:** LOG304  
**NPS:** MN4470 (4-0)  
**Available:** Winter/Summer

**Principles and Concepts of Production and Quality Management in Defense Acquisition**

**DAU:** PQM101/201  
**NPS:** MN3384 (5-1)  
**Available:** Fall/Spring

**Management of Mission Critical Computer Resources In defense Software Acquisition**

**DAU:** SAM201  
**NPS:** MN3309 (4-0)  
**Available:** Winter/Summer

**Systems Engineering in the Defense Acquisition and Project Management Environment**

**DAU:** SYS201  
**NPS:** SE4011 (3-2)  
**Available:** Fall/Spring

**Management of Advanced Systems Engineering**

**DAU:** SYS301  
**NPS:** MN4012 (2-2)  
**Available:** Every Quarter

**Test and Evaluation of Defense Weapon Systems**

**DAU:** TST202/301  
**NPS:** OS4601 (4-0)  
**Available:** Winter/Summer

**Army Cost Management Certificate (Resident NPS Program) - Curriculum 213**

**Program Manager**

Alice Crawford, Senior Lecturer/Associate Dean  
831-656-2481 DSN 756-2481  
acrawford@nps.edu

**Brief Overview**

The Naval Postgraduate School offers this four-week resident graduate education program to prepare students to support improved cost measurement, management, and control efforts. The program of instruction provides 12 units of credit that may be applicable to further education programs.

**Requirements for Entry**

Courses are offered to selected Army military and civilians. Undergraduate degree is required.

For further information go to www.us.army.mil or contact Cecile Bachelor, Special Assistant for Enterprise Cost Strategy, Office of Deputy Assistant, Secretary of the Army for Cost & Economics, at (703) 692-7399 [DSN: 222-7399] or cecile.bachelor@us.army.mil.

**Entry Dates**

Ongoing basis.

**Program Length**

Four weeks.
Graduate Certificate Requirements
Completion of the following four courses.

**MN3352 Managerial Costing**
Content: Cost measurement concepts and techniques of cost analysis
Available: Per Army requirements six to eight times per year

**MN3353 Operations Management**
Content: Fundamentals of design, management, and control of operational processes
Available: Per Army requirements six to eight times per year

**MN4354 Cost Control**
Content: Control theory, practical examples of cost control issues and solutions including cost benefit analysis and case studies
Available: Per Army requirements six to eight times per year

**MN3355 Organizational Effectiveness for Cost Managers**
Content: Systems thinking, interpersonal communication, listening, motivation, leadership, message framing, decision making, persuasion, power and social influence, and negotiations
Available: Per Army requirements six to eight times per year

**Practical Comptrollership Course (PCC)**

**Program Manager**
Lisa F. Potvin, CAPT, USN
Ingersoll Hall, Room 219
(831) 656-3628, DSN 756-3628
pcc@nps.edu; lfpotvin@nps.edu

**Brief Overview**
The Naval Postgraduate School offers an intensive two-week course in defense financial management under the sponsorship of the Assistant Secretary of the Navy (Financial Management and Comptroller). The course is part of the Department of the Navy Civilian Financial Management Career Program. The Practical Comptrollership Course (PCC) is specifically designed for individuals (civilians and military officers) who are either incumbent or about to report to responsible positions in financial management at the headquarters, major command, or field activity level. The course content reaches across all disciplines involved in financial management and comptrollership including: planning, budgeting, budget execution, fiscal law, accounting, and internal controls.

**Requirements for Entry**
The course is designed for civilian (GS-9 through GS-14 or equivalent pay plan) and military (0-2 and above) financial managers. Quotas are allocated to major commands by ASN(FM&C) through the Financial Management Education Services Specialist (FMB-59). Prospective students should contact their major command comptroller's office for nomination procedures. NPS does not control quotas for this course.

**Entry Dates, Location, Length of Course**
The course is two weeks in length (8 classroom days) and is offered six times per year. Annual course schedules and quotas are announced in July each year by letter from ASN(FM&C) and published on the course web site: http://www.nps.edu/Academics/Schools/GBSPP/Academics/ProfDev/PCC/index.html

**Typical Topics of Study**
The Congressional Budget Process
Significant Budget and Financial Management Legislation
Planning, Programming, Budgeting & Execution System
Budget Formulation & Review
Appropriations & Fiscal Law
Reimbursables & Support Agreements
Working Capital Fund Management
Overview of the Acquisition & Contracting Processes
DoD Accounting
Critical Aspects of Budget Execution
Management of Major Cost Drivers
Performance Measurement
Management Control and Auditing
Civilian Personnel
Ethics

**GBSPP Courses**

**GB Courses (MBA Program)**

**GB1000 Quantitative Skills for Graduate Management Studies (0-3) Winter/Summer**
This course is intended to help prepare students for graduate studies in defense management. It is administered online in three modules: quantitative skills, statistics and spreadsheets. The objective is to reduce your difficulties with quantitative tools in your core courses, and allow you to focus on subsequent course materials.
part of a professional’s education is the identification of issues, the
relevant in a variety of organizational settings. Thus, an essential

The objective of the Problem Analysis and Ethical Dilemma
PAED seminar is to provide an introduction to applied analytic

This seminar provides an orientation to the process of awareness,
comparative purposes, the major emphasis through case studies and

This is the MBA core acquisition course for MBA international
students in non-acquisition curricula. It introduces principles of
public procurement management by examining acquisition policy
issues, management strategies, contracting decisions, and contract
management processes. Major international procurement models
and systems will be introduced, including the US Federal
Acquisition Regulation, Transparency International’s Integrity
Pacts, the UN Model Law on Procurement, the EU Public and
Defense Procurement Directives, the World Bank Procurement
and Integrity Guidelines, and the World Trade Organization
Agreement on Government Procurement. Concepts, strategies and
tools for planning, organizing, staffing, directing and controlling
acquisition programs are examined. Acquisition topical areas
include: anti-corruption measures, acquisition planning, the
competition requirements, source selection, risk management,
quality assurance, protests, transparency and publicity mechanisms,
research and development, and contracting management. While
the US defense acquisition system may be examined for
comparative purposes, the major emphasis through case studies and
readings is on international perspectives and issues. Another major
emphasis of the course is on Foreign Military Sales (FMS) and the
application of international procurement law concepts to the FMS
process. Prerequisite: None.

GB3040 Managerial Statistics (4-0) Fall/Spring
GB3040 is an introduction to the science and art of converting data
into information for managerial and policy analysis. This course
focuses on the descriptive and inferential statistical concepts useful
for conducting basic managerial and policy analysis. Topics include
measurement scales, descriptive statistics for quantitative and
qualitative data, basic probability concepts and distributions,
sampling theory and sample design, sampling distributions, point and interval estimation, hypothesis testing, goodness-of-fit tests, contingency table tests, correlation analysis, and multiple regression analysis. Excel statistical tools will be utilized for data analysis and presentation. Follow-on courses in GSBPP will build on the statistical foundations in GB3040. Prerequisites: College algebra and knowledge of Excel. Open to MBA students, or by consent of instructor.

**GB3041 Analytical Tools for Managerial Decisions (4-0)**
**Fall/Spring**

GB3041 continues the development and understanding of the analytical process and the role of analysis in business. Building on skills from GB3040, students will expand their ability to formulate problems and identify solution methods. Topics and tools covered in GB3041 include sampling theory and sampling design strategies, survey methods, observational studies and experimentation, measurement scales, process quality control, time series smoothing methods, probabilistic and risk analysis, assessing the implications of modeling assumptions, and presenting analyses in clear, comprehensive and convincing format. Prerequisite: GB3040.

**GB3042 Operations Management (4-0)**
**Winter/Summer**

This course provides an overview of operations in military and commercial systems. The course has three sections: (1) Creating processes, including a survey of process types, capacity planning, and service system design; (2) Controlling processes, including MRP/ERP systems and the role of information; and (3) Coordinating processes, including inventory management, purchasing, and supply chain management. Prerequisite: None.

**GB3050 Financial Reporting and Analysis (4-0)**
**Winter/Summer**

This course covers theory, concepts, and practices underlying financial Accounting and Financial Reporting. The conceptual structure underlying the reporting of economic events in the form of the balance sheet, the income statement, and the statement of cash flows is first presented. Accounting recognition and measurement issues surrounding revenues, expenses, assets, liabilities and equity are introduced and analyzed. Finally, different forms of financial analysis based on financial report information are addressed. Throughout the course, emphasis is placed on the manager or user perspective. Attention is given to the federal government financial reporting model and standards. Prerequisite: Enrollment in the MBA Degree Program.

**GB3051 Cost Management (3-0)**
**Fall/Spring**

This course introduces students to cost management concepts and theories which are used by managers to make decisions on the allocation of financial, physical, and human resources to achieve strategic as well as short-term organizational goals and objectives and evaluate performance using financial and non-financial measures. The course is designed for those having a prior course in financial reporting and analysis or financial accounting. Cost management includes traditional tools and techniques such as cost behavior for decision making, activity costing, cost allocation, and standard costing. Prerequisite: GB3050.

**GB3070 Economics of The Global Defense Environment (4-0)**
**Winter/Summer**

This course develops the fundamental tools of microeconomics and macroeconomics, and applies them to defense management and resource allocation. The course centers on defense applications of economic theory. Topics covered include: defense and the macro economy; markets and their interactions with defense acquisition and contracting; national security implications of globalization; and efficiency in defense decision making. Prerequisite: MA2XXX College algebra or equivalent.

**GB3510 Defense Financial Management Practice (3-0)**
**Fall/Spring**

This course is designed for MBA students and presumes the student has a foundation including the PPBE system and Congressional Authorization and Appropriation processes. This course concentrates on financial management practices within DoD as distinct from policy and budgeting theory. The course covers the actors and activities and mechanics of building and defending budgets. It covers funding mechanisms for programs and activities, addressing the proper use and management of appropriated, reimbursable, and revolving funds. Basic principles of fiscal law are explored. It then addresses financial management and stewardship topics including budgetary accounting, management of cost drivers, the relationship between comptrollership and contracting, and internal controls. Contemporary financial management issues are discussed. Exercises and case studies are used to develop the students’ ability to apply financial management concepts to real life situations. Prerequisite: GB4053 or permission of the instructor.

**GB4014 Strategic Management (4-0)**
**Fall/Spring**

Strategic Management entails the establishment of an organization's direction and the implementation and evaluation of that direction in view of the organization's external environment and its internal capabilities. The principal aim of this course is the transfer and adaptation of the principles of business strategic management to the Department of Defense and other government agencies. In previous courses, students concentrated on the functional elements of management (e.g., accounting, finance, acquisition, logistics, contracting, etc.). This course addresses the challenges of setting direction and implementing strategies for the total system or whole organization. Cases and approaches from the public and private sectors enable students to develop the knowledge, skills, and abilities to strategically think, plan, and manage. Prerequisite: GB3010, GB3012.

**GB4015 Management of Change (3-0)**
**Winter/Summer**

This course recognizes and describes the dilemmas inherent in any effort to change a human system. Emphasis is placed on strategies and technologies for planning, managing, and implementing change. The course emphasizes approaches to planning and managing change that reflect the complexity of organizations comprised of several interdependent systems—technology, structure, task, culture, and people. The course is application-oriented and intended to enhance skill development. Prerequisite: GB4014.

**GB4021 Strategic Management of IT (3-0)**
**Spring/Fall**

The management of Information Technology (IT) within the government and corporate environments has become a function that is shifting from the traditional IT management structure to the General Manager. In today’s environment, it is imperative to understand the importance of and unique issues related to technology. Network Centric Warfare has been deemed mission critical to the success of the military now and in the future. This course provides the student with a general understanding of the key components and underlying concepts related to the valuation of technology within organizations. Topics include e-business, e-government, strategic outsourcing, software make vs. buy decisions, business process, re-engineering with technology, and the impacts of technology on force transformation. The course is not intended to be focused on the technical aspects of technology, but rather on...
the impact of technology on the manner in which DoD organizations function. Prerequisite: GB3020 or consent of instructor.

**GB4043 Business Modeling and Analysis (3-0)**

*Winter/Summer*

This course introduces mathematical modeling for a sound conceptual understanding of the decision-making process. This course familiarizes the students with applications, assumptions, and limitations of the quantitative methods in modeling. It focuses on the development of mathematical and spreadsheet models, the verification of those models, sensitivity analysis of the solutions generated from a model, and the implementation of those solutions. Some of the topics covered include linear programming, non-linear and integer programming, simulation, and forecasting. The process of modeling and particular modeling tools are applied to business problems in finance, acquisition, logistics and manpower planning. Prerequisite: GB3040 and GB4071.

**GB4044 Defense-Focused Managerial Inquiry (3-0)**

*Fall/Spring*

Fundamentally, this is a course in thinking critically and analytically. It is also a unique, practical opportunity for students to develop a research question, methodology, and proposal for their MBA project or master's thesis. Indeed, many students can expect to complete the initial stages of their MBA project or thesis by fulfilling the course requirement for a team-based research report. As Cooper and Schindler write: “Research is any organized inquiry carried out to provide information for solving problems. Business research is a systematic inquiry that provides information to guide business decisions. This includes reporting, descriptive, explanatory, and predictive studies. The managers of tomorrow will need to know more than any managers in history. Research will be a major contributor to that knowledge. Managers will find knowledge of research methods to be of value in many situations. They may need to conduct research either for themselves or for others. As buyers of research services, they will need to be able to judge research quality. Finally, they may become research specialists themselves.” Punch prefers to describe research as “organized common sense,” since it “supports the idea that good research is within the grasp of many people.” In this way, we can “simplify the more technical aspects of research methods, and enhance understanding, by showing the logic behind them.” This course similarly seeks to examine the logic of research methods--recognizing that these methods may differ across disciplines and specialties--rather than focus on detailed models or procedures that may hold little meaning for the military's managers. It is not a course in rules or required steps; rather, it is a course in understanding the principles, concepts, and range of techniques that define the craft of research. Prerequisite: None.

**GB4052 Managerial Finance (3-0)**

*Fall/Spring*

This course provides an overview of the basic concepts and principles of financial management in the private sector and its implication on government contracting. It is designed to provide insights into the financial decision-making process encountered by commercial enterprises. The major emphasis is on financial environment, risk and return analysis, valuation models, cost of capital determination, optimal capital structure, and short-term and long-term financing. Prerequisite: GB3050.

**GB4053 Defense Budget and Financial Management Policy (4-0)**

*Winter/Summer*

This course analyzes the resource requirements process within the Department of Defense (DoD) and in the executive and legislative branches of the federal government. It begins with a summary of the current threat situation and potential changes to it. Once the threat is defined, the study of the resource allocation process to meet the threat begins. The course covers the resource planning and budgeting processes of the Department of the Navy, DoD and the federal government. It includes the politics of executive and congressional budgeting, and DoD budget and financial management processes and procedures including budget formulation and execution. It also includes analysis of the Planning, Programming, Budgeting Execution System (PPBES) used by DoD to plan, budget and implement national defense resource management policy and programs. Other areas included are budget process and fiscal policy reform and the dynamics of internal DoD competition for resources. Executive and congressional budget processes are assessed to indicate how national security policy is resourced and implemented through the budget process. Spending for national security policy is tracked from budget submission through resolution, authorization and appropriation. Budget formulation, negotiation, and execution strategies are evaluated to indicate the dynamics of executive-legislative competition over resource allocation priorities. Supplemental appropriation patterns and current year budget execution patterns and problems are also considered. Prerequisite: GB3010, GB3070.

**GB4071 Economic Analysis and Defense Resource Allocation (4-0)**

*Fall/Spring*

Develops the tools and techniques of economic efficiency to assist public sector decision makers in analyzing resource allocation in government activities. Focuses on developing the principles of cost-benefit analysis (CBA) and cost-effectiveness analysis (CEA). Stresses the application of CBA and CEA to specific investment projects, programs and policies in the federal government, especially in the Department of Defense. Prerequisites: GB3070.

**GB4090 MBA Project (0-6)**

*Winter/Summer*

MBA Project. Prerequisite: Open to MBA students, or by consent of instructor.

**GB4210 Knowing Management (3-0)**

*Fall/Spring*

Online course. This elective course on knowing management integrates theory with practice to help prepare current and future leaders to manage knowledge and lead knowers in learning organizations. Knowing refers to knowledge in action, and is concerned with activities (e.g., decision, behaviors, work) in the organization. Using emerging knowledge-flow theory as its intellectual base, the theoretical part of the course helps professionals understand how knowledge is both critical and unique, and equips them to design effective knowledge management (KM) programs around knowledge flows. Using real-time cases for group critique, the problem-based learning part of the course examines a diverse set of KM programs in operation today, and offers both principles for and experience in identifying strengths and weaknesses. Students also select new or operational KM programs for evaluation, and work individually as consultants to assess and redesign them based on knowledge flows. This asynchronous (e.g., Web-based) course offers opportunities for cutting-edge graduate education beyond the classroom. Prerequisites: GB3020, IS3301, IS3302 or by consent of instructor.

**GB4410 Logistics Engineering (4-0)**

*Winter/Summer*

The concept of integrated logistics support in the design and maintenance of weapon systems. Operational requirements, reliability, system maintenance concept, functional analysis, life cycle costs, logistics support analysis, systems design, test and evaluation, production, spare/repair parts management are
discussed. This course also covers topics in logistics information technology, inventory management culture and commercial-sector best practices for military. Case studies include logistics life-cycle cost, reliability and readiness analysis for major weapon systems. Prerequisite: GB3042 or equivalent.

GB4420 Technology and Information Systems for Logistics and Operations (3-0) Fall/Spring
Overview of the use and value of information systems and technology applied to logistics and operations management. Examines the cost-benefit analysis of technology, and the evaluation of technological alternatives. Surveys commercial software available to facilitate logistics and operations management, including enterprise resource planning systems. Explores typical difficulties confronted when implementing technological solutions. Prerequisite: None.

GB4430 Defense Transportation System (4-0) Winter/Summer
This course examines how the Defense Transportation System supports the DoD mission, including the responsibilities of USTRANSCOM and its Transportation Component Commands, CONUS transportation and strategic lift, as well as institutional constraints and other managerial issues. Prerequisite: None.

GB4440 Simulation Modelling for Management Decision Making (4-0) Winter/Summer
Modeling and risk analysis for managerial decision making. Case studies of simulation modeling applications to weapon system acquisition, logistics, transportation, distribution, communications and production systems. Prerequisite: GB3040 or other introductory probability and statistics (may be taken concurrently).

GB4450 Logistics Strategy (4-0) Fall/Spring
DAU Equiv: LOG 304. This is the logistics capstone course. The course explores and analyzes the concepts, processes and methods of strategic planning and execution emphasizing aggressive proactive techniques to ensure maximum logistics influence on major weapon systems acquisition as well as optimum life cycle management of fielded systems. Cultural constraints of the current logistics environment and how to succeed in it is a significant focus of the course. The course examines and analyzes key opportunities for maximum logistics influence in requirements, development, contracting, test and evaluation, reliability, and maintainability as well as financial management and communications. The course features logistics management relevance to service roles and missions. The course employs lectures, guided discussions, case studies, role-playing, panel discussions, and lessons learned in the DoD acquisition environment. For the final examination project, the class is divided into teams and produces a comprehensive strategic plan for logistics for a fictitious major program. Prerequisite: GB4410 or consent of instructor.

GB4480 Supply Chain Management I (4-0) Fall/Spring
This course is designed to provide an introduction to supply chain management. A supply chain is a network of organizations that supply and transform materials, and distribute final products to customers. Supply chain management is a broadly defined term for the analysis and improvement of flows of material, information, and money through this network of suppliers, manufacturers, distributors, and customers. SCM also plays a vital role in the military operations. The objective of SCM is to deliver the right product to the right customer at the right time. SCM emphasizes inventory-service level tradeoffs across the chain of players that, together, provide the product to a customer.

Logistics has traditionally focused on materials issues within and downstream from the factory while SCM looks at the entire network of players, both up and downstream, and perhaps has more of an emphasis on information flows through the network. Logistics has traditionally been considered a more tactical topic while SCM has risen to prominence in recent years for addressing strategic aspects of product distribution. Ultimately, logistics and SCM activities are concerned with coordinating demand and supply. Common elements in that coordination are the management of materials (inventories), the location of materials (warehouses), and the movement of materials (transportation). As part of the coordination, an analyst must consider product and process designs as well as information flows between various players in the networks. These elements form the basis of this course. The two main objectives of this course are to help students understand: (1) the fundamental concepts and techniques necessary for attaining a world class performance in supply chain management, and (2) how these concepts and techniques can be applied to design, plan and operate supply chains supporting military operations. Prerequisites: GB3042 or permission from instructor.

GB4490 Special Topics in Supply Chain Networks (3-0) Fall
This course focuses on conceptual understanding of the Supply Chain Networks for decision-making. The course builds the knowledge for identifying distribution and transportation networks and to optimize it using advanced analytical tools. To incorporate the bigger picture of network optimization problem, the course includes real applications in private sector as well as in military and non-governmental organizations. This is done with the analysis and discussion of articles of diverse applications such as (1) Ammunition requirement planning for the Canadian army; (2) Elkem (a Norwegian company) redesigning its supply chain using optimization; (3) SCM at the USCG repair and supply center; (4) Location of disaster recovery centers in Florida County.

GB4510 Strategic Resource Management (4-0) Winter/Summer
The objective of this course is to integrate business analysis, financial analysis, and strategic analysis in solving complex management problems involving the allocation of scarce resources to achieve overall organization objectives. Resources here are not limited to financial resources but also include human and physical resources. The course will make use of a wide variety of management tools such as value chain analysis, competitive strategy, market positioning, supply chain management, activity analysis, target costing, cost of quality, and business process improvement techniques. Prerequisites: Completion of GB4530 Management Control Systems or permission of instructor.

GB4520 Internal Control & Audit (3-0) Fall/Spring
This course provides an introduction to the objectives of and activities related to internal control and audits, including design and evaluation of internal controls, auditing standards, audit reports, audit evidence, and audit tests. The course includes an overview of audits of financial reports and records and of government operations, with attention given to Government Auditing Standards. Prerequisite: GB3051, Management Accounting.

GB4530 Management Control Systems (4-0) Spring/Fall
Overview of internal controls processes. Study of the design, implementation, and evaluation of management planning and control systems in Navy and Defense organizations with comparisons to large, complex private sector organizations. Specific topics include the need for planning and control, strategic planning, the resource allocation process, organization of the management
control function, measurement of inputs and outputs, budgeting, reporting, and performance evaluation. Prerequisite: GB3051.

**GB4540 Conrad Seminar (2-0) Winter/Summer**

This course provides DoD military officers with an awareness of real life implementation of the education they have received in the (MBA (FM) curriculum). There are lectures on the Budgeting process and pending changes thereto, and an exercise in taking a hypothetical budget reduction. Senior level guest speakers from the Department of the Navy and Department of Defense discuss current Financial Management issues with the students. and five VTCs originated in the Pentagon by FMB, Director of Navy Resource Requirements (N-8), Resource Director for the JCS (J-8), ASN(FM&C) Counsel (FM C), Director of Navy Budget (N-82) and Graduates presently in their “Pay Back” tour. There is also an Air Force Cohort which covers about 40% of their course and addressing Air Force “Unique” processes and paralleling the framework of the Navy/Marine Cohort. Sixty percent of the Air Force course is jointly conducted with the Generic part of the Navy/Marine allowing for more Joint education. International Students are welcomed to participate as an elective. This course is graded pass/ fail. Prerequisite: GB3510.

**GB4550 Advanced Financial Reporting (4-0) Winter/Summer**

This course explores both underlying theory and practical applications of financial reporting and analysis. The course builds on financial reporting foundations presented in an introductory course and on basic concepts covered in auditing, economics, and finance courses. The course first develops an understanding of alternative accounting measurements, and then examines how alternative accounting policies are selected in a dynamic financial reporting environment that includes owners; creditors; employees; professional analysts; portfolio managers; and regulatory agencies. Finally, the course will determine how best to communicate financial performance and financial position to decision makers, users, and managers. Prerequisites: GB3051, GB4052, GB3510.

**GB4560 Defense Financial Management (3-0) Fall/Spring**

This course focuses on the competencies required of a Defense Financial Manager. It examines the diverse concepts, theories, and practices addressed in numerous specialty courses and ties them together in the framework of Defense Financial Management. The areas of coverage include: the Government Resource Management Environment, the Defense Resource Management Environment, Personnel Management, Manpower Management, Management and Internal Controls, Fiscal Law, the Planning, Programming, Budgeting Execution System (PPBES), Cost and Economic Analysis, Business Management Process Improvement, Accounting, Finance, and Auditing. Prerequisite: None.

**GB4570 Advanced Finance (2-0) As Required**

This course is designed to provide insights into advanced topics in financial decision making process encountered by commercial enterprises. Major topics covered include long-term financing, lease financing, optimal capital structure determination, dividend policy, security issues and refunding, risk analysis and real options, derivatives and risk management. Prerequisite: GB4052.

**GB4580 Modeling for Planning and Control (3-0) Fall/Spring**

Study of sophisticated analytical methods for various cost, policy and decision scenarios in DoD and other organizations. Emphasis is on developing analytical methods as decision support tools, with available computer software as computational aids. Major topics include regression, learning curve, Monte Carlo simulation, and time series models. Prerequisite: GB4043.

**GB4999 Elective (4-0) Fall/Spring**

Elective course to be selected by student with approval by academic associate.

**GE Courses (EMBA Program)**

**GE3010 Organizations As Systems and Structures (3-0) Winter/Summer**

GE3010 Organizations As Systems and Structures (3-0) Winter/Summer Open to EMBA DL students only. Defense organizations are purposive systems comprising tasks and technologies, vertical and lateral coordination structures and processes, reward systems, and individual motivation. This course prepares leaders to understand the organizational system components and their relationships: inputs (e.g., environment, history), design factors (i.e., people, task, structure, culture) and outputs/outcomes (e.g., productivity, satisfaction, growth). A primary focus is on the organizational level of analysis and includes such topics as environment, hierarchy and structural configuration, with special emphasis on the context and organization of DoD. Applications and cases address command and control, joint task forces and network centric operations with attention to organizational theory and design tradeoffs. Prerequisite: None.

**GE3011 Management of Teams (2-0) Winter/Summer**

Open to EMBA DL students only. Teams are a building block of today’s organizations. Teams are evident throughout DoD in such forms as operational squad, integrated product teams (IPTs), R&D innovation teams, and Joint Task Forces. The course examines the differences between groups and teams, between leader-managed and self-managed teams, between virtual and face-to-face teams, and between effective and ineffective teams. Analysis of effective teams include such issues as team dynamics, decision making, rewards, commitment, and the management of conflict (inter-personal, intra-team, and inter-team) in which power, influence and negotiation play central parts. Prerequisite: None.

**GE3031 Principles of Acquisition Management (3-0) As Required**

Open to EMBA students only. This course introduces the fundamental principles of public and private sector acquisition management by examining current acquisition policy issues, strategies, contractual decisions, and program management concepts. The aspects of planning, organizing, staffing, directing and controlling efforts within a risk managed process will be examined. Acquisition functional areas addressed in this course include: logistics, test and evaluation, systems engineering, manufacturing management, quality assurance, funds management, budgeting, research and development, and contracting management. Prerequisite: None.

**GE3042 Operations Management (4-0) As Required**

Open to EMBA students only. An overview of operations in military and commercial systems. The course has three sections: (1) Creating processes, including a survey of process types, capacity planning, and service system design; (2) Controlling processes, including MRP/ERP systems and the role of information; and (3) Coordinating processes, including inventory management, purchasing, and supply chain management. Prerequisite: GE3043.
GE3043 Analytical Tools for Decision Making (3-0) As Required
Open to EMBA students only. The objective of this course is to enhance students’ ability to solve complex managerial problems and make decisions under conditions of uncertainty and competing objectives through the use of computer-based modeling techniques. The course incorporates probability material, decision models and decision analysis, decision trees, forecasting and simulation. The interactive environment of the electronic spreadsheet is used to provide an intuitive understanding of basic principles (e.g., understanding uncertainty and risk with Monte Carlo simulation rather than mathematical analysis). Prerequisite: None.

GE3050 Financial Reporting and Analysis (3-0) Winter/Summer
Open to EMBA DL students only. This course covers theory, concepts, and practices underlying Financial Accounting and Financial Reporting. The conceptual structure underlying the reporting of economic events in the form of the balance sheet, the income statement, and the statement of cash flows is first presented. Accounting recognition and measurement issues surrounding revenues, expenses, assets, liabilities and equity are introduced and analyzed. Finally, different forms of financial analysis based on financial report information are addressed. Throughout the course, emphasis is placed on the manager or user perspective. Attention is given to the federal government financial reporting model and standards. Prerequisite: None.

GE3051 Cost Management (3-0) Spring
Open to EMBA students only. This course introduces students to cost management concepts and theories which are used by managers to make decisions on the allocation of financial, physical, and human resources to achieve strategic as well as short-term organizational goals and objectives and evaluate performance using financial and non-financial measures. The course is designed for those having a prior course in financial reporting and analysis or financial accounting. Cost management includes traditional tools and techniques such as cost behavior for decision making, activity costing, cost allocation, and standard costing. Prerequisite: GE3050.

GE3070 Economics for Defense Managers (3-0) As Required
Open to EMBA students only. Develops the fundamental tools of microeconomics and macroeconomics, and applies them to defense management and resource allocation. Course centers on defense applications of economic theory. Topics covered include: defense and the macro economy; markets and their interactions with defense acquisition and contracting; national security implications of globalization; and efficiency in defense decision making. Prerequisite: MA2XXX, College algebra.

GE3109 Ethics and Moral Development (3-0) As Required
Offered to EMBA students in their first quarter: The objective of this course is to provide newly-enrolled Executive MBA students with an introduction to the ethical challenges of the global Defense business environment facing Navy corporate business leaders and resource managers. Through the use of case analyses and discussion, the course will explore the application of ethical thinking to contemporary issues in the private and public sectors. The course goals include: 1) introduce ethical concepts which are relevant to the moral and ethical dilemmas inherent in business decisions; 2) help students develop the critical thinking and analytical skills required to address complex issues; 3) identify the range of ethical problems facing senior leaders in business and government; and 4) encourage the students to develop a personal approach to achieve ethical outcomes in the corporate-level decision-making process. The students will use the managerial perspective and critical thinking skills developed in this course throughout the remainder of their studies to identify the ethical dimension in the process of formulating and implementing Navy policy and business strategies required to build and maintain the Fleet of the 21st Century. Prerequisite: None.

GE3221 Principles of Acquisition and Program Management I (3-0) As Required
Open to EMBA students only. This is the first of two courses which provides the student with an understanding of the underlying concepts, fundamentals and philosophies of the Department of Defense systems acquisition process and the practical application of program management methods within this process. The course examines management characteristics and competencies, control policies and techniques, systems analysis methods and functional area concerns. Techniques for interpersonal relationships will be examined in team exercise settings. Topics, from a program management perspective, include the evolution and current state of systems acquisition management, the system acquisition life cycle, requirements analysis, systems engineering, contract management, resource management, test and evaluation, user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. Case studies are used to analyze various acquisition issues. Combined with GE3222, this course provides DAU Equivalency for ACQ_101, ACQ_201, and PMT 250. Prerequisite: None.

GE3222 Principles of Acquisition and Program Management II (3-0) As Required
Open to EMBA students only. This is the second of two courses which provides the student with an understanding of the underlying concepts, fundamentals and philosophies of the Department of Defense systems acquisition process and the practical application of program management methods within this process. The course examines management characteristics and competencies, control policies and techniques, systems analysis methods and functional area concerns. Techniques for interpersonal relationships will be examined in team exercise settings. Topics, from a program management perspective, include the evolution and current state of systems acquisition management, the system acquisition life cycle, requirements analysis, systems engineering, contract management, resource management, test and evaluation, user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. Case studies are used to analyze various acquisition issues. Combined with GE3221, this course provides DAU Equivalency for ACQ_101, ACQ_201, and PMT 250. Prerequisite: GE3221 or consent of instructor.

GE3306 Strategic Purchasing (3-0) As Required
For EMBA students only. This course is a graduate-level seminar in strategic purchasing. The course will be taught through a combination of formal lecture, guided discussion, and case analysis. The primary goal of this course is to develop, structure, and execute purchasing, not as a functional activity, but rather as a strategic component of total supply chain management. The course emphasizes the concept that companies with world-class purchasing practices derive a competitive advantage in their industries from their procurement and sourcing strategies. The course develops the concept of competitive advantage through strategic purchasing as it relates to efficient and effective structure
GE3510 Defense Financial Management Practice (3-0) As Required
For EMBA students. This course is designed for MBA students and presumes the student has a foundation including the PPBE system and Congressional Authorization and Appropriation processes. This course concentrates on financial management practices within DoD as distinct from policy and budgeting theory. The course covers the actors and activities and mechanics of building and defending budgets. It covers funding mechanisms for programs and activities, addressing the proper use and management of appropriated, reimbursable, and revolving funds. Basic principles of fiscal law are explored. It then addresses financial management and stewardship topics including budgetary accounting, management of cost drivers, the relationship between comptrollership and contracting, and internal controls. Contemporary financial management issues are discussed. Exercises and case studies are used to develop the students’ ability to apply financial management concepts to real life situations. Prerequisite: None.

GE4015 Managing Complex Change in the DoD Environment (3-0) As Required
Open to EMBA students only. This course recognizes and describes the dilemmas inherent in any effort to change a human system. Emphasis is placed on strategies and technologies for planning, managing, and implementing change. The course emphasizes approaches to planning and managing change that reflect the complexity of organizations comprised of several interdependent systems—technology, structure, task, culture, and people. The course is application-oriented and intended to enhance skill development. Prerequisite: GE3010.

GE4016 Managing Strategic Change (4-0) Winter/Summer
The course focuses on senior-level decision-making processes under conditions of significant uncertainty. Part of the process includes assessment of the organization’s external environment and its internal capacity to respond to decisions made to be responsive to that environment. The course takes into account the unique context of public organizations, particularly the context of DoD organizations. Furthermore, the course focuses on the challenges of implementing these decisions and evaluating the extent to which the decisions are reaching the desired outcomes, and determining what to do if they are not. The overall purpose of the course is to provide opportunities for students to grapple constructively with, and exercise good managerial judgment in, situations that are complex, rapidly changing, multidimensional, and potentially highly consequential in terms of their impact on the future. The course deals with the role of uncertainty in situations and issues that are critical for the long-term future health, survival and prosperity of the organization. Prerequisite: GE3010.

GE4021 E-Business for Defense (3-0) As Required
Open to EMBA students only. The network era has revolutionized the manner in which business processes are conducted, and we have only just begun to understand the potential of how such processes can be conducted in the future. What we do understand is that electronic business (e-business) represents a combination of technologies, business models and managerial techniques that can enable fundamental process innovation with order-of-magnitude performance improvement, if conceived and implemented well. This applies in particular to military enterprises of the U.S. Defense Department, under tremendous pressure to modernize their forces and improve the quality of life for service men and women, because of the huge size, global reach, time-critical processes and hazardous missions associated with the “business” processes of military operations. This course addresses the application of e-business technologies, business models and management to defense. The course builds on students’ knowledge of operations management, supply chain management, and strategy to address technologies, models and applications of business (e-business). The course has an explicit focus on e-business applications, opportunities and implications in defense organizations, even though many exemplars from private industry are discussed, and it integrates both theory and application to provide knowledge necessary to organize and manage in the networked, paperless enterprise of today and tomorrow. Course topics will include: IT and Strategy, IT and Organization, Extending the Enterprise (transformation), Making a Case for IT, Understanding Internetworking Infrastructure, Assuring Reliable and Secure IT Services, Managing Diverse IT Infrastructures and Managing IT Outsourcing. Prerequisite: None.

GE4043 Business Modeling and Analysis (3-0) As Required
Open to EMBA students only. This course introduces mathematical modeling for a sound conceptual understanding of the decision-making process. This course familiarizes the students with applications, assumptions, and limitations of the quantitative methods in modeling. It focuses on the development of mathematical and spreadsheet models, the verification of those models, sensitivity analysis of the solutions generated from a model, and the implementation of those solutions. Some of the topics covered include linear programming, non-linear and integer programming, simulation, and forecasting. The process of modeling and particular modeling tools are applied to business problems in finance, acquisition, logistics and manpower planning. Prerequisites: None.

GE4052 Managerial Finance (3-0) As Required
Study of capital budgeting techniques. This course provides an overview of the basic concepts and principles of financial management in the private sector and its implication on government contracting. It is designed to provide insights into the financial decision-making process encountered by commercial enterprises. The major emphasis is on financial environment, risk and return analysis, valuation models, cost of capital determination, optimal capital structure, and short-term and long-term financing. Prerequisite: GE3050.

GE4053 DoD Mission and Resource Determination (4-0) As Required
This course analyzes the resource requirements process within the Department of Defense (DoD) and in the executive and legislative branches of the U.S. federal government. It begins with a summary of the current threat situation and potential changes to it. Once the threat is defined, the study of the resource allocation process to meet the threat begins. The course covers the resource planning and budgeting processes of the Department of the Navy, DoD and the federal government. It includes the politics of executive and congressional budgeting, and DoD budget and financial management processes and procedures including budget formulation and execution. It also includes analysis of the Planning, Programming, Budgeting Execution System (PPBES) used by DoD to plan, budget and implement national defense resource
management policy and programs. Other areas included are budget process and fiscal policy reform and the dynamics of internal DoD competition for resources. Executive and congressional budget processes are assessed to indicate how national security policy is resourced and implemented through the budget process. Spending for national security policy is tracked from budget submission through resolution, authorization and appropriation. Budget formulation, negotiation, and execution strategies are evaluated to indicate the dynamics of executive-legislative competition over resource allocation priorities. Supplemental appropriation patterns and current year budget execution patterns and problems are also considered. Prerequisite: None.

**GE4101 Collaborative Problem Solving I (3-3)**
Fall/Winter/Spring/Summer
GE4101 is the first part of the capstone project which uses a collaborative approach to integrate the knowledge and skills gained in the EMBA program. Participants are introduced to an applied research framework designed to enable them to work from theory to identify a business problem to be solved for a command; create a research design for data collection and analysis; and form conclusions and recommendations. Prerequisite: Completion of the previous seven quarters of the EMBA program.

**GE4102 Collaborative Problem Solving II (3-3)**
Fall/Winter/Spring/Summer
GE4102 is the second part of the capstone project which uses a collaborative approach to integrate the knowledge and skills gained in the EMBA program. Participants work in small teams to prepare a project proposal, a final report, and a presentation containing recommendations to solve one of the command's business problems. Prerequisite: Completion of the previous seven quarters of the EMBA program.

**GE4310 Strategic Acquisition Management (3-0) Spring**

This course extends students' understanding of the complex and dynamic defense acquisition environment and ways in which various functional disciplines (e.g., contracting, test and evaluation, logistics) may be effectively integrated in successful acquisition programs. The effects and implications of current policy initiatives (e.g., acquisition reform, outsourcing) and contemporary industry trends on defense acquisition will be explored. Students will use relevant acquisition program cases to apply their knowledge by analyzing management challenges and developing strategies for success. Prerequisite: GE3222.

**GE4480 Defense Supply Chain Management (3-0)**
Winter/Summer

This course is designed to provide an introduction to supply chain management (SCM). A supply chain is a network of organizations that supply and transform materials, and distribute final products to customers. Supply chain management is a broadly defined term for the analysis and improvement of flows of material, information, and money through this network of suppliers, manufacturers, distributors, and customers. SCM also plays a vital role in the military operations. The objective of SCM is to deliver the right product to the right customer at the right time. SCM emphasizes inventory-service level tradeoffs across the chain of players that, together, provide the product to a customer. Logistics has traditionally focused on materials issues within and downstream from the factory while SCM looks at the entire network of players, both up and down stream, and perhaps has more of an emphasis on information flows through the network. Logistics has traditionally been considered a more tactical topic while SCM has risen to prominence in recent years for addressing strategic aspects of product distribution. Ultimately, logistics and SCM activities are concerned with coordinating demand and supply. Common elements in that coordination are the management of materials (inventories), the location of materials (warehouses), and the movement of materials (transportation). As part of the coordination, an analyst must consider product and process designs as well as information flows between various players in the networks. These elements form the basis of this course. The two main objectives of this course are to help students understand: (1) the fundamental concepts and techniques necessary for attaining a world class performance in supply chain management, and (2) how these concepts and techniques can be applied to design, plan and operate supply chains supporting military operations. Prerequisites: GE3042 or permission from instructor.

**GE4510 Strategic Resource Management (3-0) As Required**

The objective of this course is to integrate business analysis, financial analysis, and strategic analysis in solving complex management problems involving the allocation of scarce resources to achieve overall organization objectives. Resources here are not limited to financial resources, but also include human and physical resources. The course will make use of a wide variety of management tools such as value chain analysis, competitive strategy, market positioning, supply chain management, activity analysis, target costing, cost of quality, and business process improvement techniques. Prerequisite: GE3051.

**MN Courses**

**MN0163 Thesis Writing Workshop (0-1) Spring**
Guidelines for scientific writing for the thesis are given with examples and opportunities for practice. Prerequisite: Consent of instructor.

**MN0810 Thesis Research for Systems Management Students (0-8) Fall/Winter/Spring/Summer**
Every student conducting thesis research in Systems Management resident programs will enroll in this course. Prerequisite: None.

**MN0811 Thesis Research for Non-Resident Business & Public Policy Students (0-4) Fall/Winter/Spring/Summer**
Every student conducting thesis research in the Distance Learning Contract Management (835) and Program Management (836) degree programs will enroll in this course.

**MN2039 Basic Quantitative Methods In Management (4-0) Fall**

This course introduces the mathematical basis required for advanced management and cost-benefit analysis. Math topics include algebra, graphs, differential calculus, including both single and multiple variable functions, and indefinite and definite integrals. Management concepts include cost-benefit and cost-effectiveness analysis, marginal analysis, unconstrained and constrained optimization, and welfare analysis. Prerequisite: College algebra or consent of instructor.

**MN2111 Navy Manpower, Personnel, and Training Systems I (2-0) Fall**
An introduction to the major issues, theory, and practice of the military MPT&E system. Graded on a Pass/Fail basis only. Prerequisite: Consent of instructor.
MN2112 Seminar In Manpower, Personnel, and Training Issues II (0-2) Summer
Continuation of MN2111. Graded on a Pass/Fail basis only. Prerequisite: Open to thesis students.

MN2155 Accounting for Management (4-0)
Winter/Summer
Study of the fundamentals of financial and managerial accounting relevant to financial management. Introduction to financial accounting stressing accrual concepts and the content and analysis of financial statements. More in-depth focus on management accounting topics, including costing techniques for products and programs, use of cost information for decision making, capital budgeting, and financial performance measures. Applications of managerial accounting tools to DoD situations. Prerequisite: None.

MN2304 Seminar In Product Development (0-4) As Required
This course brings both government and industry product development leaders into the academic forum for interaction with students. Guest lecturers include government and industry product development executives, program managers, laboratory and field personnel, department officials, congressional members and staff personnel. Visits to government and industry facilities. Thesis and research presentations. Graded on a Pass/Fail basis. Prerequisite: Consent of instructor.

MN3001 Economics for Acquisition Managers (3-0)
Fall/Winter/Spring/Summer
Develops the fundamental tools of microeconomics and macroeconomics and applies them to topics in the management and allocation of resources in defense acquisition management with particular emphasis on the applications of economic theory to defense decision making. Topics covered include defense and the macro economy; markets and their effects on defense acquisition and contracting practices; the economics of corporate strategy; and efficiency in defense decision making. Prerequisite: None.

MN3012 Communications Strategies for Effective Leadership (3-0) Fall/Winter/Spring/Summer
This course provides DoD military officers and civilians with the communication strategies and skills to manage and lead in the dynamic DoD environment. Instruction focuses on assessing various communication models, making strategic media choices, writing effective informative documents, developing associates' communication competencies through various feedback roles, and giving lucid briefings. Prerequisite: None.

MN3042 Operations Management (3-0) As Required
This course provides an overview of operations in military and commercial systems. The course has three sections: (1) creating processes, including a survey of process types, capacity planning, and service system design; (2) controlling processes, including MRP/ERP systems and the role of information; and (3) coordinating processes, including inventory management, purchasing, and supply chain management. This course is the Distance Learning version of GB3042. Prerequisite: None.

MN3108 Leadership In Product Development (3-2) As Required
This is a product development course providing a broad framework for the leadership of end-to-end product commercialization with a student hands-on design challenge, to give students perspective and appreciation for the critical success factors and inhibitors to successful commercialization of complex products and systems. The format includes lectures, guest speakers, case studies and a design challenge. Topics include product development strategy and leadership, the front-end process, product delivery, distribution and customer support. The Design Challenge is a multi-disciplinary system design experience. Students work in teams to design, build, test and demonstrate a real product. The Design Challenge culminates with a prototype demonstration competition. Prerequisite: None.

MN3111 Analysis of Human Resource Management (4-0)
Spring
A broad coverage of human behavior in the work situation, with key emphasis on the issues of work in the Navy Manpower Personnel and Training Environment. Topical areas covered include selection, placement, training development, and evaluation of personnel; motivation, remuneration, morale, supervision, and working conditions in military organizations; job design and organization development within complex military bureaucracies; equipment design and man-machine interface, and the impact of technological programs within the military. Prerequisite: GB3010.

MN3117 Organizational Processes (4-0) As Required
The purpose of this course is to provide the conceptual framework and skills needed to manage and lead organizations. The focus will be on three levels of skills needed to manage modern organizations: skills needed to manage individuals, skills needed to manage teams, and skills needed to manage the organization as a whole. It focuses on the organization of the future, identifies its characteristics, and explores the implications for living in, managing, and leading such an organization. The course also focuses on skills such as negotiating, cross-cultural communication, and teamwork. It examines the creation of the structures needed within the firm and the alliances, learning, and change practices needed to maintain global leadership. The course will use cases, experiential exercises, readings, discussions, and papers. Students have the opportunity to integrate conceptual material with their own experiences, beliefs, and actions. Prerequisite: None.

MN3118 Negotiation and Consensus Building (4-0) Spring
Security, Stability, Reconstruction and Transition (SSTR) environments bring together representatives from different nations and organizations. In order to accomplish the goals of interest, these varying representatives must develop awareness, appreciation, and ability to collaborate with each other. There is no formal organization that provides structures or standards to guide the collaboration of these individuals; they must rely on informal mechanisms for collaborative post-conflict efforts. Because the goals and interests of the participating parties frequently are not in alignment, negotiation and consensus-building capabilities contribute importantly to success. Negotiation and consensus building challenges students to develop their skills in interpersonal and group dynamics (e.g., conflict management, communication, perspective taking, decision making, team building) at both the dyadic level and the group team level. The pedagogy of the course uses simulations, cases, and experiential exercises that include high levels of cultural, ethnic, organizational, and ideological diversity. Consensus building at both the dyadic and group levels is based on principles of self-organization and self-management, which are critical success factors in an environment such as SSTR where a hierarchic control system is not available as the mechanism of coordination among participants. Prerequisite: None.
MN3121: Organizational Design for Special Operations (4-0)  
As Required
Principles of organizational design are critically examined and applied to special operations' missions and organizations. Focus is on the organizational level of analysis and includes such topics as organizational environments, key success factors, technology and information systems, configuration and structure, organizational learning, reward systems, and decision making. Case method is used to develop diagnostic skills and a systemic perspective. Prerequisite: Enrollment in the SOLIC curriculum or consent of instructor.

MN3145: Marketing Management (4-0)  
Spring
This course takes a general management approach to marketing, examining (1) marketing as a process that creates and sustains customer value; and (2) the manager's role in ensuring that the firm delivers products that are successful in the marketplace. The curriculum will emphasize approaches to market research (the "voice of the customer"), innovation, creating customer value in product development, product management, and general management of marketing activities. Topics include: market oriented strategic planning, the TQM marketing process, marketing research, segmentation, target markets, differentiation, product management, the marketing mix, customer satisfaction, and e-commerce. Case studies are used extensively. Prerequisite: None.

MN3154: Financial Management in the Armed Forces (3-0)  
Winter/Summer
This course is designed for non-MBA students and focuses on financial management policies and practices in the DoD. It begins with a foundation including the origin of the Defense budget from national strategic planning through the PPBE system and the submission of the President's Budget to Congress. The Congressional Authorization and Appropriation processes and the flow of funds to the activity level complete the foundation. The course next explores the funding mechanisms for programs and activities, addressing the proper use and management of appropriated, reimbursable and revolving funds. Basic principles of fiscal law are explored. The course concludes with financial management and stewardship topics including budgetary accounting, management of cost drivers, and internal controls. Contemporary financial management issues are discussed. Exercises and case studies are used to develop the students' ability to apply financial management concepts to real-life situations. Prerequisite: None.

MN3155: Financial Management for Acquisition Managers (2-0)  
Fall/Winter/Spring/Summer
This course is a study of financial management practices and issues associated with federal government acquisition programs. The course has emphasis on (1) the resource management process flow from initiation of a new acquisition program through execution of appropriated funds (procurement and research & development accounts) for that program, (2) the congressional approval and review process unique to procurement, and (3) cost estimation, analysis and evaluation as tools for sound acquisition management decision making, and long-term investment analysis. Prerequisites: MN2155; and MN3331 or MN3221 or consent of instructor.

MN3156: Financial and Managerial Accounting (4-0)  
As Required
This course is designed as a first course in Business Financial Management for graduate students. The course covers a range of topics in financial accounting, managerial accounting and business finance. All topics covered share a common theme in that they are related to the creation and use of financial models and information. The course requires critical thinking and the ability to analyze and apply financial models and reasoning in the context of case studies. The course is divided into two broad areas: Financial Information and Financial Management. Within these areas, specific topics include: financial accounting, financial reports, financial analysis, capital structure, costing systems, performance measurement and control, and investment analysis. Prerequisites: Admission to graduate standing, college algebra, MN3108 and MN3117.

MN3172: Resourcing National Security: Policy and Process (3-0)  
Winter/Summer
This course analyzes federal policy-making with emphasis on resource decision making for national defense. The roles of principal budget participants are examined in detail. Executive (especially DoD) and congressional budget processes are assessed to indicate how national security policy is implemented through resource allocation. Spending for national security policy is tracked from budget submission through resolution, authorization and appropriation. The politics of budgeting for national defense is evaluated to indicate the dynamics of executive-legislative competition over scarce federal resources. Graded Course. Prerequisite: None.

MN3221: Principles of Acquisition and Program Management I (3-0)  
Summer
This is the first of two courses which provides the student with an understanding of the underlying concepts, fundamentals and philosophies of the Department of Defense systems acquisition process and the practical application of program management methods within this process. The course examines management characteristics and competencies, control policies and techniques, systems analysis methods and functional area concerns. Techniques for interpersonal relationships will be examined in team exercise settings. Topics, from a program management perspective, include the evolution and current state of systems acquisition management, the system acquisition life cycle, requirements analysis, systems engineering, contract management, resource management, test and evaluation, user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. Case studies are used to analyze various acquisition issues. Combined with MN3222, this course provides DAU Equivalency for ACQ 101, ACQ 201, and PMT 250. Prerequisite: None.

MN3222: Principles of Acquisition and Program Management II (3-0)  
As Required
This is the second of two courses which provides the student with an understanding of the underlying concepts, fundamentals and philosophies of the Department of Defense systems acquisition process and the practical application of program management methods within this process. The course examines management characteristics and competencies, control policies and techniques, systems analysis methods and functional area concerns. Techniques for interpersonal relationships will be examined in team exercise settings. Topics, from a program management perspective, include the evolution and current state of systems acquisition management, the system acquisition life cycle, requirements analysis, systems engineering, contract management, resource management, test and evaluation, user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. Case studies are used to analyze various acquisition issues. Combined with MN3221, this course provides DAU
MN3301 Acquisition of Defense Systems (4-0) Fall/Spring
This course introduces the principles and concepts that underlie successful defense acquisition management. The course focuses on management of the acquisition process for defense systems from the development of an initial desired capability or need through design, development, production, fielding, sustainment, and disposal. Students gain an understanding of successful acquisition as an interdisciplinary activity through contributions and applications of principles from business, management, and technical disciplines. The course also emphasizes the statutory, regulatory, and policy environment of acquisition. Numerous case studies illustrate the application of concepts and principles in actual acquisition programs. Prerequisite: None.

MN3302 Advanced Program Management (2-0) As Required
Course builds on the student's experience in the acquisition workforce. Cases are used to examine each of the major disciplines in the acquisition process and bring each student to a current and common understanding of the acquisition environment, process, requirements and management approaches. Prerequisite: DAWIA Level II Certification.

MN3303 Principles of Acquisition and Contract Management (4-0) Winter/Summer
This course is an introduction to the principles of government acquisition and contracting. It presents the fundamentals of the Federal Acquisition Regulation (FAR) and the DoD FAR Supplement; the federal acquisition and contracting processes, including requirements determination, acquisition strategies, government contract law, ethics, contract types, contracting methods, and acquisition/contract management techniques. Prerequisite: None.

MN3304 Contract Pricing and Negotiations (5-2) Winter/Summer
This course involves the study and application of pricing theory and strategies, cost methods, cost and price analysis, cost principles, Cost Accounting Standards, and contract negotiations as used in the Federal Government. Students develop and sharpen negotiating skills by participating in practical negotiation exercises with corporations. Prerequisites: MN3303.

MN3306 Strategic Purchasing (3-0) Fall/Spring
This course is a graduate-level seminar in strategic purchasing. The course will be taught through a combination of formal lecture, guided discussion, and case analysis. The primary goal of this course is to develop, structure, and execute purchasing, not as a functional activity, but rather as a strategic component of total supply chain management. The course emphasizes the concept that companies with world-class purchasing practices derive a competitive advantage in their industries from their procurement and sourcing strategies. The course develops the concept of competitive advantage through strategic purchasing as it relates to efficient and effective structure and management within the Department of Defense. The emphasis on world-class purchasing practices entails observation and analysis of commercial organizations and their purchasing practices. The student will investigate whether select commercial organizations' purchasing practices are useful to the DoD and determine practical implementation for use in the DoD acquisition environment. Prerequisite: None.

MN3307 Entrepreneurship in Strategic Purchasing (3-0) Winter/Summer
MN3307 is a graduate level seminar on the entrepreneurial concept and management and its application to strategic purchasing. Entrepreneurial thinking is designed to exploit opportunities in uncertain environments. The primary goal for MN3307 is to explore and develop strategic and critical thinking in entrepreneurial concepts and management along with specific methods for utilizing these concepts and tools within world-class purchasing organizations. Students will critically examine how the entrepreneurial mindset is applied in progressive business ventures and how DoD and the government can effectively apply these concepts and management tools for effective and efficient purchasing operations. The foundation of MN3307 is an analysis of the process by which the entrepreneurial mindset generates new ideas, researches the likelihood of success, and successfully implements the idea. The course will also investigate the critical role of entrepreneurial leadership and scanning the environment for opportunity, and capitalizing on opportunities to benefit DoD purchasing operations. The course will be taught through a combination of informal lecture, guided discussion, case study, and student presentations. Prerequisite: None.

MN3309 Acquisition of Embedded Weapon Systems Software (4-0) Winter/Summer
This course examines the fundamentals of major Congressional statutes, agency policies and regulations, and legal precedents which govern the Federal procurement process. The course contrasts the legal regimes of private and government contracting with strong emphasis on unique aspects of government contracts law, including: appropriations limitations; the power to contract; competitive and non-competitive methods of contract formation; contract administration issues such as changes and terminations; transparency and oversight; and bid protests, size protests and disputes. The course prepares students to identify and choose among legal tools, strategies, and processes which should control their decision-making as contracting professionals. Prerequisites: MN3331 or MN3222 or MN3302.

MN3312 Government Contracts Law (4-0) Fall/Spring
This course examines the legal structure within which federal government contracts with private industry are formulated and executed. The course addresses the unique aspects of government contract law including such topics as agency authority, contract interpretation, disputes and remedies, Alternative Dispute Resolution (ADR), socio-economic laws, labor law, property, patent and data rights, conflicts of interest, protests, and ethics. Comparisons are made with the Uniform Commercial Code (UCC). Emphasis is on the use of Court and Board of Contract Appeals (BCA) cases. Prerequisites: MN3303 or MN3341.

MN3313 Contracting for Modeling and Simulation (M&S) (4-0) As Required
This course serves M&S certificates and degree programs offered by the Department of systems Engineering. This course familiarizes program managers, systems engineers, and other DoD managers with the major contracting issues involved in the acquisition and use of M&S products and services. Principal course topics include intellectual property (IP) issues, delivery terms, maintenance responsibility, standards for documentation, open architecture, interoperability, and reuse. Prerequisites: MV/SE3313 or permission of the instructor.
**MN3315 Acquisition Management and Contract Administration (4-0) Fall/Spring**

This course focuses on the management functions and decision-making techniques involved in the award and administration of Best Value competitively negotiated contracts. The first phase of the course concentrates on the source selection phase of the acquisition process; specific topics include acquisition planning, market research, source selection planning, proposal development, solicitation management, source selection evaluation, contract award, and contractor debriefings. The second phase of the course emphasizes the performance phase of the acquisition process; specific topic areas include organizing for contract administration, transitioning to performance, quality management, subcontract management, financial management, performance monitoring, change management, and contract closeout. Emphasis is on the use of legal case studies and practical exercises. Prerequisites: MN3304 and MN3312.

**MN3318 Contingency Contracting (2-0) Winter/Summer**

This course is a study of the principles of contingency contracting and the fundamental skills required to provide direct contracting support to joint tactical and operational forces participating in the full spectrum of armed conflict and military operations other than war, both domestic and overseas. Topics include: Types of Contingencies, Cross-Cultural Awareness, Contingency Contracting Officer Authority, Roles and Responsibilities, Anti-terrorism and Security, Planning, Contractual Methodologies and Instruments, Contract Administration, and Ethics/Standards of Conduct. Prerequisite: None.

**MN3320 Contract Cost and Price Analysis (3-0)**

Fall/Winter/Spring/Summer

This course involves the study and application of pricing theory and strategies, costing methods, cost and price analysis, cost principles, Cost Accounting Standards, and related genres in examining proposed and incurred costs in Federal contracts in both pre-award and post-award contexts. Prerequisite: MN3303 or similar introductory contracting principles course. May not require this for MSCM students with extensive field experience and existing CON Level I DAU certification or higher.

**MN3321 Federal Contract Negotiations (3-0)**

Fall/Winter/Spring/Summer

This course involves the study and application of the art and science of developing and conducting comprehensive government contract negotiations. Emphasis is placed on cost and price analytical techniques in the formulation and presentation of a pre-negotiation business clearance, strategy and actual conduct of negotiations in a simulated business environment. Prerequisite: MN3320.

**MN3331 Principles of Acquisition and Program Management (5-1)**

Fall/Winter/Spring/Summer

This course provides the student with an understanding of the underlying concepts, fundamentals and philosophies of the Department of Defense systems acquisition process and the practical application of program management methods within this process. The course examines management characteristics and competencies, control policies and techniques, systems analysis methods and functional area concerns. Techniques for interpersonal relationships will be examined in team exercise settings. Topics, from a program management perspective, include the evolution and current state of systems acquisition management, the system acquisition life cycle, requirements analysis, systems engineering, contract management, resource management, test and evaluation, user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. Case studies are used to analyze various acquisition issues. Provides DAU Equivalency for ACQ 101, ACQ 201, and PMT 250. Prerequisite: None.

**MN3341 Advanced Contracting Principles (4-2) As Required**

This course builds on the student’s knowledge and experience in contracting to address the more complex pre-award contracting issues in the acquisition environment, including contracting methods, contract types, negotiation, source selection, contingency contracting, environmental contracting, contracting for services, R&D contracting and international procurement. Major issues regarding acquisition reform are addressed. Ethical issues throughout the contracting process are examined. Cases are used to illustrate methods for attacking contracting problems and challenges. Prerequisite: Enrolled in 835 curriculum or consent of instructor.

**MN3342 Advanced Contract Management (4-1) As Required**

This course builds on the student’s knowledge and experience in contracting to address the more complex post-award contracting issues in the acquisition environment including disputes and appeals, claims, intellectual and technical data rights, post-award pricing and negotiations, terminations, contract modifications, traffic and transportation, value engineering, environmental contracting, contractor systems reviews, property administration, quality assurance, contract financing, alternative dispute resolution (ADR), labor relations, contractor performance monitoring and surveillance, contractor performance evaluation. Prerequisites: MN3341, MN3312.

**MN3361 Software Acquisition Management (2-0)**

Fall/Winter/Spring/Summer

Advanced Acquisition Program. This course concentrates on the management of software products and software intensive systems. It is intended to focus essential program management techniques on the software element to ensure successful and timely system development. The course provides the student with knowledge of software acquisition management control processes and tools. Current software acquisition articles and cases are analyzed for application of program leadership, software development techniques, and management tools applied. Topic areas include: DoD software environment; software acquisition strategies; impediments to successful software intensive system development; software oriented requirements development; contracting for software, software discriminate proposals; software test and evaluation management; Post Deployment Software Support; risk management; and software costing and budgeting. Integrative exercises involving software managerial problem solving and decision making in the program management environment are used. Prerequisite: MN3331 or consent of instructor.

**MN3362 Acquisition Design Verification and System Assessment (2-0)**

Fall/Winter/Spring/Summer

Advanced Acquisition Program. This course examines Developmental, Operational, and Joint Test & Evaluation as viewed from the Program Manager’s perspective. The student will be able to distinguish the difference between the various testing types and the impact testing results will have on the decision makers’ thought process. Actual military and civilian test cases are used as examples for discussion purposes. Topics include the role of T&E in the Systems Engineering Process, T&E policy Structure and Oversight Mechanism, Requirements Generation, Modeling and Simulation, Alternative Acquisition Program T&E; Human
systems Integration and Live Fire T&E. Integrative case studies involving managerial problem solving and decision making in the PMO environment are also used to provide application of concepts in both IPT teaming and multiple-role individual settings. Teamwork exercises are conducted to reinforce concepts and add real-world human dynamics. Upon completion, all exercises are evaluated with after-action reviews and assessments. Prerequisite: MN3331 or consent of instructor.

**MN3363 Acquisition Manufacturing and Quality Management (2-0) Fall/Winter/Spring/Summer**
For AAAP program students. This course provides the student with knowledge and application of integrated management control processes with regard to performance, cost, and schedule, while examining higher-level and real world defense systems. Issue-oriented topic areas likely to affect Program Management Office personnel include: acquisition reform; acquisition strategy; industrial base; production and manufacturing; quality management; and risk management. Integrative case studies involving managerial problem solving and decision making in the PMO environment are also used to provide application of concepts in both IPT teaming and multiple-role individual settings. Teamwork exercises are conducted to reinforce concepts and add real-world human dynamics. Upon completion, all exercises are evaluated. Prerequisite: MN3331 or consent of instructor.

**MN3364 Business Financial and Contract Management (2-0) Fall/Winter/Spring/Summer**
Advanced Acquisition Program. The course builds on the student's knowledge and experience in contracting, and contracting related fields, to address the more complex pre-award, award and post-award issues in the acquisition and contracting, and business and financial management arenas. Prerequisite: MN3331 or consent of instructor.

**MN3365 Acquisition Logistics & Program Sustainment (2-0) Fall/Winter/Spring/Summer**
Advanced Acquisition Program. This course focuses on the logistics and sustainability planning for new major weapon systems in each phase of the DoD acquisition process. It links logistics and sustainability planning, in the early stages of system development, to the effects on the system's total ownership cost. The course describes sustainability planning and management through the Systems Engineering Process and supportability analyses techniques. The course addresses the following specific subject areas: Designing for Life Cycle Cost and Cost As an Independent Variable (CAIV); Logistics Supportability Elements; Supportability analyses; Logistics Open Systems; Software Support Planning; Supply Chain Management; and Post-Production Support Planning. Prerequisite: MN3331 or consent of instructor.

**MN3370 Seminar on Leadership in Supply Chain Management (0-2) Fall/Winter/Spring/Summer**
Graduate-level seminar emphasizing current and emerging issues from a broad range of logistics and supply chain management subjects. Speakers from the Department of Defense, other government agencies, and industry. Graded on Pass/Fail basis. Prerequisite: Consent of instructor.

**MN3384 Principles of Acquisition Production and Quality Management (5-1) Fall/Spring**
This course provides the student with an understanding of the principles and concepts of production and quality management in the DoD acquisition environment. Topics include production planning and control, "lean" production, and bottleneck analysis; quality management systems, statistical process control, and six sigma; cost estimating methods, activity based costing, and progress payments in support of production; producibility, environmental, safety and occupational health; warranties; specs and standards reform; and the Defense industrial base. Prerequisite: MN3331 or MN3221/MN3222 or MN3302 or consent of instructor.

**MN3392 Systems and Project Management (4-0) Summer**
Management ensures progress toward objectives, proper deployment and conservation of human and financial resources, and achievement of cost and schedule targets. Topics include strategic project management, project and organizational learning, lean thinking, cost, schedule planning and control, structuring of performance measures and metrics, technical teaming and project management, information technology support, risk management, and process control. Course delivery consists of lectures, speakers, case studies, and experience sharing, and reinforces collaborative project-based learning and continuous improvement. Prerequisite: MN3108.

**MN3402 Seminar in Installation Management I (0-2) As Required**
Introduces students to a variety of topics associated with the management of a complex military base installation. Graded on a Pass/Fail basis. Prerequisite: Consent of instructor.

**MN3420 Supply Chain Management (3-0) As Required**
This course is designed to provide an introduction to supply chain management (SCM). A supply chain is a network of organizations that supply and transform materials, and distribute final products to customers. Supply chain management is a broadly defined term for the analysis and improvement of flows of material, information, and money through this network of suppliers, manufacturers, distributors, and customers. The objective of SCM is to deliver the right product to the right customer at the right time. SCM emphasizes inventory-service level tradeoffs across the chain of players that, together, provide the product to a customer. Logistics has traditionally focused on materials issues within and downstream from the factory while SCM looks at the entire network of players, both up and down stream, and perhaps has more of an emphasis on information flows through the network. Logistics has traditionally been considered a more tactical topic while SCM has risen to prominence in recent years, attracting high-level attention. Ultimately, logistics and SCM activities are concerned with coordinating demand and supply. Common elements in that coordination are the management of materials (inventories), the location of materials (warehouses), and the movement of materials (transportation). As part of the coordination, an analyst must consider product and process designs as well as information flows between various players in the networks. These elements will form the basis of this course. This course is the Distance Learning version of GB4480. Prerequisites: MN3042, MN4043.

**MN3510 Defense Financial Management Practice (3-0) Fall/Spring**
This distance learning course is designed for MBA students and presumes the student has a foundation including the PBFE system and Congressional Authorization and Appropriation processes. This course concentrates on financial management practices within DoD as distinct from policy and budgeting theory. The course covers the actors and activities and mechanics of building and defending budgets. It covers funding mechanisms for programs and activities, addressing the proper use and management of appropriated, reimbursable, and revolving funds. Basic principles of
fiscal law are explored. It then addresses financial management and stewardship topics including budgetary accounting, management of cost drivers, the relationship between comptrollership and contracting, and internal controls. Contemporary financial management issues are discussed. Exercises and case studies are used to develop the students’ ability to apply financial management concepts to real life situations. Prerequisite: None.

**MN3760 Manpower Economics I (4-0) As Required**
An introduction to the theoretical aspects of labor economics. Concepts covered include the supply of labor, the demand for labor, wage determination, internal labor markets, human capital, earnings functions, turnover, compensation systems, and compensating wage differentials. Special readings are used that apply the principles to military manpower. Prerequisites: GB3040, GB4071.

**MN3900 Readings In System Management (V-0)**
Fall/Winter/Spring/Summer
An individualized program of readings and study in some area of the systems management, designed to meet the student’s special educational needs. Prerequisites: A background in the area of study and departmental approval; graded on a Pass/Fail basis only.

**MN4043 Business Modeling and Analysis (3-0) As Required**
This course introduces mathematical modeling for a sound conceptual understanding of the decision-making process. This course familiarizes the students with applications, assumptions, and limitations of the quantitative methods in modeling. It focuses on the development of mathematical and spreadsheet models, the verification of those models, sensitivity analysis of the solutions generated from a model, and the implementation of those solutions. Some of the topics covered include linear programming, non-linear and integer programming, simulation, and forecasting. The process of modeling and particular modeling tools are applied to business problems in finance, acquisition, logistics and manpower planning. This course is the Distance Learning version of GB4043. Prerequisites: None.

**MN4053 Defense Budget and Financial Management Policy (4-0) Winter/Summer**
This distance learning course analyzes the resource requirements process within the Department of Defense (DoD) and in the executive and legislative branches of the federal government. It begins with a summary of the current threat situation and potential effects to it. Once the threat is defined, the study of the resource allocation process to meet the threat begins. The course covers the resource planning and budgeting processes of the Department of the Navy, DoD and the federal government. It includes the politics of executive and congressional budgeting, and DoD budget and financial management processes and procedures including budget formulation and execution. It also includes analysis of the Planning, Programming, Budgeting Execution System (PPBES) used by DoD to plan, budget and implement national defense resource management policy and programs. Other areas included are budget process and fiscal policy reform and the dynamics of internal DoD competition for resources. Executive and congressional budget processes are assessed to indicate how national security policy is resourced and implemented through the budget process. Spending for national security policy is tracked from budget submission through resolution, authorization and appropriation. Budget formulation, negotiation, and execution strategies are evaluated to indicate the dynamics of executive-legislative competition over resource allocation priorities. Supplemental appropriation patterns and current year budget execution patterns and problems are also considered. Prerequisite: None.

**MN4090 Joint Applied Project I (2-0)**
*Fall/Winter/Spring/Summer*
Course reflects laboratory hours dedicated to presenting research techniques and independent/team efforts needed to conduct Joint Applied Project research and analysis and to produce the Professional Report. These laboratory hours will be used by students and student teams for interactions with their Joint Applied Project advisors, Academic Associate(s), editors, and thesis processors in producing high quality, disciplined research products for publication as appropriate. Prerequisite: None.

**MN4091 Joint Applied Project II (2-0)**
*Fall/Winter/Spring/Summer*
Intended to help students attack unstructured managerial problems. Student teams must determine the organizational objective and identify what the underlying issues are; and determine the most appropriate tools from the curriculum to apply in order to provide insight into these issues; and recommend appropriate courses of action. Graded course. Prerequisite: None.

**MN4104 Strategic Management Issues In Military Organizations (3-0) As Required**
Examination of strategic management from the perspective of leadership in military education and training organizations. This course explores strategic planning, policy formulation, and organizational adaptation with a dual emphasis on understanding the concepts as well as acquiring the ability to isolate and communicate concepts relevant to developing subordinates. Prerequisites: consent of instructor.

**MN4105 Strategic Management (3-0) As Required**
Strategic Management entails the establishment of an organization’s direction and the implementation and evaluation of that direction given the organization’s external environment and its internal capabilities. The principal aim of this course is the transfer and adaptation of the principles of business strategic management to the Department of Defense and other federal agencies. In previous courses, students concentrate on the functional elements of management (e.g., accounting, finance, acquisition, logistics, contracting, etc.). This course addresses the challenges of setting direction and implementing strategies for the total system or whole organization. Cases and approaches from the public and private sectors enable students to develop the knowledge, skills, and abilities to strategically think, plan, and manage. Prerequisites: MN3012.

**MN4106 Manpower / Personnel Policy Analysis (4-0)**
*Summer*
Study and analysis of military manpower / personnel policy alternatives with emphasis on identifying the trade-offs involved, the dynamic impact of major policy decisions and the short-term and long-term consequences of decisions. Review, use and evaluation of tools to aid in selecting policy alternatives. Analysis of issues in the DoD and military services. Prerequisites: MN3760, MN4111.

**MN4107 Systems Thinking and Modeling for a Complex World (4-0) Fall/Winter/Spring/Summer**
This course introduces you to System Dynamics modeling for the analysis of organizational policy and strategy. You will learn to visualize an organization in terms of the structures and policies that create dynamics and regulate performance. The goal is to use the analysis and modeling techniques of System Dynamics to improve
understanding of how complex organizational structures drive organizational performance, and then to use that understanding to design high leverage interventions to achieve organizational goals. We use role-playing games and computer-based simulations called “microworlds,” where space and time can be compressed, slowed, and stopped so we can experience the long-term side effects of decisions, systematically explore new strategies, and develop our understanding of complex systems (analogous to the “flight simulators” that pilots use to learn about the dynamics of flying an aircraft). The course presents system dynamics with a minimum of mathematical formalism. The goal is to develop the students’ intuition and conceptual understanding, without sacrificing the rigor of the scientific method. (No prior computer modeling experience is needed.) Prerequisite: None.

**MN4110 Multivariate Manpower Data Analysis I (4-1)**

Winter

An introduction to multivariate data analysis. This section will focus on the tools necessary to perform data analysis. The primary goal of this course is to introduce multiple linear regression models. The second goal involves making correct inferences and interpretations of the findings. Special topics include hypothesis testing, model specification issues, multicollinearity, dummy variables, and research methodology. Prerequisite: GB3040 or consent of instructor.

**MN4111 Multivariate Manpower Data Analysis II (4-1)**

Spring

An introduction to the specialized multivariate techniques used for analysis of military manpower data. Topics include advanced linear estimation techniques, such as panel data analysis and two-stage models. In addition, nonlinear methods are introduced, such as binary choice models and survival analysis. The course also covers special techniques for policy evaluation and reduction of estimation bias due to omitted variables or sample selection. Students apply techniques to manpower databases. Prerequisite: MN4110, or consent of instructor.

**MN4114 Sociological and Psychological Perspectives on Military Service (4-0)**

Winter

Exploration of the concepts, theories, and methods of military sociology and military psychology as applied historically and in the current setting. Study of the military as a social institution, focusing on the internal organization and practices of the armed forces as well as the relationship between the military and society. Review and evaluation of the psychological principles employed in a variety of military areas such as health care, selection and job classification, human factors, organizational systems, personnel security, and performance appraisal. Emphasis on representative cases in DoD and the armed forces. Prerequisite: GB3010.

**MN4115 Foundations of Education and Learning in DoD Organizations (4-0)**

Fall

Analysis of issues in DoD education, learning and training (ELT). Major course themes focus on understanding adult military ELT from a strategic systems perspective; analyzing instructional program design, implementation, and technologies and applying methods of needs analysis and program evaluation. Examination of how DoD can become a learning organization to respond to the dynamic demands of both the organization and its military members. Guest speakers, military publications, student cases, and discussion based on the experience of the instructor and the students are utilized to maintain the necessary focus on current military applications. Prerequisite: GB3010.

**MN4116 Society of Human Resource Management (0-3)**

Fall/Spring

This course prepares students for taking the Human Resource Certification Institute (HRCI) certification examination. Prerequisite: Enrollment in the MSA curriculum and consent of instructor.

**MN4118 Modeling for Decision Support in Manpower Systems (3-2)**

Fall/Spring

An introduction to applied manpower models and modeling techniques. Students will gain insight into how models are used by policy makers in the decision process and into the complexity of the military manpower system. Several models that are currently used by the Bureau of Naval Personnel and Headquarters USMC will be analyzed, including accession planning, sea-shore rotation policy, promotion planning and inventory projection models. Other topics covered include the manpower planning process, types of models, model evaluation and good modeling practices. Prerequisites: GB3040, GB4043, OS4701 (may be taken concurrently).

**MN4119 Navy Manpower Requirements Process (3-0)**

Summer

An in-depth analysis of fleet and shore unit manpower requirements and personnel documents. The course will cover the determination and validation of fleet requirements as they pertain to an operational unit’s Required Operational Capabilities and Projected Operational Environment and the resulting Ship Manpower Document (SMD), Squadron Manpower Document (SMQD), and Fleet Manpower Document (FMD); and how the Shore Manpower Requirements Determination Process (SMRDP) links the Mission, Function and Task statement to the resulting Statement of Manpower Requirements (SMR). The course covers how fleet and shore manpower documents link with the Activity Manpower Document (AMD). The Personnel sub-process will be studied as it relates to the Enlisted Distribution and Verification Report (EDVR) in support of fleet readiness. Prerequisites: Enrollment in the MSA curriculum and consent of instructor.

**MN4123 Organizing and Planning In Complex Networks (4-0)**

Summer

In 21st century operational and policy settings, people are expected to work in networks to get things done. Operating beyond the boundaries of any one organization in an inter-organizational domain, network members are called upon to join forces and work collaboratively with others. Network collaborations are difficult, however, because they challenge traditional management assumptions. Members must coordinate without hierarchy, lead without formal authority, and solve problems and make decisions without someone being "in control" or "in charge." This course provides the basic knowledge, skills, and abilities to enable students to work collectively in networks, especially those with members who come from different cultural, ethnic and national organizations. With the use of cases, experiential exercises, and simulations, students learn how to craft and execute collaborative strategies to improve network performance. Prerequisite: Consent of instructor.

**MN4125 Managing Planned Change in Complex Organizations (4-0)**

Spring

Examination of the approaches to planning and managing change efforts in complex social systems made up of the interdependent components of technology, structure, task, and people; and of the role of the manager or staff specialist; and the process of helping. Emphasis is placed on strategies and technologies for diagnosis and planning aimed at effective implementation. Course provides
opportunities for practice using both simulations and actual organizational cases. Particular emphasis is placed on the DoD/DoN organizations and the special problems they have in bringing about change.

**MN4130 Marine Manpower Management (3-0)** Summer

Upon completion of this course, the student will have an in-depth understanding of USMC Manpower Management and implementation of management policy techniques through analysis, procedures, organizational and administrative actions to better staff Headquarters Marine Corp management policy issues. USMC officers will gain insight into management actions that support budget requirement requests and the resource allocation efforts subsequent to budget approval. Each officer will develop an understanding of the relationship between the Table of Organization (T/O), Troop List (TL) and the Authorized Strength Report (ASR). Each officer will complete an UNS report. Graded (3-0). Prerequisite: MN2111 or consent of instructor.

**MN4145 Policy Analysis (4-0)** Fall/Spring

Develops the tools and techniques of economic efficiency to assist public sector decision makers in analyzing resource allocation in government activities. Focuses on developing the principles of cost-benefit analysis (CBA) and cost-effectiveness analysis (CEA). Stresses the application of CBA and CEA to specific investment projects, programs, and policies in the federal government, especially in the Department of Defense. Prerequisites: MN3161 and OS3101 or equivalent.

**MN4157 Seminar in Management Accounting I (3-0)**

Fall/Spring

This course complements the financial management program by covering significant topics not otherwise included in the program to prepare students to obtain the Certified Management Accountant (CMA) and/or Certified in Financial Management (CFM) designation. This course covers topics in business analysis, corporate financial management, management accounting and reporting, and strategic management. This course reviews, in more depth, topics covered in the introductory financial and cost management course. Specific topics addressed in the course may vary. Prerequisite: GB3050 and GB3051.

**MN4304 Defense Systems Contracting (2-0)**

Winter/Summer

This course is the study of the DoD's major systems contracting policies, processes, procedures, and practices. A review of major systems acquisition and program management is provided but the primary focus is on the contracting process used to acquire defense systems for the various services. The topics covered include: acquisition environment, acquisition strategy, source selection, incentive contracting, alpha contracting, multi-year procurement, and requirement/capability specifications. Prerequisites: MN3331 or MN3222.

**MN4307 Program Management Policy and Control (4-0)**

Fall/Winter/Spring/Summer

This course provides the student with knowledge and understanding of major systems management control processes and tools, application of program management control systems and the use of computer-based management information systems with strategic media choices so as to develop effective media campaigns, interact effectively with the print and broadcast news media, and handle press conferences and similar media events. Particular attention is focused on anticipating and handling crisis communication. Specifically, students will learn to organize crisis management teams, develop crisis management plans, and create communication plans to manage information and public perception. Case studies involving program management problem solving and decision making in the acquisition environment are used. Prerequisites: MN3331 or MN3109/MN3392, MN3303 (or GB4053 or MN3364), MN4470 (or GB4450 or MN3365), MN3384 (or MN3363), MN3309 (or MN3361), and MN4602 (or MN3362).

**MN4308 Field Contract Management (2-0)** As Required

Examines procurement at the installation and center level. Emphasis is on (1) simplified acquisition procedures, (2) contracts for other than major systems, (3) services contracting, and (4) contracting for information technology resources. Prerequisite: MN4473 or consent of instructor.

**MN4310 Logistics Engineering (4-0)** Fall/Spring

The concept of integrated logistics support in the design and maintenance of weapon systems. Operational requirements, system maintenance concept, functional analysis, life cycle costs, logistics support analysis, systems design, test and evaluation, production, spare/repair parts management are discussed. This course also covers topics in logistics information technology, inventory management culture and commercial-sector best practices for military. Case studies include logistics life cycle cost, reliability and readiness analysis for major weapon systems Prerequisite: GB4043, OS3006, (both may be taken concurrently).

**MN4311 Contracting for Services (3-0)** Fall/Spring

This course studies the DoD’s major services contracting policies, processes, procedures, and practices. Detailed and critical examination of current policies, issues, and practices in services contracting, to include performance based services contracting (PBSC), is accomplished through extensive case, policy, and report analysis requiring synthesis of concepts, processes and best practices. A review of major services acquisition and program management is provided but the primary focus is on the contracting process used to acquire major services for the DoD. Topics include: information technology services, base operating support services, environmental services, construction services, and contractor logistics support. Prerequisites: MN3331 and MN3303 or by permission of the instructor.

**MN4366 Program Management and Leadership (4-0)**

Summer

This course provides the student with knowledge and understanding of major systems management control processes and tools, application of program management control systems and the use of computer-based management information systems with strategic media choices so as to develop effective media campaigns, interact effectively with the print and broadcast news media, and handle press conferences and similar media events. Particular attention is focused on anticipating and handling crisis communication. Specifically, students will learn to organize crisis management teams, develop crisis management plans, and create communication plans to manage information and public perception. Case studies involving program management problem solving and decision making in the acquisition environment are used. Prerequisites: MN3331 or MN3109/MN3392, MN3303 (or MN3371), MN3155 (or GB4053 or MN3364), MN4470 (or GB4450 or MN3365), MN3384 (or MN3363), MN3309 (or MN3361), and MN4602 (or MN3362).
MN4371 Acquisition and Contracting Policy (4-0)  
Fall/Spring  
This course uses case studies and current acquisition issues to analyze government and business acquisition/contracting policies. Emphasis is on acquisition decision making and policy formulation/execution. Prerequisites: MN3304, MN3320 and MN3312 (or equivalent)

MN4374 Seminar in Acquisition Management: Strategic Purchasing (3-0) Fall/Spring  
This course is a graduate-level seminar in strategic purchasing. The primary purpose and objective of MN4374 is to provide the student with an opportunity to review and analyze the concepts and disciplines of strategic purchasing, to demonstrate critical analysis and thinking skills in applying strategic purchasing management and execution to make DoD and other agencies “world-class” buying organizations. A second purpose is to investigate the specific topics, concepts and theories that are projected to be of high interest to DoD acquisition activities of the future. The course is divided into three components. The MN4374 course includes 15 blocks of instruction, focusing on those areas of the world-recognized Institute for Supply Management as world-class business practices for progressive purchasing. Specific cases and in-class “exams” are designed to reinforce class readings and discussions. The course is designed to capitalize on the foundations provided by MN3303, MN3306, and MN3307. Critical thinking and analytical skills are developed in designing and executing the most efficient and effective purchasing organizations and associated business processes. Prerequisite: None

MN4379 Operations Management (4-0) Winter  
This course introduces students to problems and analysis related to the design, planning, control, and improvement of manufacturing and service operations. It will extensively utilize case studies and analytical problem sets. Topics include operations strategy, process analysis, project analysis, materials management, production planning and scheduling, quality management, computer-aided manufacturing, capacity and facilities planning, and theory of constraints applied to product development. The course will equip students with the basic tools and techniques used in analyzing operations, as well as the strategic context for making operational decisions. Prerequisites: MN3108, MN3117, and OS3211, or consent of instructor.

MN4450 Logistics Strategy (3-0) As Required  
DAU Equiv: LOG 304. This is the logistics capstone course. The course explores and analyzes the concepts, processes and methods of strategic planning and execution, emphasizing aggressive proactive techniques to ensure maximum logistics influence on major weapon systems acquisition as well as optimum life cycle management of fielded systems. Cultural constraints of the current logistics environment and how to succeed in it is a significant focus of the course. The course examines and analyzes key opportunities for maximum logistics influence in requirements, development, contracting, test and evaluation, reliability, and maintainability as well as financial management and communications. The course features logistics management relevance to service roles and missions. It employs lectures, guided discussions, case studies, role-playing, panel discussions, and lessons learned in the DoD acquisition environment. For the final examination project, the class is divided into teams and produces a comprehensive written case study. Prerequisite: None.

MN4470 Strategic Planning and Policy for the Logistic Manager (4-0) Winter/Summer  
The course explores and analyzes the concepts, processes and methods of strategic logistics planning and execution, emphasizing proactive techniques to ensure maximum logistics influence on major weapon systems acquisition as well as optimum life cycle management of fielded systems. The course will examine and analyze key opportunities for maximum logistics influence in requirements development, contracting, test and evaluation, reliability and maintainability, as well as financial management and communications. The course will feature logistics management relevance to service roles and missions. The course will employ lectures, guided discussions, case studies, role-playing, panel discussions and lessons learned in the DoD acquisition environment. Upon successful completion of the course, the student will be awarded a DAWIA (Defense Acquisition Workforce Improvement Act) Level III certificate for Acquisition Logistics. Prerequisite: GB4410 or consent of instructor.

MN4473 Strategic Acquisition and Contract Management (4-1) As Required  
Tailored toward the students in the class, the course examines the unique contracting issues/problems encountered in a variety of organizational situations. Analysis, discussion and potential resolution of actual working problems are undertaken. A comprehensive written case study is the capstone effort in the course for each student. Students will be grouped into teams simulating integrated product team (IPT) organization to address various issues germane to the students’ organizations. Prerequisite: MN3342.

MN4474 Organizational Analysis (2-0) As Required  
This course concentrates on analysis of acquisition organizations from an open systems perspective. Focus is on tools and techniques for diagnosing managerial problems by analyzing structure, task requirements, technology, culture, and various organizational subsystems. The course emphasizes application in that students complete a course project requiring integrated application of the systems model in an analysis of their own acquisition organization. Prerequisite: none.

MN4602 Test and Evaluation Management (2-0)  
Fall/Winter/Spring/Summer  
Designed to cover Developmental, Operational and Joint Test and Evaluation, including planning concepts and procedures frequently used in test and evaluation programs. Taught from the perspective of the Program Manager, Test Project Officer and Test Engineer. Actual military cases are used for examples. Topics include the role of Test and Evaluation in Systems Engineering and Acquisition Management, DT and OT test planning, introduction to test design, conduct of tests, live fire testing, modeling and simulation, human systems integration (HSI), reporting of test results, range and resource issues, and lessons learned. Student teams will write a detailed test plan. Prerequisite: MN3302.

MN4760 Manpower Economics I (4-0) Spring  
An introduction to the theoretical aspects of labor economics. Concepts covered include the supply of labor, the demand for labor, wage determination, internal labor markets, human capital, earnings functions, turnover, compensation logistics, and compensating wage differentials. Special readings are used that apply the principles to military manpower. Prerequisite: None.
**MN4761  Applied Manpower Analysis (4-0) Summer**
Application of theoretical models and quantitative techniques to Navy and DoD manpower, personnel, and training issues. Topics include application of cost-benefit and cost-effectiveness analysis techniques to manpower policies, manpower supply models, attrition and reenlistment models, force structure analysis, manpower productivity, and compensation systems. Course uses specialized readings in DoD and Navy manpower. Prerequisites: MN3760 and MN4111.

**MN4790  Managing Diversity (4-0) Spring**
This is an experiential course developing awareness, understanding, and leadership action for managing diversity and inclusion in the uniform and civilian military. The course explores social constructs of gender, race, class, and culture; builds personal, leadership, and organizational skills for addressing diversity and inclusion issues; and develops the competency of leaders to respond effectively to the opportunities and the challenges posed by the increasing presence of diversity in the military. The objective of managing inclusion is to maximize the organization’s performance through understanding, valuing, and leveraging diversity both in the workplace and in the customer base. Managing diversity competency is developed through personal and organizational introspection and change. Graded on a Pass/Fail basis only. Prerequisite: None.

**MN4900  Readings in Management (V-0)**
*Fall/Winter/Spring/Summer*
An individualized program of advanced readings and study in some area of Systems Management. Prerequisites: A background of advanced work in the area of study and departmental approval. Graded on a Pass/Fail basis only.

**MN4970  Seminar in Systems Management (V-0)**
*Fall/Winter/Spring/Summer*
Study of a variety of topics of general interest in the systems management, to be determined by the instructor. Prerequisites: A background in systems management and consent of instructor.

**MN4999  Elective (4-0) As Required**
Course elective.

**PD Courses**

**PD0810  Thesis Research (0-8) Fall/Winter/Spring/Summer**
Thesis research for PD21 students.

The Graduate School of Engineering and Applied Sciences consist of seven Departments, two Committees, and two Academic Group:

Department of Applied Mathematics MA
Department of Electrical and Computer Engineering ECE
Engineering Acoustics Academic Committee EAAC
Department of Mechanical and Aerospace Engineering MAE
Department of Meteorology MR
Department of Oceanography OC
Department of Physics PH
Space Systems Academic Group SP
Department of Systems Engineering SE
Undersea Warfare Academic Group USWAG

Overview
The Graduate School of Engineering and Applied Sciences (GSEAS) supports the Navy and the Department of Defense by educating future leaders to lead, innovate and manage in a changing, highly technological world, and by conducting research recognized internationally for its relevance to national defense and academic quality. More specifically, GSEAS provides advanced technical and scientific knowledge and understanding so graduates:

- understand the capabilities and limitations of current and future technologies in battle space environments
- understand and apply emerging and advanced technologies to enhanced war fighting capabilities
- are able to grow, anticipate, respond and lead in future complex, rapidly changing technological environments
- are able to represent their organization’s technical needs and interests with and within myriad constituencies, to include DoD, the Joint Staff, and industry

GSEAS accomplishes the above by offering high quality, traditional academic degrees that include:

- Science and engineering curricula tailored to the needs of naval communities and other DoD constituents
- Research programs funded by the defense community, aligned to future capabilities—integrated into curricula and courses
- Hands-on education—classroom theory linked to real-world experiences in laboratories, experiments, testing—often classified
- Blending current operational experience of students, emerging technologies, and cutting-edge faculty in a joint, international culture
- Life changing education—transforming officers into technical generalists, sub-specialists and war fighters

Curricula
Traditional degree granting programs are offered by departments, normally at both the master’s and Ph.D. levels. Most of these degree programs are an integral part of one or more unique interdisciplinary curricula designed for relevance to national security needs. Each of these curricula infuses cutting edge knowledge into academic courses taught by a dedicated, world-class faculty:

Applied Mathematics (380)
Combat Systems Sciences and Technology (533)
Electronic Systems Engineering (590)
Reactors/Mechanical Engineering via Distance Learning (571)
Mechanical & Naval Engineering (570)
Mechanical Engineering for Nuclear Trained Officers via Distance Learning (572)
Meteorology (372)
Meteorology and Oceanography (373)
Oceanography (440)
Operational Oceanography (374)
Space Systems Engineering (591)
Space Systems Operations (366)*
Space Systems Operations (Distance Learning) (316)*
Space Systems Operations (International) (364)
Systems Engineering (580)
Systems Engineering Analysis (308)*
Systems Engineering Certificate (282)
Systems Engineering (Distance Learning) (311)
Systems Engineering Management (MSSEEM) / Product Development (Distance Learning) (721)
Underwater Acoustic Systems (Distance Learning) (535)
Undersea Warfare (525)
Undersea Warfare (International) (526)

*Indicates an interdisciplinary curriculum offered with the Graduate School of Operational and Information Sciences

Degrees

Within each of these curricula, students have the opportunity to earn a high quality academic degree while focusing on an area relevant to national defense and war fighting capabilities. For example, students enrolled the in Space Systems Engineering (Curriculum 591) have an opportunity to study and do research related to space systems while earning an academic degree from either the Department of ECE, PH, MAE, ME or CS and while students enrolled in the Undersea Warfare (Curriculum 525/526) have the opportunity to study and do research related to undersea warfare while earning a degree from either the Departments of ECE, MA, MAE, PH, OC, or OR. Student research is under the tutelage of faculty with research experience related to national security and is an integral part of the educational experience of each student.

GSEAS offers the following degree programs, each designed and evolved to meet the changing needs of the Navy and defense communities while maintaining high academic standards:

Master of Science in Applied Mathematics, Ph.D. in Applied Mathematics
Master of Science in Applied Physics, Ph.D. in Applied Physics
Master of Science in Applied Science (Physical Oceanography), (Acoustics), or (Signal Processing)
Master of Science in Astronautical Engineering, Astronautical Engineer, Ph.D. in Astronautical Engineering
Master of Science in Combat Systems Technology
Master of Science in Electrical Engineering, Electrical Engineer, Ph.D. in Electrical & Computer Engineering
Master of Science in Engineering Acoustics, Master of Engineering Acoustics, Ph.D. in Engineering Acoustics
Master of Science in Engineering Science
Master of Science in Engineering Systems
Master of Science in Mechanical Engineering, Mechanical Engineer, Ph.D. in Mechanical Engineering
Master of Science in Meteorology, Ph.D. in Meteorology
Master of Science in Meteorology and Physical Oceanography
Master of Science in Physical Oceanography, Ph.D. in Physical Oceanography

Master of Science in Physics, Ph.D. in Physics
Master of Science in Product Development
Master of Science in Systems Engineering
Master of Science in Systems Engineering Analysis
Master of Science in Systems Engineering Management

Carlos F. Borges, Professor and Chair (1991)*; Ph.D., University of California, Davis, 1990.

David Canright, Associate Professor and Associate Chair for Labs and Computing (1988); Ph.D., University of California, Berkeley, 1987.

Lester E. Carr, III, Lecturer (2005); Ph.D., Naval Postgraduate School, 1989.

Fariba Fahroo, Professor (1992); Ph.D., Brown University, 1991.

Christopher Frenzen, Associate Professor (1989); Ph.D., University of Washington, 1982.

Ralucca Gera, Associate Professor (2005); Ph.D., Western Michigan University, 2005.
Frank Giraldo, Professor (2006); Ph.D., University of Virginia, 1995.

William Gragg, Professor (1987); Ph.D., University of California, Los Angeles, 1964.

Wei Kang, Professor (1994); Ph.D., University of California, Davis, 1991.

Arthur Krener, Distinguished Visiting Professor (2006); Ph.D., University of California, Berkeley, 1971

Guillermo Owen, Distinguished Professor (1983); Ph.D., Princeton University, 1962.

Craig Rasmussen, Professor and Associate Chair for Instruction (1991); Ph.D., University of Colorado at Denver, 1990.

Clyde Scandrett, Professor (1987); Ph.D., Northwestern University, 1985.

Pantelimon Stanica, Professor and Associate Chair for Research (2006); Ph.D., State University of New York at Buffalo, 1998.

Hong Zhou, Associate Professor (2004); Ph.D., University of California, Berkeley, 1996.

Professors Emeriti:

Donald A. Danielson, Professor Emeritus (1985); Ph.D., Harvard University, 1968.

Richard Franke, Professor Emeritus (1970); Ph.D., University of Utah, 1970.

Harold M. Fredricksen, Professor Emeritus (1980); Ph.D., University of Southern California, 1968.

Toke Jayachandran, Professor Emeritus (1967); Ph.D., Case Institute of Technology, 1967.

Gordon E. Latta, Professor Emeritus (1979); Ph.D., California Institute of Technology, 1951.

Arthur L. Schoenstadt, Professor Emeritus (1970); Ph.D., Rensselaer Polytechnic Institute, 1968.

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

Brief Overview

As well as the Master of Science and Ph.D. programs in Applied Mathematics, the Applied Mathematics Department offers individually tailored minor programs for many of the school’s doctoral students. The majority of the department instructional—effort is devoted to the service courses offered.

Degrees

Master of Science in Applied Mathematics

In order to enter a program leading to the degree Master of Science in Applied Mathematics, the prospective student is strongly advised to possess either a Bachelor degree with a major in mathematics or a strong mathematical orientation in a Bachelor degree in another discipline.

Any program that leads to the degree Master of Science in Applied Mathematics for a student who has met the entrance criteria must contain a minimum of 32 quarter-hours of graduate-level (3000-4000 numbered) courses with a minimum QPR of 3.0. The program specifications must be approved by the Chairman of the Department of Applied Mathematics and the Academic Associate. The program is subject to the general conditions specified in the Academic Council Policy Manual as well as the following:

1. A student must complete or validate the four 1000 level calculus sequence and the introductory courses in linear algebra and discrete mathematics.

2. The program must include at least 16 hours in 3000 level mathematics courses and 16 hours of approved 4000 level mathematics courses.

3. Courses in Ordinary Differential Equations, Real Analysis, and upper division Discrete Mathematics are specifically required, and those at the 3000 level or above may be applied toward requirement (2)

4. An acceptable thesis is required. The Department of Applied Mathematics permits any student pursuing a dual degree to write a single thesis meeting the requirements of both departments, subject to the approval of the Chairmen and Academic Associates of both departments.

In addition to the core courses required in item (3), the program allows the student to select an applied subspecialty option from the following list: applied mathematics, numerical analysis and computation, discrete mathematics, operations research, theoretical mathematics, and intelligence.

Doctor of Philosophy

The Department of Applied Mathematics offers the Doctor of Philosophy in Applied Mathematics degree. Areas of specialization will be determined by the
department on a case by case basis. Requirements for the degree include course work followed by an examination in both major and minor fields of study, and research culminating in an approved dissertation. It may be possible for the dissertation research to be conducted off-campus in the candidate’s sponsoring organization.

Entrance into the program will ordinarily require a master’s degree, although exceptionally well-prepared students with a bachelor’s degree in mathematics may be admitted. A preliminary examination may be required to show evidence of acceptability as a doctoral student. Prospective students should contact the Chairman of the Applied Mathematics Department or the Academic Associate for further guidance.

Minor in Applied Mathematics

Ph.D. students from another department can qualify for a minor in mathematics by taking at least four mathematics courses at the 3000 or 4000 level; at least three of these must be at the 4000 level. The QPR for courses taken toward the minor requirement must be at least 3.5. The courses taken should constitute a coherent minor program, and must be approved by the Academic Associate for the Department of Applied Mathematics. The use of reading courses to satisfy the requirement is strongly discouraged.

Prerequisites

Prerequisites are as described in the course descriptions. If a student has not taken the prescribed prerequisites at NPS, then a validation examination by the Applied Mathematics Department may be substituted.

Applied Mathematics Course Descriptions

MA Courses

MA0134  Problem Solving Session for MA1113/4 (No Credit) (0-3) Spring/Summer/Fall/Winter
Offered for no credit, pass/fail. Students must be concurrently enrolled in either MA1113 or MA1114, but the course is not mandatory for either course. Prerequisites: None.

MA0156  Problem Solving Session for MA1115/6 (No Credit) (0-3) Spring/Summer/Fall/Winter
Offered for no credit, pass/fail. Students must be concurrently enrolled in either MA1115 or MA1116, but the course is not mandatory for either course. Prerequisites: None.

MA0810  Thesis Research (0-8) As Required
Every student conducting thesis research will enroll in this course. Prerequisites: None.

MA1010  Algebra and Trigonometry (4-0) As Required
Real number system, complex numbers, exponents and radicals, algebraic expressions and operations, linear and quadratic equations, inequalities, functions and graphs, polynomials and their zeros, rational functions, exponential and logarithmic functions, systems of equations, matrices, trigonometry and unit circles, trigonometric identities and functions. Prerequisites: None.

MA1025  Introduction to Mathematical Reasoning (4-0) As Required
An introductory course in logic and elementary discrete mathematics to be taken by students in the Operations Research curriculum. Considerable emphasis is placed on propositional and predicate logic, and on techniques of proof in mathematics. Mathematical topics include sets, functions, and relations. Coverage of combinatorics includes an introduction to permutations, combinations, the pigeon-hole principle, and the principle of inclusion/exclusion. No previous experience with this material is assumed. Prerequisites: None.

MA1113  Single Variable Calculus (4-0) Spring/Summer/Fall/Winter
Review of analytic geometry and trigonometry, functions of one variable, limits, derivatives, continuity and differentiability; differentiation of algebraic, trigonometric, logarithmic and exponential functions with applications to maxima and minima, rates, differentials; product rule, quotient rule, chain rule; antiderivatives, integrals and the fundamental theorem of calculus; definite integrals, areas. Taught at the rate of nine hours per week for five weeks. Prerequisites: Pre-Calculus mathematics.

MA1114  Single Variable Calculus II with Matrix Algebra (4-0) Spring/Summer/Fall/Winter
Topics in calculus include applications of integration, special techniques of integration, infinite series, convergence tests, and Taylor series. Matrix algebra topics covered are: the fundamental algebra of matrices including addition, multiplication of matrices, multiplication of a matrix by a constant and a column (vector) by a matrix; elementary matrices and inverses, together with the properties of these operations; solutions to system of linear algebraic equations using Gaussian elimination and the LU decomposition (without pivoting); determinants, properties of determinants; and a brief introduction to the arithmetic of complex numbers and DeMoivre's theorem. Taught at the rate of nine hours per week for five weeks. Prerequisites: MA1113.

MA1115  Multi-variable Calculus (4-0) Spring/Summer/Fall/Winter
Vector algebra and calculus, directional derivative, gradient, polar coordinates and parametric equations, functions of several independent variables, limits, continuity, partial derivatives, chain rule, maxima and minima, double and triple integrals, cylindrical and spherical coordinate systems. Taught at the rate of nine hours per week for five weeks. Prerequisites: MA1114.

MA1116  Vector Calculus (3-0) Spring/Summer/Fall/Winter
The calculus of vector fields; directional derivative, gradient, divergence, curl; potential fields; Green’s, Stokes’, and the divergence integral theorems. Applications in engineering and physics. Taught at the rate of seven hours per week for five weeks. Prerequisites: MA1115.

MA1118  Multivariable Calculus for Operations Research (4-0) Fall/Spring
First-order linear differential equations, curves and surfaces, polar coordinates, vector algebra and calculus, functions of several independent variables, partial derivatives, Taylor series, chain rule, maxima and minima, directional derivatives and gradient, Lagrange multipliers, double integrals. Prerequisite: MA1114.

MA2025  Logic and Discrete Mathematics I (4-1) Summer/Winter
MA2025 is a first course in discrete mathematics for students of mathematics and computer science. Topics include propositional
and predicate logic up to the deduction theorem, methods of mathematical proof, naive set theory, properties of functions, sequences and sums, mathematical induction, an introduction to divisibility and congruences, and an introduction to enumerative combinatorics. Prerequisites: None, although a review of algebra skills is recommended.

MA2043 Introduction to Matrix and Linear Algebra (4-0) As Required
The fundamental algebra of vectors and matrices including addition, scaling, and multiplication. Block operations with vectors and matrices. Algorithms for computing the LU (Gauss) factorization of an MxN matrix, with pivoting. Matrix representation of systems of linear equations and their solution via the LU factorization. Basic properties of determinants. Matrix inverses. Linear transformations and change of basis. The four fundamental subspaces and the fundamental theorem of linear algebra. Introduction to eigenvalues and eigenvectors. Prerequisites: Students should have mathematical background at the level generally expected of someone with a B.S. in Engineering, i.e., familiarity with Calculus and solid algebra skills. EC1010 (May be taken concurrently.)

MA2121 Differential Equations (4-0) Spring/Summer/Fall/Winter

MA2300 Mathematics for Management (5-0) Winter/Spring/Summer
Mathematical basis for modern managerial tools and techniques. Elements of functions and algebra; differential calculus of single- and multi-variable functions; integration (antidifferentiation) of single-variable functions. Applications of the derivative to rates of change, curve sketching, and optimization, including the method of Lagrange multipliers. Prerequisite: College algebra.

MA3001 Incremented Directed Study (Variable 1-0 or 2-0) (V-0) As Required
Provides the opportunity for a student who is enrolled in a 3000 level mathematics course to pursue the course material and its applications in greater depth by directed study to the extent of one additional hour beyond the normal course credit. Prerequisites: Enrollment in a 3000 level mathematics course and consent of instructor.

MA3025* Logic and Discrete Mathematics II (4-1) As Required
Provides a rigorous foundation in logic and elementary discrete mathematics to students of mathematics and computer science. Topics from logic include modeling English propositions, propositional calculus, quantification, and elementary predicate calculus. Additional mathematical topics include elements of set theory, mathematical induction, relations and functions, and elements of number theory. Prerequisites: MA2025 (preferable) or MA1025.

MA3030 Introduction to Combinatorics and Its Applications (4-1) As Required
Provides a thorough grounding in elementary combinatorics and its applications to computer science and discrete probability theory to students of computer science who concurrently take MA3025, Logic and Discrete Mathematics. Topics from combinatorics include fundamental counting rules, binomial and multinomial theorems, the pigeonhole and inclusion/exclusion principles, and homogeneous recurrence relations. Elementary discrete probability is covered, up to the expectation of a discrete random variable. Corequisite: MA3025.

MA3042 Linear Algebra (4-0) As Required

MA3046 Matrix Analysis (4-1) As Required
This course provides students in the engineering and physical sciences curricula with an applications-oriented coverage of major topics of matrix and linear algebra. Matrix factorizations (LU, QR, Cholesky), the Singular Value Decomposition, eigenvalues and eigenvectors, the Schur form, subspace computations, structured matrices. Understanding of practical computational issues such as stability, conditioning, complexity, and the development of practical algorithms. Prerequisites: MA2043 and EC1010.

MA3110 Intermediate Analysis (4-0) Summer/Winter
Multi-variable calculus integrated with linear algebra. Functions of several variables, continuous transformations, Jacobians, chain rule, implicit function theorem, inverse function theorem, extreme, optimization and Lagrange multiplier technique. Applications in Operations Research. Prerequisites: MA1115 and MA3042.

MA3132 Partial Differential Equations and Integral Transforms (4-0) Spring/Summer/Fall/Winter
Solution of boundary value problems by separation of variables; Sturm-Liouville problems; Fourier and Bessel series solutions, Fourier transforms; classification of second-order equations; applications, method of characteristics. Applications to engineering and physical science. Satisfies the ESR in differential equations for the Applied Mathematics program. Prerequisites: MA2121 and MA1116.

MA3139 Fourier Analysis and Partial Differential Equations (4-0) Summer/Winter
Fourier series; solution of the one and two-dimensional wave equations, D’Alembert’s solution, frequency and time domain interpretations; Fourier integral transforms and applications to ordinary and partial differential equations and linear systems; Convolution theorems. Course covers basic material essential for signal processing, filtering, transmission, waveguides, and other related problems. Applications include spectral analysis of electronic signals, e.g., radar or sonar. Designed for UW and EW/IW students. Prerequisites: MA1115 and MA2121.

MA3185 Tensor Analysis (3-0) Fall
MA3232 Numerical Analysis (4-0)  
Spring/Summer/Fall/Winter  
Provides the basic numerical tools for understanding more advanced numerical methods. Topics for the course include: Sources and Analysis of Computational Error, Solution of Nonlinear Equations, Interpolation and Other Techniques for Approximating Functions, Numerical Integration and Differentiation, Numerical Solution of Initial and Boundary Value Problems in Ordinary Differential Equations, and Influences of Hardware and Software. Prerequisites: MA1115, MA2121 and ability to program in MATLAB and MAPLE.

MA3243 Numerical Methods for Partial Differential Equations (4-1) Winter  
Course designed to familiarize the student with analytical techniques as well as classical finite difference techniques in the numerical solution of partial differential equations. In addition to learning applicable algorithms, the student will be required to do programming. Topics covered include: Implicit, Explicit, and Semi-Implicit methods in the solution of Elliptic and Parabolic PDE’s, iterative methods for solving Elliptic PDEs (SOR, Gauss-Seidel, Jacobi), the Lax-Wendroff and Explicit methods in the solution of 1st and 2nd order Hyperbolic PDEs. Prerequisites: MA3132 and the ability to program in a high level language such as Fortran, C, or MATLAB.

MA3261 Basic Parallel Computation (3-0) As Required  
The course has two goals: First, to introduce fundamental issues such as shared vs. distributed memory, connection topologies, communication algorithms, speedup, efficiency, storage requirements, granularity, pipelining, problem scaling, and useful paradigms for algorithm development. Second, to develop working proficiency by designing, implementing, and evaluating the performance of several parallel algorithms. These include, but are not limited to, numerical quadrature, matrix computations, sorting, network analysis, and dynamic programming. Prerequisites: MA1115 or MA3025 and ability to program in a high-level language.

MA3301 Linear Programming (Same as OA3201) (4-0) As Required  
See OA3201 for course description.

MA3393 Topics in Applied Mathematics (V-0) As Required  
A selection of topics in applied mathematics. The course content varies and the credit varies. This course is intended to reflect study for the beginning graduate student in an area for which no formal course is taught. Credit for this course may be granted more than one time to an individual student. Prerequisites: Consent of instructor.

MA3560* Applied Modern Algebra and Number Theory (4-0) As Required  
This course is devoted to aspects of modern algebra and number theory that directly support applications, principally in communication. The algebraic emphasis is on ring and field theory, with special emphasis on the theory of finite fields, as well as those aspects of group theory that are important in the development of coding theory. Elements of number theory include congruences and factorization. Applications are drawn from topics of interest to DoD/DoD. These include error correcting codes and cryptography. Prerequisites: MA3025.

MA3607 Introduction to Real Analysis (4-0) Summer  
The objective of this course is for students to achieve a solid understanding of the basic concepts, theorems, and proofs in introductory real analysis, including: limits, sequences, series, continuity, uniform convergence and uniform continuity, differentiation, and Riemann integration. This is a mathematics course in the pure sense. Proofs will be emphasized, and the student will learn how to reproduce, understand, create and enjoy mathematical proofs. Prerequisites: MA1114.

MA3610 Topology, Fractals, and Chaotic Dynamics (3-0) As Required  
An introductory course on chaotic dynamics systems and fractals. Topics covered include: flows on the line, bifurcations, linear systems, phase plane, limit cycles, the Lorenz equations, fractals, and one-dimensional maps. Applications include population growth, laser threshold, the pendulum, relaxation oscillations, and synchronized chaos. Prerequisites: MA1115 and MA2121.

MA3677 Theory of Functions of a Complex Variable I (4-0) As Required  
Selected topics from the theory of functions of a complex variable; analytic functions, power series, Laurent series. Singularities of analytic functions; contour integration and residues; applications of residues to real integrals and Laplace transforms, zeros of analytic functions, infinite product representation for analytic functions; maximum modulus theorems for analytic and harmonic functions; conformal mapping. Applications include interference effects in optics and problems from heat flow and fluid flow. Prerequisites: MA1115.

MA3730 Theory of Numerical Computation (3-0) As Required  
Analysis of computational methods used for the solution of problems from the areas of algebraic equations, polynomial approximation, numerical differentiation and integration, and numerical solutions of ordinary differential equations. Prerequisites: MA2121.

MA4026 Combinatorial Mathematics (4-0) As Required  
Advanced techniques in enumerative combinatorics and an introduction to combinatorial structures. Topics include generating functions, recurrence relations, elements of Ramsey theory, theorems of Burnside and Polya, and balanced incomplete block designs. Application areas with DoD/DoN relevance range from mathematics to computer science and operations research, including applications in probability, game theory, network design, coding theory, and experimental design. Prerequisites: MA3025.

MA4027 Graph Theory and Applications (4-0) Fall  
Advanced topics in the theory of graphs and digraphs. Topics include graph coloring, Eulerian and Hamiltonian graphs, perfect graphs, matching and covering, tournaments, and networks. Application areas with DoD/DoN relevance range from mathematics to computer science and operations research, including applications to coding theory, searching and sorting, resource allocation, and network design. Prerequisites: MA3025.

MA4103 Thesis Topics Seminar (3-0) As Required  
Explores in depth discrete dynamical systems and the thesis topics of students enrolled in the Applied Mathematics degree program. Fulfills the ESR to provide students with the experience of organizing and presenting applied mathematical ideas to students and faculty, including a classroom environment. Prerequisites: Consent of instructor. Graded on a Pass/Fail basis only.
MA4237 Advanced Topics in Numerical Analysis (V-0) Fall
The subject matter will vary according to the abilities and interest of those enrolled. Applications of the subject matter to DoD/DoN are discussed. Prerequisites: Consent of instructor.

MA4242 Numerical Solution of Ordinary Differential Equations (4-0) As Required
Adams formulas, Runge-Kutta formulas, extrapolation methods, implicit formulas for stiff equations; convergence and stability, error estimation and control, order and stepsize selection, applications. Prerequisites: MA3232.

MA4243 Numerical Solution of Partial Differential Equations (3-1) As Required
Finite difference methods for parabolic, elliptic, and hyperbolic equations, multi-grid methods; convergence and stability, error estimation and control, numerical solution of finite difference equations, applications. Prerequisites: MA3132, MA3232 suggested.

MA4245 Mathematical Foundations of Galerkin Methods (4-0) As Required
Variational formulation of boundary value problems, finite element and boundary element approximations, types of elements, stability, eigenvalue problems. Prerequisites: MA3132, MA3232 or equivalent.

MA4248 Computational Linear Algebra (4-1) As Required
Development of algorithms for matrix computations. Rounding errors and introduction to stability analysis. Stable algorithms for solving systems of linear equations, linear least square problems and eigen problems. Iterative methods for linear systems. Structured problems from applications in various disciplines. Prerequisites: MA3046, or consent of instructor, advanced MATLAB programming.

MA4261 Distributed Scientific Computing (4-0) As Required
General principles of parallel computing, parallel techniques and algorithms, solution of systems of linear equations, eigenvalues and singular value decomposition, domain decomposition and application (e.g., satellite orbit determination and shallow water fluid flow). Prerequisites: MA3042 or MA3046, MA3132, and MA3232.

MA4301 Nonlinear Programming (Course Taught by or Staff, Same as OA4201) (4-0) As Required
See OA4201 for course description.

MA4302 Design of Experiments (Course Taught by or Staff, Same as OA4101) (3-1) As Required
See OA4101 for course description.

MA4303 Regression Analysis (Course Taught by or Staff, Same as OA4102) (4-0) As Required
See OA4102 for course description.

MA4304 Time Series Analysis (Course Taught by or Staff, Same as OA4308) (4-0) As Required
See OA4308 for course description.

MA4305 Stochastic Models II (Course Taught by or Staff, Same as OA4301) (4-0) As Required
See OA4301 for course description.

MA4311 Calculus of Variations (4-0) As Required
First and second order tests, Lagrange multipliers, Euler-Lagrange equation, nonsmooth solutions, optimization with constraints, Weierstrass condition, optimal control of ODE systems, Pontryagin maximum principle. Applications may include: control and dynamical systems, estimation, weak formulations, Hamilton's variational principle, or others depending on the interests of the students. Prerequisites: MA2121.

MA4321 Stability, Bifurcation and Chaos (3-0) As Required
Differential equations and dynamical systems, equilibrium of autonomous systems, stability, Liapunov's method, examples of chaos, local bifurcations of vector fields and maps, chaotic dynamical systems. Prerequisites: MA3610.

MA4322 Principles and Techniques of Applied Mathematics I (4-0) Fall
Selected topics from applied mathematics to include: Dimensional Analysis, Scaling, Stability and Bifurcation, Perturbation Methods— regular and singular with boundary layer analysis, as well as, asymptotic expansions of integral, integrals equations, Green's functions of boundary value problems, and distribution theory. Prerequisites: MA3042 and MA3132; MA3232 strongly recommended.

MA4323 Principles and Techniques of Applied Mathematics II (4-0) Winter
Continuation of MA4322. Selected topics include: calculus of variations, Hamiltonian Mechanics, distribution theory and Green's Functions in two and three dimensions, and discrete models. Prerequisites: MA4322

MA4332 Partial Differential Equations (4-0) As Required
This course provides an introduction to the theory of partial differential equations. It includes the following topics: classification of second order equations; initial value and boundary value problems for hyperbolic, parabolic, and elliptic partial differential equations; existence and uniqueness of linear elliptic and parabolic PDEs; nonlinear parabolic and elliptic PDEs; Hamilton-Jacobi equations; systems of conservation laws and nonlinear wave equations; transform methods and Green's functions. Prerequisites: MA3132, and MA3232 strongly recommended.

MA4335 Linear and Nonlinear Waves (3-0) As Required
Analysis of the two main classes of wave motion, hyperbolic waves and linear dispersive waves. Topics covered include: kinematic waves, shock waves, shock structure and shock fitting, Burger's equation, the wave equation, linear dispersive waves, wave patterns and water waves. Prerequisite: MA3132.

MA4362 Astrodynamics (3-0) As Required
Review of the two-body problem. The effects of a third point mass and a distributed mass. Expansion of the disturbing potential in series of Legendre functions. Variation of parameter equations for osculating orbital elements. Perturbation and numerical solution techniques. Statistical orbit determination. Codes used by the military to maintain the catalog of artificial satellites and space debris. Prerequisites: SS3500 or equivalent.

MA4372 Integral Transforms (3-0) As Required
The Laplace, Fourier and Hankel transforms and their inversions; Asymptotic behavior. Applications to problems in engineering and physics. Prerequisites: MA3132.

MA4377 Asymptotic and Perturbation Methods I (4-0) As Required
Advanced course in the application of approximate methods to the study of integrals and differential equations arising in physical problems. Topics covered include: asymptotic sequences and
expansions, integrals of a real variable, contour integrals, limit process expansions applied to ordinary differential equations, multiple variable expansion procedures and applications to partial differential equations. Prerequisites: MA3132.

MA4378 Asymptotic and Perturbation Methods II (3-0) As Required
Continuation of MA4377. Prerequisites: MA4377.

MA4391. Analytical Methods for Fluid Dynamics (4-0) As Required
The basic fluid dynamic equations will be derived, and a variety of analytical methods will be applied to problems in viscous flow, potential flow, boundary layers, and turbulence. Applications in aeronautics will be discussed. Prerequisites: MA3132 or MA3139.

MA4392 Numerical Methods for Fluid Dynamics (4-0) As Required
Numerical methods exclusively will be applied to fluid dynamics problems in viscous flow, potential flow, boundary layers, and turbulence. Applications in aeronautics will be discussed. Prerequisites: MA3232 and MA4391.

MA4393 Topics in Applied Mathematics (V-0) Fall
The course content varies but applications of interest to the DoN/DoD will be discussed. Credit may be granted for taking this course more than once. Prerequisites: Consent of instructor.

MA4400 Cooperation and Competition (4-0) Spring
The course will develop game theoretic concepts in evaluations of the importance of players in bargaining situations and of elements in networks. Topics covered include cooperative and noncooperative games, bargaining, the Shapley Value, and coalitions. The course will study applications to military problems and applications to economics, political science, and biology. There will be extensive reading from the literature. Prerequisites: MA3042, OA3201, and an introductory course in probability.

MA4550 Combinatorial and Cryptographic Properties of Boolean Functions (4-0) As Required
The course will discuss the Fourier analysis of Boolean functions and the relevant combinatorics with an eye toward cryptography and coding theory. Particular topics will include avalanche features of Boolean functions, correlation immunity and resiliency, bentness, trade-offs among cryptographic criteria and real-life applications in the designs of stream and block ciphers. Prerequisite: MA3025 or a similar combinatorial/discrete mathematics course (and recommended, but not required, an introductory course in probability).

MA4560* Coding and Information Theory (4-0) Summer
Mathematical analysis of the codes used over communication channels is made. Techniques developed for efficient, reliable and secure communication are stressed. Effects of noise on information transmission are analyzed and techniques to combat their effects are developed. Linear codes, finite fields, single and multiple error-correcting codes are discussed. Codes have numerous applications for communication in the military, and these will be addressed. Prerequisites: MA3560.

MA4565 Advanced Modern Algebra (3-0) As Required

MA4570 Cryptography (4-0) Spring
The methods of secret communication are addressed. Simple cryptosystems are described and classical techniques of substitution and transposition are considered. The public-key cryptosystems, RSA, Discrete Logarithm and other schemes are introduced. Applications of cryptography and cryptanalysis. Prerequisites: MA3560.

MA4593 Topics in Algebra (3-0) Fall
A selection of topics in algebra. Content of the course varies. Credit for taking the course more than once is allowed. Students may select a topic of interest to the DoN/DoD, so the course can support the MERs in a variety of curricula. Prerequisite: MA3560.

MA4620 Theory of Dynamical Systems (4-0) As Required
This course provides an introduction to the theory of dynamical systems providing a basis for the analysis and design of systems in engineering and applied science. It includes the following topics: Second order linear systems; contraction mapping, existence and uniqueness of solutions; continuous dependence on initial conditions; comparison principle; Lyapunov stability theorems; LaSalle’s theorem; linearization methods; nonautonomous systems; converse theorems; center manifold theorems; and stationary bifurcations of nonlinear systems. Prerequisites: MA2121.

MA4635 Functions of Real Variables I (3-0) As Required
Semi-continuous functions, absolutely continuous functions, functions of bounded variation; classical Lebesgue measure and integration theory, convergence theorems and Lp spaces. Abstract measure and integration theory, signed measures, Radon-Nikodym theorem; Lebesgue decomposition and product measure; Daniell integrals and integral representation of linear functionals. Prerequisites: MA3606.

MA4636 Functions of Real Variables II (3-0) As Required
Continuation of MA4635. Prerequisites: MA4635.

MA4675 Complex Analysis (4-0) As Required
A continuation of MA3677. Differential equations in the complex plane, transform methods, the Wiener-Hopf method, integral equations, discrete Fourier analysis. Prerequisite: MA3677.

MA4693 Topics in Analysis (3-0) Spring
Content of the course varies. Students will be allowed credit for taking the course more than once. Prerequisites: Consent of instructor.

MA5810 Dissertation Research (0-8) As Required
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

MO Courses
MO designated courses are intended for students in operational curricula only. They do not satisfy the mathematics course requirements for accredited engineering curricula, nor do they satisfy the prerequisites for any of the MA designated courses.

MO1180 Topics in Mathematics for Systems Analysis (3-2) Spring/Fall
A one quarter course in logic, elementary mathematics, combinatorics, and matrix algebra, plus a review of selected topics from single variable calculus with extensions to two variables. This course is intended for first-quarter students in the distance learning Master of Systems Analysis curriculum. Logic places emphasis on the Propositional and Predicate Calculus. Elementary
mathematical topics include sets, functions, and relations. Coverage of combinatorics includes an introduction to basic principles of counting (sum and product rules), permutations, and combinations. The fundamental algebra of matrices includes addition, multiplication of matrices, and multiplication of a matrix by a constant, and a column (vector) by a matrix; elementary matrices and inverses, together with the properties of these operations; solutions to m x n systems of linear algebraic equations using Gaussian elimination. Selected topics from single-variable calculus are extended to functions of two-variables, including double integrals over rectangles and general regions. (This course may not be taken for credit by students in an engineering or science degree program, nor may it be used as a prerequisite for any other mathematics course). Prerequisite: Single-variable calculus.

MO1901 Mathematics for ISSO (3-0) As Required
A brief survey of selected calculus and post-calculus topics—single variable derivatives and integrals, infinite series and sequences, complex numbers, and Fourier series and transforms. (This course may not be taken for credit by students in an engineering or science degree program, nor may it be used as a prerequisite for any other mathematics course.) Prerequisites: None.

MO1903 Mathematics for ISSO Space Systems Operations Specialization (3-0) Fall
To be taken concurrently with MA1114. The course consists of a brief survey of the following topics: Complex numbers, Fourier series and transforms, and Ordinary Linear Differential Equations. (This course may not be taken for credit by students in an engineering or science degree program, nor may it be used as a prerequisite for any other mathematics course.) Taught at the rate of seven hours per week for five weeks. Prerequisites: MA1113.

*Required courses for the certificate program Mathematics of Secure Communication.

Mathematics of Secure Communication
Certificate - Curriculum 280

Program Manager
Pante Stanica
Spanagel Hall, Room 268
(831) 656-2714, DSN 756-2714, FAX (831) 656-2355
pstanica@nps.edu

Brief Overview
The Mathematics of Secure Communication certificate program comprises four upper division and graduate level courses. Upon successful completion of the coursework, students will be awarded a certificate of accomplishment, in keeping with standard practices of the Naval Postgraduate School. The purpose of this program is to provide mathematics education to naval officers and DoD civilians in the broad areas of Cryptography, Coding and Information Theory, and Secure Communications.

Requirements for Entry
Requirements for entry include completion of an introductory course in Discrete Mathematics equivalent to MA2025. Also required is a baccalaureate degree with an academic profile code (APC) of 324.

Entry Dates
At the beginning of the spring and fall quarters, with start dates in late March/early April and late September/early October, respectively.

Program Length
Four quarters.

Graduate Certificate Requirements
To earn the academic certificate students must pass all four courses with a C+ (2.3 Quality Point Rating (QPR)) or better in each course and an overall QPR of 3.0 or better. Students earning grades below these standards will need to retake the courses to bring their grades within standards or they will be withdrawn from the program.

Certificate in Scientific Computation - Curriculum 283

Program Manager
Beny Neta
Spanagel Hall, Room 270
(831) 656-2235, DSN 756-2235
FAX (831) 656-2355
bneta@nps.edu

Brief Overview
The Scientific Computation academic certificate provides education in the use of mathematical analysis and numerical solution techniques to model science and engineering problems on computers. Scientific Computation has become the third pillar of scientific research, a peer with traditional methods of physical experimentation and theoretical investigation, and as such has emerged as an area critical to the success of the mission of the Navy and the Department of Defense. High performance computers are already widely used in weather
prediction, modeling ocean dynamics, design and testing of advanced weapons systems, development of new smart materials, etc. And it has become very clear that even more broad application of scientific computation will be essential to accelerate scientific discovery for national competitiveness and global security.

A thorough understanding of the mathematics underlying the algorithms is essential for the correct interpretation and further development of computational approaches in science. The Scientific Computation certificate program is designed to provide that very background. It is comprised of four courses – the first two of these are fundamental and the other two are selected from a group of nine courses that allows the certificate to be tailored to a specific area of interest. Upon successful completion of the coursework, students will be awarded a certificate of accomplishment in keeping with standard practices of the Naval Postgraduate School.

**Requirements for Entry**

Prospective students must meet the necessary prerequisites for the courses in the program.

**Entry Date**

Program entry dates are flexible and students who wish to pursue this certificate should coordinate with the program manager.

**Program Length**

Variable.

**Graduate Certificate Requirements**

To earn the academic certificate students must pass all four courses with a C+ (2.3 Quality Point Rating (QPR)) or better in each course and an overall QPR of 3.0 or better. Students earning grades below these standards will need to retake the courses to bring their grades within standards or they will be withdrawn from the program.

**Required Courses**

- MA3046 Matrix Analysis
- MA3232 Numerical Analysis
- MA4237 Advanced Topics in Numerical Analysis
- MA4242 Numerical Solution of Ordinary Differential Equations
- MA4243 Numerical Solution of Partial Differential Equations
- MA4245 Mathematical Foundations of Galerkin Methods
- MA4248 Computational Linear Algebra
- MA4261 Distributed Scientific Computing
- MA4311 Calculus of Variations
- MA4377 Asymptotic and Perturbation Methods
- MA4620 Theory of Dynamical Systems

**Applied Mathematics - Curriculum 380**

**Program Officer**

Owen Schoolsky, CDR
(831)656-2678, DSN 756-2678
Code 73, Spanagel Hall, Room 401A
omschool@nps.edu

**Academic Associate**

Don Danielson
Code MA, Spanagel Hall, Room 238B
(831) 656-2622, DSN 756-2622, FAX (831) 656-2355
dad@nps.edu

**Brief Overview**

This program is designed to meet the needs of the Department of Defense for graduates who are skilled in applying concepts of higher mathematics. The objective of the program is to equip an officer with the skill to analyze a military problem, formulate it in mathematical terms, solve or approximate a solution, and interpret and present the results.

Completion of this curriculum also qualifies an officer as an Applied Mathematics Subspecialty with a code of 4100P. A typical job in this subspecialty is an instructor in mathematics at the U.S. Naval Academy or the U.S. Military Academy at West Point.

**Requirements for Entry**

Preparatory to graduate work in applied mathematics, the officer shall have completed a strong program of study at the undergraduate level or the first three quarters of the mathematics core sequence, which includes linear algebra, advanced calculus in one and several variables, ordinary differential equations, probability and statistics. Officers not having the required qualifications for direct input enter the program indirectly through the Engineering Science (460) curriculum. An APC of 324 is required.

**Entry Date**

Advanced Science (Applied Mathematics) is an eight-quarter course of study with preferred entry date in June. If further information is needed, contact the Academic Associate or Program Officer for this curriculum.

**Typical Course of Study**

**Quarter 1**

- MA1113 Single Variable Calculus I (4-0)
- MA1114 Single Variable Calculus II w/ Matrix Algebra (4-0)
- MA2025 Logic & Discrete Mathematics I (4-0)
The value of graduate education in mathematics lies in the vast breadth of its applicability. The officer with advanced education in mathematics possesses skills in problem solving, modeling, abstraction, optimization, and analysis that are sufficiently general that they apply in many arenas and never lose their currency in the face of changing technology and yet-to-be-identified needs. Graduate education in mathematics is a career-long enabler. Students in the Applied Mathematics curriculum will receive a solid mathematical foundation as they transition into graduate curricula emphasizing relevant and modern advanced mathematical techniques. Students will be encouraged to develop and utilize skills in analysis, reasoning, creativity, and exposition as they acquire knowledge of mathematics and its applications.

1. **Fundamental Areas:** The officer will complete courses in the following fundamental areas of Mathematics, developing sufficient mastery to qualify for teaching Mathematics at the undergraduate level.
   a. Single, Multivariate, and Vector Calculus
   b. Linear Algebra and Algebraic Structures
   c. Logic and Discrete Mathematics
   d. Real and Complex Analysis
   e. Modern Applied Algebra and Number Theory
   f. Numerical Analysis
   g. Mathematical Modeling in Applied Mathematics
   h. Ordinary and Partial Differential Equations

2. **Applications:** The officer will become well-versed in the applications of mathematics to real world problems of interest to the military, enhancing performance in post-graduate operational billets and policy making positions.

3. **Computer Skills:** The officer will acquire the ability to use higher-level structured computer languages on current workstations.

4. **Communication and Research Skills:** The officer will perform independent research in an area of Mathematics, develop written and oral presentation skills, and gain instructional experience.

5. **Joint Professional Military Education:** Graduates will complete the Navy Joint Professional Military Education Phase I requirements.

Department of Electrical and Computer Engineering

James Bret Michael, Professor (2004); Ph.D. George Mason University, 1993.

Sherif Michael, Professor (1983); Ph.D., University of West Virginia, 1983.

Donna Miller, Research Associate (2007); MSSE (Software Engineering), Naval Postgraduate School, 2000.

Michael A. Morgan, Distinguished Professor (1979); Ph.D., University of California at Berkeley, 1976.

David S. Neely, CDR, USN, Military Associate Professor and Associate Chair for Operations (2007); MSEE, Naval Postgraduate School, 1994.

Giovanna Oriti, Research Assistant Professor (2008); Ph.D. University of Catania, Italy, 1997.

Phillip E. Pace, Professor and Associate Chair for Researcher (1992); Ph.D., University of Cincinnati, 1990.

Andrew Parker, Research Associate (1996); M.S., University of Maryland, 1994; MSES, Naval Postgraduate School, 1992.

John P. Powers, Distinguished Professor Emeritus (1970); Ph.D., University of California at Santa Barbara, 1970.

R. Clark Robertson, Professor and Chair (1989); Ph.D., University of Texas at Austin, 1983.

Alan Ross, Professor of the Practice of Computer Engineering (2008); Ph.D., University of California, Davis, 1978.

Weilian Su, Associate Professor (2004); Ph.D., Georgia Institute of Technology, 2004.

Frederick Terman, Senior Lecturer (1983); MSEE, Stanford University, 1964.

Charles W. Therrien, Professor Emeritus (1984); Ph.D., Massachusetts Institute of Technology, 1969.

Murali Tummala, Professor (1986); Ph.D., India Institute of Technology, 1984.

W. Ray Vincent, Research Associate Professor (1980); M.S., Michigan State University, 1948.

Todd Weatherford, Associate Professor (1995); Ph.D., North Carolina State University, 1993.

Weismann, Douglas, Research Associate (2008); BSEE, UC Davis, 1986.
Brief Overview

The Department of Electrical and Computer Engineering is the major contributor to programs for the education of officers in the Electronic Systems Engineering curriculum, the Combat Systems curriculum, the Space Systems Engineering curriculum, the Electronic Warfare curriculum and the Information Warfare curriculum. Additionally, the department offers courses in support of other curricula such as Information Technology Management; Command, Control, Communications, Computers and Intelligence (C4I); Space Systems Operations; Underwater Acoustics and Engineering Acoustics.

The program leading to the MSEE is accredited as an Electrical Engineering Program at the advanced level by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012 - telephone: (410) 347-7700; www.abet.org .

If needed, an MSEE student will usually spend six to twelve months learning or reviewing material at a junior or senior level before entering into graduate studies. The graduate study portion of a typical program is about one year in duration with a combination of course study and thesis work being performed. The thesis portion of the program is the equivalent of four courses (one quarter) with an acceptable written thesis being a requirement for graduation.

The curriculum is organized to provide the students with coursework spanning the breadth of Electrical and Computer Engineering. In addition, students concentrate in one major area of specialization within Electrical and Computer Engineering by taking a planned sequence of advanced courses. Currently there are formal concentrations in:

- Communications Systems
- Computer Systems
- Guidance, Navigation and Control Systems
- Power Systems and Microelectronics
- Signal Processing Systems
- Network Engineering
- Sensor Systems Engineering

The department has about thirty faculty members, either on a permanent or visiting basis, contributing to the instructional and research programs.

Mission

The ECE department mission is to provide NPS students with the highest quality and most defense-relevant graduate education available in electrical and computer engineering.

Degrees

The ECE department offers programs leading to the Master of Science degree in Electrical Engineering (MSEE), the Master of Science in Engineering Science with a major in Electrical Engineering [MSES(EE)] or the Master of Science in Engineering Science with a major in Computer Engineering [MSES(CE)], the Master of Engineering with major in Electrical Engineering[MEng(EE)] or the Master of Engineering with a major in Computer Engineering [MEng(CE)], the degree of Electrical Engineer (EE) and Doctor of Philosophy (Ph.D.). A student is able to earn an academic degree listed above while enrolled in Electronic Systems Engineering (Curriculum 590 resident or 592 non-resident distance learning), Space Systems Engineering (Curriculum 591), Combat Systems Science & Technology (Curriculum 533), and Undersea Warfare (Curriculum 525). The department typically graduates over forty graduate degree candidates per year in resident programs and additional candidates in distant learning programs.

MSEE Degree Program

A Bachelor of Science in Electrical Engineering or its equivalent is required for the MSEE degree. Credits earned at the Naval Postgraduate School and credits from the validation of appropriate courses at other institutions are combined to achieve the degree equivalence.

To complete the course requirements for the MSEE degree, a student needs a minimum of 52 credit hours of graduate level work. There must be a minimum of 36 credits in the course sequence 3000-4999, of which at least 30 credits must be in Electrical and Computer Engineering. The remainder of these 36 credits must be in engineering, mathematics, physical science, and/or computer science. Specific courses may be required by the department and at least four courses that total a minimum of 12 credits, must be in the course sequence 4000-4999.

An acceptable thesis for a minimum of 16 credits must be presented to, and approved by, the department.

MSEE Program Objectives: The MSEE Degree program has the following objectives (i.e., skills and abilities that graduates can bring to their position after having graduated from NPS and received 3-5 more years of on-the-job experience and professional development):

- **Leadership**: Students will be provided with an educational foundation that prepares them for leadership roles along diverse career paths.
- **Program Management**: Students will be provided with an educational foundation that prepares them for
assignments related to research, design, development, procurement, integration, maintenance, and life cycle management of electronic systems for defense and national security.

- **Operational Utilization:** Students will be provided with an educational foundation that allows them to understand the capabilities and limitations of military electronic systems and to effectively employ electronic systems in military operations.

**MSEE Program Outcomes:** In order to achieve the above objectives, the Program curriculum is designed to produce the following outcomes (skills and abilities students will have at the time they complete the Program):

- **Breadth:** Students will possess and be able to apply knowledge and principles at a graduate level in two or more of the following areas: electronics, power, controls, signal processing, communications, computers sensors, or network engineering. Students will also possess and be able to apply knowledge of systems engineering principles.
- **Depth:** Students will possess knowledge and be able to apply knowledge and principles at a graduate level in one or more of the following areas of electrical and computer engineering: electronics and power systems, control systems, signal processing systems, communication systems, sensor systems, computer systems, or network engineering.
- **Independent Investigation:** Students will develop the ability to conduct and report the results of a technically challenging, defense-relevant independent investigation.
- **BSEE Equivalency:** Students will have BSEE degrees from ABET-Accredited programs, or will have BSEE degree equivalency.

Students with acceptable academic backgrounds may enter a program leading to the degree Master of Science in Engineering Science with an emphasis in Electrical and Computer Engineering [MSES(EE) degree]. The program of each student seeking this degree must contain at least 52 credit hours of graduate level work including 36 credit hours in the course sequence 3000-4000. Of these 36 course credits, at least 20 must be in Electrical and Computer Engineering, and an additional 12 must be in engineering, mathematics, physical science and/or computer science. At least 12 of the 36 must be in the course sequence 4000-4999. All students must register for a minimum of 16 hours of thesis research and submit an acceptable thesis. This program provides depth and diversity through specially arranged course sequences to meet the needs of the Navy and the interests of the individual. The department chairman’s approval is required for all programs leading to this degree.

**MSES(EE) Degree Program**

Students who do not have BSEE degrees and are unable to achieve BSEE equivalency can pursue the MSES(EE) degree. Such students must by virtue of their education and on-the-job experience be capable of successfully completing one of the MSEE Degree Program specialization tracks. Except for BSEE degree equivalency, the requirements for the MSES(EE) degree are the same as those for the MSEE degree.

**MEng(EE) Program**

The Master of Engineering (Electrical Engineering) is a course-based degree program for non-resident students enrolled in distance learning programs. Students must complete a minimum of 32 credit hours of graduate level course work which includes a minimum of three courses and 10 credit hours of 4000 level course work. MEng(EE) degree programs must contain a minimum of 5 courses in electrical and computer engineering. This degree program is quite flexible and can be designed with a focus tailored to meet distance learning customer requirements for workforce development.

**EE Degree Program**

Students with strong academic backgrounds may enter a program leading to the degree of Electrical Engineer. The EE degree program requires more course work and a more comprehensive thesis than a master’s degree program but does not require the seminal research demanded in a Ph.D. program.

A minimum of 96 total graduate credits is required for the award of the engineer’s degree, of which at least 24 must be in accepted thesis research, and at least 54 credits must be in Electrical and Computer Engineering courses.

At least 36 of the total hours are to be in courses in the sequence 4000-4999. Approval of all programs must be obtained from the Chairman, Department of Electrical and Computer Engineering.

**TSSE Program**

The Total Ship Systems Engineering Program is an interdisciplinary, systems engineering and design-oriented program available to students enrolled in Mechanical Engineering, Electrical and Computer Engineering or Combat Systems programs. The program objective is to provide a broad-based, design-oriented education focusing on the warship as a total engineering system. The eight-course sequence of electives introduces the student to the integration procedures and tools used to develop highly complex systems such as Navy ships. The program culminates in a team-performed design of a Navy ship, with students from all three curricula as team members. Students enrolled in programs leading to the Electrical Engineer Degree are also eligible for participation. Entry requirements are a baccalaureate degree in an engineering discipline with a demonstrated capability to perform
satisfactorily at the graduate level. The appropriate degree thesis requirements must be met, but theses that address system design issues are welcome.

**Ph.D. Degree Program**

The Department of Electrical and Computer Engineering has an active program leading to the Doctor of Philosophy degree. Joint programs with other departments are possible. A noteworthy feature of these programs is that the student's research may be conducted away from the Naval Postgraduate School in a cooperating laboratory or other installation of the federal government. The degree requirements are as outlined under the general school requirements for the doctor's degree.

**ECE Department Laboratories**

The laboratories of the department serve the dual role of supporting the instructional and research activities of the department. The department has well-developed laboratories in each specialty area.

**Nano-electronics Lab**

This laboratory supports design and analysis of semiconductor devices, design and development of VLSI integrated circuits, and design, implementation and testing of microprocessor and VLSI systems. Major equipment of the lab includes: Semiconductor Parameterization Equipment, Capacitance-Voltage measurement equipment, Semi-automatic Probing stations, High Speed Sampling Scopes, Logic Analyzers, Printed Circuit Assembly tools, Unix and PC workstations, Silvaco(TM) TCAD simulation tools, Tanner and Cadence Design tools and Semiconductor Parameterization Equipment (high power capability), Manual Probing stations (2+), Wire-bonding equipment, and PC workstations. The lab supports courses and thesis research projects in the MSE degree Computer/Nanotechnology track and Power/Solid state track. This lab will be a major player in the nanoelectronics of the NPS Nano/MEMs initiative.

**Digital Electronics/Microprocessor Lab**

This laboratory is an instructional lab that supports courses in digital logic design and microprocessor-based system design. Students acquire practical knowledge through hard-wired and programmable logic design. Programmable design includes CPLDs (complex programmable logic devices) and FPGA (field-programmable gate arrays). Students learn how to develop combinational and sequential circuits using hardware description languages, VHDL and/or Verilog. They learn the design, verification, and simulation process used in contemporary digital computer design using tools like ModelSim, Precision, and Synplify Pro. This lab supports instruction in microprocessor programming and interfacing, as well as system design involving high-speed processor and architectures. Specifically, ARM is used as a representative RISC (reduced instruction set computer) processor. Students gain an understanding of embedded computing through assignments that create systems which acquire inputs (data, keyboard entry, A/D etc.) and produce outputs (processed data, displayed data, D/A, etc.). For example, students program an NXT robot that accepts human-supplied controller input and produces signals that drive actuator motors.

**Circuits and Signals Lab**

This laboratory provides support for instruction and research in the areas of basic analog design, discrete component testing, fundamental circuit design, and communication theory. The laboratory is equipped with CAD facilities capable of schematic capture, circuit simulation, and fault detection. The lab utilizes various test equipment to include, but not limited to, oscilloscopes, signal generators, spectrum analyzers, multi-meters, and high-speed data acquisition equipment.

**Academic Computing Lab**

This laboratory is the largest PC-equipped learning resource center in Spanel Hall and the primary PC computational facility for the Department of Electrical and Computer Engineering. It is primarily a teaching laboratory for accomplishing computer assignments that are assigned as part of ECE courses. It is also used for research-related computing but only when such computing does not interfere with course work. The laboratory serves approximately 350 students annually and supports over 25 courses and over 12 curricula. It is also heavily used for student thesis preparation. The computers in this lab are, by necessity, high-end systems because the vast majority of software used in the lab are scientific and engineering applications that are extremely computationally intensive. The NPS Information Technology Assistance Center (ITAC) organization supplies labor for maintenance and upgrading of this facility.

**Optical Electronics Lab**

This laboratory provides educational and research support in the areas of fiber optics, lasers (including a fiber sigma laser), integrated optics and electro-optics. The laboratory has a variety of fiber optics instrumentation (including two OTDRs, a fusion splicer, optical spectrum analyzer, connector application equipment, a 1.5 Gb/s digital pattern generator and BER tester, an optical fiber amplifier, optical autocorrelator for pulsewidth measurement, various diode laser controllers), RF and microwave instrumentation (signal synthesizer, microwave spectrum analyzer), and general purpose test instrumentation. A variety of detectors, integrated optical modulators and imaging equipment are also available. The lab supports EC3210, EC3550, EO3911, EC4210, thesis students, and research in fiber optic communications and optical signal processing.
Electromagnetics Lab

This laboratory supports instruction and research in the area of microwave systems and technology. This is accomplished with a mix of hardware, instruments, test systems, and software. Included in the lab inventory are scalar and vector microwave network analyzers, electromagnetic software for simulating antennas, ships and aircraft, and a software design system for simulation of microwave circuits and systems. There is also a fully automated anechoic chamber for antenna pattern measurements.

Radar and Electronic Warfare Systems Lab

The objective of the Radar and Electronic Warfare (EW) Systems Laboratory is to educate military officers and civilians in the technology and operational characteristics of electronic warfare. The Radar and Electronic Warfare Systems Laboratory supports both research and teaching. The hardware laboratory contains instrumented radar and electronic warfare equipment and has been in operation for over 35 years. Each radar system is well instrumented to operate as a teaching tool. The equipment allows the student to experience hands-on knowledge of performance characteristics, conduct experimental research, and reinforces concepts that are taught in the classroom.

Controls and Robotics Lab

This laboratory is mainly an instructional lab that supports experiments for all courses in Guidance, Navigation, Controls, and Robotics. Lab facilities include servo control stations and associated computers (equipped with A/D and D/A data acquisition cards, LabView, and Matlab/SIMULINK software) that are used to conduct simulations and physical experiments, modeling, analysis, and design of control systems. The lab is also equipped with advanced robots to support robotics laboratory assignments and thesis projects in robotics.

Power Systems Lab

The Power Systems Laboratory supports postgraduate education and thesis research related to the design, analysis, simulation and implementation of power converter and electric drive technology. Thesis research projects are closely coupled to current Department of Defense priorities including more-survivable power system architectures such as DC Zonal Electric Distribution, Integrated Power Systems, and electric propulsion. In coursework and projects, students employ modern device technologies, hardware-in-the-loop synthesis tools, simulation packages, measurement devices, and power converter and electric machine modules to assess component operation, develop feedback controls, and study evolving power system challenges. An emphasis is placed on prototyping and validating against detailed simulation models.

Digital Signal Processing Lab

This laboratory supports instruction and research in the area of Digital Signal Processing. Research and student thesis include work in the areas of detection and classification of signals, face recognition, acoustic communications, multirate signal processing and other areas. Lab facilities include several Windows based workstations and the capability of programming Field Programmable Gate Arrays (FPGA) for real time applications.

Computer Communications and Networking Lab

This laboratory supports instruction and research in computer network design, engineering, and infrastructure development. The lab is currently divided between guided media (wire and fiber optic) networks and wireless networks. The lab also has facilities within the NPS High Performance Computing lab for network simulation and experimentation. Thesis work and research undertaken include modeling and simulation of high-speed and wireless networks and related protocols, video transmission and voice transmission over digital networks, traffic modeling, simulation and analysis, design and simulation of wide area networks, and related areas. Guided media lab facilities include routers, LAN switches, Voice-over-IP servers, Telcom fiber optic switches, ATM switches, video processing equipment, a channel simulator, protocol analyzers, network simulation packages, and computer workstations. The wireless lab facilities include WiFi, WiMax, VoIP, and sensor mote equipment, as well as a variety of signal generation and analysis equipment.

Secure Computing Lab

This lab contains computing facilities for classified projects (up to the SECRET level). It contains a variety of computing platforms from Windows-based PCs to a Linux cluster. The lab is also heavily used by students preparing classified documents including class presentations and theses.

Cryptologic Research Lab (CRL)

This laboratory is the NPS’s center for research in communications engineering, focusing on physical layer design issues for wireless communications devices. Research areas emphasized are non-binary modulation, forward error correction coding, software defined radio, spread spectrum systems, cellular systems, wireless local and wide area networks, and interference mitigation. The CRL’s facilities include many tools for modern communications engineering, such as eight software defined radio design stations; a state-of-the-art wireless fading channel simulator; arbitrary waveform generators; microprocessor-, digital signal processor (DSP)-, and field programmable gate array (FPGA)-based signal processing systems; and various signal generation, capture, and analysis tools.
Flash X-ray Lab
The NPS Flash X-ray Laboratory provides DoD support, testing and research capability to study weapons effects on electronics. It provides a Gamma radiation source to verify operation of electronic circuit and systems in a nuclear weapons environment. The machine can additionally be used to study Electro Magnetic Pulse for nuclear or microwave weapons. This is one of two Flash X-ray systems in the Navy (NRL).

Signal Enhancement Lab
The ECE department does a significant amount of research in wireless communications functions, both transmitting and receiving, in-the-clear and encrypted, solving interference, electromagnetic compatibility and radio spectrum utilization issues. Applications include Direction Finding, Improvised Explosive Device detection and jamming, and low-profile and Ultra-Wide-Band antenna development. This laboratory provides hardware and software support of these projects and is entirely research-supported.

Other support facilities within the department include the Calibration and Instrument Repair Laboratory. Classified instruction and research are supported by appropriately certified facilities.

Calibration and Repair Lab
The Calibration Lab and Electronics Repair Lab is a dual function facility that provides Electronics Calibration capabilities and Electronics General Repair functions. The Electronics Test Equipment Repair Lab is a full-time, stand-alone repair facility. It provides a wide repair support for all NPS Electronics Test Equipment that are listed in the Property Book Inventories, maintained by each department. Repair parts, test equipment and library of repair and service manuals are also maintained on site. The Calibration Lab is a Type 4 Electronics Field Repair Facility (FCA) assigned to region METCALPAC, Tech HQ, NAVSEASYSCOM. All test equipment that falls within the assigned Phase Packages (4 Phases) are all supported.

Electrical and Computer Engineering Course Descriptions

EC Courses

EC0810 Thesis Research (0-8) Spring/Summer/Fall/Winter
Every student conducting thesis research will enroll in this course. Prerequisites: None.

EC0820 Integrated project (0-12) As Required
This course is available to students in the Electrical and Computer Engineering Department who are participating in an integrated project. Prerequisites: Consent of instructor.

EC0950 Seminar (No Credit) (0-1) As Required
Lectures on subjects of current interest will be presented by invited guests from other universities, government laboratories, and from industry, as well as by faculty members of the Naval Postgraduate School. Prerequisites: None.

EC1010 Introduction to Matlab (1-1)
Spring/Summer/Fall/Winter
An introductory course for students with little or no programming background using MATLAB. Basic concepts of the MATLAB environment are considered, such as matrix operations, vector and matrix manipulations, equation solving, simulation, programming, and graphing. This course prepares students for using MATLAB in future course work in the ECE department. Graded on a Pass/Fail basis only. Prerequisites: None.

EC2010 Probabilistic Analysis of Signals and Systems (3-1)
Summer/Winter
The foundations of signals and systems are developed from probabilistic and statistical approaches. Emphasis is on signal processing, communication systems, and computer networks relevant to military applications. Topics include probability, random variables, and random sequences; density and distribution functions; deterministic versus nondeterministic signals; expectation, the dc and the r.m.s. values of nondeterministic signals, correlation and covariance; radar and sonar signal detection; LTI systems, transformation of random variables and the central limit theorem; basic queuing theory and computer communication networks. Prerequisites: EC2410 (may be taken concurrently).

EC2100 Circuit Analysis (3-2) Summer/Winter
The fundamental circuit analysis course for Electrical Engineering majors. The course considers circuit principles, circuit topology, direct current circuits, natural response, forced response, total response, impedance concepts, the application of the Laplace transformation to solve circuit problems and device transfer functions. The laboratories will utilize both computer software and hands-on exercises. Prerequisites: PH1322, MA1043, and MA2121 (may be concurrent).

EC2110 Circuit Analysis II (3-2) Fall
A continuation of EC2100. The course considers circuit principles, impedance concepts and steady-state ac circuits, ac power, frequency response and selectivity, basics of operational amplifiers and an introduction to machines and power converters. Prerequisites: EC2100.

EC2200 Introduction to Electronics Engineering (3-3)
Summer/Winter
An introduction to electronic devices and circuits. Solid state physics and semiconductor fundamentals. Properties of p-n junctions in diodes; Bipolar Junction Transistors (BJT) and Field Effect Transistors (FET); static and dynamic models for these devices, and their linear and nonlinear applications. Applications of transistors in the design of amplifiers and digital systems. Ideal operational amplifiers characteristics and applications. Fabrication and the design of integrated circuits. Prerequisites: EC2110.

EC2220 Electrical Engineering Design (3-4) Spring
A team-based capstone engineering design course emphasizing the application of electrical engineering principles, devices, and circuits to the design, analysis, implementation, and testing of electronic systems. The intensive laboratory component initially reviews various electronic circuits useful in the design of the final project. Final projects require the design, analysis, implementation, testing and demonstration of an electronic system that also incorporates
realistic parameters impacting the design process, such as economics, ergonomics, ethics, environmental impact, safety, etc. Prerequisites: EC2200.

**EC2300 Control Systems (3-2) Summer/Winter**
The main subject of this course is the analysis of feedback systems using basic principles in the frequency domain (Bode plots) and in the s-domain (root locus). Performance criteria in the time domain, such as steady-state accuracy, transient response specifications, and in the frequency domain such as bandwidth and disturbance rejection, will be introduced. Simple design applications using root locus and Bode plot techniques will be addressed in the course. Laboratory experiments are designed to expose the students to testing and evaluating mathematical models of physical systems using computer simulations and hardware implementations. Prerequisites: EC2100 and ability to program in MATLAB.

**EC2320 Linear Systems (3-1) Fall**
Formulation of system models including state equations, transfer functions, and system diagrams for continuous and sampled-data systems. Computer and analytical solution of system equations. Stability, controllability, and observability are defined. Introduction to design by pole placement using measured and estimated state feedback. Application to military systems is introduced via example. Prerequisites: EC2100 and ability to program in MATLAB.

**EC2400 Discrete Systems (3-1) Spring/Fall**
Principles of discrete systems, including modeling, analysis and design. Topics include difference equations, convolution, stability, bilateral z-transforms and application to right-sided and left-sided sequences, system diagrams and realizations, and frequency response. Simple digital filters are designed and analyzed. Prerequisites: MA1113 and ability to program in MATLAB.

**EC2410 Analysis of Signals and Systems (3-1) Summer/Winter**
Analysis of digital and analog signals in the frequency domain; properties and applications of the discrete Fourier transform, the Fourier series, and the continuous Fourier transform; analysis of continuous systems using convolution and frequency domain methods; applications to sampling, windowing, and amplitude modulation and demodulation systems. Prerequisites: EC2400.

**EC2450 Accelerated Review of Signals and Systems (4-0) As Required**
An advanced review of continuous and discrete system theory intended for students who have previous education in these areas. Topics covered by each student will depend upon background and competence in the subject matter of EC2400, EC2410, and EC2320. Prerequisites: Sufficient background in linear systems theory. Graded on Pass/Fail basis only.

**EC2500 Communications Systems (3-2) Spring/Fall**
In this first course on the electrical transmission of signals, the theory, design, and operation of analog and digital communication systems are investigated. Included are A/D conversion, modulation, demodulation, frequency-division multiplexing, and time-division multiplexing. Prerequisites: EC2200 and EC2410.

**EC2650 Fundamentals of Electromagnetic Fields (4-1) Spring/Fall**
This course covers electromagnetic field theory and engineering applications. Both static and dynamic electric and magnetic field theory is covered. The complete theory is presented in terms of Maxwell's equations and boundary conditions. Applications include induction, plane wave propagation in lossless and lossy media, analysis of finite transmission lines, and plane wave reflection. Labs provide practical experience with microwave instruments, components, and measurement techniques. Prerequisites: MA1116 or equivalent.

**EC2820 Digital Logic Circuits (3-2) Spring/Fall**
An introductory course in the analysis and design of digital logic circuits that are the basis for military and civilian computers and digital systems. No previous background in digital concepts or electrical engineering is assumed. Topics include: data representation, Boolean algebra, logic function minimization, the design and application of combinatorial and sequential SSI, MSI, and LSI logic functions including PLAs and ROMs, and the fundamentals of finite state machine design and applications. Laboratories are devoted to the analysis, design, implementation, construction, and debugging of combinatorial and sequential logic circuits using SSI, MSI, LSI, and programmable logic devices. Prerequisites: None.

**EC2840 Introduction to Microprocessors (3-2) Summer/Winter**
An introduction to the organization and operation of micro processing and microcomputers, both key embedded elements of military systems. Topics include: the instruction set, addressing methods, data types and number systems, stack and register organization, exception processing, assembly language programming techniques including macros, assembly language implementation of typical control structures, data structures, and subroutine linkage methods. Laboratory sessions teach a systematic method for program design and implementation. The laboratory assignments consist of a series of programs which collectively implement a major software project. Prerequisites: A high level language.

**EC2990 Design Projects in Electrical Engineering (0-8) Spring/Summer/Fall/Winter**
Design projects under the supervision of faculty members. Individual or team projects involving the design of devices or systems. Projects will typically be in support of faculty members. Prerequisites: Consent of instructor. Graded on Pass/Fail basis only.

**EC3000 Introduction to Graduate Research (1-0) Spring/Summer/Fall/Winter**
This course is designed to prepare students to undertake graduate research and to write a thesis or dissertation. The first part of the course provides an overview of (1) the NPS Department of Electrical and Computer Engineering, the department's research program and its faculty, (2) the NPS Research Program and the organization and functions of the NPS Research Office, (3) NPS library electronic resources, (4) an overview of S&T planning in the DoD, and (5) guidance on the thesis process. In the second part of the course, research opportunities are presented by the faculty. A broader view of the field of electrical and computer engineering is gained through student attendance at ECE Department seminars delivered by outside speakers. In the third part of the course, students are exposed to thesis research currently being carried out in the ECE Department by attending thesis presentations delivered by graduating students. Prerequisites: Consent of instructor. Graded on Pass/Fail basis only.

**EC3130 Electrical Machinery Theory (4-2) Winter**
An introduction to the analysis of magnetically-coupled circuits, dc machines, induction machines, and synchronous machines. The course will include explicit derivations of torque, voltage, and flux...
linkage equations, formulation of steady-state circuits, development of reference frame theory, and the basics of machine simulation as required in shipboard electric drive analysis. Prerequisites: EC2110 (may be taken concurrently).

EC3150 Solid State Power Conversion (3-2) Summer
A detailed analytical approach is presented for the operation, performance, and control of the important types of solid state power converters found in naval shipboard power systems. The course reviews the characteristics of power semiconductor switching devices. A systems approach is used to analyze high power converters: phase controlled rectifiers, line commutated inverters, self-commutated inverters, transistor converters, and switching regulators. Prerequisites: EC2100 or consent of instructor.

EC3200 Advanced Electronics Engineering (3-2) Spring
Characteristics of differential and multistage amplifiers. Transistors frequency response, including Bipolar Junction Transistors (BJT), Junction Field Effect Transistors (JFET), and Metal Oxide Semiconductor Field Effect Transistors (MOSFET); characteristics and design consideration. Integrated circuit OPAMP applications; analysis and design of non-ideal OPAMPs. Applications of BJTs and Complementary Metal Oxide Semiconductors (CMOS) in integrated circuits, and different biasing techniques. Analysis and design of digital circuits, including Transistor Logic (TTL), Emitter Coupled Logic (ECL), and CMOS logic families. Applications and design feedback amplifiers and operational amplifiers applications in analog filters and oscillators. Prerequisites: EC2200.

EC3210 Introduction to Electro-Optical Engineering (4-1) Fall
An overview of the elements that comprise current military electro-optical and infrared (EO/IR) systems. Topics include properties of light, optical elements, quantum theory of light emission, operating principles of laser sources, propagation of Gaussian beams, laser sources, laser modulators, thermal sources of radiation, laser and IR detectors (photomultipliers, photoconductors, photodiodes, avalanche photodiodes), signal-to-noise analysis of direct- and heterodyne-receiver systems. Includes military applications of electro-optic and infrared technology such as missile seekers, laser designators, laser weapons, and Bragg-cell signal processors. Prerequisites: EC2200 and EC2650.

EC3220 Semiconductor Device Technologies (3-2) Fall
This course is intended to familiarize the student with solid state device operation and fabrication of present day semiconductors and transistor technologies. Topics include: fundamental theory of charge transport, semiconductor materials (Si, GaAs, SiGe, InP), bandgap engineering, epitaxy crystal growth, and semiconductor device manufacturing technology. A virtual wafer lab is accomplished in the software labs to visualize parameters as impurity implants to electron flow. Measurement labs will utilize hands-on wafer probe measurements of digital and analog devices. Prerequisites: EC2200 or equivalent.

EC3230 Space Power and Radiation Effects (Formerly E03205) (3-1) Spring
Fundamentals of different power systems utilized in spacecraft; photovoltaic power technology; solid-state physics, silicon solar cells, solar cell measurement and modeling, gallium arsenide cells and II-V compounds in general, array designs and solar dynamics. Radiation effects on solid state devices and materials. Survivability of solar cells and integrated circuits in space environment and annealing method. Other space power systems including chemical and nuclear (radioisotope thermoelectric generators and nuclear reactors). Energy storage devices and power conversion. Spacecraft power supply design. Note: EC3230 is taught with compressed scheduling (first six weeks of quarter). Prerequisites: EC2200.

EC3280 Introduction to MEMS Design (3-3) As Required
This is a 4.5 credit hour class introducing the students to Micro Electro Mechanical Systems (MEMS). Topics include material considerations for MEMS and microfabrication fundamentals. Surface, bulk and non-silicon micromachining. Forces and transduction; forces in micro-nano-domains and actuation techniques. Case studies of MEMS based microsensor, microactuator and microfluidic devices. The laboratory work includes computer aided design (CAD) of MEMS devices and small group design project. Prerequisites: basic understanding of electrical and mechanical structures: EC2200 or MS2201 or PH1322 or consent of instructor.

EC3310 Optimal Estimation: Sensor and Data Association (3-2) Winter
The subject of this course is optimal estimation and Kalman filtering with extensions to sensor fusion and data association. Main topics include the theory of optimal and recursive estimation in linear (Kalman filter) and nonlinear (extended Kalman filter) systems, with applications to target tracking. Topics directly related to applications, such as basic properties of sensors, target tracking models, multihypothesis data association algorithms, reduced order probabilistic models and heuristic techniques, will also be discussed. Examples and projects will be drawn from radar, EW, and ASW systems. Prerequisites: EC2320, EC2010, MA3046.

EC3320 Optimal Control Systems (3-2) Spring
This course addresses the problem of designing control systems which meet given optimization criteria. The student is exposed to the development of the theory, from dynamic programming to the calculus of variation, and learns how to apply it in control engineering. Prerequisites: EC2300, EC2320.

EC3400 Digital Signal Processing (3-2) Spring/Fall
The foundations of one-dimensional digital signal processing techniques are developed. Topics include Fast Fourier Transform (FFT) algorithms, block convolution, the use of DFT and FFT to compute convolution, and design methods for nonrecursive and recursive digital filters. Multirate signal processing techniques are also introduced for sampling rate conversion, efficient analog to digital, digital to analog conversion, time frequency decomposition using filter banks and quadrature mirror filters. Computer-aided design techniques are emphasized. The algorithms introduced have direct applications in sonar and radar signal processing, IR sensor arrays, modern navy weapon systems, and also in voice and data communications. Prerequisites: EC2410.

EC3410 Discrete-Time Random Signals (3-2) Summer/Winter
Fundamentals of random processes are developed with an emphasis on discrete time for digital signal processing, control, and communications. Parameter estimation concepts are introduced, and impact of uncertainty in parameter evaluation (estimated moments and confidence intervals) are presented. Random processes are introduced. DKLT and applications to image processing and classification problems are considered. Impact of linear transformations to linear systems is discussed. FIR Wiener, and matched filters are introduced. IIR Wiener filter introduced, time permitting. Applications to signal and system characterization in areas such as system identification, forecasting, and equalizations.
are considered to illustrate concepts discussed during the course. Prerequisites: EC2410 (may be concurrent) and EC2010.

EC3450 Fundamentals of Ocean Acoustics (4-0) Fall
Introduction to various mathematical techniques (both exact and approximate), special functions (e.g., Bessel functions, Hankel functions, and Legendre polynomials), orthogonality relationships, etc., that are used to model and solve real world problems concerning the propagation of sound in the ocean. Topics include, for example, reflection and transmission coefficients, ocean waveguide pulse-propagation models based on normal mode and full-wave theory, the WKB approximation, three-dimensional ray acoustics, and the parabolic equation approximation. Prerequisites: Standard undergraduate sequence of calculus and physics courses for engineering and science students.

EC3500 Analysis of Random Signals (4-0) Fall
Fundamental concepts and useful tools for analyzing non-deterministic signals and noise in military communication, control, and signal processing systems are developed. Topics include properties of random processes, correlation functions, energy and spectral densities, linear systems and mean square estimation, noise models and special processes. Prerequisites: EC2500 (may be concurrent) and EC2010, or consent of instructor.

EC3510 Communications Engineering (Unclassified) 3-1 (Winter)
The influence of noise and interference on the design and selection of digital and analog communications systems is analyzed. Topics include link budget analysis and signal-to-noise ratio calculations, receiver performance for various analog and digital modulation techniques, and bandwidth and signal power trade-offs. Examples of military communications systems are included. Prerequisites: EC2220 and EC3500 or EC3410.

EC3600 Antennas and Propagation (3-2) Summer/Winter
A fundamental understanding of antennas, scattering, and propagation is developed. Characteristics and design principles of common antenna types such as dipoles, arrays, horns, reflectors and microstrip patches, are considered. Concepts of antenna gain and effective area are used to develop power link equations. Scattering theory is introduced and propagation phenomena are considered for real-world scenarios. Design applications include phased, Yagi and log-periodic arrays, as well as shaped-beam reflector antennas, sidelobe suppression, radar target scattering, stealth principles, surface waves, HF and satellite communications. Prerequisite: EC2650 or equivalent.

EC3610 Microwave Engineering (3-2) Spring
This course provides an overview of the circuits and devices used in microwave radar communication and electronic warfare systems. The course covers network analysis using scattering parameters, transmission media, selected circuits, electron tubes, solid state devices, and monolithic integrated circuits. Circuits and devices are studied in the laboratory using both hardware and computer simulation. Prerequisite: EC2650.

EC3630 Radiowave Propagation (3-2) Spring
This course treats the effects of the earth and its atmosphere on the propagation of electromagnetic waves at radio frequencies. Topics covered include ground waves, sky waves, ducting, reflection, refraction, diffraction, scattering, attenuation, and fading. Basic theory is covered and computer models are introduced where appropriate. Emphasis is placed on determination of the transmission loss between transmitting and receiving antennas. Computer laboratory exercises are used to illustrate the propagation characteristics of various indoor and outdoor environments, and their effects on system performance. Prerequisites: EC2650 or consent of instructor.

EC3700 Joint Network-Enabled Electronic Warfare I (3-2) Fall
The concept of information operations (IO) and the critical role for electronic warfare (EW) are examined. The net-enabled force transformation is presented emphasizing how network-enabled EW technology provides a force multiplier for this transformation. Important EW technology components of SeaPower-21 are emphasized. The network space – battlespace duality and the Global Information Grid are also analyzed (FORCEnet). Metrics are presented to quantify the information value from wireless networks of distributed sensors and weapons. A direct assessment of the value of the network (information superiority) to the combat outcome (battlespace superiority) is presented. Integrated air defense suppression examples are studied using game theory to demonstrate the concepts. The role of intelligence also is emphasized. Sensor technologies and their use in the battlespace are presented. Mathematical models for electronic attack (EA) techniques are developed including those against GPS, RF and IR sensors. Off-board EA techniques including chaff, towed and rocket decoys, and digital image synthesizers are emphasized for counter-surveillance, counter-targeting and counter-terminal. High-power microwave and laser-based directed energy weapons are examined. Sensor protection techniques are discussed including an introduction to the new area of counter-electronic support. Students do a research project on a topic of interest from the Force Transformation Roadmap. Laboratory exercises are also conducted in the Radar and Electronic Warfare Laboratory. Prerequisites: EC2500 and EC2650 or equivalent.

EC3710 Computer Communications Methods (3-2) Spring/Fall
The course objective is to develop an understanding of computer communications networks with emphasis on the requirements of military environments and the U.S. Navy’s combat platforms. Coverage includes the essential topics of network topology, connectivity, queuing delay, message throughput, and performance analysis. The layered network architectures, such as the seven-layer OSI model and DoD’s TCP/IP protocol suite, are covered. The techniques and protocols used in these layers are discussed. Local area networking technologies such as Ethernet, FDDI and wireless Ethernet, and wide area technologies such as X.25 and frame relay are covered. Principles of networking devices (hubs, switches, and routers) are presented. Some distributed applications are presented briefly. Prerequisites: EC2010 and EC2500.

EC3730 Cyber Network and Physical Infrastructures (3-2) Winter
Cyber infrastructure systems and technologies of interest to the military. Copper and fiber media networks, telecommunication networks and signaling, the Internet, enterprise networks, network-centric sensing, collection, monitoring, dissemination, and distribution of critical data. Terrestrial wireless networks: cellular networks, local area and long haul data networks (GSM, WiFi, WiMAX, LTE, Link 16 and Link 22). Space based networks: satellite communication networks, wide area large sensor networks. Heterogeneous networks: end-to-end communication, sensing, collection, and distribution across fiber, terrestrial wireless, and satellite networks, protocols, design and performance analysis. Control and overlay networks such as Supervisory Control and Data Acquisition (SCADA) systems and the National power grid.
Prerequisites: EC2500 and understanding of basic communication systems and networks.

**EC3740 Reverse Engineering in Electronic Systems (3-2) Summer**

Presents fundamental, systems-level concepts for developing an understanding of system functionality - with an emphasis on hardware systems - without a prior access to the system's design specifications. Considers generalized approaches to developing a set of specifications for a complex system through orderly examination of specimens of that system. Illustrates procedures for identifying the system's components and their interrelationships. Demonstrates methods for creating representations of the system in another form or at a higher level of abstraction. Presents fundamental definitions for forward engineering, reverse engineering, design recovery, restructuring and reengineering. Basic analysis techniques such as impulse response will be introduced. System identification techniques such as parameter estimation, Markov models and linear time-invariant (LTI) theory will be used to build dynamical models from observed data. Case studies from several domain areas will be presented to include: integrated circuit (IC) and circuit board analysis, communications protocol analysis, software disassembly, and programmable logic verification. Prerequisite: None.

**EC3750 Introduction to SIGINT Engineering (3-2) Fall**

An introduction to the technology of signals intelligence systems, with particular emphasis on the means for accessing signals of intelligence value. Covers the three major branches of SIGINT: communications intelligence, electronic intelligence, and foreign instrumentation signals intelligence. Collection platform, receivers, and antennas are examined. Emitter location techniques are considered. Prerequisites: EC3410 or EC3500 or EO3512, U.S. citizenship and Top Secret clearance with eligibility for SCI access.

**EC3760 Information Operations Systems (3-2) Winter**

This course examines the Network-centric Environment that is the focus of the Information Operations (IO) infrastructure with emphasis on current and future implementation models. A Signals Intelligence (SIGINT) approach is taken in which the adversary's computer network system architecture is examined and evaluated for the purpose of exploitation, protection, and/or attack. A thorough review of the fundamentals of communications, computer networks, and advanced digital technologies is discussed. This course works closely with the Department of Defense to reinforce realistic approaches for solving critical IO issues within the community. Prerequisites: EC3410 or EC3500 or consent of instructor. Classification: U.S. citizenship and TOP SECRET clearance with eligibility for SCI access.

**EC3800 Microprocessor Based System Design (3-2) Fall**

Advanced microprocessor system concepts are studied. Microprocessor systems are widely used for embedded control in military systems as well as for stand-alone computers. Topics covered are CPU operation and timing, address decoding, typical LSI support chips, exception processing, design of static and dynamic memory systems, worst-case timing analysis, bus arbitration, and direct memory access controllers. The laboratory consists of a design project integrating hardware and software using a state-of-the-art development system. Prerequisites: EC2820 and EC2840.

**EC3820 Computer Systems (3-2) Summer**

The course presents a unified approach for the design of computer systems stressing the interacting processes implemented in hardware, software, and firmware. General features of operating systems are studied as well as specific features of an existing system. The elements of a multiprogramming system are introduced. Prerequisite: EC2840.

**EC3830 Digital Computer Design Methodology (3-2) Winter**

A design and project-oriented course covering basic principles, theories, and techniques for practical design of digital systems. Emphasizes an integrated viewpoint combining essential elements of classical switching theory with a thorough understanding of modern design aids. Current military and commercial systems are used as design examples. Prerequisite: EC2820.

**EC3840 Introduction to Computer Architecture (3-2) Spring**

The fundamental principles of computer architecture and processor design, including the influences of implementation technology, cost, performance, and the historical development of computer architecture. Levels of abstraction and instruction set/architecture design. Processor design and implementation, including the data path and the control unit. Computer design, including buses, the memory hierarchy, and the input/output subsystem. Factors affecting performance and performance measurement, evaluation, and comparison. The effects of embedded military applications on computer architecture. Prerequisites: EC2820 and EC2840.

**EC3860 Trustworthy Computer Hardware Analysis and Design (3-2) Spring**

This course initially presents a detailed review of the techniques, methods, and tools used by engineers to design and implement modern, high-performance, digital circuits, systems, and computers. This is followed by a detailed review of implementation technologies, at all levels of integration from discrete devices to complete systems on a chip, including the use of COTS, ASIC, and programmable devices, that are typically used for implementing a wide range of digital systems including servers, desk-top computers, embedded computers, reconfigurable computers, and network routers and switches. Course material then focuses on the vulnerabilities of the design, implementation, and manufacturing processes to the covert addition of malicious functionality, as well as the vulnerabilities of the underlying implementation technology. Finally, the techniques and methods required to design, implement, and manufacture trusted, high-performance, digital circuits, systems, and computers are studied. Corequisite: EC3740.

**EC3910, 30.90 Special Topics in Electrical Engineering (V) Spring/Summer/Fall/Winter**

Courses on special topics in Electrical Engineering are offered under these numbers. In most cases, new courses are offered as special topics of current interest with the possibility of being developed as regular courses. See the Electrical and Computer Engineering Department’s on-line catalog for current offerings.

**EC4000 Introduction to Doctoral Research (2-0) Spring/Fall**

The main objectives of the course are to foster interaction among the doctoral students and the department faculty and to promote excellence in research. Additional objectives of the course are to prepare the doctoral students to initiate the screening and qualifying steps of the program, to undertake dissertation research, and to publish and present research results. Along with an overview of the ECE Ph.D. program, the course provides guidance on the program preliminaries, such as the screening and qualification exams and minor requirements, and the dissertation research process. A broad overview of the current research problems in the field of electrical and computer engineering relating to the needs of national defense and in the ECE department in particular is presented. Students in the early stages of their program will be
exposed to ongoing dissertation research and advances in the field through research presentations delivered by doctoral students in the research phase of their program, NPS faculty and outside researchers. The course provides the opportunity for doctoral students at all levels of progress to meet once a week to discuss their research, share ideas, rehearse conference presentations and dissertation defenses, and to gain exposure to a diversity of research topics and ideas. Graded on Pass/Fail basis only. PREREQUISITE: Approved ECE Ph.D. student or Consent of the ECE Ph.D. Program Committee.

**EC4010 Principles of Systems Engineering (3-2) Spring/Fall**

An introduction to systems engineering concepts and methods for the design and integration of complex defense systems, with emphasis on electrical engineering applications. Familiarity with the systems engineering process is developed through case studies of representative defense systems and a group design project which includes determination of system requirements from mission needs and operational requirements. Digital simulation models, including those in current use by DoD, are used to determine engineering and performance tradeoffs. Prerequisites: Four quarters in an NPS engineering curriculum or equivalent.

**EC4130 Advanced Electrical Machinery Systems (4-2) Spring**

Advanced analysis of detailed and reduced-order representations of shipboard electric machinery and power electronic drives. This course will include extensions to 3-phase machine and network connections, constant flux and current source control, extensive simulation examples including saturation and open-phase conditions, comprehensive investigation of linearized and reduced-order machine and drive representations, the modeling and control of a dc link system, and the fundamentals of AC machine vector control. Prerequisites: EC3130.

**EC4150 Advanced Solid State Power Conversion (4-1) Fall**

Design and analysis of modern power electronic drives with particular emphasis on electric drives for present and future ship propulsion systems and variable frequency/variable speed power converters for advanced shipboard electric power distribution. Electrical and mechanical systems compatibility and electrical system interfacing topics are addressed. This course begins by examining the non-ideal aspects of power semiconductor switches and other components. In addition, dynamic performance of power electronic circuits is explored. The course includes some more advanced topics like resonant converters and active power line conditioners. Prerequisites: EC3150 and electrical machine theory, or consent of instructor.

**EC4210 Electro-Optic Systems Engineering (3-0) Winter**

Advanced topics and application of electro-optics. Military applications of electro-optic and infrared technology such as laser communications, laser radar, and Bragg cell signal processors. Signal-to-noise analysis of laser detector performance. Student reports on EO/IR topics of current military interest. Prerequisites: EC3210.

**EC4220 Introduction to Analog VLSI (3-1) Winter**

Examples of such analog VLSI designs in military applications. Prerequisites: EC2400 and EC3200.

**EC4230 Reliability Issues for Military Electronics (3-1) Winter**

This course investigates where and why semiconductor devices fail in military environments. Topics include limitations of commercial-off-the-shelf (COTS) integrated circuits, thermal failure, electrostatic breakdown, noise in solid state devices, packaging reliability issues, radiation effects due to space and nuclear environments, and the limited availability of military integrated circuit suppliers. Prerequisites: EC3220.

**EC4280 Micro Electro Mechanical Systems (MEMS) Design II (2-4) As Required**

This is the second course in Micro Electro Mechanical Systems (MEMS) Design. This course will expose students to advanced topics on material considerations for MEMS, microfabrication techniques, forces in the micro- and nano-domains, and circuits and systems issues. Case studies of MEMS-based microsensors, microactuators, and microfluidic devices will be discussed. The laboratory work includes computer aided design (CAD) and characterization of existing MEMS devices. The grades will be based on exams, lab projects, and a group design project. Prerequisites: ME/EC/PH3280 or ME3780 or consent of instructor.

**EC4300 Advanced Topics in Modern Control Systems (3-1) As Required**

Advanced topics and current developments in control systems are presented in this course. The list of special topics includes (but it is not limited to) robotics systems, autonomous vehicles, and design by robust techniques. Prerequisites: Consent of instructor.

**EC4310 Fundamentals of Robotics (3-2) Fall**

This course presents the fundamentals of land-based robotic systems covering the areas of locomotion, manipulation, grasping, sensory perception, and tele-operation. Main topics include kinematics, dynamics, manipulability, motion/force control, real-time programming, controller architecture, motion planning, navigation, and sensor integration. Several Nomad mobile robots will be used for class projects. Military applications of robotic systems will be discussed. Prerequisites: MA3042; either EC2300 or EC2320, or consent of instructor.

**EC4320 Design of Robust Control Systems (3-2) Winter**

This course presents advanced topics on control system design. Major emphasis is on robust techniques in order to account for uncertainties on the systems to be controlled. Several applications show the trade-offs in several applications, such as missile and/or underwater vehicles control design. Advanced concepts on H2 and H-infinity will be introduced as part of the course. Prerequisites: EC3310, EC3320.

**EC4330 Navigation, Missile, and Avionics Systems (3-2) Spring**

Principles of missile guidance, including guidance control laws, basic aerodynamics and six degree-of-freedom motion simulation. Additional topics are selected from the following areas to address the general interests of the class: advanced guidance laws, passive sensors, INS guidance, fire control and tracking systems, and ballistic missile targeting. Prerequisites: EC3310. Classification: U.S. citizenship and SECRET clearance.
EC4350 Nonlinear Control Systems (3-2) Spring
This course presents techniques for automatic control of nonlinear systems with application to current military and robotic systems. Main topics include the analysis and design of nonlinear systems with phase plane and describing function methods, Lyapunov and sliding mode control techniques. Accuracy limit cycles, jump resonances, relay servos, and discontinuous systems will also be considered. Prerequisites: EC2300, EC2320.

EC4400 Advanced Topics in Signal Processing (3-0) As Required
Special advanced topics in signal processing not currently covered in a regularly scheduled course and relevant to advanced naval and other military applications. Topics may include digital filter structures and implementations, advanced computational topics and architectures for signal processing, imaging, recent work in signal modeling, array processing, or other topics of interest. Prerequisites: Consent of instructor.

EC4430 Multimedia Information and Communications (3-1) Fall
The course objective is to present essentials of real-time communication of digital multimedia (audio, video and text) information over packet-switched networks by bringing together topics from digital signal processing (information processing), digital communications (information transmission and reception), and computer networking (information distribution). Algorithms for compression of multimedia information are presented. Related international standards, such as G.728, JPEG, MPE3, MP3, LZW, and IS95, are discussed. Major topics include digital representation and compression of multimedia information, transmission (storage) and distribution of compressed information, and end-to-end delivery issues, such as loss, reliability, security and encryption of multimedia information. Prerequisites: EC3410 or EC3500.

EC4440 Statistical Digital Signal Processing (3-2) Fall
Modern methods of digital signal processing are developed in this course from a statistical point of view. Methods are developed for processing random signals through statistical data analysis and modeling. Topics include adaptive filtering, linear prediction, MA, AR, and ARMA signal modeling, lattice structures, and an introduction to subspace methods and other modern methods of spectrum estimation. Techniques presented are applied to various engineering problems such as system identification, forecasting, and equalization. The algorithms introduced have direct applications in communication, sonar, radar systems signal processing, and modern Navy weapon systems. Prerequisites: EC3410 or EC3500 and MA3042.

EC4450 Sonar Systems Engineering (4-1) Winter
Mathematical development and discussion of fundamental principles that pertain to the design and operation of passive and active sonar systems critical to naval operations. Topics from complex aperture theory, array theory, and signal processing are covered. This course supports the undersea warfare and engineering acoustics curricula and others. Prerequisites: EC3450 or PH3452 or OC3260 and either EC3410 or EC3500 or EO3402 or equivalent.

EC4460 Artificial Neural Networks (3-1) Summer
The basic theory and practice of artificial neural networks and their applications in electrical engineering are presented. Modeling of biological neurons as processing elements, their organization into a network of interconnected artificial neurons, and some basic laws of learning are discussed. Details of learning algorithms, such as LMS, backpropagation, self-organizing map, and adaptive resonance theory are presented. Emphasis is placed on problems related to pattern recognition and classification, control systems, optimization, and data compression. Course projects address DOD specific applications, such as radar/sonar target recognition and classification using image or acoustic data. Prerequisites: EC3500 or EC3410 and knowledge of simple electronic and logic circuits.

EC4480 Image Processing and Recognition (3-2) Winter
This course provides image processing background for understanding modern military applications, such as long range target selection, medium range identification, and short range guidance of new weapons systems. Subjects include image sampling and quantization, image representation, enhancement, transformation, encoding, and data compression. Predictive coding, transform coding, and interchange coding techniques are also introduced. 3D to 2D imaging projections are also introduced to extract 3D information either from motion or stereo imaging. Some effort is directed toward image compression techniques particularly suited for multimedia video conferencing. Prerequisites: EC3400.

EC4500 Advanced Topics in Communications (3-0) As Required
Topics and current developments in communications relevant to advanced naval and other military applications. Offered on an occasional basis with the topics determined by the instructor. Prerequisites: Consent of instructor.

EC4510 Cellular Communications (3-0) Winter
This course presents the fundamentals of cellular communications. Cellular architectures, propagation models, modulation formats, diversity techniques, equalization, error control, multiple access techniques, networking, and standards such as AMPS, N-AMPS, IS-54, GSM, and IS-95 are covered. Prerequisites: EC3510.

EC4530 Soft Radio (3-2) Summer
An introduction to soft radios, devices that generate (transmitter) and/or process (receiver) digital communications signals in software and in reconfigurable hardware. The course covers basic radio frequency (RF) design principles, soft radio architectures, analysis of receiver operation, and existing soft radio efforts. Prerequisite: EC3510 or consent of instructor.

EC4550 Digital Communications (4-0) Spring
This course presents the advantages and limitations of modern military M-ary digital communications systems. M-ary modulation formats, matched filter receivers, probability of symbol error calculations, coherent and non-coherent receivers, carrier and symbol synchronization, modem, bandwidth and signal energy, diversity combining, and fading channels are covered. Examples of current operational and proposed military and commercial space and earth links are treated. Prerequisites: EC3510.

EC4560 Spread Spectrum Communications (3-2) Summer
Methods of reducing the effects of hostile jamming on military radio communications systems are considered. Direct sequence spread spectrum systems and frequency-hopped spread spectrum systems are examined with regard to their LPI, LPD, AJ, and multiple access capabilities. Time-hopped and hybrid systems are also considered. Coarse and fine synchronization problems and techniques are presented. Prerequisites: EC3510.
EC4570 Signal Detection and Estimation (4-0) Winter
Principles of optimal signal processing techniques for detecting signals in noise are considered. Topics include maximum likelihood, Bayes risk, Neyman-Pearson and min-max criteria and calculations of their associated error probabilities (ROC curves). Principles of maximum likelihood, Bayes cost, minimum mean-square error (MMSE), and maximum a posteriori estimators are introduced. Integral equations and the Karhunen-Loève expansion are introduced. The estimator-correlator structure is derived. Emphasis is on dual development of continuous time and discrete time approaches, the latter being most suitable for digital signal processing implementations. This course provides students the necessary foundation to undertake research in military radar and sonar systems. Prerequisites: EC3410 or EC3500.

EC4580 Error Correction Coding (4-0) Fall
Digital military communication systems often employ error control coding to improve effectiveness against noise, fading, and jamming. This course, together with EC4560, provides students the necessary foundations for understanding the principles of such systems. Topics include Shannon's channel capacity theorem and coding methods for error control in digital communications systems, including convolutional, block, concatenated, and turbo codes, as well as trellis-coded modulation. Applications of error control coding to modern digital communications systems are discussed. Prerequisites: EC3510.

EC4590 Communications Satellite Systems Engineering (3-0) Winter
Communication satellite systems including the satellite and user terminals. Subjects include orbital mechanics, satellite description, earth terminals, detailed link analysis, frequency division multiple access, time division multiple access, demand assignment, random multiple access, and spread spectrum multiple access. Various military satellite communications systems are introduced. Prerequisites: EC3510 or EO4516.

EC4600 Advanced Topics in Electromagnetics (3-0) As Required
Selected advanced topics in electromagnetics that are not currently covered in regular courses offerings, and relevant to naval and other military applications. Topics may include, but are not limited to, computational electromagnetics, scattering and radiation, propagation, and new device and antenna concepts. Prerequisites: EC3600 or consent of instructor.

EC4610 Radar Systems (3-2) Summer
The radar range equation is developed in a form including signal integration, the effects of target cross-section, fluctuations, and propagation losses. Modern techniques discussed include pulse compression frequency modulated radar, moving target indicator (MTI) and pulse Doppler systems, monopulse tracking systems, multiple unit steerable array radars, and synthetic aperture systems. Laboratory sessions deal with basic pulse radar systems from which the advanced techniques have developed, with pulse compression, and with the measurement of radar cross-section of targets. Prerequisites: EC3600.

EC4630 Radar Cross Section Prediction and Reduction (3-2) Fall
This course covers the design and engineering aspects of stealth and its impact on platform and sensor design. Signature prediction methods in the radar, infrared (IR), and laser frequency bands are discussed. Radar cross section (RCS) analysis methods include geometrical optics and diffraction theory, physical optics and the physical theory of diffraction, and numerical solutions to integral and differential equations. Prediction methods for IR and laser cross sections (LCS) are also introduced. Signature reduction by shaping, materials selection, and active and passive cancelation are applied to each frequency regime. The measurement of these cross sections is also covered. Prerequisites: EC3600 or consent of instructor.

EC4640 Airborne Radar Systems (3-2) Fall
The main objective of this course is to discuss concepts and digital signal processing techniques involved in modern airborne radars, which detect targets in presence of large ground clutter and other interferences. Radar waveform (or modes) are treated as continuous wave (CW), high pulse repetition frequency (HPRF), medium pulse repetition frequency (MPRF), and low pulse repetition frequency (LPRF). Practical implementation and the signal processing associated with each mode will be elaborated. Advantages and limitations of each mode shall be discussed. Military applications of these modes will be discussed in the existing airborne and surface based radar systems. Concepts and algorithms are covered for digital pulse compression, MTI clutter cancelation, Doppler processing, constant false alarm rate (CFAR) detection, ambiguity resolution, synthetic array radar (SAR) processing and other associated techniques and algorithms. Prerequisites: EC4610 or equivalent.

EC4680 Joint Network-Enabled Electronic Warfare II (3-2) Spring
The course is intended for U.S. students with Secret clearance. The course continues the discussion of counter electronic support and begins with an introduction to low-probability-of-intercept (LPI) emitter signaling techniques and technologies. The origin and importance of the LPI emitter are emphasized. Case studies are shown to demonstrate the capability of the LPI emitter as an anti-ship capable missile seeker. Network enabled receiver techniques are presented highlighting the benefits of the sensor-shooter-information grid and swarm intelligence. The new challenges facing the intercept receiver design and the trends in receiver technology are addressed. To increase the processing gain of the receiver, time-frequency signal processing methods are presented and include the pseudo Wigner-Ville distribution, quadrature mirror filter bank trees for wavelet decomposition and the Choi-Williams distribution. Bi-frequency techniques are also emphasized and include cyclostationary processing for estimating the spectral correlation density of the intercepted signal. Calculations using each signal processing method are shown to demonstrate the output information and its correlation with the input signal parameters. New detection results are then derived by the student for various LPI signaling schemes to illustrate the parameter extraction methods developed. Autonomous emitter classification architectures are also presented. Laboratory simulation exercises are conducted to demonstrate the concepts. Prerequisites: EC3700, U.S. citizenship, and Secret clearance.

EC4690 Joint Network-Enabled Electronic Warfare II (3-2) Spring
The course is intended for international students and contains the same material as EC4680. The course continues the discussion of counter electronic support and begins with an introduction to low-probability-of-intercept (LPI) emitter signaling techniques and technologies. The origin and importance of the LPI emitter are emphasized. Case studies are shown to demonstrate the capability of the LPI emitter as an anti-ship capable missile seeker. Network enabled receiver techniques are presented highlighting the benefits
of the sensor-shooter-information grid and swarm intelligence. The new challenges facing the intercept receiver design and the trends in receiver technology are addressed. To increase the processing gain of the receiver, time-frequency signal processing methods are presented and include the pseudo Wigner-Ville distribution, quadratic mirror filter bank trees for wavelet decomposition and the Choi-Williams distribution. Bi-frequency techniques are also emphasized and include cyclostationary processing for estimating the spectral correlation density of the intercepted signal. Calculations using each signal processing method are shown to demonstrate the output information and its correlation with the input signal parameters. New detection results are then derived by the student for various LPI signaling schemes to illustrate the parameter extraction methods developed. Autonomous emitter classification architectures are also presented. Laboratory simulation exercises are conducted to demonstrate the concepts. Prerequisites: EC3700.

**EC4710 High-Speed Networking (3-2) Summer**

The course systematically develops the traffic characteristics of DoD and commercial broadband services (video, voice, text, and other multimedia information) and determines the need for high-speed networks with emphasis on quality of service. Queuing theory is used in the design and analysis of the various modules of a high-speed network: traffic modeling, switches, admission control, scheduling, traffic monitoring, and congestion control. Emerging trends and technologies that enable deployment of high-speed global networks for tactical, commercial, and residential use are discussed. Topics include queuing theory, traffic models, traffic management, and broadband technologies, such as ATM, Gigabit Ethernet, DSL, and cable access. Laboratory is concerned with the use of OPNET for simulation studies of various network topologies. Prerequisites: EC3850 or consent of instructor.

**EC4715 Cyber System Vulnerabilities and Risk Assessment (3-2) Summer**

The course utilizes reverse engineering principles to identify and assess vulnerabilities in electronic, communication, and control systems and analyze risk to provide tradeoffs. Vulnerabilities in cyber systems based on genetic, developmental, and those caused by system overload are presented. Widely accepted industry and military standards, underlying technologies, specification mismatches and interoperability, and resource constraints are examined to identify vulnerabilities of interest. Vulnerability assessment at component and system level along with prioritization and elimination procedures are discussed. Risk analysis for secure operation of the system and relevant tradeoffs are presented. Laboratory exercises provide hands-on experience. Prerequisite: EC3730, EC3740.

**EC4725 Advanced Telecommunication Systems Engineering (3-2) Summer**

Studies the engineering of communications transport networks with a particular emphasis on telephony systems. Presents basic concepts in conventional telephony and traffic engineering such as availability, blockage, dimensioning and survivability. Introduces the architecture of Public Switched Telephone Networks (PSTN) and Mobile Switching Networks (MSN). Presents alternatives for enterprise architectures including Private Automatic Branch Exchange (PABX) and Media Gateways (MG). Examines DoN implementations from intra-, ship-to-ship and long haul. Discusses approaches to signaling and provisioning. Presents the Signaling System No. 7 (SS7) architecture. Surveys a variety of transport network technologies to include the Synchronous Optical Network (SONET)/Synchronous Digital Hierarchy (SDH) standard, Dense Wavelength Division Multiplexing (DWDM), dark fiber, and metro Ethernet. Introduces carrier-grade Voice-over-Internet Protocol (VoIP) implementations. Concludes with a discussion of Network Management. Prerequisite: EC3710.

**EC4730 Covert Communications (3-2) Winter**

Electronic signal and data communication mechanisms in which the presence of a message being transmitted is concealed in plain sight of other signals or data are presented. Information hiding in user data, protocol data, and radio, electronic, acoustic and other sensory signals is examined. The techniques of steganography, covert channels, low probability exploitation, and information concealment in analog signals are studied. Techniques and mechanisms for establishing robust, secure covert communication schemes are introduced. The detection, analysis, and abortion of adverse covert communication schemes are discussed. Design of systems suitable for attack and defense of covert communications using programmable logic devices is introduced. Low probability of detect, low probability of intercept, and anti-jamming techniques are reviewed. Embedding and extraction algorithms of steganography are presented. Related topics of watermarking and embedded malware are reviewed. Prerequisite: EC3730 or EC3710.

**EC4735 Telecommunications Systems Security (3-2) Fall**

Examines underlying technical security issues, policies, standards, implementations, and technologies associated with large-scale commercial telecommunications systems. Reviews the infrastructure and components of carrier class networks to include transport multiplexers and multi-protocol switches. Discusses the public switched telephone network (PSTN) and public land mobile network (PLMN). Begins with a review of the need for Signaling System No. 7 (SS7) and how security is implemented in SS7 networks. Presents fundamental trust assignments in second generation (2G) cellular mobile networks and specifically analyzes trust relationships between core components of the PLMN subsystems. Specifically discusses air interface (Um, Gm) protection measures and presents case studies of systemic flaws. Presents evolutionary changes in security practices in third (3G) and fourth generation (4G) protocols and standards. Examines underlying principles of lawful intercept (LI) implementation and the evolution of LI capability from the PSTN through 3G and 4G networks. Studies the protection of data services in the PLMN and IP Multimedia Subsystem (IMS). Specifically focuses on the General Packet Radio Service (GPRS) Tunneling Protocol (GTP) and Roaming Exchanges (GRX). Discusses future research and proposed security standards in next generation systems. Prerequisite: EC4725.

**EC4745 Mobile Ad-Hoc Wireless Networks (3-2) Spring**

The course presents the fundamental principles, design issues, performance analysis, and military applications of infrastructure and ad hoc wireless packet switched networks. Radio wave propagation, wireless channel characteristic, orthogonal frequency division multiplexing, transceiver design, channel coding, and other physical layer technologies are reviewed. Principles of wireless local area and wide area (cellular) networks are presented. Design and performance analysis of medium access control mechanisms - contention, reservation and scheduling - are covered. Mobile IP protocol is presented, and reactive and proactive protocols for routing in ad hoc networks are introduced. The performance of TCP over wireless networks is analyzed. Security in infrastructure and ad hoc networks is addressed. Sensor networks are introduced. Energy management is discussed. The widely used and emerging
wireless networking standards are reviewed. Hardware laboratory assignments provide hands-on experience and OPNET projects allow simulation of large scale networks to complement the theory presented in the course. Prerequisite: EC3710 or consent of instructor. **EC4750 Sigint Systems II (3-4) Winter** Detailed problems and principles of Signals Intelligence (SIGINT) are presented. Several SIGINT scenarios are studied in class, and students select one for a team project. The scenarios taught are based on SIGINT needs from the National Security Agency (the scenarios are highly classified). The selected SIGINT scenario will require a conceptual design or realignment of national SIGINT systems to satisfy the operational commander's SIGINT needs. Prerequisites: EC3750 or consent of instructor. Classification: U.S. citizenship and TOP SECRET clearance with eligibility for SCI access. **EC4755 Network Traffic, Activity Detection, and Tracking (3-2) Spring** Network traffic characterization, traffic engineering/management and detection and tracking of traffic anomalies are covered with a focus on statistical and information theoretic concepts, signal processing, and control theory. Network (cyber) traffic is characterized based on statistical and information theoretic approaches such as self similarity and information entropy. Traffic flows and traffic flow analysis are presented; multimedia nature of network traffic discussed. Traffic engineering techniques of congestion control, traffic redirection, and admission control are examined utilizing network flows and queue management and analysis. Detection theory is introduced. Detection of threat activity based on traffic anomalies is examined. Neyman-Pearson criterion and the receiver operating characteristic are presented. Traffic flow analysis for activity tracking is discussed. Case studies of local area networks, the Internet, sensor networks, and wireless networks including the 4G systems are conducted. Laboratories will provide hands-on experience and introduce tools of traffic characterization, detection, monitoring, and tracing. Prerequisite: EC3730, EC3500. **EC4765 Cyber Warfare (TS/SCI) (3-2) Summer** Cyber warfare explored from an electrical engineering perspective. Historical examples of military cyber warfare operations are reviewed. Rudimentary denial-of-service techniques are initially discussed and progress to intelligent waveform-specific forms of computer network attack (CNA). The effect of communications signaling manipulation is analyzed in examples involving mobile wireless networks such as Global Systems Mobile (GSM), and the IEEE 802.11 and 802.16 standards. Extension of cyber warfare concepts to large scale systems is presented to include concepts in distributed denial of service attacks, distributed storage, distributed sensor coordination, and information exfiltration. Prerequisites: EC3760; Classification: U.S. citizenship and TOP SECRET clearance with eligibility for SCI access. **EC4770 Wireless Communications Network Security (3-2) Fall** Examines the impact of the radio frequency environment on the security of wireless communications networks. Specifically, considers access and availability issues related to jamming and associated countermeasures such as spread spectrum transmission. Investigates diversity applications such as Multiple Input Multiple Output (MIMO) and Orthogonal Frequency Division Multiplexing (OFDM). Examines confidentiality assurance in the form of encryption and analyzes the impact of the RF environment on various cipher types such as stream and block ciphers. Discusses approaches to integrity assurance in the form of digital hashing, interleaving, and convolutional coding. Examines all of the above factors in the context of a variety of topologies including personal area networks (PAN), local area networks (LAN), metropolitan area networks (MAN) and wide area networks (WAN). Provides a brief overview of encryption and digital signaling. Analyzes and compares protocol implementations such as Wired Equivalent Privacy (WEP), Wi-Fi Protected Access (WPA), the WiMax Cipher Block Chaining Message Authentication Code Protocol (CCMP) and the Mobile Application Part (MAP) of Signaling System No. 7 (SS7). Discuss general aspects of wireless communication vulnerabilities. Prerequisite: EC3730 or consent of instructor. **EC4775 Computer Network Hardware Security (3-2) Summer** This course initially reviews computer network hardware from the architectural, design, implementation, and manufacturing perspectives. The operational vulnerabilities of networking hardware are then presented. Techniques and methods for improving network hardware security, that are appropriate for both existing and future high-speed networks, are then discussed. Today's cyber networks operate at multi-gigabit wire speeds and future networks are projected to operate at tera-bit speeds. Network security techniques which require packet processing and analysis at these high speeds will be examined, and special hardware implementations will be presented. Additional topics include critical high speed hardware for network security applications, encryption and decryption processors, and hardware intrusion detection schemes. Prerequisite: EC3730, EC3860. **EC4785 Internet Engineering (3-2) Winter** This course examines the optimal design and analysis of interconnected, heterogeneous computer networks, specifically those employed by the US Navy (e.g., IT-21). A common theme throughout will be the confluence of connection-oriented and connectionless data communications and their overarching networking methodologies. The course will focus primarily on the TCT/JP suite. Techniques for segmentation and reassembly, routing, transfer agent placement, error control, throughput analysis, broadcasting, and multicasting will be examined in detail. Performance of common distributed applications will be analyzed. Prerequisite: EC3710 or consent of the instructor. **EC4790 Cyber Architectures and Engineering (3-2) Fall** The course addresses the holistic design, analysis and integration of the three-tiered cyber architecture of the medium, network, and services. Interoperability and interconnection of heterogeneous networks are discussed. Service oriented architectures and service orchestration mechanisms to include such techniques as artificial intelligence, control theory, min-max algorithm and feedback analysis are introduced. Network centric services and system design for both wired and wireless platforms are emphasized. Tools such as WSDL and SoaML will be introduced. System availability calculations and quality of service issues at different levels of the system are discussed in-depth. Comprehensive approaches to security across all levels of the system-medium, network, and services-are analyzed. Development of network centric, distributed engineering applications will be considered for static as well as mobile services. Sensor networks, information fusion, and end-to-end services are studied. Prerequisite: EC370 or EC3710.
EC4795 Wireless Device Security (3-1) Spring
This advanced course extends earlier study in communications devices and software defined radio to include security vulnerabilities and countermeasures from the perspective of the radio signal and the wireless device. Radio signal vulnerabilities include signal interception, rogue access points, wireless intrusion, client misassociation, unauthorized association, emitter geographical location, direction finding, RF energy detection, and emitter fingerprinting. Wireless device vulnerabilities include backdoor access, tempest, reverse engineering, cloning and tampering of static random access memory field programmable gate arrays, bus snooping, side channel attacks, covert channels, red/black separation, and aspects of software defined and cognitive radios. Prerequisites: EC3500, EC4530.

EC4800 Advanced Topics in Computer Engineering (3-0) As Required
Advanced topics and current developments in computer architecture including such subjects as: graphics and multimedia processors relevant to military applications and workstations; computer structures for artificial intelligence and large data bases; supercomputers and massively parallel architectures; advanced logic design, hardware/software co-design, and multiple-valued logic. Prerequisites: Consent of instructor.

EC4810 Fault-Tolerant Computing (3-2) Summer
Introduction to fault-tolerant computing. The causes and effects of computer, digital system, and software failure. The fundamental concepts and techniques for the design and implementation of fault-tolerant computers, testing digital systems, and software. Modeling, simulation, and evaluation of fault-tolerant systems. Military and space applications of fault-tolerant computing. Prerequisites: EC3840.

EC4810 Fault-Tolerant Computing (3-2) Summer
Introduction to fault-tolerant computing. The causes and effects of computer, digital system, and software failure. The fundamental concepts and techniques for the design and implementation of fault-tolerant computers, testing digital systems, and software. Modeling, simulation, and evaluation of fault-tolerant systems. Military and space applications of fault-tolerant computing. Prerequisites: EC3840.

EC4820 Advanced Computer Architecture (3-2) Fall
Techniques to achieve high-performance computing, including advanced architectural features and highly parallel processors. Techniques for improving processor, memory subsystem, and I/O subsystem performance, including pipelining, memory interleaving, multi-level caching, and parallel I/O. Parallel computer models, scalability, and clustering. Parallel programming, the role of the compiler, and compiler parallelization techniques. Performance metrics, evaluation, and comparisons between parallel processors. Enabling technologies for highly parallel computers, including the use of microprocessors and field-programmable gate arrays. Distributed memory. Processor/cluster interconnection networks. Advanced implementation technologies and techniques, including reconfigurable computing. Military applications of high-performance computers and parallel processors. Prerequisites: EC3840.

EC4830 Digital Computer Design (3-2) Spring
This course presents digital system design techniques that can be used in tactical embedded systems. It involves a study of the architecture of and the design process for digital computer systems. Topics covered include instruction set architectures, advanced computer arithmetic, hierarchical design techniques, and design of systems using standard and custom VLSI devices. Modern computer-aided design tools are emphasized. Laboratory project is the design of a digital computer. Prerequisites: EC3500 and EC3830.

EC4880 Advanced Microprocessors (3-1) Fall
Advanced topics and current developments in high-end microprocessor architecture and implementation; RISC vs. CISC, superscaler design; cache coherency; multimedia processors; bus and memory interfaces; military applications. Prerequisites: EC3840.

EC4870 VLSI Systems Design (3-2) Winter
Introduction to the design and implementation of Complementary Metal Oxide Semiconductor (CMOS) and Bipolar CMOS (BiCMOS) Very Large Scale Integration (VLSI) digital Integrated Circuits (ICs). Topics covered include the specification of the high-level functional design, the design, implementation, and simulation of low-level cells, floor planning and the assembly of low-level cells into the high-level design using hierarchical place-and-route techniques, circuit extraction and simulation for functional verification, timing analysis, and power estimation, and the principles of bulk CMOS, BiCMOS, and SOS/SOI IC fabrication. Applications of VLSI ICs in military systems are also covered. The course is centered around laboratory projects where student groups design, implement, simulate, and submit for fabrication, a full-custom CMOS, BiCMOS, VLSI IC. IC functionality is selected by each student group. A field trip to a commercial foundry and clean room tour is also included. Prerequisites: EC2200 and either EC3800 or EC3830 or EC3840.

EC4900 Topics for Individual Study in Electrical Engineering (V-V) Spring/Summer/Fall/Winter
Supervised study in selected areas of Electrical Engineering to meet the needs of the individual student. A written report is required at the end of the quarter. Prerequisites: Consent of the department chairman. Graded on Pass/Fail basis only.

EC4910, 20 Advanced Special Topics In Electrical Engineering (V-V) Fall
Courses on advanced special topics in Electrical Engineering are offered under these numbers. In most cases, new courses are offered as special topics of current interest with the possibility of being developed as regular courses. See the Electrical and Computer Engineering Department's on-line catalog for current offerings.

EC5810 Dissertation Research (0-8) As Required
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

EO Courses
EO2402 Introduction to Linear Systems (4-1) Summer
A course in the rudiments of linear systems for naval officers in non-electrical engineering curricula. Principles of discrete and continuous-time systems. Topics include difference equations, discrete and continuous convolution, correlation, transfer functions, and system diagrams. Transform applications in communication and control systems. Prerequisites: Ability to program in a higher level language.

EO2512 Introduction to Communications and Countermeasures (4-2) Spring
A first course in communications and countermeasures for the Information Warfare curriculum. The course considers basic electricity and electronics, noise analysis, amplitude modulation, frequency modulation, digital coding, and transmission. Prerequisites: MA3139.

EO2513 Introduction to Communication Systems Engineering (4-2) Winter
A first course in communications systems for the C4I curriculum. The course considers basic electricity and electronics, signals and...
systems, and amplitude modulation transmission and reception. Prerequisite: MO1901

**E02525 Probabilistic Analysis of Signals and Communications Systems (4-1) Spring**
Basic analog and digital communications techniques are discussed. The foundations of signals and systems are developed from probabilistic and statistical approaches. Emphasis is on communication systems relevant to military applications. Topics include AM, FM, probability, random variables, probability density and distribution functions; deterministic versus nondeterministic signals; expectation, the dc and rms values of nondeterministic signals, correlation and covariance; LTI systems, transformation of random variables, and the central limit theorem. Prerequisites: MA2121 and PH1322

**E02652 Fields, Waves, and Electromagnetic Engineering (4-1) Winter**
This course covers electromagnetic field theory and engineering applications. Static electric and magnetic field theory is developed and Maxwell's equations are presented. Applications include plane wave propagation, analysis and design of transmission lines, waveguides, resonators, and high frequency components. Labs provide practical experience with microwave instruments, components, and measurement techniques. The objective of the course is to provide a foundation for subsequent study of microwave engineering, antennas, scattering, and radio wave propagation for application in the areas of communications, radar, and electronic warfare. Prerequisites: MA1116 and PH1322, or consent of instructor.

**E03402 Signals and Noise (3-1) Fall**
A course in the rudiments of modern signal processing for naval officers in non-electrical engineering curricula. Topics include signal processing in the frequency domain using the DFT and FFT, random signals, their description and processing. Applications to signal detection, demodulation, filtering, beam forming, target tracking, and other relevant naval and military operations. Prerequisites: EO2402 and OS2103 or equivalent.

**E03404 Applied Digital Signal Processing (3-2) As Required**
This course introduces the fundamentals of Digital Signal Processing as applied to one dimensional acoustic signals. The course covers the fundamental theory of Signals and Systems, the application of the DFT (Discrete Fourier Transform) to problems in spectral estimation, digital filter design, detection of pulses by correlation and fundamentals of array processing. The laboratories are entirely based on processing of acoustic signals using Matlab. Prerequisites: Permission of the instructor.

**E03502 Telecommunications Systems Technology (4-0) Winter/Summer**
A broad-based course in telecommunications systems technology for a multidisciplinary audience. The course considers analog and digital communications systems. Specific topics include amplitude and angle modulation transmission and reception; baseband and passband digital modulation; system noise; transmission lines, waveguides and antennas; fiber optics; satellite communications. Prerequisites: MO1901.

**E03512 Telecommunications Engineering (4-1) Summer**
The second course in communications and countermeasures for the Information Warfare curriculum. The course considers signals and protocols for networks, time and frequency domain multiplexing, transmission lines, antennas, and fiber optics, and cellular communication concepts. Prerequisites: EO2512.

**E03513 Communications Systems Engineering (4-2) Spring**
The second course in communications systems engineering for the C4I curriculum. The course considers analog and digital communications systems. Specific topics include angle modulation transmission and reception; the sampling theorem; spectral representation of pulse and digital signals; pulse and digital modulations; baseband coding forms; frequency and time division multiplexing; transmission lines, waveguides and antennas. Prerequisites: EO2513.

**E03516 Introduction to Communication Systems Engineering (4-2) Spring**
A first course in communication systems for the Space Systems Operations curriculum. The course considers basic electricity and electronics, signals and systems, and amplitude modulation transmission and reception. Prerequisites: None.

**E03525 Communications Engineering (4-1) Summer**
The influence of noise and interference on the design and selection of digital communications systems is analyzed. Topics include link budget analysis and signal-to-noise ratio calculations, receiver performance for various digital modulation techniques, bandwidth and signal power trade-offs, an introduction to spread spectrum communications, and multiple access techniques. Examples of military communications systems are included. Prerequisites: E02525.

**E03602 Electromagnetic Radiation, Scattering and Propagation (4-2) Spring**
The principles of electromagnetic radiation are applied to antenna engineering, scattering, and propagation. The characteristics of various practical antenna types are considered including arrays and reflectors. Scattering concepts are introduced and propagation phenomena are considered. Applications include sidelobe suppression, radar target scattering and stealth approaches, HF and satellite communications. This course is intended for students not in the 590 curriculum. Prerequisites: E02652 or equivalent.

**E03730 Cyber Communications Architectures (same as CY3300) (4-0) As Required**
The purpose of this course is to develop literacy and familiarity with Navy, DoD, and allied enterprise information systems and emerging technology trends. It presents basic concepts in conventional and military telephony and telecommunication networks; examines DoN implementations from intra-ship, ship-to-ship and long haul; and discusses architectures and components of the GIG including both classified and unclassified networks. It discusses interoperability of diverse network architectures and the impact of mobile platforms on operations. Prerequisites: CY3100, CY3110 and CS3030, SECRET.

**E03911 Interdisciplinary Studies in Electrical and Computer Engineering (V-V) Fall**
Courses on special topics of joint interest to electrical and computer engineering and other areas are offered under these numbers. In most cases new courses are offered as special topics of current interest with the possibility of being developed as regular courses. See the Electrical and Computer Engineering Department's online catalog for current offerings.

**E04512 Communications and Countermeasures (3-2) Fall**
The final course in communications and countermeasures for the Information Warfare curriculum. The course develops encryption and decryption concepts, secure communications, and communications countermeasures. Prerequisites: E03512. Classification: U.S. citizenship and SECRET clearance.
EO4513 Communications Systems Analysis (4-2) Summer
The final course in communications systems engineering for the C4I curriculum. The course considers propagation effects on signal transmission; end-to-end path calculations for wire/coax, optical fiber, and RF systems including terrestrial ground links and satellite communications; spread spectrum; wireless/cellular communications. Prerequisites: EO3513.

EO4516 Communications Systems Analysis (4-2) Summer
The final course in communications systems engineering for the Space Systems Operations curriculum. The course considers propagation effects on signal transmission; end-to-end path calculations for wire/coax, optical fiber, and RF systems including terrestrial ground links and satellite communications; spread spectrum; wireless/cellular communications. Prerequisites: EO3516.

EO4612 Microwave Devices and Radar (4-2) Summer
Those microwave devices most important in radar and in electronic warfare systems are studied, including magnetrons, traveling-wave tubes, and solid-state diodes. The radar range equation is developed. In addition to basic pulse radar, modern techniques are discussed including Doppler systems, tracking radar, pulse compression, and electronically steerable array radars. Electromagnetic compatibility problems involving radar systems from which the advanced techniques have developed, with performance measurement methods, automatic tracking systems, pulse compression, and the measurement of radar cross-section of targets. Prerequisites: EO3602 (may be concurrent) or consent of instructor.

EO4911 Advanced Interdisciplinary Studies in Electrical and Computer Engineering (V-V) Fall
Courses on advanced special topics of joint interest to electrical and computer engineering and other areas are offered under these numbers. In most cases, new courses are offered as special topics of current interest with the possibility of being developed as regular courses. See the Electrical and Computer Engineering Department's on-line catalog for current offerings Prerequisites: None.

Brief Overview
This curriculum is designed to educate officers in current electronics technology and its application to modern naval warfare. It establishes a broad background of basic engineering knowledge, leading to selected advanced studies in electronic systems, ship/weapon control systems, and communication/information processing applicability. It will enhance individual performance in all duties throughout a naval career, including operational billets, technical management assignments, and policy making positions, thereby preparing Naval officers for progressively increasing responsibility, including command, both ashore and afloat. U. S. Naval officer students are required to complete the requirements for the MSE degree as well as certain additional requirements specified by the program sponsor for award of a Navy P-code. Other students are not required to satisfy these additional requirements.

Requirements for Entry
A baccalaureate degree in engineering or the physical sciences is desired. Differential and integral calculus, one year of calculus-based college physics and at least one semester of college chemistry are required. The Engineering Science Program within the ESE curriculum is available for candidates who do not meet all admission requirements. The time required will vary with the candidate's background. Prior to undertaking the program, or as a part of the program, each officer will earn/have earned the equivalent of an accredited BSEE. An APC of 323 is required for direct entry.

Entry Date
Electronic Systems Engineering is typically an eight-quarter course of study with entry dates in every quarter. A six-quarter program is available for officers with an ABET accredited BSEE degree on a case-by-case basis. If further information is needed, contact the Academic Associate or the Program Officer.

Degree
Requirements for the Master of Science in Electrical Engineering degree are met en route to satisfying the educational skill requirements.

Subspecialty
Completion of this curriculum qualifies an officer as an Engineering Electronics Subspecialist with a subspecialty code 53XXP. A limited number of particularly well-qualified students may be able to further their education
Typical Subspecialty Jobs
Instructor: Naval Academy, Annapolis, MD
Project Manager: SPAWARSYS; NAVSEASYSCOM; NIWA
Operations Test and Evaluation: COMOPTEVFOR
Electronics Research Manager: NSA/CSS, FT. Meade
C3 Staff Officer: DISA HQ, Washington, DC
Project Officer: Warfare Systems Architecture and Engineering, SPAWARHDQTRS
Electrical Engineer: USSTRATCOM

Typical Course of Study:
Computer Systems Option

Quarter 1
EC2100 (4-2) Circuit Analysis
EC2820 (3-2) Digital Logic Circuits
MA1115 (4-0) Multi-Variable Calculus
NW3230 (4-2) Strategy & Policy

Quarter 2
EC2110 (3-2) Circuit Analysis II
EC2200 (3-1) Introduction to Electronic Engineering
EC2400 (3-3) Discrete Systems
EC2840 (3-2) Introduction to Microprocessors

Quarter 3
CS2971 (4-2) Introduction to Object-Oriented Programming with C++
EC2300 (3-2) Control Systems
EC2410 (3-1) Analysis of Signals and Systems
EC3800 (3-2) Microprocessor Based System Design
EC3000 (1-0) Introduction to Graduate Research

Quarter 4
ECXXXX BSEE Elective I
EC3830 (3-2) Digital Computer Methodology
EC3500 (4-0) Analysis of Random Signals
EC2320 (3-1) Linear Systems
EC3000 (1-0) Introduction to Graduate Research

Quarter 5
ECXXXX BSEE Elective II
EC2220 (3-4) Applied Electronics
EC3820 (3-1) Computer Systems
ECXXXX BSEE Elective III

Quarter 6
EC4010 (3-2) Principles of Systems Engineering
EC4830 (3-2) Digital Computer Design
EC3830 (3-2) Digital Computer Design Methodology

EC0810 (0-8) Thesis Research

Quarter 7
ECXXXX MSEE Elective I
EC3850 (3-1) Computer Communications Methods
EC0810 (0-8) Thesis Research
EC0810 (0-8) Thesis Research

Quarter 8
ECXXXX MSEE Elective II
EC4800 (3-0) Advanced Topics in Computer Engineering
EC4870 (3-2) VLSI Systems Design
EC0810 (0-8) Thesis Research

Typical Subspecialty Jobs
Instructor: Naval Academy, Annapolis, MD
Project Manager: SPAWARSYS; NAVSEASYSCOM; NIWA
Operations Test and Evaluation: COMOPTEVFOR
Electronics Research Manager: NSA/CSS, FT. Meade
C3 Staff Officer: DISA HQ, Washington, DC
Project Officer: Warfare Systems Architecture and Engineering, SPAWARHDQTRS
Electrical Engineer: USSTRATCOM

Typical Course of Study:
Computer Systems Option

Quarter 1
EC2100 (4-2) Circuit Analysis
EC2820 (3-2) Digital Logic Circuits
MA1115 (4-0) Multi-Variable Calculus
NW3230 (4-2) Strategy & Policy

Quarter 2
EC2110 (3-2) Circuit Analysis II
EC2200 (3-1) Introduction to Electronic Engineering
EC2400 (3-3) Discrete Systems
EC2840 (3-2) Introduction to Microprocessors

Quarter 3
CS2971 (4-2) Introduction to Object-Oriented Programming with C++
EC2300 (3-2) Control Systems
EC2410 (3-1) Analysis of Signals and Systems
EC3800 (3-2) Microprocessor Based System Design
EC3000 (1-0) Introduction to Graduate Research

Quarter 4
ECXXXX BSEE Elective I
EC3830 (3-2) Digital Computer Methodology
EC3500 (4-0) Analysis of Random Signals
EC2320 (3-1) Linear Systems
EC3000 (1-0) Introduction to Graduate Research

Quarter 5
ECXXXX BSEE Elective II
EC2220 (3-4) Applied Electronics
EC3820 (3-1) Computer Systems
ECXXXX BSEE Elective III

Quarter 6
EC4010 (3-2) Principles of Systems Engineering
EC4830 (3-2) Digital Computer Design
EC3830 (3-2) Digital Computer Design Methodology

EC0810 (0-8) Thesis Research

Quarter 7
ECXXXX MSEE Elective I
EC3850 (3-1) Computer Communications Methods
EC0810 (0-8) Thesis Research
EC0810 (0-8) Thesis Research

Quarter 8
ECXXXX MSEE Elective II
EC4800 (3-0) Advanced Topics in Computer Engineering
EC4870 (3-2) VLSI Systems Design
EC0810 (0-8) Thesis Research

Typical Subspecialty Jobs
Instructor: Naval Academy, Annapolis, MD
Project Manager: SPAWARSYS; NAVSEASYSCOM; NIWA
Operations Test and Evaluation: COMOPTEVFOR
Electronics Research Manager: NSA/CSS, FT. Meade
C3 Staff Officer: DISA HQ, Washington, DC

EC4870 (3-2) VLSI Systems Design
EC0810 (0-8) Thesis Research

The Communications Systems option is designed to provide an advanced education in modern communication engineering topics such as digital communications, spread spectrum communication including anti-jam and low probability of intercept applications, forward error correction coding, wireless networks, and satellite communications.

The Computer Systems option is designed to provide an advanced education in the design, implementation, and application of military computer systems, including such topics as logic circuits, logic design and synthesis, microprocessors, computer and digital systems architecture, military computer architectures, fault tolerant computing, high-speed networking, silicon VLSI and gallium arsenide digital IC design, parallel processing, and the hardware/software interface.

The Guidance, Control, and Navigation Systems option is designed to provide an advanced education in the modeling and simulation advanced dynamic systems, the current state of knowledge regarding state estimation (linear and nonlinear filtering), system identification, and the control of dynamic systems, and to unite the theory with military applications. Courses in specific areas of military application include military robotics, missile guidance and control, and integrated target tracking.

The Solid State Microelectronics and Power Systems option is designed to provide advanced education in the analysis, design, simulation and control of power electronic and electromechanical components and integrated topologies common to existing and proposed military systems.

The Signal Processing Systems option is designed to provide advanced education in algorithms and design of systems for analysis and processing of signals and images encountered in communications, control, surveillance, radar, sonar and underwater acoustics.

The Sensor Systems Engineering option is designed to provide the educational curriculum and thesis research opportunities in a wide range of sensor systems utilized by Navy, DoD and other national agencies. Research efforts cover a wide range of topics dealing with sensor related
problems -- from basic research in electromagnetic scattering, propagation and compatibility, or underwater acoustic propagation, to applications to electronic warfare and sonar systems, sensor networks, submarine EM signatures and shielding, weather processing for tactical military radars, digital/optical receivers, low probability of intercept (LPI) emitters and digital phased arrays for sensors and communication systems.

The Network Engineering option offers advanced education in design, implementation and analysis of modern communication networks. Courses cover the infrastructure of network-centric military communication systems to include wireless, mobile ad-hoc and sensor networks, high-speed networks, large-scale network deployment, intrusion prevention systems and architectures for multimedia distribution. Hands-on experimentation and implementation is provided using state-of-the-art networking equipment consisting of optical switches, routers, wireless access points, advanced sensor motes, traffic generators, channel simulators, protocol analyzers, high-resolution vector spectrum analyzers, wireless signal generators, multimedia encoder/decoder transmission systems, and simulation software.

**Educational Skills Requirements (ESR)**

**Electronic Systems Engineering - Curriculum 590**

**Subspecialty Codes: 5300P-5311P**

1. **Mathematics:** The officer will have a thorough knowledge of mathematical tools, which are intrinsic to electrical and computer systems engineering, including but not limited to differential equations, vector analysis, linear algebra, probability, and Fourier and Laplace methods.

2. **Engineering Science and Design:** To acquire the requisite background needed to meet the other military education requirements, the officer will acquire proficiency in modern physics, electromagnetic, electronic devices and circuits, system theory, modern electronic system design, and integrated electrical power systems and their controls. In addition, proficiency will be gained in other appropriate fields, such as underwater acoustics, dynamics, fluid mechanics or thermo-dynamics, that provide the requisite breadth to a military engineering education.

3. **Cyber Networks and Physical Infrastructures:** The officer will have a sound understanding of cyber infrastructure systems and technologies of interest to the military. Knowledge will include but not be limited to cover copper and fiber media networks, telecommunication networks and signaling, the Internet and enterprise networks, wireless and cellular networks, and spaced based networks. Additionally, officers will gain an understanding of control and overlay networks such as Supervisory Control and Data Acquisition (SCADA) systems and the National power grid. In addition, the officer will have introductory knowledge of computer hardware and their integration into military systems.

4. **Electronic and Electrical Engineering:** In order to provide officers skilled in the application of electronic systems to military needs, the officer will have competence in the broad area of electrical engineering including circuits, electronics, computer and communications networks, and systems engineering. The officer will select elective courses to obtain breadth in his/her understanding of military electronic systems. To achieve depth of understanding, the officer shall specialize in one of the following areas: (a) Communication Systems (including electronic counter-counter measures, low probability of intercept systems, low probability of detection systems, and other military issues) (b) Guidance, Navigation, and Control Systems (c) Microelectronics and Power Systems (d) Signal Processing Systems (as applied to surveillance, underwater acoustic data acquisition and processing, imaging and target location, and other military issues) (e) Computer Systems (including advanced integrated circuits, networking and data communications, parallel and distributed systems, reliable real time military platforms) (f) Sensors (including radar, electro-optical, electronic and information warfare systems) (g) Network Engineering (including wireless networks, sensor networks, high speed data networking, and telecommunication systems) (h) Cyber Systems (including a rigorous treatment of the cyber network and physical infrastructure, cyber system vulnerabilities and risk assessment, telecommunications systems engineering, trustworthy hardware, and Internet engineering).

5. **System Engineering:** The officer will have a sound understanding of engineering principles utilized in the systems engineering process, particularly as they relate to military systems, including establishment of system related operational requirements and criteria.

6. **Conducting and Reporting Independent Investigation:** The officer will demonstrate the ability to conduct independent investigation of a Navy and/or DoD relevant electronic systems problem, to resolve the problem, and to present the results of the analysis in both written and oral form.
Electronic Systems Engineering (DL) - Curriculum 592

ECE DL Business Manager
Roberto Cristi, Ph.D.
Code EC/Cx, Spanagel Hall

(831) 656-2859, DSN 756-2859
fargues@nps.edu

Brief Overview
Electrical and Computer Engineering Department
Distance learning programs are tailored to customer requirements and may lead to one of several master's degrees. Options include the Master of Science in Electrical Engineering (MSEE), the Master of Science in Engineering Science with a major in electrical engineering (MSES(EE)) and the Master of Engineering (MEng). Courses are delivered on a schedule determined in consultation with the customer, with one course per quarter being typical (four courses per year). A typical program can be completed in two to three years. MS degree programs are research-based and require submission and approval of a written thesis. The MSEE degree program is ABET accredited and requires that students have a baccalaureate degree from an ABET accredited engineering program or establish equivalency. The ECE Department can provide transition education for the purpose of establishing equivalency, but additional course work is required. The MSES(EE) Degree Program is also research-based but is not ABET accredited. It is intended for students who have not satisfied ABET undergraduate program criteria but by their academic preparation and on-the-job experience can successfully complete graduate courses in a chosen area of electrical engineering. Theses must be submitted and approved within a three year period following the completion of course work in research-based degree programs.

The MEng degree program is course-based, and the degree may be awarded solely on the basis of course work. MEng programs may include a capstone project if a customer wants one. The total time required to complete a degree program ranges from four to seven years, depending on the courses selected.

DL Program Delivery Mode
To maintain quality, it is ECE Department policy to enroll non-resident students in courses offered synchronously to resident students. Courses are delivered to the remote site via video tele-education (VTE) using two-way audio and video. Lectures are recorded and streaming video is made available to accommodate those DL students whose attendance at the remote site is interrupted by job-related travel. Course materials are provided online using Blackboard (nps.blackboard.com). Student mentoring sessions will be scheduled by each instructor and conducted via email or phone. Courses can also be delivered synchronously using desktop-to-desktop solutions, currently Elluminate Live (www.elluminate.com).

Requirements for Entry
An APC score of 323.
Acceptance by the ECE Department: Entrance to the Electrical and Computer Engineering curriculum at Naval Postgraduate School is through a three-part requirement consisting of a minimum grade point average at the undergraduate level, a sufficient mathematics background, and a sufficient background in technical undergraduate studies. Applicants with a B.S.E.E. degree usually will satisfy the last two requirements automatically.

Command/Company endorsement.

Entry Dates
At the beginning of any quarter in the academic year.

Degree
MSEE, MSES(EE) or MEng.

Subspecialty
This program does not lead to a subspecialty code.

Typical course of study (MEng with specialization in EW):

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Credits</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EC3600</td>
<td>3-2</td>
<td>Antennas and Propagation</td>
</tr>
<tr>
<td>EC3630</td>
<td>3-2</td>
<td>Radiowave Propagation</td>
</tr>
<tr>
<td>EC3700</td>
<td>3-2</td>
<td>Joint Network Enabled Electronic Warfare</td>

</tbody>
</table>
Employment years 3–4
EC3210 (3–2) Introduction to Electro-Optical Engineering
EC3610 (3–2) Microwave Engineering
EC4610 (3–2) Radar Systems

Employment years 5–6
EC4630 (3–2) Radar Cross Section Prediction and Reduction
EC4640 (3–2) Airborne Radar Systems
EC4680 (3–2) Joint Network Enabled Electronic Warfare II

Employment year 7
EC0820 (0–8) Capstone Project in Electrical Engineering
EC0830 (0–8) Capstone Project in Electrical Engineering
EC4900 Topics for Individual Study in Electrical Engineering

Subspecialty
Completion of this program will contribute toward the graduate's subspecialty code within his/her designated curriculum. The student will also receive 5602P subspecialty code for completion of the TSSE Program.

Typical Subspecialty Jobs
Upon award of the subspecialty code, the officer would be eligible for assignments typical of the P-Code. The expectation is that the combination of education and experience would lead to individuals qualified for assignment later in their career to more responsible positions in systems design and acquisition in NAVSEA, SPAWAR and OPNAV, and as Program Managers.

Cyber Warfare Certificate - Curriculum 288

Academic Associate
Monique P. Fargues, Ph.D.
Code EC/Fa, Spanagel Hall
Room 456
(831) 656-2859, DSN 756-2859
fargues@nps.edu

Brief Overview
The Cyber Warfare Certificate addresses the network threat environment, network infrastructure, network design and security for both wired and wireless environments as well as all facets of computer network operations, depending on the choice of certificate electives. The coursework equips students with an ability to apply techniques for network operations with both wired and wireless computer networks based on an ability to analyze, design and evaluate networks. Electives can be chosen to satisfy requirements for workforce education in both the DoD and Intelligence Community. Non-DoD sectors of government and the private sector which traditionally focus on network defense may also wish to consider this certificate to provide their employees with a more insightful understanding of computer and network defense challenges.

A minimum of 12 credit hours must be completed.

Requirements for Entry
- An APC score of 323.
- Acceptance by the ECE Department: Entrance to the Electrical and Computer Engineering curriculum at the Naval Postgraduate School is through a three-part requirement consisting of a minimum grade point average at the undergraduate level, a sufficient mathematics background, and a sufficient background in technical undergraduate studies. Applicants with a B.S.E.E. degree usually will normally satisfy the last two requirements automatically.
· Command/Company endorsement.
· TS/SCI clearance is required

**Entry Dates**

Any Quarter

**Program Length**

9 months

**Graduate Certificate Requirements**

The academic certificate program must be completed within three years of admission to the program. A student must maintain a 3.0 GQPR in the certificate courses to be awarded a certificate.

**Required Courses: Curriculum 288**

EC3760 Information Operations Systems (TS/SCI)
EC4765 Cyber Warfare
Elective(s) From Approved List: DA3105, EC3750, EC4730, EC4755

**Signal Processing Certificate - Curriculum 290**

**Academic Associate & Technical Point of Contact**
Monique P. Fargues, Ph.D.
Code EC/Fa, Spanagel Hall
Room 456

(831) 656-2859, DSN 756-2859
fargues@nps.edu

**Brief Overview**

Provides students an understanding of digital signal processing fundamentals, principles, and applications at the advanced level. The certificate provides a solid engineering foundation which covers the fundamental concepts needed to analyze and process digital information in many current applications including video, imaging, audio, communications, networking, underwater, and control applications. This program provides a mixture of instruction and computer-based laboratory exercises that offer students the opportunity to explore concepts and investigate applications in signal processing.

The four course sequence is extracted from the current set of graduate courses required to complete the Signal Processing Systems specialization track offered by the ECE Department.

The total number of NPS graduate credits obtained for the certificate varies between 15 and 16 depending on the elective choice. This certificate program can also be applied toward a master's degree program (Curriculum 592).

**Requirements for Entry**

An APC score of 323.

Acceptance by the ECE Department: Entrance to the Electrical and Computer Engineering curriculum at NPS is through a three-part requirement consisting of a minimum grade point average at the undergraduate level, a sufficient mathematics background, and a sufficient background in technical undergraduate studies. Applicants with a B.S.E.E. degree usually will satisfy the last two requirements automatically.

Command/Company endorsement.

**Entry Date**

At the beginning of Summer or Winter quarters (July or January).

**Program Length**

Four quarters.

**Graduate Certificate Requirements**

The academic certificate program must be completed within three years of admission to the program. A student must maintain a 3.0 GQPR in the certificate courses to be awarded a certificate.

**Required Courses**

EC3400 Digital Signal Processing
EC3410 Discrete-Time Random Signals
EC4440 Statistical Digital Signal Processing
EC4410 Speech Signal Processing
EC4430 Multimedia Information and Communications
EC4450 Sonar Systems Engineering
EC4460 Neural Networks
EC4480 Image Processing and Recognition
EC4910 DSP for Wireless Applications

**Electric Ships and Power Systems Certificate - Curriculum 291**

**Academic Associate**
Monique P. Fargues, Ph.D.
Code EC/Fa, Spanagel Hall
Room 456

(831) 656-2859, DSN 756-2859
fargues@nps.edu

**Technical Point of Contact**
Alexander Julian, Ph.D.
Brief Overview

The Electric Ship Power Systems graduate certificate program provides a solid engineering foundation which covers the fundamental concepts in electrical power conversion and electromechanical power conversion at the advanced level. This coherent program is obtained by taking a 4-graduate-course sequence which provides a mixture of instruction and computer-based laboratories offering students the opportunity to study the behavior and performance power systems in a virtual environment.

The 4-graduate-course sequence is extracted from the current set of graduate courses required to complete the Solid State Microelectronics and Power Systems specialization track to the MSEE Degree offered by the ECE department.

The total number of NPS graduate credits obtained for the certificate is 18.5.

Requirements for Entry

- An APC score of 323.
- Acceptance by the ECE Department: Entrance to the Electrical and Computer Engineering curriculum at the Naval Postgraduate School is through a three-part requirement consisting of a minimum grade point average at the undergraduate level, a sufficient mathematics background, and a sufficient background in technical undergraduate studies. Applicants with a B.S.E.E. degree usually will satisfy the last two requirements automatically.
- Command/Company endorsement.

Entry Dates

At the beginning of any quarter in the academic year (Oct, Jan, Apr, Jul)

Program Length

Four quarters

Graduate Certificate Requirements

The academic certificate program must be completed within 3 years of admission to the program. A student must maintain a 3.0 GQPR in the certificate courses to be awarded a certificate.

Required Courses: Curriculum 291

- EC3130 Electrical Machine Theory
- EC4130 Advanced Electrical Machinery Systems
- EC3150 Solid State Power Conversion
- EC4150 Advanced Solid State Power Conversion

Electronic Warfare Engineer Academic Certificate - Curriculum 292

Academic Associate & Technical Point of Contact

David C. Jenn, Ph.D.
Code EC/Jn, Spanagel Hall, Room 414
(831) 656-2254, DSN 756-2254
jenn@nps.edu

Brief Overview

Provides students an understanding of the technical foundations found in electronic warfare at the system level and examines the impact of the physical environment. The certificate provides a solid engineering foundation which covers the fundamental concepts needed to understand how EW signals are affected by the environment and includes a survey of existing EW systems and analysis techniques. This program provides a mixture of instruction and computer-based laboratory exercises which offer students the opportunity to explore concepts and investigate applications in the electronic warfare area.

The three-course sequence is extracted from the current set of graduate courses required to complete the Sensor Systems Engineering specialization track offered by the ECE Department.

The total number of NPS graduate credits obtained for the certificate is 12.0. This certificate program can also be applied toward a master’s degree program (Curriculum 592).

Requirements for Entry

An APC score of 323.

Acceptance by the ECE Department: Entrance to the Electrical and Computer Engineering curriculum at Naval Postgraduate School is through a three-part requirement consisting of a minimum grade point average at the undergraduate level, a sufficient mathematics background, and a sufficient background in technical undergraduate studies. Applicants with a B.S.E.E. degree usually will satisfy the last two requirements automatically.

Command/Company endorsement.

Entry Date

At the beginning of any quarter in the academic year.

Program Length

Four quarters.

Graduate Certificate Requirements

The academic certificate program must be completed within three years of admission to the program. A student...
must maintain a 3.0 GQPR in the certificate courses to be awarded a certificate.

**Journeyman EW Engineer Academic Certificate Program - Curriculum 293**

**Academic Associate & Technical Point of Contact**

David C. Jenn, Ph.D.
Code EC/Jn, Spanagel Hall, Room 414
(831) 656-2254, DSN 756-2254
jenn@nps.edu

**Brief Overview**

Provides students an understanding of the microwave and optical aspects of sensor and electronic warfare systems. State-of-the-art material on microwave and optical devices and their use in systems are discussed during the courses. The certificate material also includes a description of the operation of devices and trade-offs involved in component selection. This program provides a mixture of instruction and computer-based laboratory exercises that offer students the opportunity to explore concepts and investigate applications in the electronic warfare area.

The three-course sequence is extracted from the current set of graduate courses required to complete the Sensor Systems Engineering specialization track offered by the ECE Department.

The total number of NPS graduate credits obtained for the certificate is 12.0. This certificate program can also be applied toward a master’s degree program (Curriculum 592).

**Requirements for Entry**

An APC score of 323.

Acceptance by the ECE Department: Entrance to the Electrical and Computer Engineering curriculum at the Naval Postgraduate School is through a three-part requirement consisting of a minimum grade point average at the undergraduate level, a sufficient mathematics background, and a sufficient background in technical undergraduate studies. Applicants with a B.S.E.E. degree usually will satisfy the last two requirements automatically.

Command/Company endorsement.

**Entry Date**

At the beginning of Fall or Spring quarter.

**Program Length**

Four quarters.

**Graduate Certificate Requirements**

The academic certificate program must be completed within three years of admission to the program. A student must maintain a 3.0 GQPR in the certificate courses to be awarded a certificate.

**Senior EW Engineer Academic Certificate Program - Curriculum 294**

**Academic Associate & Technical Point of Contact**

David C. Jenn, Ph.D.
Code EC/Jn, Spanagel Hall, Room 414
(831) 656-2254, DSN 756-2254
jenn@nps.edu

**Brief Overview**

Provides students an understanding of advanced topics commonly found in EW. Among them are signature control (stealth) and low probability of intercept techniques for radar and electronic warfare. This program provides a mixture of instruction and computer-based laboratory exercises that offer students the opportunity to explore concepts and investigate applications in the electronic warfare area.

The three-course sequence is extracted from the current set of graduate courses required to complete the Sensor Systems Engineering specialization track offered by the ECE Department.

The total number of NPS graduate credits obtained for the certificate is 12.0. This certificate program can also be applied toward a master’s degree program (Curriculum 592).

**Required Courses**
- EC4630  
  Radar Cross Section Prediction and Reduction
- EC4640  
  Airborne Radar Systems
- EC4680/ or  
  EC4690 (DL)  
  Joint Network Enabled Electronic Warfare II

**Other Academic Certificates**
Several additional graduate certificate programs have been approved and will be described in detail in future NPS catalogs:
- Fault Tolerant Computing (Curriculum 285)
- Reconfigurable Computing (Curriculum 286)
- Digital Communications (Curriculum 287)
- Network Engineering (Curriculum 295)
- Guidance Navigation & Control (Curriculum 284)

Prospective students should request additional information on these certificate programs which are currently available for enrollment.

**Network Engineering Certificate - Curriculum 295**

**Academic Associate**
Roberto Cristi, Ph.D.
Code EC/Cx, Spanagel Hall
Room 462
(831) 656-2223, DSN 756-2223
rcristi@nps.edu

**Program Manager**
Roberto Cristi, Ph.D.
Code EC/Cx, Spanagel Hall
Room 462
(831) 656-2223, DSN 756-2223
rcristi@nps.edu

**Brief Overview**
The Network Engineering Certificate is comprised of three or four courses (EC3710, EC4745 and one or two elective courses). Upon completion of this certificate program, students will be awarded a certificate of completion from the Naval Postgraduate School. The Network Engineering Certificate addresses the design, implementation, traffic, signaling and performance analysis of modern enterprise and telecommunications network infrastructures integrating both wired and wireless media.

**Requirements for Entry**
For entry, the student must have a baccalaureate degree. An academic profile code (APC) of 323 is required.

**Entry Date**
Spring or Fall

**Program Length**
Four Quarters

**Required Courses**
- EC3710  
  (3-2)  
  Computer Communications Methods
- EC4745  
  (3-2)  
  Mobile Ad Hoc Wireless Networking

**And one or two of the following electives to total a minimum of 12 credit hours:**

- EC4725  
  (3-2)  
  Advanced Telecommunication Systems Engineering
- EC4785  
  (3-1)  
  Internet Engineering
- EC4710  
  (3-2)  
  High Speed Networking
- EC4430  
  (3-1)  
  Multimedia Information and Communications

**Cyber Systems Certificate - Curriculum 296**

**Academic Associate**
Monique P. Fargues, Ph.D.
Code EC/Fa, Spanagel Hall, Room 456
(831) 656-2859, DSN 756-2859
fargues@nps.edu

**Program Manager**
Roberto Cristi, Ph.D.
Code EC/Cx, Spanagel Hall
Room 462
(831) 656-2223, DSN 756-2223
rcristi@nps.edu

**Brief Overview**
This certificate is designed to provide students with a graduate level focus on cyber systems, system reverse engineering, and depending on elective choice, an ability to
assess vulnerability and risk, architecture and engineering, or network traffic.

**Requirements for Entry**

Students who plan to enroll in the Cyber Systems Certificate Program should have a BSEE degree or a degree in another area of science or engineering with additional coursework and on-the-job experience, including a basic communications course, that will allow them to successfully complete the certificate courses. An APC of 323 is required for entry.

**Entry Date**

Fall

**Program Length**

9-12 months

**Required Courses**

- EC3730 (3-2) Cyber Network and Physical Infrastructures
- EC3740 (3-2) Principles of Reverse Engineering of Electronic Systems

And one or two of the following electives to total a minimum of 12 credit hours:

- EC4715 (3-2) Cyber Systems Vulnerability and Risk Assessment
- EC4790 (3-2) Cyber Architectures and Engineering
- EC4755 (3-2) Network Traffic, Activity Detection and Tracking

---

**Wireless Network Security Certificate - Curriculum 297**

**Academic Associate**
Monique P. Fargues, Ph.D.
Code EC/Fa, Spanagel Hall, Room 456
(831) 656-2859, DSN 756-2859
fargues@nps.edu

**Program Manager**
Roberto Cristi, Ph.D.
Code EC/Cx, Spanagel Hall
Room 462
(831) 656-2223, DSN 756-2223
rcristi@nps.edu

**Brief Overview**

This certificate is designed to provide students with a graduate level focus on the security of wireless communications networks, and depending on elective choice, an ability to assess the security of wireless devices or telecommunications systems, to maintain situational awareness on wireless networks or assess the risk of covert malicious functionality in system hardware components.

**Requirements for Entry**

Students who plan to enroll in the Wireless Network Security Certificate Program should have a BSEE degree or a degree in another area of science or engineering with additional coursework and on-the-job experience, including a basic communications course, that will allow them to successfully complete the certificate courses. An APC of 323 is required for entry.

**Entry Date**

Fall

**Program Length**

9-12 months

**Required Courses**

- EC4770 (3-2) Wireless Communications Network Security
- EC4745 (3-2) Mobile Ad Hoc Wireless Networking

And one or two of the following electives to total a minimum of 12 credit hours:

- EC3860 (3-2) Trustworthy Computer Hardware Analysis and Design
- EC4735 (3-2) Telecommunications Systems Security
- EC4755 (3-2) Network Traffic, Activity Detection and Tracking
- EC4795 (3-2) Wireless Device Security

Brief Overview

The academic character of the programs in Engineering Acoustics is interdisciplinary, with courses and laboratory work drawn principally from the fields of physics and electrical engineering. Although broadly based, the emphasis of the programs is on those aspects of acoustics and signal processing applied to undersea warfare. Subjects covered include the generation, propagation and reception of sound in the ocean; military applications of underwater sound; and acoustic signal processing. These programs are designed specifically for students in the Combat Systems Sciences and Technology, Undersea Warfare, and Underwater Acoustic Systems curricula, government employees in acoustics-related laboratories and systems commands, and international students.

Degree

Master of Science in Engineering Acoustics

The Master of Science in Engineering Acoustics degree will be awarded as an interdisciplinary program in accordance with the following degree requirements:

1. A student pursuing a program leading to a Master of Science in Engineering Acoustics must have completed work which would qualify him/her for a Bachelor of Science degree in engineering or physical science. Credit requirements for the Master of Science degree must be met by courses in addition to those used to satisfy this requirement.

2. The Master of Science in Engineering Acoustics requires a minimum of 36 graduate credit quarter-hours of course work; at least 20 graduate quarter-hours must be taken in acoustics and its applications. Three 4000 level courses must be included from any three of the following six areas: wave propagation; transducer theory and design; noise, shock, and vibration control; sonar systems; signal processing; and communications. In addition, these courses must include at least one from each of the sponsoring disciplines (physics and electrical engineering).

3. An acceptable thesis must be completed.

Approval of each program by the Chair of the Engineering Acoustics Academic Committee must be obtained prior to reaching the mid-point of the degree program.

Master of Engineering Acoustics

The Master of Engineering Acoustics degree is limited to non-resident students and is awarded as an interdisciplinary program in accordance with the following degree requirements:

1. A student pursuing a program leading to a Master of Engineering Acoustics must have completed work which would qualify him/her for a Bachelor of Science degree in engineering or physical science. Credit requirements for the Master's degree must be met by courses in addition to those used to satisfy this requirement.

2. The Master of Engineering Acoustics requires a minimum of 36 graduate credit quarter-hours of course work; at least 20 graduate quarter-hours must be taken in acoustics and its applications. Three 4000 level courses must be included from any three of the following six areas: wave propagation; transducer theory and design; noise, shock, and vibration control; sonar systems; signal processing; and communications. In addition, these courses must include at least one from each of the sponsoring disciplines (physics and electrical engineering).

3. In lieu of a thesis, a one-quarter capstone project is required.

Approval of each program by the Chair of the Engineering Acoustics Academic Committee must be obtained prior to reaching the mid-point of the degree program.

Doctor of Philosophy and Doctor of Engineering

The Department of Electrical and Computer Engineering and the Department of Physics jointly sponsor an interdisciplinary program in Engineering Acoustics leading to either the Doctor of Philosophy or Doctor of Engineering degree. Areas of special strength in the departments are physical acoustics, underwater acoustics, acoustic signal processing, and acoustic communications. A noteworthy feature of this program is that a portion of the student's research may be conducted away from the Naval Postgraduate School at a cooperating laboratory or other federal government installation. The degree requirements and examinations are as outlined under the general school requirements for the doctorate degree. In addition to the school requirements, the departments require a preliminary examination to show evidence of acceptability as a doctoral student.

Underwater Acoustic Systems - Curriculum 535

Chair, EAAC

Daphne Kapolka, Ph.D.
Code PH/Kd, Spanagel Hall, Room 202
(831) 656-1825, DSN 756-1825
Brief Overview

The Underwater Acoustic Systems curriculum is currently available to Distance Learning students and leads to either a Master of Science in Engineering Acoustics or a Master of Engineering Acoustics depending on whether the student completes a thesis. Students typically take one course per quarter for a period of 8 quarters (24 months) followed by a thesis or capstone project. They must also complete a one-week residency during their first 4000-level physics course to gain experience in experimental techniques. The courses are taught primarily via videos and voice-over PowerPoint slides, course readings, discussion forums, and the virtual classroom software, Elluminate, to maximize student schedule flexibility. They are usually timed to coincide with resident offerings. The course of studies is designed to improve the student’s performance in operational, maintenance, and acquisition positions by providing them with a firm background in the fundamental science and engineering of acoustic systems.

Requirements for Entry

This curriculum is open to US and allied government civilians and defense contractors. Admission requires a baccalaureate degree with above-average grades, completion of mathematics through differential equations and integral calculus, plus one year of calculus-based physics. An APC of 323 is required for direct entry.

Entry Date

The Underwater Acoustic Systems Program starts in the summer quarter.

Young S. Shin, Distinguished Professor Emeritus (1981); Ph.D., Case Western Reserve University, 1971.
Raymond P. Shreeve, Professor Emeritus (1971); Ph.D., University of Washington, 1970.

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

Brief Overview

The Department of Mechanical and Aerospace Engineering (MAE) provides a strong academic program which spans the engineering disciplines of thermal-fluid sciences, structural mechanics, dynamic systems, guidance and control, materials science and engineering, propulsion, and systems engineering, including total ship systems engineering, spacecraft, and missile design. These disciplines are blended together with a strong emphasis on Naval engineering applications required by surface vessels, submarines, and spacecraft. Furthermore, the department provides advanced education in classified topics in Astronautical Engineering. Programs leading to the degrees of Master of Science in Mechanical Engineering and Master of Science in Astronautical Engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). A specific curriculum must be consistent with the general minimum requirements for the degree as determined by the Academic Council. Any program leading to a degree must be approved by the Department Chairman at least two quarters before completion. In general, approved programs will require more than the stated minimum degree requirements in order to conform to the needs and objectives of the United States Navy, and satisfy the applicable subspecialty-code requirements.

Program Objectives

Mechanical Engineering

The overall educational objective of the Mechanical Engineering program is to support the NPS mission by producing graduates who have knowledge and technical competence, at the advanced level in Mechanical Engineering, in support of national security. The specific educational objectives for each program are:

1. The ability to identify, formulate, and solve technical and engineering problems in Mechanical Engineering and related disciplines using the techniques, skills and tools of modern practice, including modeling and simulation. These problems may include issues of research, design, development, procurement, operation, maintenance or disposal of engineering components and systems for military applications.

2. The ability to provide leadership in the specification of military requirements, in the organization and performance of research, design, testing, procurement and operation of technically advanced, militarily effective systems. The graduate must be able to interact with personnel from other services, industry, laboratories and academic institutions, and be able to understand the role that engineering and technology have in military operations, and in the broader national and global environment.

3. The ability to communicate advanced technical information effectively in both oral and written form.

Astronautical Engineering

To produce graduates who have the Knowledge and technical competence in the following areas:

1. Orbital Mechanics, Space Environment, and Remote Sensing
2. Military Space Systems
3. Project Management and System Acquisition
4. Spacecraft Communications and Signal Processing
5. Computers - Hardware and Software
6. Spacecraft Dynamics, Guidance, and Control
7. Spacecraft Structures and Materials
8. Propulsion Systems
9. Spacecraft Thermal Control and Power
10. Spacecraft Design and Integration

Additional objectives include demonstrated competence at the advanced level in one of the primary disciplines of Astronautical Engineering (orbital mechanics, space environment, attitude determination, guidance and control, telecommunications, space structures, spacecraft/rocket propulsion or spacecraft design) and demonstrated ability to conduct and report independent research.

Degrees

The following degrees are available. Consistent with NPS Academic Policy, with the exception of the Engineer’s or Doctoral degrees, all degree requirements must be satisfied independently. A student is able to earn an academic degree listed below while enrolled in Naval/Mechanical Engineering (Curriculum 570), Reactors/Mechanical Engineering DL (Curriculum 571), Nuclear Power School/Mechanical Engineering DL (Curriculum 572), Space Systems Engineering (Curriculum 591), and Combat Systems Science and Technology (Curriculum 533).

Master of Science in Mechanical Engineering

A candidate shall have completed academic work equivalent to the requirements of this department for the Bachelor of Science degree in Mechanical Engineering. Candidates who have not majored in mechanical
undergraduate courses in mechanical engineering and mathematics to fulfill these requirements in preparation for their graduate program.

The Master of Science degree in Mechanical Engineering requires a minimum of 48 quarter-hours of graduate level work. The candidate must take all courses in an approved study program, which must satisfy the following requirements: There must be a minimum of 32 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 12 quarter-hours at the 4000 level. Of the 32 quarter-hours at least 24 quarter-hours must be in courses offered by the MAE Department.

A student seeking the Master of Science degree in Mechanical Engineering must also demonstrate competence at the advanced level in at least one of the available disciplines of Mechanical Engineering. These disciplines are the thermal-fluid sciences; solid mechanics, shock and vibration; dynamic systems and control; system design; and materials science. This may be accomplished by completing at least eight quarter-hours of the 4000 level credits by courses within one discipline, and a thesis in the same discipline.

An acceptable thesis for a minimum of 16 credits is also required for the Master of Science degree in Mechanical Engineering. An acceptable thesis for the degree of Mechanical Engineer may also meet the thesis requirement of the Master of Science in Mechanical Engineering degree. The student's thesis advisor, the Academic Associate, the Program Officer and the Department Chairman must approve the study program and the thesis topic.

Master of Science in Astronautical Engineering

The Master of Science degree in Astronautical Engineering requires a minimum of 48 quarter-hours of graduate level work. The candidate must take all courses in an approved study program, which must satisfy the following requirements: There must be a minimum of 32 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 12 quarter-hours at the 4000 level. Of the 32 quarter-hours, at least 24 quarter-hours must be in courses offered by the MAE Department.

A student must demonstrate knowledge of orbital mechanics, attitude determination, guidance and control, telecommunications, space structures, spacecraft/rocket propulsion, space power, spacecraft thermal control, and spacecraft design and testing.

The student must also demonstrate competence at the advanced level in one of the above disciplines of Astronautical Engineering. This may be accomplished by completing at least eight quarter-hours of the 4000 level credits by courses in this Department in a particular area and a thesis in the same discipline area. The typical specialization track is in Structures, Dynamics, and Control, and requires two (2) non-design AE48XX courses.

An acceptable thesis for a minimum of 16 credits is also required. The student's thesis advisor, the Academic Associate, the Program Officer, and the Department Chairman must approve the study program and the Thesis Proposal.

Master of Science in Engineering Science (Mechanical Engineering)

Candidates with acceptable academic background may enter a program leading to the degree of Master of Science in Engineering Science (with major in Mechanical Engineering). Candidates who have not majored in mechanical engineering or closely related subject areas, or who have experienced significant lapses in continuity with previous academic work, will initially take undergraduate courses in mechanical engineering and mathematics to prepare for their graduate program.

The Master of Science in Engineering Science (with major in Mechanical Engineering) degree requires a minimum of 48 quarter-hours of graduate level work. The candidate must take all courses in an approved study program, which must satisfy the following requirements: there must be a minimum of 32 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 12 quarter-hours at the 4000 level. Of the 32 quarter-hours, at least 24 quarter-hours must be in courses offered by the MAE Department.

A student seeking the Master of Science in Engineering Science degree must also demonstrate competence at the advanced level in at least one of the available disciplines of Mechanical Engineering. These disciplines are the thermal-fluid sciences; solid mechanics, shock and vibration; dynamic systems and control; system design; and materials science. This may be accomplished by completing at least eight quarter-hours of the 4000 level credits by courses within one discipline, and a thesis in this same discipline.

An acceptable thesis for a minimum of 16 credits is also required for the Master of Science in Engineering Science (with major in Mechanical Engineering) degree. The student's thesis advisor, the Academic Associate, the Program Officer, and the Department Chairman must approve the study program and the thesis topic.

Under special circumstances as approved by the Academic Associate, the Program Officer, and the Department Chair, students may take four additional courses in lieu of a thesis. Those four additional courses should be at least 3000 and 4000 level courses offered by the MAE Department, and among them at least two courses should be at the 4000 level.
Entrance into the 571 Reactors/Mechanical Engineering Curriculum Program, leading to the degree Master of Science in Engineering Science (with major in Mechanical Engineering), is restricted to individuals who have successfully completed the Bettis Reactor Engineering School (BRES) and who have an academic profile code (APC) of 121 or better. All entrants must be nominated for the program by the designated program coordinator and primary consultant for Naval Reactors (SEA-08). See Curriculum 571 for details.

Entrance into the 572 Nuclear Power School/Mechanical Engineering Curriculum Program is restricted to graduates of the Officers Course of Naval Nuclear Power School and having an APC of (323), and undergraduate engineering degree or equivalent, and being nominated by their command. See Curriculum 572 for details.

**Master of Science in Engineering Science (Astronautical Engineering)**

Candidates with acceptable academic background may enter a program leading to the degree of Master of Science in Engineering Science (with major in Astronautical Engineering). Candidates who have not majored in astronautical engineering or closely related subject areas, or who have experienced significant lapses in continuity with previous academic work, will initially take undergraduate courses in astronautical engineering and mathematics to prepare for their graduate program.

The Master of Science in Engineering Science (with major in Astronautical Engineering) degree requires a minimum of 48 quarter-hours of graduate level work. The candidate must take all courses in an approved study program, which must satisfy the following requirements: there must be a minimum of 32 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 12 quarter-hours at the 4000 level. Of the 32 quarter-hours, at least 24 quarter-hours must be in courses offered by the MAE Department.

A student must demonstrate knowledge of orbital mechanics, attitude determination, guidance and control, telecommunications, space structures, spacecraft/rocket propulsion, space power, spacecraft thermal control, and spacecraft design and testing.

The student must also demonstrate competence at the advanced level in one of the above disciplines of Astronautical Engineering. This may be accomplished by completing at least eight quarter-hours of the 4000 level credits by courses in this department and a thesis in the same discipline area. The typical specialization track is in Structures, Dynamics, and Control, and requires two (2) non-design AE48XX courses.

An acceptable thesis for a minimum of 16 credits is also required. The student’s thesis advisor, the Academic Associate, the Program Officer, and the Department Chairman must approve the study program and the Thesis Proposal.

**Master of Science in Engineering Science (Aeronautical Engineering)**

Candidates with acceptable academic background may enter a program leading to the degree of Master of Science in Engineering Science (with major in Aeronautical Engineering). Candidates who have not majored in aeronautical engineering or closely related subject areas, or who have experienced significant lapses in continuity with previous academic work, will initially take undergraduate courses in aeronautical engineering and mathematics to prepare for their graduate program.

The Master of Science in Engineering Science (with major in Aeronautical Engineering) degree requires a minimum of 48 quarter-hours of graduate level work. The candidate must take all courses in an approved study program, which must satisfy the following requirements: there must be a minimum of 32 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 12 quarter-hours at the 4000 level. Of the 32 quarter-hours, at least 24 quarter-hours must be in courses offered by the MAE Department.

A student must demonstrate knowledge of aerodynamics, aircraft stability and control, avionics, aircraft structures, aircraft and missile propulsion.

The student must also demonstrate competence at the advanced level in one of the above disciplines of Aeronautical Engineering. This may be accomplished by completing at least eight quarter-hours of the 4000 level credits by courses in this department and a thesis in the same discipline area. The typical specialization track is in Aircraft Structures, Aerodynamics, Stability and Control, Avionics or Propulsion.

An acceptable thesis for a minimum of 16 credits is also required. The student’s thesis advisor, the Academic Associate, the Program Officer, and the Department Chairman must approve the study program and the Thesis Proposal.

**Mechanical Engineer**

A graduate student with a superior academic record (as may be demonstrated by a graduate QPR of 3.70 or better) may apply to enter a program leading to the Mechanical Engineer degree. A candidate must prepare his or her application and route it through the Program Officer to the Department Chairman for a decision. Typically, the selection process occurs after completion of the candidate’s first year of residence.

A candidate must take all courses in a curriculum approved by the Chairman of the MAE Department. At a minimum, the approved curriculum must satisfy the requirements stated in the following paragraphs.
The Mechanical Engineer degree requires at least 64 quarter-hours of graduate level credits in Mechanical Engineering and Materials Science, at least 32 of which must be at the 4000 level. At least 12 quarter-hours of graduate level credits must be earned outside of the MAE Department. At least one advanced mathematics course should be included in these 12 quarter-hours.

An acceptable thesis of 28 credit hours is required for the Mechanical Engineer degree. Approval of the thesis advisor and program must be obtained from the Chairman of the MAE Department.

Astronautical Engineer

A graduate student with a superior academic record (as may be demonstrated by a graduate QPR of 3.70 or better) may apply to enter a program leading to the Astronautical Engineer degree. A candidate must prepare his or her application and route it through the Program Officer to the Department Chairman for a decision. Typically, the selection process occurs after completion of the candidate’s first year of residence.

A candidate must take all courses in a curriculum approved by the Chairman of the MAE Department. At a minimum, the approved curriculum must satisfy the requirements stated in the following paragraphs.

The Astronautical Engineer degree requires at least 64 quarter-hours of graduate level credits in Astronautical Engineering or Mechanical Engineering and Materials Science, at least 32 of which must be at the 4000 level. At least 12 quarter-hours of graduate level credits must be earned outside of the MAE Department. At least one advanced mathematics course should normally be included in these 12 quarter-hours.

An acceptable thesis of 28 credit hours is required for the Astronautical Engineer degree. Approval of the thesis advisor and program must be obtained from the Chairman of the MAE Department.

Aeronautical Engineer

A graduate student with a superior academic record (as may be demonstrated by a graduate QPR of 3.70 or better) may apply to enter a program leading to the Aeronautical Engineer degree. A candidate must prepare his or her application and route it through the Program Officer to the Department Chairman for a decision. Typically, the selection process occurs after completion of the candidate’s first year of residence.

A candidate must take all courses in a curriculum approved by the Chairman of the MAE Department. At a minimum, the approved curriculum must satisfy the requirements stated in the following paragraphs.

The Aeronautical Engineer degree requires at least 64 quarter-hours of graduate level credits in Aeronautical Engineering or Mechanical Engineering and Materials Science, at least 32 of which must be at the 4000 level. At least 12 quarter-hours of graduate level credits must be earned outside of the MAE Department. At least one advanced mathematics course should normally be included in these 12 quarter-hours.

An acceptable thesis of 28 credit hours is required for the Aeronautical Engineer degree. Approval of the thesis advisor and program must be obtained from the Chairman of the MAE Department.

Doctor of Philosophy

The Department offers Doctor of Philosophy (Ph.D.) degrees in Mechanical Engineering, Astronautical Engineering, and Aeronautical Engineering. Students having a superior academic record may request entrance into the doctoral program. All applicants will be screened by the departmental doctoral committee for admission. The department also accepts officer students selected in the Navy-wide doctoral program, qualified international officers, and DoD civilian students.

An applicant to the doctoral program who is not already at NPS should submit transcripts of previous academic and professional work. Also all applicants are required to submit a current Graduate Record Examination (GRE) general test to the Director of Admissions, Naval Postgraduate School, 1 University Circle, He-022, Monterey, California 93943.

Every applicant who is accepted for the doctoral program will initially be enrolled in one of the following programs: Mechanical Engineer, Astronautical Engineer, or Aeronautical Engineer Program; under a special option which satisfies the broad departmental requirements for the Engineer’s degree, which includes research work. As soon as feasible, the student must identify a faculty advisor to supervise research and to help formulate a plan for advanced study. As early as practicable thereafter, a doctoral committee shall be appointed to oversee that student’s individual doctoral program as provided in the school-wide requirements for the doctor’s degree. Joint programs with other departments are possible.

Special Programs

Along with degree programs, the department offers special programs that are sequences of courses along with capstone design projects that focus on the design of important military systems, such as platforms and weapons.

Total Ship Systems Engineering Program

The Total Ship Systems Engineering Program is an interdisciplinary, systems engineering and design-oriented program available to students enrolled in Mechanical or Astronautical or Aeronautical Engineering, Electrical and Computer Engineering or Combat Systems programs. The program objective is to provide a broad-based, design-oriented education focusing on the warship as a total
Missile Systems Engineering Program

The Missile Systems Engineering Track is an option that can be pursued within the framework of the Master of Science in Mechanical Engineering (MSME) or Master of Science in Engineering Science degree programs. This program is a regular part of the TEMASEK program, but is also open to DoD contractors, as well as all U.S. Military and DoD Civilian Students. The program provides a solid engineering foundation in analysis and design techniques involved in developing offensive and defensive missile systems.

This option consists of a four-course sequence of special courses embedded in the normal MSME or MSES(ME) degree program of courses and a thesis.

The courses for this program are:

1. ME3205 Missile Aerodynamics.
2. AE4452 Advanced Missile Propulsion.
3. ME4703 Missile Flight Dynamics and Control.
4. ME4704 Missile Design.

NPS works with industry, primarily with Raytheon Missile Systems Division in Tucson, AZ, to create this unique blend of high-quality academic courses and "real word" systems engineering focus in missile design and manufacturing, leading to a program of unique military relevance.

Autonomous Systems Engineering Program

The Autonomous Systems Engineering Track is an option that can be pursued within the framework of the Master of Science in Mechanical Engineering (MSME) or Master of Science in Engineering Science degree programs. This program is open to DoD contractors, as well as all U.S. Military and DoD Civilian Students. The program can be completed in four to six quarters, depending on academic preparedness of the student, and is developed around several core courses related to modeling and guidance navigation and control algorithms design for autonomous underwater, surface, ground, aerial, or space systems, satellites and spacecraft. Additional course electives can be taken to enhance specialty areas, along with thesis research related to a specific type of autonomous system or its component, or a wide range of other useful military technologies.

The core courses of the program are:

- Introduction to Unmanned Systems
- Low-Level Control of Unmanned Vehicles
- Unmanned Vehicles Navigation
- High-Level and Discrete Event Control of Autonomous Systems
- Computer Vision
- C3 Networks for Unmanned Systems
- Collaborative Control of Multiple Autonomous Systems
- Unmanned Systems Design

The final course in this sequence, Unmanned Systems Design, is a capstone course that integrates the material into a design of (a component of) an autonomous underwater, surface, ground, aerial, or space system, its algorithm or sensor to be tested within the tactical network environment during quarterly field experiments at Camp Roberts Training Site.

Laboratories

MAE Laboratories are designed to support the educational and research mission of the Department. In addition to extensive facilities for the support of student and faculty research, a variety of general use equipment is available. This includes equipment and facilities for the investigation of problems in engineering mechanics; a completely equipped materials science laboratory; an oscillating water channel; a vibration and structural dynamics laboratory; a fluid power controls laboratory; a robotics and real-time control laboratory; facilities for experimentation with low velocity air flows.

NPS Center for Autonomous Vehicle Research: The primary goal of the NPS Center for Autonomous Vehicle Research (CAVR) is to educate students in the development and use of technologies needed for unmanned vehicles through coursework, thesis and dissertation research. The secondary goal of the CAVR is to advance Naval autonomous vehicle operations by providing support to the fleet, Navy labs and Program offices, testing and experimentation of advanced technologies, independent verification and validation of a variety of novel autonomous vehicles concepts, and by innovative concept development. Currently the CARV houses two autonomous submarines (Aries and REMUS), Sea Fox surface vehicle and a wide variety of Tier I and Tier II class unmanned aerial vehicles (UAV) staring from Scan Eagle UAV and all way down to miniature flapping-wing vehicles.

CAD/CAE Computer Laboratory: This lab consists of Windows PCs and is used heavily by students for both class and thesis related work. This lab has a wide range of...
special mechanical engineering software for analysis and design. This facility includes a 128 processor cluster for large scale computations.

Additional Laboratories

**Nano/MEMS Laboratory:** This laboratory provides a facility for teaching the emerging technologies of Nano/MEMS.

**Fluid Mechanics and Hydrodynamics Laboratories:** The fluid mechanics laboratory supports instruction in basic courses in fluid mechanics. It is equipped with a small wind tunnel for specific instructional purposes. The hydrodynamics laboratory includes a unique U-shaped oscillating water tunnel for the study of a wide range of phenomena, such as flow about stationary and oscillating bodies, vortex-induced vibrations, stability of submarines and boundary layers, and vortex-free-surface interactions. The hydrodynamics laboratory also houses a recirculating water tunnel for numerous flow-separation and vibration phenomena and a vortex-breakdown facility for the investigation of the stability of swirling flows. These facilities are supported by a 3-beam Laser-Doppler-Velocimeter, numerous other lasers, high-speed motion analyzers, data-acquisition systems, and dedicated computers for numerical simulations.

**Materials Laboratory:** Laboratory supports teaching and research in composite materials, especially metal matrix composites.

- **Auger Surface Analysis Laboratory:** It consists of an ultrahigh vacuum system and an electron beam source to probe the surface and interface structure of composites and microelectronic devices.
- **Transmission Electron Microscopy Lab:** Contains a TOPCON 002B TEM used for materials science and engineering teaching and research.
- **Scanning Electron Microscopy Lab:** Contains a TOPCON 540 SEM used for materials science and engineering teaching and research.
- **X-Ray Diffraction Laboratory:** Two Philips X-ray Systems are used for materials science and engineering teaching and research.
- **Optical Microscopes Laboratory:** This lab includes several optical microscopes as well as electronic imaging and image analysis systems that are used for materials science and engineering teaching and research.
- **Metallurgical Sectioning/Polishing Laboratory:** This supports all teaching and research by provision of facilities to prepare samples for examination.
- **Transmission Electron Microscopy II Lab:** This laboratory is equipped with a JEOL-100CX microscope and is used primarily for instruction of students in the techniques of electron microscopy.
- **Scanning Electron Microscopy Laboratory:** This laboratory is equipped with an older model Cambridge Instruments SEM.
- **Physical Testing (Dilatometer) Laboratory:** This laboratory is dedicated to dilatometry and is primarily used for research applications.
- **Heat Treatment Laboratory:** This laboratory supports courses and research mainly in the materials area and includes a selection of conventional furnaces.
- **Corrosion Laboratory:** This laboratory supports the instructional program in the area of corrosion science and engineering.
- **Metallurgical Etching Laboratory:** This laboratory supports all teaching and research in materials by provision of facilities for the chemical treatment of samples for metallographic examination.
- **Welding Laboratory:** Welding is the primary method of fabrication for naval vessels, and instruction and research on welding/joining of both conventional and advanced alloys is carried out in this facility.
- **Materials Processing Laboratory:** This supports both teaching and research involving deformation and thermal processing of materials. It is equipped with presses, a rolling mill, and various heat treatment furnaces.
- **Creep Test Laboratory:** This laboratory supports research in high-temperature structural metals and composites.
- **Mechanical Test Laboratory:** This lab supports mechanical testing with impact, creep, and fatigue instrument and electromechanical properties.
- **Ceramics Laboratory:** This laboratory is devoted primarily to research on high temperature materials based on various ceramic compositions.
- **Composites Laboratory:** This laboratory supports research in composite materials, especially metal matrix composites.

**Marine Propulsion Laboratory**

This laboratory has gas turbine (Allison C-250) and diesel (Detroit 3-53) engines connected to water brake dynamometers, located in separate, isolated engine test cells. These engines are instrumented to obtain steady-state performance and high-frequency, time-resolved measurements. Aerothermodynamic, acoustic, and vibration phenomena in turbo-machinery and reciprocating engines are being investigated, particularly relating to non-uniform flow and condition-based maintenance (CBM) in naval machinery. These engines are used for both instructional and applied research programs in the area of marine power and propulsion. In addition, this lab has bench-top rotordynamics experiments for demonstrating high-speed machinery balancing and investigating rotodynamic instabilities. The lab has sub-scale flow
facilities for developing and testing low observable (stealth) technologies for engine inlets and exhausts.

**Rocket Propulsion Laboratory**

This lab conducts research on advanced concepts in solid, liquid, and combined mode propellants. Experimental and computational research is conducted in the areas of propellant mixing, combustion, pulse detonation, thrust control, and plume mixing. A full range of mechanical and optical diagnostic techniques are used on small and subscale experiments.

**Structural Dynamics Laboratory**

This lab is devoted to structural dynamics and is especially designed to facilitate both teaching and research into vibration and shock effects associated with underwater explosions, as well as related shipboard vibration problems. The ability to validate simulation models with lab-scale tests is critical for student education. The lab includes a state of the art multi-channel data acquisition system, and a large variety of transducers and instrumentation.

**Thermal Engineering Laboratories**

These labs are used mainly for instruction in heat transfer to investigate convection phenomena of single and multi-phase flows and include facilities for measurement of temperature change and fluid motion in a range of systems. The lab also includes equipment/instrumentation for measurements in microelectronics and micro–heat exchanger systems.

- **Convection Heat Transfer Laboratory:** Used mainly for instruction in heat transfer by convection phenomena and includes facilities for measurement of temperature change and fluid motion in a range of systems.
- **Electronic Cooling Laboratory:** The operation of microelectronic devices results in intense, but very localized, heating of electronic devices.
- **Two-Phase Heat Transfer Laboratory:** This is an instructional and research laboratory for the study of heat transfer involving more than one phase, e.g., heat transfer involving liquid and vapor phases during boiling or condensation.

**Ship Systems Engineering (TSSE) Laboratory**

This is an integrated design center in which student teams perform a capstone design project of a Navy ship. Ship design encompasses hull, mechanical, and electrical systems as well as combat systems, and is done in cooperation with the Meyer Institute.

**Astronautical Engineering Laboratories**

- **Spacecraft Design Laboratory:** This laboratory houses computer-aided design tools for spacecraft design and a spacecraft design library. It is used heavily by students for three spacecraft design courses, AE3870, AE4870, and AE4871. Students can do collaborative spacecraft design using the unique design tools not available in other educational institutions.
- **Smart Structure and Attitude Control Laboratory:** This lab consists of five major ongoing experiments to facilitate the instruction and research by students in the area of both smart structures, sensors, and actuators for active vibration control, vibration isolation, and shape control in space applications and attitude control of flexible spacecraft and space robotic manipulators. In addition to students’ thesis research, it also supports courses AE4816, AE3811, and AE3818.
- **Optical Relay Spacecraft Laboratory:** This joint laboratory of NPS and AFRL is used for both instruction and research on acquisition, tracking, and pointing of flexible military spacecraft. The main facilities include a bifocal relay mirror spacecraft attitude simulator, actuated by variable speed control moment gyros; a single focal spacecraft attitude simulator, actuated by reaction wheels; and an optical beam and jitter control test bed. This laboratory is used for courses AE3811, AE3818, and AE4818.
- **Spacecraft Robotics Laboratory:** The Spacecraft Robotics Laboratory, funded by NPS and AFRL, hosts the Autonomous Docking and Spacecraft Servicing Simulator (AUDASS). This test bed, consisting of two independent robotic vehicles (a chaser and a target), aims to carry out on-the-ground testing of satellite servicing and proximity formation flight technologies. The vehicles float, via air pads, on a smooth epoxy floor, providing a frictionless support for the simulation in 2-D of the zero-g dynamics. This is used for course AE3811.
- **FLTSATCOM Laboratory:** This laboratory of NPS and AFRL is used for both instruction and research by students in laboratory course AE3811. Students get operational experience including spin-up of a reaction wheel, rotation of a solar array drive, firing sequence of thrusters, and receiving telemetry on the satellite operational parameters.
- **Segmented Mirror Telescope (SMT):** The SMT is a unique platform for research into advanced Adaptive Optics (AO) techniques employing a prototype satellite imaging system with approximately 1,000 degrees of freedom.

**Research Centers**

The following Research Centers are organized in the MAE Department:
Aerodynamic Decelerator Systems Center and Laboratory: Payload delivery has always played a vital role in a variety of combat and humanitarian operations. In the recent years the touchdown accuracy improved drastically allowing delivering not only traditional bundle supplies, but also smaller, time-critical items like munitions, medical resupplies, sensors, autonomous ground robots. Moreover, the delivery of these articles is possible using smaller autonomous aerial vehicles as opposed to conventional military aircraft. The center focuses on a variety of novel research topics that support technologies vital to the Army's and Navy's future force, combating terrorism and new emerging threats. It includes the development of guidance, navigation and control algorithms for a family of various-weight precision guided airdrop systems to be deployed from fixed- and rotary-wing unmanned platforms, along with research on different sensors to support airdrop missions. The center is constantly working on different challenging projects, providing a wide variety of thesis opportunities in different areas: conceptual design, CFD analysis, computer modeling, image processing, control design, sensor integration; supports coursework in Control and Autonomous Systems.

Center for Materials Sciences and Engineering: The Center for Materials Sciences and Engineering provides a focus for research and education in Materials Science and Engineering at NPS.

Center for Autonomous Underwater Vehicle Research: The primary goal of the NPS Center for AUV Research is to educate Navy and USMC officer students in the development and use of technologies needed for unmanned underwater vehicles through coursework, thesis, and dissertation research. The secondary goal of the Center is to advance Naval UUV operations by providing: Support to the Fleet, Navy Labs and Program Offices.

Turbo-Propulsion Laboratory: The Turbo Propulsion Laboratory houses a unique collection of experimental facilities for research and development related to compressors, turbines, and advanced air-breathing propulsion engine concepts. In a complex of specially designed concrete structures, one building, powered by a 750 HP compressor, contains 10 by 60 inch rectilinear and 4 to 8-foot diameter radial cascade wind tunnels, and a large 3-stage axial research compressor for low speed studies. A two-component, automated traverse, LDV system is available for CFD code verification experiments. A second building, powered by a 1250 HP compressed air plant, contains fully instrumented transonic turbine and compressor rigs in explosion-proof test cells. A spin-pit for structural testing of rotors to 50,000 RPM and 1,800 degrees Fahrenheit is provided. Data acquisition from 400 channels of steady state and 32 channels of non-steady measurements, at up to 200 kHz, is controlled by the laboratory's Pentium workstations. A third building houses a 600 HP radial and 150 HP boost compressor capable of delivering 2000 scfm of air at 10 and 20 atmospheres respectively. These charge four tanks for blow-down to a supersonic wind tunnel (4 x 4 inches), a transonic cascade wind tunnel (2 x 3 inches), and two free jets (one 6-inch and one 1-inch in diameter). The large free jet is equipped with an instrumented thrust stand for the testing of small gas turbine engines. The building also houses a 3-inch diameter shock tube.

Spacecraft Research and Design Center: The Spacecraft Research and Design Center at the Naval Postgraduate School consists of six state-of-the-art laboratories: Flitsatcom Laboratory, Spacecraft Attitude Dynamics and Control Laboratory, Smart Structures Laboratory, Spacecraft Design Center, NPS-AFRL Optical Relay Mirror Spacecraft Laboratory, and Satellite Servicing Laboratory. These laboratories are used for instruction and research in the Space System Engineering and Space Systems Operations curricula. The emphasis has been on providing students with hands-on experience in the design, analysis, and testing of space systems, and to provide students with facilities for experimental research. The emphasis in the research is on acquisition, tracking, and pointing of flexible spacecraft with optical payloads; active vibration control, isolation, and suppression using smart structures; space robotics, satellite servicing, space system design, and computer aided design tools. These laboratories have been used in joint projects with Naval Satellite Operational Center, NRL, AFRL, Columbia University, and Boeing. See www.nps.edu/SRDC.

Center for Survivability and Lethality: The Center provides research and education in a broad range of technologies and methodologies to make platforms more survivable to attack and more lethal to hostile platforms and systems. Work in submarines, surface ships, fixed wing and rotorcraft, and space systems are supported. The Center also conducts research in improving the survivability of civilian infrastructure and transportation systems. Twenty NPS faculty members from MAE, Physics, and Electrical Engineering participate in the Center. See www.nps.edu/csl.
Mechanical and Aerospace Engineering
Course Descriptions

AE Courses

AE0810 Thesis Research (0-8)
Every student conducting thesis research will enroll in this course. Prerequisites: None.

AE2440 Introduction to Digital Computation (3-2)
Introduction to system operations and program development on the department UNIX workstations and the NPS computer facilities. High-level programming languages, including C, MATLAB, and FORTRAN. Development of computer programs, subroutine organization, input and output. Applications of programming techniques to the solution of selected problems in engineering. Prerequisites: MA1115.

AE2820 Introduction to Spacecraft Structures (3-2)

AE3804 Thermal Control of Spacecraft (3-0)
Conduction, radiation, thermal analysis, isothermal space radiator, lumped parameter analytical model, spacecraft passive and active thermal control design, heat pipes, and louvers. Prerequisites: None.

AE3811 Space Systems Laboratory (2-2)
Principles of spacecraft test programs; component, subsystem, and system level tests; military standard test requirements for space vehicles, laboratory experiments in Ftstacom Laboratory on satellite performance, in Spacecraft Test Laboratory for vibration, modal and thermal tests; and in Spacecraft Attitude Control Laboratory for spacecraft control performance. Graded Pass/Fail. Prerequisites: Consent of instructor.

AE3815 Spacecraft Rotational Mechanics (3-2)
Coordinate system transformations (GCI, LVLH, etc.), time differentiation operator, velocity and acceleration in 3D-frames of reference, Poisson’s equations, spacecraft application examples (strapdown INS, etc.), angular momentum, inertia tensor transformations, Newton–Euler equations of motion, spin stability, single-spin spacecraft, nutation and precession, energy-sink analysis, passive nutation control, dynamics and stability of dual spin spacecraft, gravity-gradient stabilization. Prerequisites: SS3500, MA2121, MA3046, and AE2440 or equivalent.

AE3818 Spacecraft Attitude, Determination, and Control (3-2)
Spacecraft attitude linear control: linearized attitude control, three-axis-stabilized spacecraft. Non-linear attitude control design: minimum-time slewing maneuver, quaternion feedback. Actuators for attitude control: Thrusters, Reaction Wheels, Control Moment Gyroscopes, Magnetotorquers, and related topics (thrust modulation and mapping, CMG steering laws and singularities, momentum dumping). Sensors for attitude and rate determination: star sensors, horizon sensor, sun sensor, gyroscopes. Attitude determination methods: deterministic approach (Triad algorithm), statistic approach (Wabha problem), stochastic approach (Kalman Filter). The labs focus on the practical solution of significant attitude control and determination problems by simulations in Matlab-Simulink. Prerequisites: EC2300 or equivalent, and AE3815.

AE3820 Advanced Mechanics and Orbital Robotics (3-2)
This course is an intermediate level analysis of the dynamics of space systems, including: ascent and descent of rockets, tethers, yo-yo despins, spinning hubs with flexible appendages, single stage to orbit, and various problems in spacecraft attitude dynamics such as nutation dampers. The analysis will include developing the equation of motion, equilibrium and stability analysis, solutions of nonlinear systems using perturbation methods and numerical techniques. Computational and symbolic manipulator packages will be used extensively. Prerequisites: MA2121.

AE3830 Spacecraft Guidance and Control (3-2)

AE3851 Spacecraft Propulsion (3-2)
Introduces concepts and devices in spacecraft propulsion. It reviews fundamental fluid mechanics, electricity and magnetism, and thermodynamics with molecular structure. Conventional chemical means such as H2/O2 and monopropellants are discussed. Electric propulsion schemes (resistojets, arc-jets, ion, magneto-plasma-dynamic, etc.) are introduced and their performances contrasted with chemical schemes. Characteristics of more advanced concepts (laser, solar, nuclear, etc.) are also considered. Prerequisites: None.

AE3852 Propulsion for Launch Vehicles (4-0)
Introduction to propulsion for launch vehicles, beginning with mission energy requirements and an overview of current and proposed launch propulsion devices. Performance analysis, operating characteristics and propellant selection criteria are considered for air breathing and solid, liquid and nuclear rocket motor propulsion systems. Advanced cycles and concepts are presented. Design of components and subsystems. Prerequisites: ME3201.

AE3870 Computational Tools for Spacecraft Design (2-4)
In this course, the students become familiar with the use of computer aided design tools for spacecraft subsystems and system design. The tools are for conceptual spacecraft design trade-offs and detailed subsystem design, such as for structures, thermal, attitude control, and communications. Prerequisites: Consent of instructor.

AE4362 Astrodynamics (3-0)
Review of the two-body problem. The effects of a third point mass and a distributed mass. Expansion of the disturbing potential in series of Legendre functions. Variation of parameter equations for osculating orbital elements. Perturbation and numerical solution techniques. Statistical orbit determination. Codes used by the military to maintain the catalog of artificial satellites and space debris. Prerequisites: SS3500 or equivalent.
AE4452 Advanced Missile Propulsion (4-1)
Analysis and design of solid propellant rockets, ramjets, dual-combustion ramjets, scramjets and ducted rockets. Propellant selection criteria and characteristics, combustion models and behavior, performance analysis, combustor design, combustion instabilities and damping, mission and flight envelope effects on design requirements and technology requirements. Use of performance and grain design codes (SPP, PEP, and NASA SP233) and laboratory test firings for comparison with measured performance. Prerequisites: AE3852 or consent of instructor.

AE4502 Supersonic and Hypersonic Flows (4-0)

AE4506 Rarefied Gas Dynamics (4-0)
Topics include advanced thermodynamics with molecular structure, kinetic theory, distribution functions, Boltzmann equation and transport phenomena from a kinetic theory point of view. Types of flow range from free-molecule to transition, to high temperature continuum. Numerical approaches are discussed. Applications to space problems and hypersonics are treated. Prerequisites: ME3201 or equivalent.

AE4516 Dynamics and Control of Space Structures (4-0)
Review of dynamics, finite element method, structural natural frequencies, mode shapes, and control of flexible structures. Smart sensors and actuators and applications to active vibration control, shape control, vibration isolation and fine beam pointing. Equation of motion of spacecraft with flexible structures, and control of spacecraft and flexible structures. The interaction of flexibility and control. Impact of flexibility on the performance of military spacecraft and future trends. Prerequisites: Graduate AE3830, ME3521, and EC2300 or equivalent.

AE4818 Acquisition, Tracking, and Pointing of Military Spacecraft (3-2)
Acquisition, tracking, and pointing (ATP) requirements for military spacecraft, effects of jitter on ATP performance, jitter control, acquisition system, tracking algorithms, laser beam control, spacecraft attitude control using control moment gyros, example of ATP designs for military spacecraft, laboratory experiments on spacecraft attitude control and laser beam control. Prerequisites: AE3818.

AE4830 Spacecraft Systems I (Intended For Curriculum 366) (3-2)
This course emphasizes the systems analysis of geosynchronous spacecraft and covers the analysis of GNC (orbit and attitude control), structures, propulsion, thermal and electrical power subsystems. Basic mathematical equations will be used in the preliminary design of the subsystems and the tradeoff studies involved. The differences and similarities between dual-spin and three-axis stabilized spacecraft will be covered in detail. Systems aspect of a typical mission profile will be illustrated. Throughout, emphasis will be on the spacecraft bus. Students will be engaged in problem solving during most of the laboratory period. Prerequisites: Completion of Space Operations core-curriculum.

AE4831 Spacecraft Systems II (Intended for Curriculum 366) (3-2)
In this course, students will be involved in a group project to design a spacecraft to meet mission requirements. Material presented in AE4830 as well as AE4831 will be utilized. In parallel, this course covers some or all of the following aspects of spacecraft systems: spacecraft testing, TT&C subsystem, and design of observation payloads. Differences and similarities between geosynchronous spacecraft and LEO/HEO spacecraft will be discussed. Topics include gravitational perturbation (J2 effects), gravity-gradient stabilization, and atmospheric drag effects. Prerequisites: AE4830.

AE4850 Astrodynmic Optimization (3-2)
This course develops basic measures of performance of a space vehicle (including launch vehicles) with methods to target a set of conditions and optimize the performance. Topics include an overview of the Guidance, Navigation and Control System, fundamentals of nonlinear programming, state-space formulation, vehicle and environmental models, performance measures, problem of Bolza, the Maximum Principle, and transversality conditions. A significant focus of the course will be in practical methods and numerical techniques, particularly pseudospectral methods. Computational methods will be used to solve a wide range of problems in astrodynaminc optimization arising in military space, such as rapid spacecraft reorientation and targeting problems, launch-on-demand, strategic low-thrust orbital maneuvers, and optimal formation-keeping strategies. Where appropriate, the course will illustrate systems aspects of mission design. Prerequisites: MA2121, SS3500, and AE3815.

AE4860 Military Space Maneuvers (2-2)
This course develops the fundamentals of tactical and strategic space maneuvers and addresses the issues pertaining to space warfare. The course covers a wide range of specific military maneuvers that include their mathematical modeling, mission definitions, mission design and optimization. Special attention will be paid to the class of following maneuvers: pursuit-evasion problems, orbital intercept, destructive and nondestructive asset denial problems, rapid retargeting and minimum-time space maneuvers. These maneuvers and certain elements of high-speed velocity guidance will be modeled, simulated, optimized and analyzed as part of the laboratory sessions. Students will also gain practical experience in a state-of-the-art software to analyze the implementation of future military space maneuvers. Additional details pertaining to the course are classified. Prerequisites: MA2121, SS3500, and AE3815. Classification: Security Clearance Required: Secret/NOFORN

AE4870 Spacecraft Design and Integration I (4-0)
Principles of spacecraft design considerations, spacecraft configurations, design of spacecraft subsystems, interdependency of designs of spacecraft subsystems, launch vehicles, mass power estimation, and trade-offs between performance, cost, and reliability. The emphasis is on military geosynchronous communications satellites. The course includes an individual design project. Prerequisites: AE2820, AE3804, AE3851, AE3818, EC3230.

AE4871 Spacecraft Design and Integration II (2-4)
A team project-oriented course on design of non-geosynchronous spacecraft systems. Provides understanding of the principles of space system design, integration, and systems engineering, and
their application to an overall spacecraft mission. Considerations are given to cost, performance, and test plan. Several DoD/NASA organizations, such as Naval Research Laboratory and Jet Propulsion Laboratory, provide support in the definition of the mission requirements for the project, spacecraft design, and design reviews. Prerequisites: AE 4870.

**AE4902 Directed Study in Astronautical Engineering (V-V)**
Directed advanced study in Astronautical Engineering on a subject of mutual interest to student and staff member after most of a student's electives have already been taken. May be repeated for credit with a different topic. This course is graded on a Pass/Fail basis only. Prerequisites: Consent of Department Chairman.

**AE5810 Dissertation Research (0-8)**
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

**ME Courses**

**ME0810 Thesis Research (0-8)**
Every student conducting thesis research will enroll in this course.

**ME0820 Integrated Project (0-12)**
Integrated project.

**ME0951 MAE Seminars (No Credit) (0-1)**
Lectures on subjects of current interest are presented by NPS faculty and invited experts from other universities and government or industrial activities. All ME students must register for this course every quarter.

**ME1000 Preparation for Professional Engineers Registration (3-0)**
The course will cover the topics from the 8-hour Professional Examination given by the State of California for Professional Engineer. Discussion will involve applicable engineering techniques, including design and analysis of mechanical systems and components. Prerequisites: Prior passage of Fundamentals of Engineering (FE) Exam or consent of instructor. Graded on Pass/Fail basis only.

**ME2101 Engineering Thermodynamics (4-2)**

**ME2201 Introduction to Fluid Mechanics (3-2)**
Properties of fluids, hydrostatics and stability of floating and submerged bodies. Fluid flow concepts and basic equations in steady flows: mass, momentum, and energy considerations. Dimensional analysis and dynamic similitude. Viscous effects and fluid resistance. Drag and separated flow over simple bluff bodies. Prerequisites: ME 2503.

**ME2501 Statics (3-0)**
Forces and moments, particles and rigid bodies in equilibrium. Simple structures, friction, first moments and centroids. Prerequisite: MA 1115 (may be taken concurrently).

**ME2502 Dynamics (4-1)**

**ME2503 Engineering Statics and Dynamics (5-0)**
Forces and moments, equilibrium equations, statically indeterminate objects, trusses, methods of joints and sections, centroids, composites, rectilinear and plane curvilinear motion, absolute and relative motion, work and energy, virtual work, impulse and momentum, impact, system of particles, rigid body motion, moving frame, plane motion, fixed-axis rotation. Prerequisites: MA 1115 (may be concurrent).

**ME2601 Mechanics of Solids I (4-1)**
Stress-strain. Plane stress and plane strain, principal stresses, maximum shear stress, thermal stress, Mohr’s circle, axial loading, indeterminate members, pressure vessels, elastic torsion, indeterminate torsion, shear moment diagram, elastic bending, beam deflection, combined loading, theory of failure. Supporting laboratory work. Prerequisites: ME 2502 or ME 2503 and MA 1115 or equivalent.

**ME2801 Introduction to Engineering System Dynamics and Control (3-2)**
Review of system modeling principles and reduction to mathematical forms. Introduction to feedback and control, reduction of complex block diagrams to simple forms, Response of first and second order systems to standardized inputs, characteristic equations, transient response, steady state errors. Complex plane representation of open loop systems. Stability methods including Routh-Hurwitz criterion and the root locus method. Design of systems in the complex plane. Prerequisites: ME 2502 or ME 2503 and MA 1211.

**ME3150 Heat Transfer (4-1)**
Introduction to the various modes of heat transfer and their engineering applications. Steady and unsteady conduction involving the use of thermal circuit analogs, analytical, and numerical techniques. Introduction to conservation of mass, momentum and energy. External and internal forced convection fundamentals and correlation. External natural convection. Boiling. Condensation. Heat exchanger analysis and design including a design project. Thermal radiation. Prerequisites: ME 2101, ME 2201, and MA 3132 (may be taken concurrently).

**ME3201 Applied Fluid Mechanics (4-1)**
Steady one-dimensional compressible flow. Fundamentals of ideal-fluid flow, potential function, stream function. Analysis of viscous flows, velocity distribution in laminar and turbulent flows, introduction to the elements of the Navier-Stokes equations, solution of classical viscous laminar flow problems. Applications to Naval Engineering. Prerequisites: ME 2101, ME 2201, and MA 3132 (may be taken concurrently).

**ME3205 Missile Aerodynamics (4-1)**

**ME3240 Marine Power and Propulsion (4-2)**
This course provides an introduction to the basic principles of power and propulsion systems, with an emphasis on performance of platforms and weapons for naval applications. The laws of
thermodynamics and fluid mechanics are applied to analyze and
design of components and systems. The thermodynamics of simple
gas and vapor cycles are presented, including the Otto, Diesel,
Brayton and Ranking cycles, and complex and combined cycles
with intercooling, reheat, regeneration and combined cycles. The
aerothermodynamics of compressors, combustors, turbines, heat
exchangers, injectors and nozzles are presented along with preliminary
design methods, such as meanline design of turbomachinery.
Component matching and engine operation of simple gas
engines is treated. Mechanical and structural design aspects of
engine development are presented. Propeller characteristics and
propulsion/vehicle integration are presented. This course includes
laboratories on gas turbines, diesels and turbomachinery.
Prerequisites: ME2101, ME3201, ME3521, ME3201 and
ME3521 may be taken concurrently).

ME3410 Mechanical Engineering Instrumentation and
Measurement Lab (2-4)
Introduction to measurement systems, statistical analysis of data,
error analysis, uncertainty analysis, manipulation of data including
electrical readout and processing, data acquisition fundamentals and
Fourier decomposition and dynamic signals. Measurements of
temperature, pressure, velocity, flow rates. Energy balances, surface
temperature visualization, flow visualization. Measurement of
motion using accelerometers and encoders. Measurement of strain
strain and force. Operational amplifiers, analog computers, filters.
Prerequisites: ME3611, ME3801, ME3150, ME3521 (ME3150
and ME3521 may be taken concurrently).

ME3440 Engineering Analysis (4-0)
Rigorous formulation of engineering problems arising in a variety of
disciplines. Approximate methods of solution. Finite difference
methods. Introduction to finite element methods. Prerequisites:
ME2201, ME2502 or ME2503, and ME3611.

ME3450 Computational Methods in Mechanical
Engineering (3-2)
The course introduces students to the basic methods of numerical
modeling for typical physical problems encountered in solid
mechanics and the thermal/fluid sciences. Problems that can be
solved analytically will be chosen initially and solutions will be
obtained by appropriate discrete methods. Basic concepts in
numerical methods, such as convergence, stability and accuracy,
will be introduced. Various computational tools will then be applied to
more complex problems, with emphasis on finite element and finite
difference methods, finite volume techniques, boundary element
methods and gridless Lagrangian methods. Methods of modeling
cative non-linearities, such as upwind differencing and the
Simple method, will be introduced. Discussion and structural
mechanics, internal and external fluid flows, and conduction and
convection heat transfer. Steady state, transient and eigenvalue
problems will be addressed. Prerequisites: ME3150, ME3201,
ME3611.

ME3521 Mechanical Vibration (3-2)
Elements of analytical dynamics, free and forced response of single
degree and multi-degree of freedom systems. Dynamic response
using modal superposition method. Properties of stiffness and
inertia matrices, orthogonality of modal vectors, eigenvalue
problem, modal truncation, vibration isolation and suppression.
Vibration of bars, shafts, and beams. Supporting laboratory work.
Prerequisites: ME2503, ME2601, MA2121 or equivalent (may be
taken concurrently).

ME3611 Mechanics of Solids II (4-0)
Differential equations of bars, shafts and beams with Macauley
functions. Unsymmetric bending. Curved beams. Shear flow in
thin walled sections. Shear center. Torsion of thin walled open
sections. Thick walled cylinders. Energy including Castigliano and
unit dummy load methods for displacements. Statically
indeterminate systems including beams, frames, trusses, arches and
combined structures. Prerequisite: ME2601.

ME3711 Design of Machine Elements (4-1)
Design of representative machine elements with consideration
given to materials selection, tolerances, stress concentrations,
fatigue, factors of safety, reliability, and maintainability. Typical
elements to be designed include fasteners, columns, shafts, journal
bearings, spur and helical gears, and clutches and brakes. In
addition to traditional design using factors of safety against failure,
picular emphasis is placed on design for specified reliability using
probabilistic design methods. Prerequisites: ME3611.

ME3712 Capstone Design (1-6)
Design teams apply integrated and systematic design processes to
real multifunctional and multidisciplinary problems in mechanical
systems. Students develop process concepts, planning, design
methodology, material selection, manufacturing and engineering
analysis. Capstone design projects include projects provided by
industry partners as well as DoD sponsors. The scope of design
problems range across both engineering and non-engineering issues
in the integrated design process. Prerequisites: ME2801, ME3150,
ME3201, ME3450, ME3521, ME3711, MS3202, OS3104.

ME3720 Introduction to Unmanned Systems (3-2)
This course provides an overview of unmanned systems technology
and operations, including navigation, vehicle dynamics, power and
propulsion, communications, navigation, motion planning
fundamentals. Operational and design considerations for single
and multi-vehicle operations are presented. Volume and weight
limitations on payload and range are covered as are energy and
power constraints. Prerequisites: Permission of instructor.

ME3750 Platform Survivability (4-0)
This course introduces the concepts and analytical tools used in
designing and testing survivable combat platforms and weapon
systems. The applications are to a broad range of platforms and
weapons, including submarines, surface ships, fixed and rotary wing
aircraft, cruise missiles, and satellites in a hostile (non-nuclear)
environment. The technology for increasing survivability and the
methodology for assessing the probability of surviving hostile
environments are presented. Topics covered include: current and
future threat descriptions; the mission/threat analysis; combat
analysis of SEA, vulnerability reduction technology for the major
systems and subsystems; susceptibility reduction concepts,
including stealth; vulnerability, susceptibility, and survivability
assessment; and trade-off methodology. Prerequisites: None.

ME3780 Introduction to Micro Electro Mechanical Systems
Design (3-3)
This is a class introducing students to Micro Electro Mechanical Systems
(MEMS). Topics include material considerations for
MEMS and microfabrication fundamentals; Surface, bulk and
non-silicon micromachining; forces and transduction; forces in
micro- nano- domains and actuation techniques. Case studies of
MEMS based microsensor, microactuator and microfluidic devices
will be discussed. The laboray work includes computer aided
design (CAD) of MEMS devices and group design projects.
Prerequisites: EC2200, or MS2201 or PH1322 or consent of instructor.

**ME3801 Autonous Systems and Vehicle Control I (3-2)**
Study of frequency response methods for determining closed loop stability including those of Nyquist, Bode and Nichols including gain and phase margins. Compensation methods including phase lead, phase lag and PID controller design. Introduction to state space representation of Multiple-Input, Multiple-Output (MIMO) control systems. Prerequisite: ME2801.

**ME4101 Advanced Thermodynamics (4-0) As Required**
This course reviews elementary definitions, concepts and laws of thermodynamics and then extends these to cover general thermodynamics, and advanced topics. The concepts of availability, exergy, irreversibility, and general equilibrium conditions in single and multi-component systems are presented. Ideal and non-ideal solutions and chemical potential are treated along with an introduction to statistical thermodynamics and non-equilibrium concepts such as Osager's reciprocal relations. Prerequisites: ME2101.

**ME4160 Applications of Heat Transfer (4-0) As Required**
Applications of heat transfer principles to engineering systems. Design topics include heat exchangers (e.g., boilers, condensers, coolers), cooling electronic components, heat pipes, solar collectors, turbine blade cooling. Prerequisites: ME3150.

**ME4161 Conduction Heat Transfer (4-0) As Required**

**ME4162 Convection Heat Transfer (4-0) Fall**
Fundamental principles of forced and free convection. Laminar and turbulent duct flows and external flows. Dimensionless correlations. Heat transfer during phase changes. Heat exchanger analysis with Mechanical Engineering applications. Prerequisites: ME3150, ME3201, ME4220, or consent of instructor.

**ME4163 Radiation Heat Transfer (4-0) As Required**

**ME4202 Compressible and Hypersonic Flow (4-0) As Required**

**ME4211 Applied Hydrodynamics (4-0) As Required**
Fundamental principles of hydrodynamics. Brief review of the equations of motion and types of fluid motion. Standard potential flows: source, sink, doublet, and vortex motion. Flow about two-dimensional bodies. Flow about axisymmetric bodies. Added mass of various bodies and the added-mass moment of inertia. Complex variables approach to flow about two-dimensional bodies. Conformal transformations. Flow about hydro and aerofoils. Special topics such as dynamic response of submerged bodies, hydroelastic oscillations, etc. Course emphasizes the use of various numerical techniques and the relationship between the predictions of hydrodynamics and viscous flow methods. Prerequisites: ME3201.

**ME4220 Viscous Flow (4-0) Fall**

**ME4225 Computational Fluid Dynamics and Heat Transfer (3-2) As Required**
This course presents numerical solution of sets, of partial differential equations, that describe fluid flow and heat transfer. The governing equations for fluid dynamics are reviewed and turbulence modeling is introduced. Discretization techniques are applied to selected model equations and numerical methods are developed for inviscid and viscous, compressible and incompressible flows. Individual term projects include application of CFD to thesis research and to current military problems. Prerequisites: ME3201 or ME3450.

**ME4231 Advanced Turbomachinery (3-2) As Required**
The underlying principles governing flow through and energy exchange in turbomachines are developed to provide a basis for understanding both design and advanced computational methods. Key considerations and procedures followed in the design of new aircraft engine fans, compressors and turbines are introduced. Lectures are coordinated with experimental test experience at the Turbopropulsion Laboratory. Prerequisites: ME3240.

**ME4240 Advanced Topics in Fluid Dynamics (4-0) As Required**
Topics selected in accordance with the current interests of the students and faculty. Examples include fluid-structure interactions, cable strumming, wave forces on structures, free-streamline analysis of jets, wakes, and cavities with emphasis on computational fluid dynamics. Prerequisites: ME4220 and ME4211.

**ME4251 Engine Design and Integration (3-2) As Required**
The conceptual and preliminary component, subsystem, and systems design of military, or military related, airbreathing engines, along with the integration of the engine in a platform, is experienced within student design teams. The course is focused on a team response for a Request-for-Proposal (RFP) for an engine meeting specific requirements. Performance, cost, supportability, deployment, manufacturing, product quality and environmental considerations may be included in the design process. The project draws on all of the mechanical engineering disciplines. Prerequisites: ME3240.

**ME4420 Advanced Power and Propulsion (4-0) Fall**
This course presents an advanced treatment of power and propulsion topics, primarily for naval applications. Thermodynamic analysis of simple, advanced and complex cycles, such as combined and augmented cycles (e.g., RACER and STIG)
are presented along with new and direct energy conversion concepts. Design integration of single and multi-type (CODAG, CODOG, etc.) power and propulsion systems with vehicles. Engine installation considerations, including the design of auxiliary equipment and inlet/exhaust systems, are presented. Design and current research topics in fluid mechanics and rotodynamics of turbomachinery are presented. Repair, condition-based maintenance and machinery operation, including balance techniques, are discussed. Prerequisites: ME3240.

**ME4522 Finite Element Methods in Structural Dynamics (4-0) As Required**

This course provides an introduction to the principles and methods of computational structural dynamics and vibration analysis. Modern computational methods make use of the matrix structural models provided by finite element analysis. Therefore, this course provides an introduction to dynamic analysis using the finite element method, and introduces concepts and methods in the calculation of modal parameters, dynamic response via mode superposition, frequency response, model reduction, and structural synthesis techniques. Experimental modal identification techniques will be introduced. Prerequisites: ME3521.

**ME4525 Naval Ship Shock Design and Analysis (4-0) As Required**

Characteristics of underwater explosion phenomena, including the shock wave, bubble behavior and bubble pulse loading, and bulk cavitation. Surface ship/submarine bodily response to shock loading. Application of shock spectra to component design. Dynamic Design Analysis Method (DDAM) and applications to shipboard equipment design. Fluid-Structure Interaction (FSI) analysis, including Doubly Asymptotic Approximation (DAA) and surface ship FSI. Current design requirements for shipboard equipment. Prerequisites: ME3521 or equivalent.

**ME4550 Random Vibrations and Spectral Analysis (3-2) As Required**

**ME4612 Advanced Mechanics of Solids (4-0) Winter**

Selected topics from advanced mechanics of materials and elasticity. Stress and strain tensors. Governing equations such as equations of equilibrium, constitutive equations, kinematic equations and compatibility equations. Two-dimensional elasticity problems in rectangular and polar coordinate systems. Airy stress function and semi-inverse technique. Energy methods with approximate solution techniques including Rayleigh-Ritz method. Buckling of imperfect columns. Introduction to plate and shell bending theory. Prerequisites: ME3611.

**ME4613 Finite Element Methods (4-0) Fall**

Introduction to the fundamental concepts of the finite element method. Weighted residual methods and weak formulation. Element discretization concept and shape functions. Generation of element matrices and vectors, and their assembly into the matrix equation. Application of boundary and initial conditions. Isoparametric elements and numerical integration techniques. Computer programming and application to engineering problems such as boundary value, initial value and eigenvalue problems. Prerequisites: ME3611, ME3440 or equivalent or consent of instructor.

**ME4620 Theory of Continuous Media (4-0) As Required**

**ME4700 Weaponing (3-2) Spring**

Describes and quantifies methods commonly used to predict the probability of successfully attacking ground targets. Initial emphasis is on air launched weapons, including guided and unguided bombs, air-to-ground missiles, LGBs, rockets and guns. Course outlines the various methodologies used in operational products used widely in the USN, USAF and Marine Corps. Prerequisites: ME2502 or MA2121, or equivalent. Some capability in MS Excel and MATLAB, or permission of instructor.

**ME4702 Engineering Systems Risk Benefit Analysis (3-2) As Required**

This course emphasizes three methodologies, Decision Analysis (DA), Reliability and Probabilistic Risk Assessment (RPRA) and Cost-Benefit Analysis (CBA). The course is designed to give students an understanding of how these diverse topics can be applied to decision making process of product design that must take into consideration significant risk. The course will present and interpret a framework for balancing risks and benefits to applicable situations. Typically these involve human safety, potential environmental effects, and large financial and technological uncertainties. Concepts from CBA and RPRA are applied for real world problems resulting in decision models that provide insight and understanding, and consequently, leading to improved decisions. Same course as OS4010. Prerequisites: OS3104/EO4021 or equivalent course in probability, or consent of instructor.

**ME4703 Missile Flight and Control (4-1) Spring**

Static and dynamic stability and control; transient modes; configuration determinants; subsonic, transonic, supersonic force and moment data for performance calculations with short and long-range cruciform missiles and cruise missiles; acceleration, climb, ceiling, range and agility in maneuvering trajectories. Principles of missile guidance, including guidance control laws, and six-degree-of-freedom motion simulations. Additional topics are selected from the following areas to address the general interests of the class: advanced guidance laws, passive sensors, INS guidance, fire control and tracking systems. Prerequisites: ME3205 and ME2801 or equivalent.

**ME4704 Missile Design (3-2) Fall**

Conceptual missile design methodology centered around a student team design project, focused on a military need defined by a Request-for-Proposal. It stresses the application aerodynamics, propulsion, flight mechanics, cost, supportability, stability and control and provides the student with their application to design. Consideration is given to trade-offs among propulsion requirements, air loads, quality sensors, guidance laws, quality, controls, and structural components. Prerequisites: PREREQUISITE: ME3205, ME4703 or equivalent, AE4452.

**ME4731 Engineering Design Optimization (4-0) As Required**

Application of automated numerical optimization techniques to design of engineering systems. Algorithms for solution of nonlinear constrained design problems. Familiarization with available design
optimization programs. State-of-the-art applications. Solution of a variety of design problems in mechanical engineering, using numerical optimization techniques. Prerequisites: ME3450, ME3150, ME3201, ME3611.

**ME4751 Combat Survivability, Reliability, and systems Safety Engineering (4-1) As Required**
This course provides the student with an understanding of the essential elements in the study of survivability, reliability and systems safety engineering for military platforms including submarines, surface ships, fixed-wing and rotary wing aircraft, as well as missiles, unmanned vehicles and satellites. Technologies for increasing survivability and methodologies for assessing the probability of survival in a hostile (non-nuclear) environment from conventional and directed energy weapons will be presented. Several in-depth studies of the survivability various vehicles will give the student practical knowledge in the design of battle-ready platforms and weapons. An introduction to reliability and system safety engineering examines system and subsystem failure in a non-hostile environment. Safety analyses (hazard analysis, fault-tree analysis, and component redundancy design), safety criteria and life cycle considerations are presented with applications to aircraft maintenance, repair and retirement strategies, along with the mathematical foundations of statistical sampling, set theory, probability modeling and probability distribution functions. Prerequisites: Consent of instructor.

**ME4753 Risk Analysis and Management for Engineering Systems (3-2) Fall/Spring**
This course covers three areas in the risk field - Qualitative Risk Analysis, Quantitative Risk Analysis, and Decision Risk Analysis. Qualitative Risk Analysis presents techniques for risk identification/evaluation, risk handling, risk monitoring and risk management. Quantitative Risk Analysis includes Probabilistic Risk Assessment (RPRA) of system performance and project cost/schedule. Decision Risk Analysis gives the students an understanding of how to apply risk and cost benefit techniques in decision making when one must deal with significant risk or uncertainty. The course will present a framework for balancing risks and benefits to applicable situations. Typically these involve human safety, potential environmental effects, and large financial and technological uncertainties. Concepts are applied toward representative problems resulting in risk and decision models that provide insight and understanding, and consequently lead to more successful projects/programs with better system performance within cost and schedule. This is the same course as SE4353. Prerequisites: OS3180/OS3104, or equivalent graduate level course in probability, or consent of the instructor.

**ME4811 Autonomous Systems and Vehicle Control II (3-2) Fall**

**ME4812 Fluid Power Control (3-2) As Required**
Fluids and fluid flows in high-performance actuators and controllers. Power flow and fluid power elements, valve and pump control, linear and rotary motion. State space descriptions. Design of electro-hydraulic position and velocity control servo-mechanisms for high performance with stability. Prerequisite: ME3801.

**ME4821 Marine Navigation (3-2) Spring**
This course presents the fundamentals of inertial navigation, principles of inertial accelerometers, and gyroscopes. Derivation of gimbaled and strapdown navigation equations and corresponding error analysis. Navigation using external navigation aids (navaids): LORAN, TACAN, and GPS. Introduction to Kalman filtering as a means of integrating data from navaids and inertial sensors. Prerequisite: ME3801.

**ME4822 Guidance Navigation and Control of Marine Systems (3-2) Summer**
This course takes students through each stage involved in the design, modeling and testing of a guidance, navigation and control (GNC) system. Students are asked to choose a marine system such as an AUV, model its dynamics on a nonlinear simulation package such as SIMULINK and then design a GNC system for this system. The design is to be tested on SIMULINK or a similar platform. Course notes and labs cover all the relevant material. Prerequisites: ME4801 or consent of instructor.

**ME4823 Dynamics of Autonomous Vehicles (4-0) Winter**

**ME4825 Marine Propulsion Control (3-2) As Required**
Introduction to dynamic propulsion systems modeling and analysis methods. Control design specifications and design strategies. Introduction to modern control design theory and multivariable methods. Theory and applications of optimal control and discrete-time control systems. Case studies of current naval propulsion control systems. Prerequisites: ME3901, ME3240 (may be taken concurrently), and MA3132.

**ME4901 Advanced Topics in Mechanical (Aerospace) Engineering (V-V) As Required**
Advanced study in Mechanical (Aerospace) Engineering generally on a subject not covered in existing courses. May be repeated for credit with a different topic. This course number should be used to initiate new advanced courses. Prerequisite: Permission of Department Chairman and instructor. This course may not be taken on a Pass/Fail Basis.

**ME4902 Directed Study in Mechanical (Aerospace) Engineering (V-V) As Required**
Directed advanced study in Mechanical (Aerospace) Engineering on a subject of mutual interest to student and faculty member after most of a student's electives have already been taken. This is typically a "Reading" course directed by a faculty member. This course may be repeated for credit with a different topic. Prerequisite: Permission of Department Chairman and instructor. Graded on Pass/Fail basis only.

**ME5810 Dissertation Research (0-8) As Required**
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

159
MS Courses

**MS2201 Introduction to Materials Science and Engineering (3-2) Summer/Winter**
This is a first course in Materials Science and Engineering and emphasizes the basic principles of microstructure-property relationships in materials of engineering and naval relevance. Topics include crystalline structure and bonding, defects, thermodynamics and kinetics of reactions in solids, deformation, strengthening mechanisms and heat treatment. Students will acquire a working vocabulary and conceptual understanding necessary for advance study and for communication with materials experts. Prerequisites: Undergraduate courses in calculus, physics and chemistry.

**MS3202 Properties, Performance and Failure of Engineering Materials (3-2) Fall/Spring**
The purpose of this course is to advance the students' understanding of the fundamentals of materials science, while putting that understanding in the context of the behavior of materials in engineering applications. Contemporary developments in engineering materials such as composites, ceramics and polymers are considered, as well as traditional engineering alloys such as steels and aluminum alloys. Performance and failure histories of materials in service will be studied, as well as conventional textbook subjects. Examples pertinent to Naval, Aero and Combat Systems Science are emphasized. Topics include mechanical properties, fracture, fatigue, failure analysis and corrosion. Prerequisites: MS2201 or equivalent or consent of instructor.

**MS3203 Structural Failure, Fracture and Fatigue (3-2) As Required**
Theories of yield and fracture for aircraft design limit loads and ultimate loads; stress-life and strain-life fatigue theories of crack initiation in aircraft structures subjected to realistic flight load spectra, using Neuber's approximation and incorporating the Miner concept of cumulative damage. Fatigue crack propagation concepts and Navy methods of fleet structural fatigue tracking and monitoring. Prerequisites: MS3202, ME2601.

**MS3214 Intermediate Materials Science and Engineering (4-0) As Required**
The purpose of this course is to provide a bridge between the introductory courses in materials science, MS2201 and MS3202, and the 4000 level elective courses in materials science. The emphasis is on a deepening of understanding of basic principles which govern the behavior of solid materials. Principles of physical metallurgy and the physics of materials will be considered in detail. Topics include thermodynamics of solids, electronic structure of alloys, lattice stability, phase equilibria, diffusion, dislocation theory, deformation mechanisms and an introduction to the kinetics of phase transformations. The course is intended to show how the application of basic principles leads to clearer understanding and control of the behavior and properties of contemporary materials. Prerequisites: MS2201 and MS3202 or equivalent or consent of instructor.

**MS3304 Corrosion and Marine Environmental Deterioration (3-2) Spring**
The fundamentals of corrosion science and the practice of corrosion engineering are discussed. The objectives include an appreciation of the varied causes, mechanisms and effects of corrosion. Fundamental topics such as basic electrochemistry, polarization and passivity are covered. A primary goal of the course is the development of skill in the recognition and prevention of a wide variety of types of corrosion. Standard methods of corrosion control are discussed, including cathodic protection, coatings, alloy selection and inhibitors. Prerequisites: MS2201 or equivalent or consent of instructor.

**MS3606 Introduction to Welding and Joining Metallurgy (3-2) Fall**
Welding and joining are presented from the point of view of metallurgy. Topics include the nature and applications of welding and joining processes; the welding thermal cycle; metallurgical effects of the welding thermal cycle; welding and joining of steels, aluminum alloys, stainless steels and heat-resistant alloys. Also, weldment inspection and quality assurance are introduced. Prerequisites: MS2201 and MS3202 or consent of instructor.

**MS4215 Phase Transformations (3-2) Winter**
The mechanisms and kinetics of structural changes in solid materials are considered in detail. A wide variety of transformation mechanisms are studied, including solidification, recrystallization, precipitation and martensitic transformation. The basic principles which govern these reactions are developed, including principles of nucleation and growth, diffusion and lattice distortion. The relevance of various transformations to practical heat treatment, thermomechanical processing, and technological advances is discussed. Microstructural recognition and methods of monitoring phase transformations are included. Changes in properties resulting from phase transformations are given limited attention. Prerequisites: MS3214 or equivalent or consent of instructor.

**MS4312 Characterization of Advanced Materials (3-2) Spring**
This course is structured to provide an insight into the various tools available for advanced physical examination of engineering materials. Topics covered include X-ray diffraction and optical, scanning, transmission and scanning transmission electron microscopies. Prerequisites: MS3202 or consent of instructor.

**MS4511 Mechanical Behavior of Engineering Materials (4-0) Summer/Fall**
The response of structural materials to stress is discussed, including elastic and plastic deformation and fracture. Topics include elastic response and the modules of elasticity; plasticity; deformation mechanisms and dislocation theory; strengthening mechanisms; and fatigue and fracture. Application to materials development is also considered. Prerequisites: MS3202, and MS3214 or consent of instructor.

**MS4822 The Engineering and Science of Composite Materials (4-0) As Required**
This course focuses on the structure-property correlation in composites utilizing a multi-disciplinary approach, covering the areas of materials science and engineering and solid mechanics. Emphasis is given to the theoretical constitutive behavior at the micro- and macro-levels, as well as on how such behavior can be altered by processing and service variables. The course is divided into three broad parts: (1) Theoretical predictions of composite properties; (2) Materials issues (including processing) complicating accurate performance prediction; and (3) Thermo-mechanical behavior in actual service conditions. Prerequisites: ME3611, MS3202 or equivalent.
MX Courses

MX2001. Introduction to Physics-Based Modeling and Simulation (4-0)
This course is intended for DoD non-technical acquisition professionals who do not have engineering or science degrees so that they can obtain a general understanding of key M&S capabilities necessary for design, analysis, and maintenance of engineering systems. The course will introduce basic concepts in the modeling of engineering systems. The steps involved in the idealization of systems to produce a "computable" model will be discussed. Examples will involve structural, thermal, fluid, and electrical aspects. Fundamental physical quantities such as rates of change, (e.g. acceleration, stress) and force will defined heuristically. The simulation of simple physical processes (e.g. falling object) will be described. No computer programming is required. Spatial discretization, finite difference and finite element methods will be introduced. This course may not be used to fulfill ME/AE degree program requirements. Prerequisites: None.

MX3001. Basic Engineering Concepts in Modeling & Simulation I (4-0)
This course will provide introductory concepts of various engineering topics to DoD non-technical acquisition professionals who do not have engineering or science degrees so that they can obtain a general understanding of key M&S capabilities necessary for design, analysis, and maintenance of engineering systems. The topics covered in the course include structural mechanics, shock & vibrations, fluids, heat transfer & thermodynamics, dynamics and controls, and materials and fabrication. Upon completion, students should have basic understanding of the wide range of engineering concepts that are essential for physics-based engineering modeling and simulation. This course may not be used to fulfill ME/AE degree program requirements. Prerequisite: MX2001.

MX3002. Overview of Computers, Weapons Platforms and Electrical Systems (4-0)
This course will provide introductory concepts of various engineering topics to the DoD Modeling and Simulation workforce member supporting Defense Acquisition so that they can obtain a general understanding of key M&S capabilities necessary for design, analysis, and maintenance of computers, weapons platforms, and Electrical engineering systems. The topics covered in the course include wave propagation, modeling and simulation approaches to complex system design and assessment, fundamentals of computer software and its limitations, basic concepts in electrical engineering and electrical machinery, and the fundamental issues involved in C4ISR systems. Upon completion, students should have basic understanding of the wide range of engineering concepts that are essential for physics-based engineering M&S. This course may not be used to fulfill ME/AE degree program requirements. Prerequisites: MX2001, MX3001.

MX4000. Selected Topics in the Application of Engineering Modeling & Simulation (4-0)
This course provides the DoD acquisition professional with an overview of how typical engineering modeling and simulation applications support the acquisition process. A systematic approach will be used to demonstrate the function of physics-based modeling and simulation in the design, production, operation and maintenance of complex systems. The course is broken into four general topic areas that address specific engineering features related to land vehicle systems, sea based systems, aviation systems and space-satellite systems. Investigations into the feasibility, utility, and risk of engineering modeling and simulation in each of these focus areas will be highlighted through the use of engineering case studies. Upon completion of this course, students should have a general awareness of engineering modeling and simulation applications in support of the acquisition lifecycle. This course may not be used to fulfill ME/AE degree program requirements. Prerequisites: MX2001, MX3001, MX3002.

TS Courses

TS3000. Electrical Power Engineering (3-2) As Required
An overview of the principles, concepts and trade-offs which form the foundation for ships' electric power systems. The composition of electrical power systems for present and future Navy vessels is presented. Theory necessary to understand interactions among shipboard electric power system components is discussed. The interactions between the electric power system and the various types of loads is introduced. Prerequisites: None.

TS3001. Fundamental Principles of Naval Architecture (3-2)
Summer/Winter
The geometry, hydrostatics and hydrodynamics of monohull and other floating and submerged bodies; Froude similarity; wave and skin friction resistance; powering determination. Longitudinal and transverse stability of floating bodies. Hull girder strength. Introduction to seakeeping and passive survivability principles. Prerequisites: ME2201, ME2601 or consent of instructor.

TS3002. Principles of Ship Design and Case Studies (3-2) As Required
Systems engineering in the design of complex systems; systems architecture and interface engineering and the Navy design environment. The systems development process, including need identification, requirements, feasibility determination, risk reduction, contract and detailed design. The iterative, multilevel ship design process, with affordability as a fundamental feature; modern ship design and construction methods, systems engineering techniques and tools. Case studies, ship design trends, design exercises and illustrations. Prerequisites: TS3001.

TS3003. Naval Combat System Elements (3-2) As Required
This course will cover combat system detection and engagement elements. This includes radar, ESM, active and passive sonar, infrared, warheads, guns, missiles, torpedoes, fire control and countermeasures. The emphasis will be on what the elements contribute to a combat system, their basic principles of operation, their performance limitations, and their interfaces with the rest of the combat system. Details on specific elements and systems will be limited to those needed to illustrate basic principles and interactions affecting systems engineering. Prerequisites: ME2503, or equivalent or consent of instructor.

TS4000. Naval Combat System Engineering (3-2) As Required
Spring
Covers the definition and integration of naval combat systems. The emphasis will be on how the various detection, engagement, and control elements interact with each other and on how to combine them into an efficient and survivable combat system. Also addressed will be topside arrangements, signature reduction, readiness assessment, embedded training, and support system interfaces. Prerequisites: TS3000, TS3003.

TS4001. Integration of Naval Engineering Systems (3-2)
A system-oriented approach to integrating the principles of Naval Architecture and Marine Engineering in the design of ship...
subsystems. Lectures and projects exploring engineering design tools and analysis methods to meet specified systems requirements are used. Projects on hull, mechanical and electrical ship systems design are emphasized. The impact of systems design on other systems and subsystems and on the ship, including affordability, military effectiveness and survivability at the whole ship level are considered. Prerequisites: TS3000, TS3001, TS3002.

**TS4002  Ship Design Integration (2-4) Summer**

The ship-impact of requirements/cost/performance tradeoffs within technical and acquisition constraints. Conversion of broad military requirements to mission-based ship requirements and specific tasks resulting from those requirements. Exploration of alternative methods of satisfying requirements, leading to combat systems (payload) definition. Conduct of feasibility studies to investigate whole-ship alternatives which meet requirements. Selection of a best design approach. Design considerations for unusual ship types and an assessment of future Navy ship and combat systems needs and trends. Prerequisites: TS4001 and TS4000.

**TS4003  Total Ship Systems Engineering (2-4) Fall**

The design of a Naval vessel as a single engineering system satisfying mission requirements, with emphasis on affordability and survivability. The interaction and interfacing of various subsystems such as hull, propulsion, and combat systems will be explored through a joint ship “preliminary design” project to produce a balanced ship design based on the alternative chosen from feasibility studies conducted in TS4002. Concepts of design optimization within constraints. Prerequisites: TS4002.

### Engineering Modeling and Simulation Certificate- Curriculum 279

**Program Manager**

Knox Millsaps  
Watkins Hall, Room 338  
(831) 656-3382, DSN 756-3382  
millsaps@nps.edu

**Brief Overview**

The Engineering Modeling & Simulation certificate is comprised of four courses (MX-2001, MX-3001, MX-3002 and MX-4000). Upon completion of this certificate program, students will be awarded a certificate of completion from the Naval Postgraduate School. The Engineering Modeling & Simulation Certificate program is targeted primarily at personnel in the DoD Acquisition Workforce but has great benefit for all students who seek further knowledge regarding the application of physics-based modeling and simulation in support of the acquisition lifecycle.

**Requirements for Entry**

For entry, the student must have a baccalaureate degree with a Minimum APC or 334.

**Program Length**

Four quarters.

### Graduate Certificate Requirements

To earn the academic certificate students must pass all four courses with a C+ (2.3 Quality Point Rating (QPR)) or better in each course and an overall QPR of 3.0 or better. Students earning grades below these standards will need to retake the courses to bring their grades within standards or they will be withdrawn from the program.

**Required Courses**

**Quarter 1**

| MX2001 (4-0) | Introduction to Physics-Based Modeling and Simulation |

**Quarter 2**

| MX3001 (4-0) | Basic Engineering Concepts in Modeling & Simulation I |

**Quarter 3**

| MX3002 (4-0) | Overview of Computers, Weapons Platforms and Electrical Systems |

**Quarter 4**

| MX4000 (4-0) | Selected Topics in the Application of Engineering Modeling & Simulation |

### Naval/Mechanical Engineering - Curriculum 570

**Program Officer**

Joe Keller, CDR, USN  
Code 74, Watkins Hall, Room 107A  
(831) 656-2033, DSN 756-2033  
jjkeller@nps.edu

**Academic Associate**

Joshua H. Gordis, Ph.D.  
Code ME/Go, Watkins Hall, Room 313  
(831) 656-2866, DSN 756-2866  
jgordis@nps.edu

**Brief Overview**

The objective of this program is to provide graduate education, primarily in the field of Naval/Mechanical Engineering, in order to produce graduates with the technical competence to operate and maintain modern warships and naval systems. It establishes a broad background of basic engineering knowledge leading to advanced studies in heat transfer, fluid mechanics, control systems, solid mechanics and vibrations and material science. The graduate will be able to participate in technical aspects of naval systems acquisition for technological advances in naval ships and systems. Through emphasis on the design aspect within the
program, the graduate will be well prepared to apply these advances in technology to the warships of the future. An original research project resulting in a finished thesis is an integral part of the curriculum.

**Requirements for Entry**

A baccalaureate degree or its equivalent is required, preferably in an engineering discipline. A minimum academic profile code (APC) of 323 is required (334 with one quarter refresher). This equates to a minimum grade point average of 2.20, with mathematics through differential and integral calculus and one year of calculus-based physics as non-waiverable requirements. The program is open to naval officers in the rank of LTJG through LCDR in the 11XX/14XX community, equivalent grade officers of other U.S. services and qualified foreign military officers. DoD employees are also eligible.

**Entry Date**

Naval/Mechanical Engineering is typically an eight-quarter program with preferred entry dates in March or June. Time in residence may be reduced by course validations depending on the officer's specific academic background. If further information is needed, contact the Program Officer or the Academic Associate.

**Degree**

Requirements for the Master of Science in Mechanical Engineering degree are met as a milestone en route to satisfying the educational skill requirements of the curricular program.

**Subspecialty**

Completion of this curriculum qualifies an officer as a Naval/Mechanical Engineering Specialist with a subspecialty code of 5601P. The curriculum sponsor is Naval Sea Systems Command. A limited number of particularly well qualified students may be able to further their education beyond the master’s degree and seek the degree of Mechanical Engineer and a 5601N Subspecialty Codes.

**Typical Subspecialty Billets**

Upon award of the 5601P/5602P subspecialty code, the officer becomes eligible for assignment to those billets identified as requiring graduate education in Naval/Mechanical Engineering. Typical of these billets are the following:

- Industrial Activities - Shipyard, SUPSHIP, Ship Repair Facility, SIMA
- Mechanical Engineering Instructor, USNA
- Tender Repair Officer (Engineering Duty Officer)
- Fleet/Type Commander Staff
- Board of Inspection and Survey
- Propulsion Examining Board
- OPNAV/NAVSEA

Total Ship Systems Engineering (Under Department of Mechanical and Aerospace Engineering)

Program Director
Fotis A. Papoulias
Code ME/PA, Watkins Hall, Room 323
(831) 656-3381, DSN 756-3381
papoulias@nps.edu

Total Ship Systems Engineering

The objective of this program is to provide a broad-based, design-oriented education focusing on the warship as a total engineering system, including hull, mechanical, electrical and combat systems. The program is for selected Naval/Mechanical Engineering, Electrical Engineering, and Combat Systems Sciences and Technology students and is structured to lead to the MSME, MSEE, or MS in Physics. Entry to the Total Ship Systems Engineering program is through the standard 533/570/590/591 curricula.

Entry Date

Total Ship Systems Engineering will generally fit as part of an eight-or nine-quarter program, with TSSE elective commencing in October. The ease of accommodating TSSE in a student's program is influenced by the student's NPS entry quarter and undergraduate background and performance. Individuals interested in the program should explore the necessary course sequencing with the program officer or academic associate as early as possible.

Subspecialty

Completion of this program will contribute toward the graduates' subspecialty code within his/her designated curriculum. The student will also receive the 5602P subspecialty code for completion of the TSSE Program.

Typical Subspecialty Jobs

Upon award of the subspecialty code, a Naval officer would be eligible for assignments typical of the Navy P-Code. The expectation is that the combination of education and experience would lead to individuals qualified for assignment later in their career to more responsible positions in systems design and acquisition in NAVSEA, SPAWAR and OPNAV, and as Program Managers.

Educational Skill Requirements (ESR)

Naval/Mechanical Engineering - Curriculum 570
Subspecialty Code: 5601P

Officers entering into the Naval/Mechanical Engineering curriculum will be offered the necessary preparatory level
courses to enable them to satisfy the equivalent of a baccalaureate degree in Mechanical Engineering. They shall meet, as a minimum, the requirements set forth by the Accreditation Board for Engineering and Technology (ABET). At the graduate level, the officer will acquire the competence to participate in technical aspects of naval systems research, design, development, maintenance and acquisition. The background to deal with future advances is gained through the emphasis on design and a combination of the core program requirements, specialization and thesis research. In pursuit of the above, the goal is for each officer to acquire a senior/upper division level physical and analytical understanding of the topics below. It is recognized that all students may not meet all ESRs, depending on individual circumstances determined by the Program Officer and the academic associate. However, each student will be exposed to fundamentals in all ESR areas.

1. **Thermodynamics and Heat Transfer**: Fundamentals of thermodynamics and heat transfer with applications to all marine engineering power cycles, as well as propulsion and auxiliary system cycle analysis and design.

2. **Fluid Mechanics**: Compressible and incompressible flow, both viscous and inviscid, with emphasis on propellers, cavitation, and design of shipboard fluid systems (e.g., fluid machinery, pumps, turbo-machinery).

3. **Dynamics and Control**: Kinematics and dynamics of particle, rigid-body and multi-body mechanical systems. Modeling and simulation of engineering systems with mechanical, electrical and hydraulic components. Feedback control concepts, both frequency response and time domain, with applications to the design of component, platform, and weapon systems. Control of systems with continuous, discrete and combined logic states. Navigation and control for single and network-centric systems. Design of intelligent systems for machinery monitoring and automation, as well as autonomous vehicle operations.

4. **Structural Mechanics and Vibration**: Statically determinant and indeterminate structural analysis, stress/strain analysis, buckling and fatigue. Shock and vibration response of marine structures, including surface ships and submarines.

5. **Materials and Fabrication**: Metallurgical processes and transformations; analytical approach to failure of materials in Naval Engineering use and a basic understanding of the materials technology associated with welding and marine corrosion; an introduction to the developing fields of composites and superconducting materials.

6. **Computers**: A basic understanding of computer system architecture, operating systems (such as UNIX), networking and introduction to engineering software design. Practical experience of structured programming languages (such as FORTRAN, C), and the use of integrated design tools for computational and symbolic manipulation (such as MATLAB and Maple). Use and application of mainframe, workstation and personal computers for the solution of naval engineering design and analysis tasks. Exposure to finite element and finite difference tools and techniques, with application to the thermo-fluid and structural mechanics/dynamics areas, including experience with representative software packages.

7. **Mathematics**: Sufficient mathematics, including integral transforms and numerical analysis, to achieve the desired graduate education.

8. **Design/Synthesis**: Design synthesis and introduction to optimization techniques, with emphasis on the design of mechanical subsystems and their integration into the ship system.

9. **Electrical Engineering**: Electromagnetic and circuit theories, DC circuits, steady-state AC circuits, methods of circuit analysis, including Laplace transforms. Exposure to the construction and operating characteristics of rotating machinery, static converters, and power distribution systems and multiphased circuits.

10. **Naval Architecture**: Fundamentals of naval architecture including the geometry, hydrostatics and hydrodynamics of monohull floating and submerged structures. Wave and skin friction analysis, power requirements of particular designs. Longitudinal and transverse stability of floating and submerged bodies, hull girder strength requirements. Introduction to sea keeping and survivability principles.

11. **Specialization**: Through additional graduate level courses and their associated prerequisites, each officer will also acquire technical competence in one or more of the following areas: thermal/fluid sciences, solid and structural mechanics, dynamics and controls, material science, or total ship systems engineering.

12. **Joint and Maritime Strategic Planning**: American and world military history and joint and maritime planning, including the origins and evolution of national and allied strategy; current American and allied military strategies which address the entire spectrum of conflict; the U.S. maritime component of national military strategy; the organizational structure of the U.S. defense establishment; the role of the commanders of unified and specified commands in strategic planning, the process of strategic planning;
joint and service doctrine, and the roles and missions of each in meeting national strategy.

13. **Thesis**: The graduate will demonstrate the ability to conduct independent research in the area of Naval/Mechanical Engineering, and proficiency in presenting the results in writing and orally by means of a thesis and command-oriented briefing appropriate to this curriculum.

**Naval Reactors-Mechanical/Electrical Engineering Program - Curriculum 571**

jgordis@nps.edu

**Brief Overview**
The objective of this special program is to provide both naval officers and civilian employees of Naval Reactors (NR), an advanced education leading to a Master of Science in Engineering Science with major in either Mechanical or Electrical Engineering. This is a non-thesis program for individuals who work as engineers and who wish to pursue a master’s degree via Distance Learning. The program sponsor is NAVSEA and the subject matter expert is SEA-08.

**Requirements for Entry**
Entrance into this program is restricted to individuals who have successfully completed the Bettis Reactor Engineering School (BRES). Further requirements include an Academic Profile Code of 121. All entrants must be nominated for the program by the designated program coordinator and primary consultant for Naval Reactors.

The nomination to the Director of Admissions must include original transcripts of the student’s undergraduate and BRES records. The Director of Admissions will provide copies of all records to the Academic Associate in Mechanical or Electrical Engineering depending on the degree the student is pursuing.

**Entry Date**
Students usually enter this program at the beginning of the academic quarter following completion of the BRES. Application for entry is to be made through the program coordinator and primary consultant for Naval Reactors. The program is also available to civilian employees of Naval Reactors who have completed BRES. For further information, contact the Academic Associate, or the Primary Consultant for this program.

**Degree Requirements for Mechanical Engineering**
The student must complete 20 hours of advanced graduate level (ME4XXX) NPS courses. This requirement may be met by completing a sequence of five courses via Distance Learning in a program approved by the Chairman of the Department of Mechanical and Aerospace Engineering. There are two (2) technical tracks, one in the Fluids/Thermal/Propulsion area and the other in Solids/Structures/Vibrations. A minimum of four (4) of the courses must be from one track or the other. This Master of Science in Engineering Science (Major in Mechanical Engineering) program may be completed in five academic quarters following completion of BRES.

**Degree Requirements for Electrical Engineering**
The student must complete 28 hours of graduate level (EC3XXX and EC4XXX) NPS courses. This requirement may be met by completing a sequence of seven courses via Distance Learning in a program approved by the Chairman of the Department of Electrical and Computer Engineering. This Master of Science in Engineering Science (Major in Electrical Engineering) program may be completed in seven academic quarters following completion of BRES.

**Credit for Completion of BRES**
This program is designed to build upon the BRES courses and the power plant design experience. The following BRES courses are considered as integral to this program and equivalent to 16 credit hours of ME3XXX level NPS courses:
- BRES 200 Mathematics
- BRES 340 Applied Structural Mechanics
- BRES 350 Heat Transfer and Fluid Flow
- BRES 360 Reactor Dynamics, Control and Safeguards

In addition, BRES 370 Reactor and Power Plant Design Project is considered partially in lieu of a thesis.
The NPS transcript will include 16 credits for the BRES program. The Quality Point Rating (QPR) for the NPS transcript will be computed based only on the NPS courses completed by the student.

**Subspecialty**
Graduates of BRES earn a Navy Subspecialty Code of 5200, which applies to their reactor design training. This Naval Postgraduate School curriculum will not affect that subspecialty code nor provide any additional subspecialty code(s).

**Typical Course of Study**
Upon entry into the program students will typically enroll in one course per quarter, to be taken via Distance Learning. All requirements must be completed within three calendar years from entry. Students will select a program of study from available courses and submit a program for approval by the Chairman of Mechanical or Electrical Engineering.

**Educational Skill Requirements (ESRs)**

**Reactors - Mechanical or Electrical Engineering Program - Curriculum 571**

**Subspecialty Code:** None

The ESRs required by Naval Reactors are met upon completion of the BRES. This is a degree program only, leading to the Master of Science in Engineering Science with Major in Mechanical or Electrical Engineering.

**Distance Learning Program in Mechanical Engineering for Nuclear Trained Officers - Curriculum 572**

**Primary Consultant**
Mr. Robert C. Gibbs  
Director, Management and Administration  
Naval Sea Systems Command  
NAVSEA 08B-MA Attn R Gibbs  
1240 Isaac Hull Ave SE Stop 8015  
Washington Navy Yard, DC 20376-8015  
(202) 781-6004

**Academic Associate**
Joshua H. Gordis, Ph.D.  
Code ME/Go, Watkins Hall, Room 313  
(831) 656-2866, DSN 756-2866, FAX (831) 656-2238  
jgordis@nps.edu

**NPS Distinct Learning Office, PACNORWEST**
2000 Thresher Ave., Room G-101  
Silverdale, WA 98215  
(360) 315-2803; FAX (360) 315-2516  
msesmedl@nps.edu

**Brief Overview**
This special program provides the opportunity for nuclear trained naval officers (those who have successfully completed Naval Nuclear Power School, Officers Course) to obtain a Master of Science in Engineering Science with a major in Mechanical Engineering - MSES(ME), while on deployment. This is a non-thesis program, but a capstone research or design project is required, along with a presentation, which is generally done via VTC or Video. This is a distance learning program, with content offered via two-way video at the Trident Training Facility in Bangor, WA or via streaming video, selected courses are available as asynchronous packages, and other DL or resident courses available through partner institutions, as described below. For more information, see: www.nps.edu/mae/dl/nuc.

**Requirements for Entry**
Admission into this program is restricted to individuals who have successfully completed the Officer's Course at the Naval Nuclear Power School (NNPS). Further requirements include a minimum Academic Profile Code of 323 and a B.S. in Engineering. All entrants must be nominated by their commands. The nomination to the Director of Admissions must include original transcripts of the student's undergraduate records.

**Entry Date**
Students may enter this program in any quarter. However, specific courses are subject to availability.

**Degree Requirements for Mechanical Engineering**
NPS courses may be taken via VTC or streaming video, or special asynchronous courses packages have been developed so that this program may be completed while you are deployed. In addition up to twelve (12) equivalent quarter-credits can be obtained from a partner institution, which currently include the University of Washington (UWa) and Georgia Tech (GT). Graduate courses from GT/UWa are generally considered to be ME4000 level equivalents. The final two (2) quarters are devoted to a capstone research or design project and presentation, and the student must register for ME0810 during these quarters. A
degree plan must be submitted and pre-approved by the Chairman of the Department of Mechanical and Aerospace Engineering. This special program fully considers the 28.5 quarter credits earned in NNPS, and therefore none of these credits may be used to fulfill the degree requirements. This program may be completed in two (2) years.

Subspecialty
This is a degree program only and does not provide an additional subspecialty code.

Typical Course of Study

Quarter 1
ME3201 (4-1) Applied Fluid Mechanics (Asynchronous)

Quarter 2
ME3150 (4-1) Heat Transfer (Asynchronous)

Quarter 3
ME4220 (4-0) Viscous Flow (Asynchronous)

Quarter 4
ME4162 (4-0) Convection Heat Transfer (Asynchronous)

Quarter 5
ME4161 (4-0) Conduction Heat Transfer (Asynchronous)

Quarter 6
ME 4420 (4-0) Marine Power and Propulsion (Asynchronous)

Quarter 7
ME0810 (0-8) Research/Design Paper

Quarter 8
ME0810 (0-8) Research/Design Paper

Department of Meteorology

Michael M. Bell, Research Assistant Professor (2007)*;
M.S., Colorado State University, 2006.

Hway-Jen Chen, Research Associate (2000); M.S.,
University of California - Los Angeles, 1993.

Chih-Pei Chang, Distinguished Professor (1972); Ph.D.,
University of Washington, 1972.

Philip A. Durkee, Professor (1984); Ph.D., Colorado State
University, 1984.

Russell L. Elsberry, Distinguished Research Professor
(1968); Ph.D., Colorado State University, 1968.

Paul A. Frederickson, Research Associate (1999); M.S.,
University of Maryland, 1989.

Peter S. Guest, Research Professor (1992); Ph.D., Naval

Joshua Hacker, Associate Professor (2009); Ph.D.
University of British Columbia.

Patrick A. Harr, Professor (1989); M.S., Colorado State

Mary S. Jordan, Research Associate (1999); M.S., Naval

Michael T. Montgomery, Professor (2006); Ph.D., Harvard,
1986.

Richard W. Moore, Research Assistant Professor (2008);
Ph.D., Colorado State University, 2004.

James T. Murphree, Research Associate Professor (1991);
Ph.D., University of California at Davis, 1989.

Kurt E. Nielsen, Research Associate (1999); M.S.,

Andrew Penny, Research Associate (2009); M.S. University
of Arizona.

Qing Wang, Professor and Associate Chair for Research
(1995); Ph.D., Pennsylvania State University, 1993.
Professors Emeriti:

Kenneth L. Davidson, Professor (1970); Ph.D., University of Michigan, 1970.

Russell L. Elsberry, Distinguished Professor (1968); Ph.D., Colorado State University, 1968.

George W. Haltiner, Distinguished Professor Emeritus (1946); Ph.D., University of Wisconsin, 1948.

Robert L. Haney, Professor Emeritus (1970); Ph.D., University of California at Los Angeles, 1971.

Robert J. Renard, Distinguished Professor Emeritus (1952); Ph.D., Florida State University, 1970.

Carlyle H. Wash, Professor (1980); Ph.D., University of Wisconsin, 1978.

Forest Williams, Senior Lecturer Emeritus (1975); M.S., Naval Postgraduate School, 1962; M.S., Massachusetts Institute of Technology, 1972.

Roger T. Williams, Professor (1968); Ph.D., University of California at Los Angeles, 1963.

Willem van der Bijl, Professor, Ph.D. (1961), State University, Utrecht, Netherlands, 1952

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

Brief Overview

The Department of Meteorology's history dates back to the 1940s when it was part of the Postgraduate Department at the Naval Academy. The department's academic function is interdisciplinary in nature in that it supports separate Master of Science Degree programs: Meteorology, Meteorology and Physical Oceanography, and Oceanography; and, provides courses for the Space Systems, Undersea Warfare, Information/Electronic Warfare, and Joint Command, Control, Communications, Computers and Intelligence (C4I) curricula. Offerings in the Special Operations and Joint Warfare Analysis are under development.

Department academic strengths include air/ocean dynamics and numerical modeling and prediction, structure and dynamics of the atmospheric boundary layer, satellite remote sensing and its applications and synoptic meteorology, including analysis and prediction in tropical, mid-latitude, and polar regions in both hemispheres. More than forty courses are offered in meteorology, primarily at the graduate level. The department has Nineteen faculty (8 tenure track, 11 non-tenure track, two military, and five emeritus), with graduate student participation as research-team members through the M.S. thesis and Ph.D. dissertation process. The current areas of research concentration encompass numerical and analytic air/ocean modeling and prediction, tropical meteorology (including monsoon circulations and tropical cyclone dynamics and forecasting), coastal meteorology and oceanography, climate dynamics, marine boundary layer studies with emphasis on air/sea interactions and electromagnetic/optic propagation, remote sensing/satellite meteorology and a wide range of synoptic studies (e.g., regional studies, maritime cyclogenesis, short range forecasting, and numerical-model verification). The Ph.D. program in the department is active with Navy officers, Air Force officers, DoD civilians and international officers among its recent graduates.

Degree

A student is able to earn an academic degree listed below while enrolled in Meteorology (Curriculum 372) and Meteorology and Oceanography (Curriculum 373).

Master of Science in Meteorology

Entrance to a program leading to a Master of Science in Meteorology degree requires a baccalaureate degree with completion of mathematics through differential and integral calculus and a minimum of one year of college physics.

The Master of Science in Meteorology degree requires completion of:
1. Necessary prerequisite courses in mathematics (through partial differential equations) and meteorology,
2. The sequence of core courses in the fields of dynamical, numerical, physical and synoptic meteorology,
3. An approved selection of graduate elective courses,

The total number of quarter-hours in (2) and (3) above must be at least 36. These 36 hours must include 18 quarter-hours at the 4000 level in courses other than directed study.

Master of Science in Meteorology and Physical Oceanography

Direct entrance to a program leading to the Master of Science in Meteorology and Physical Oceanography degree requires a baccalaureate degree in one of the physical sciences, mathematics or engineering. This normally permits the validation of a number of required undergraduate courses such as physics, differential equations, linear algebra, vector analysis, and various courses in meteorology and/or oceanography which are prerequisites to the graduate program. These prerequisites may be taken at the Naval Postgraduate School; however, in that event, the program may be lengthened by one or more quarters.
The Master of Science in Meteorology and Physical Oceanography degree requires completion of:

1. Necessary prerequisite courses in mathematics (through partial differential equations), meteorology, and physical oceanography,
2. The sequence of core courses in the fields of dynamical, numerical, physical and synoptic meteorology and oceanography,
3. An approved selection of graduate elective courses in meteorology and oceanography,
4. A significant educational experience in the field using instruments.
5. An acceptable thesis on a topic approved by the department.

The total number of quarter-hours in (2) and (3) above must be at least 48. These 48 hours must include 20 hours at the 4000 level in courses other than directed study, and they should show an approximate balance between the disciplines of meteorology and oceanography.

**Dual Degree in Meteorology and Physical Oceanography**

The Meteorology and Oceanography Departments have adopted a policy to not recommend the award of dual master's degrees in Meteorology and Physical Oceanography.

**Doctor of Philosophy**

The Ph.D. program is offered in the Department of Meteorology in the following areas of study: numerical weather prediction, geophysical fluid dynamics, boundary-layer meteorology, analysis of atmospheric systems and tropical meteorology.

The requirements for the degree are grouped into three categories: course work, research in conjunction with an approved dissertation and examination in both the major and, if elected, a minor field. The minor field is usually in physical oceanography, mathematics or physics.

The Department of Meteorology also may require a preliminary examination to show evidence of acceptability as a doctoral student.

Prospective students should consult with the Chairman of the Department of Meteorology for further guidance regarding doctoral programs.

**Laboratories**

As described below, the department is served by four major laboratory facilities: An interactive computer lab, a synoptic meteorology lab, a meteorological measurements lab, and a tactical applications lab.

The Interactive Digital Environmental Analysis (IDEA) Laboratory, which is shared with Oceanography, provides real-time acquisition and analysis of conventional and remotely-sensed data in support of the synoptic and physical meteorology and oceanography programs. The laboratory consists of 32 image analysis and graphics workstations. The laboratory accesses real-time GOES, NOAA, Navy (FNMOC), and DMSP data for use in instruction and research.

The department has developed a modern Synoptic Analysis and Forecasting Laboratory which receives environmental products and observations for instruction on the preparation of real-time weather analyses and forecasts. Fleet Numerical Meteorology and Oceanography Center (FNMOC) and the National Center for Environmental Prediction (NCEP) weather analysis and forecast products are received through a variety of channels that include the Navy Oceanographic Data Distribution System (NODDS), UNIDATA, GOESTAP, PC-based DIFAX facsimile, and the World-Wide Web. UNIX workstations and PC-based systems provide multiple software capabilities for displaying, animating, and visualizing current weather observations, satellite images, radar observations, and numerical model products obtained from FNMOC, NCEP or generated locally.

The Marine Atmospheric Measurements Laboratory utilizes in-situ and remote sensing instrumentation systems for both teaching and research. Instrumentation includes: A 405 MHz and 915 MHz Doppler radar wind profiler with radio acoustic sounding system (RASS); rawinsonde systems with GPS and LORAN navigational aids; a laser ceilometer; and a fully instrumented surface weather station. Access to other instrumentation (measuring turbulent fluxes, aerosols, etc.), measuring platforms (research vessel, buoys, and remotely piloted aircraft) and data from a variety of networked local measurement sites enables the laboratory to provide near “real-time” data from the coastal region.

**Meteorology Course Descriptions**

**MR Courses**

**MR0001 Meteorology and Oceanography Colloquium (0-1)**
As Required
(No credit.) Departmental lecture series covering topics of current interest by NPS and outside guest speakers. Graded pass/fail. Prerequisites: none.

**MRR210 Refresher, Introduction to Meteorology/Lab (No Credit) Meets last six weeks of quarter (4-2) As Required**
An introductory course that treats the composition and structure of the atmosphere, thermodynamic processes, forces and related small- and large-scale motions, air masses fronts, tropical cyclones, solar and terrestrial radiation, general circulation and weather forecasting. Additionally, laboratory periods are included to illustrate lecture material, including surface and airways communication codes, pressure and streamline/ isotach analyses, introduction to mid-latitude and tropical analyses by the Navy Operational Global Atmospheric Prediction System (NOGAPS) over oceanic regions, plus satellite interpretation.
MR0810 Thesis Research (0-8) As Required
Every student conducting thesis research will enroll in this course.

MR0999 Seminar in Meteorology (No Credit) (2-0) As Required
Students present results of thesis or other approved research investigation. Prerequisites: Concurrent preparation of thesis or other acceptable research paper.

MR2020 Computer Computations in Air-Ocean Sciences (2-2) As Required
Introduction to the programming languages, operating systems, and computing facilities which METOC students use in MR and OC courses. Laboratory assignments are elementary problems in oceanography and meteorology. Prerequisites: Calculus and college physics.

MR2200 Introduction to Meteorology (4-0) As Required
An introductory course that treats the composition and structure of the atmosphere, thermodynamic processes, forces and related small-and large-scale motions, air masses, fronts, tropical cyclones, solar and terrestrial radiation, general circulation and weather forecasting. Prerequisites: Department approval.

MR2210 Introduction to Meteorology/Laboratory (4-2) As Required
Same course as MR2200 plus laboratory periods illustrating lecture material, including Navy Operational Global Atmospheric Prediction System (NOGAPS) analysis over oceanic areas, plus satellite imagery interpretation. Prerequisites: Department approval.

MR2230 Meteorology, Oceanography, and Military Operations (4-0) As Required
This course is an introduction to meteorology and oceanography (METOC) from a military operations perspective. The course examines the basic patterns and processes of the atmosphere and ocean, and their impacts on the planning and conducts of military.

MR2262 Elements of Weather Forecasting (1-2) As Required
Survey of subjective and objective methods of atmospheric prognosis. Weather briefings illustrate applications of forecasting principles and use of satellite imagery. Prerequisites: MR222, MR3230 or consent of instructor.

MR2416 Meteorology for Electronic Warfare (2-0) As Required
A survey of environmental factors affecting the propagation and attenuation of electromagnetic waves. Synoptic and climatological conditions associated with anomalous refraction are studied. Ionospheric phenomena associated with longer wavelength (HF) propagation. Layers associated with high aerosol concentration and optical turbulence are identified. Hands-on experience with existing environmental effects assessment models. Prerequisites: Differential and integral calculus (may be taken concurrently).

MR2520 Survey of Air-Ocean Remote Sensing (3-0) As Required
Overview of systems for remote sensing of the atmosphere and oceans from space, and operational applications. Prerequisites: Undergraduate physics and calculus or consent of instructor.

MR3140 Probability and Statistics for Air-Ocean Science (3-2) Spring/Fall
Basic probability and statistics, in the air-ocean science context with emphasis on techniques of statistical data analysis. Histograms, boxplots, empirical distributions and associated characteristics such as moments and percentiles. Structure of a probability model, density distribution function, expectation and variance. Binomial, Poisson and Gaussian distributions. Conditional probability and independence. Joint distributions, covariance and central limit theorem. Standard tests of hypotheses and confidence intervals for both one-and two-parameter situations. Regression analysis as related to least squares estimation. Prerequisites: Calculus.

MR3150 Analysis of Air/Ocean Time Series (3-2) As Required
Analysis methods for atmospheric and oceanic time series. Fourier transforms applied to linear systems and discrete data. Correlation functions, power density spectra and cospectra. Optimal design of air-ocean data networks. Laboratory work involves analysis of actual atmospheric and oceanic time series using principles developed in class. Prerequisites: A probability and statistics course.

MR3212 Polar Meteorology/Oceanography (4-0) Winter
Operational aspects of arctic and antarctic meteorology. Polar oceanography. Sea-ice: amount, its seasonal distribution, melting and freezing processes, physical and mechanical properties, drift and predictions. Prerequisites: OC3240, MR3222 or consent of instructor.

MR3220 Meteorological Analysis (4-0) Spring/Fall
Techniques of evaluation, interpretation and analysis of pressure, wind, temperature and moisture data, including weather satellite observations, with emphasis on the low and middle troposphere. Synoptic models of extratropical vortices, waves and frontal systems, with emphasis on three-dimensional space structure and time continuity, including isentropic surfaces and vertical cross-section analysis. Introduction to analysis in the troposphere and low stratosphere, including daily exposure to Navy Operational Global Atmospheric Prediction System (NOGAPS) analysis, and satellite imagery interpretation. Prerequisites: MR3420 or MR3480, MR/OC3321.

MR3222 Meteorological Analysis/Laboratory (4-4) Summer
Same course as MR3220, plus laboratory sessions in the IDEA lab on the concepts considered in the lectures, with emphasis on the analysis of the low and middle troposphere, streamline and isotach analysis techniques, satellite interpretation, and vertical cross-section analyses. Prerequisites: MR3420 or MR3480, MR/OC3321.

MR3230 Tropospheric and Stratospheric Meteorology (4-0) Summer/Winter
Development and application of conceptual models of the evolution of various tropospheric and stratospheric circulation systems. Extratropical cyclones, jet streams and fronts are examined through application of dynamical concepts with particular emphasis on aspects associated with the marine environment. Prerequisites: MR3222, MR3422 (may be taken concurrently).

MR3234 Tropospheric and Stratospheric Meteorology/Laboratory (4-4) Summer
Same as MR3230 plus laboratory sessions utilizing the IDEA Lab to facilitate the physical understanding of dynamical relationships inherent to the conceptual models of the various weather systems. Exercises utilize various case studies including material from recent marine cyclogenesis field experiments. Prerequisites: MR3222, MR3422, (may be taken concurrently).
MR3240  Radar Meteorology (3-0) As Required
Principles of radar meteorology. Topics covered include radar systems, meteorological radar equation, doppler radar basics, propagation, attenuation, precipitation and velocity estimation, and characteristic echoes. Prerequisites: MR3222 and MR3522.

MR3250  Tropical Meteorology (3-0) Summer/Winter
Structure and mechanisms of synoptic-scale wave disturbances, cloud clusters, upper-tropospheric systems, the intertropical convergence zone; structure, development and motion of tropical cyclones; monsoon circulations. Emphasis on analysis and energetics. Prerequisites: MR322 and MR3230 or MR3234 (may be taken concurrently).

MR3252  Tropical Meteorology/Laboratory (3-4)
Summer/Winter
Same as MR3250 plus laboratory sessions on analysis of tropical systems emphasizing streamline and isolach analysis and incorporating aircraft and satellite observations. Exercises stress tropical cyclone regimes. Satellite imagery is used as an analysis tool and also in forecasting tropical cyclone intensity. A track forecasting exercise provides an exposure to the use of various dynamic, climatological and statistical forecast models. Prerequisites: MR4322 and MR3230 or MR3234 (may be taken concurrently).

MR3260  Operational Atmospheric Prediction (3-0)
Fall/Winter
Subjective and objective methods of atmospheric prognosis and techniques for forecasting operationally-important weather elements from surface to 100 mb. Interpretation, use and systematic errors of computer-generated products. Weather satellite briefs and applications of forecasting principles to current situations. Prerequisites: MR3230, or MR3234; MR/OC4323 may be taken concurrently.

MR3262  Operational Atmospheric Prediction/Laboratory (3-5) Fall/Winter
Same as MR3260 plus laboratory sessions on the application of lecture material. Also, practice in weather briefings, including diagnosis and forecasting of current weather briefing, including diagnosis and forecasting of current weather situations using weather satellite observations, and Fleet Numerical Oceanography Center and National Meteorological Center products. Prerequisites: MR3230 or MR3234; MR/OC4323 may be taken concurrently.

MR3321  Air-Ocean Fluid Dynamics (4-0) Winter
A foundation course for studies of atmospheric and oceanographic motions. The governing dynamical equations for rotating stratified fluids are derived from fundamental physical laws. Topics include: the continuum hypothesis, real and apparent forces, derivations and applications of the governing equations, coordinate systems, scale analysis, simple balanced flows, boundary conditions, thermal wind, barotropic and baroclinic conditions, circulation, vorticity, and divergence. Prerequisites: Multivariable calculus and vectors; ordinary differential equations (may be taken concurrently).

MR3413  Boundary Layer Meteorology (3-0) Spring
This course covers the basic concepts, description, and quantification of the main features of the atmospheric boundary layer (ABL) and atmospheric dispersion. The characteristics of turbulent flow will be introduced at the beginning of the course followed by a detailed discussion of the flux-profile relationship and the bulk aerodynamics surface flux parameterization for the surface layer. The course also covers the main features and dominant physical processes in the stable, clear, and convective boundary layers and an overview of the surface energy budget over various surface types. For dispersion modeling, the basic concepts of dispersion modeling and the Gaussian plume and puff models will be introduced. During the course, the statistical and dimensional analysis methods, which are the main tools to analyze the ABL observational and numerical modeling data, are introduced and used to reveal the characteristics and structure of the ABL. Prerequisites: MR3222 and MR3480.

MR3419  Assessment of Atmospheric Factors in EM/EO Propagation (2-1) As Required
The course addresses atmospheric parameters and their distribution that affect propagation of electromagnetic and Electro-optical (EM/EO) waves and describes their assessment with in situ and satellite borne sensors. It relates propagation phenomena to wavelength-dependent controlling atmospheric influences. Students receive demonstrations of obtaining web-site available atmospheric descriptions. There are demonstrations and exercises with computer-based assessment codes that relate EM/EO propagation to measured and predicted atmospheric properties: PROPHET (HF), AREPS (UHF VHF-SHF), EOTDA&NOVAM (IR). Discussions will occur on display/distribution of global atmospheric and oceanic conditions supporting specific operational systems. Satellite sensor retrieval procedures will be described and demonstrated. Prerequisites: Curriculum; Calculus based physics and math through multivariable calculus; Enrollment in International Electronic Warfare and Electronics/Communication.

MR3420  Atmospheric Thermodynamics (3-0)
Spring/Summer/Fall/Winter
The physical variables; the equation of state; the first law of thermodynamics and its application to the atmosphere; meteorological thermodynamic diagrams; adiabatic processes and potential temperatures; moist air processes; hydrostatic equilibrium, vertical motion in the atmosphere, stability methods and criteria. Prerequisites: Multivariable calculus.

MR3421  Cloud Physics (3-0) Spring
Basic principles of cloud and precipitation physics and application to cloud formation and optical properties. Prerequisites: MR3420 or MR3480.

MR3445  Oceanic and Atmospheric Observational Systems (2-2) As Required
Principles of measurement: sensors, data acquisition systems, calibration, etc. Methods of measurement for thermodynamic and dynamic variables in the ocean and atmosphere, including acoustics and optics. Prerequisites: OC3230 and MR3420, MR/OC3150 or consent of instructor.

MR3455  Measurement Systems for the Marine and Coastal Atmospheric Boundary Layer (2-2) As Required
The course treats a broad spectrum of measurement techniques for atmospheric dynamic and thermodynamic variables. Laboratory sessions provide hands-on experience with various state-of-the-art sensing systems, including NPS’ Doppler Radar Wind Profiler. Topics include sensor static and dynamic characteristics; calibration; in situ measurements of wind, pressure, temperature, humidity, aerosols and radiation on the surface, on balloon-borne sounding systems and on aircraft; and surface-based remote sensing systems, including wind profilers, SODAR and LIDAR. Prerequisites: MR3150 and MR3222 or consent of instructor.
MR3480 Atmospheric Thermodynamics and Radiative Processes (4-1) As Required
The physical variables; the equation of state; the first law of thermodynamics and its application to the atmosphere; meteorological thermodynamic diagrams; adiabatic processes and potential temperatures; moist air process; hydrostatic equilibrium, vertical motion in the atmosphere, stability methods and criteria. Basic radiative transfer including absorption and scattering by atmospheric constituents; solar and terrestrial radiative heating; radiative energy budgets; climate change; radiative effects of clouds and aerosols; optical phenomena. Prerequisites: Single variable calculus.

MR3520 Remote Sensing of the Atmosphere and Ocean (4-0) Winter
Principles of radiative transfer and satellite sensors and systems; visual, infrared and microwave radiometry and radar systems; application of satellite remotely-sensed data in the measurement of atmospheric and oceanic properties. Prerequisites: Undergraduate physics and differential/integral calculus, ordinary differential equations and MR3480, or consent of instructor.

MR3522 Remote Sensing of the Atmosphere and Ocean/Laboratory (4-2) Winter
Same as MR3520 plus laboratory sessions on the concepts considered in the lecture series. Prerequisites: Same as MR3520.

MR3540 Radiative Processes in the Atmosphere (3-0) Spring/Fall
Applications of radiation theory to atmospheric energy budgets, general circulation and anthropogenic climate changes. Radiational imbalance at the surface leading to heat fluxes and temperature changes in atmosphere and earth. Upper atmosphere phenomena (ozonosphere and ionosphere). Radiative effects of clouds and aerosols, and optical phenomena. Prerequisites: MR3420, MR3520 or MR3522.

MR3570 Operational Oceanography and Meteorology (2-4) Spring/Summer
Experience in the field acquiring and analyzing oceanographic and atmospheric data using state-of-the-art instrumentation. Integration of satellite remote sensing and other operational products with in situ data. Includes survey of instrumentation, pre-cruise planning, operations the field and post-cruise analysis. Prerequisites: OC3240, MR3220, or consent of instructor.

MR3571 Operational Oceanography and Meteorology Lecture (2-0) As Required
Introduction to the core oceanographic and atmospheric instruments used in support of environmental monitoring and modeling. Principles of instrument design and sampling protocols will be covered. Emphasis will be placed on the capabilities and limitation of autonomous platforms, on aircraft- and shore-based remote sensing, and on the major systems in place to organize and distribute environmental data. A brief introduction to data assimilation will be included to illustrate the critical link between observations and oceanic and atmospheric circulation models. Prerequisite: OC3230 or consent of instructor.

MR3572 Operational Oceanography and Meteorology Lab (0-4) As Required
This course is intended to insure a flexible hands-on experience deploying equipment in a realistic environment. Students will be required to design their individual field programs working with the instructor and the curriculum’s program officer. Approved programs include: 1) design and implementation of coastal ocean or atmosphere sampling protocols using unmanned vehicles, 2) design and implementation of monitoring plans for the surf zone or estuarine environments (in this case OC4210 may be taken as an alternative), 3) design and implementation of sampling protocols for the atmosphere using fixed-location or aircraft-based sensors, 4) design of and participation in upper-ocean or lower-atmosphere sampling protocols at polar ice camps, and 5) design of and participation in deep-water surveys onboard ocean-going research vessels using NPS vessel time or faculty-mentored cruises of opportunity. Prerequisite: MR3571 (may be taken concurrently) or consent of instructor.

MR3610 Modern Climatology (4-0) Summer
An introduction to physical climatology and its applications. This course examines Earth’s climate system, especially major long-term global and regional patterns, and the physical processes that create them, with focus on the application of physical climatology to solve operational DoD problems and analyze and forecast climate variations at intraseasonal and longer time scales. Emphasis placed on support of military operations, past, present and future. Prerequisites: MR2200, MR/OC3321 and MR3480.

MR4234 Advanced Topics in Mid-Latitude Weather Systems (4-0) Spring
The course examines the classic conceptual models of mid-latitude weather systems and their associated dynamics. From this classic perspective, recent advances in our theoretical and observational understanding of cyclones and fronts are examined to extend our conceptual models of mid-latitude weather systems over a broad range of scales. It is expected that students have a working knowledge of the quasigeostrophic dynamics of cyclones, fronts, and jet streaks as taught in MR3234 (Trop and Strat) and MR4322 (Dynamic Met) or their equivalents. Prerequisites: MR3234 and MR4322 or similar undergraduate course on mid-latitude weather systems.

MR4325 Weather for Warfighter Decision Making (3-2) Fall
Weather-based decision making in the DoD is currently accomplished in a suboptimal manner by following deterministic (single-value) forecasts. This course introduces decision science in the context of comparing deterministic vs. stochastic weather forecasts to explain how the DoD may greatly benefit from applying stochastic weather in objective decisions. Various aspects of generating, communicating, and applying stochastic forecasts for optimal decision making are explored. Prerequisites: MR/OC3140 or similar course on statistics. MR4323 and MR4324 are recommended but not required.

MR4240 Coastal Meteorology (3-1) As Required
Mesoscale circulations of the coastal atmosphere are examined from theoretical, observational, and model perspectives. Thermally-driven circulations, orographically-driven circulations and mesoscale circulations due to the interaction of synoptic-scale weather systems with coastlines are studied to develop useful conceptual models of coastal meteorological phenomena. Prerequisites: MR4322, MR4324 taken concurrently or consent of instructor.

MR4241 Mesoscale Meteorology (3-0) Spring/Fall
Descriptive and physical understanding of subsynoptic-scale weather systems including fronts, squall lines, mesoscale convective systems, tornadoes, etc., and their relation to the synoptic-scale environment. Applications to short-range and local-area forecasting utilizing satellite and numerical-model products relevant to
mesoscale weather phenomena. Prerequisites: MR3230, MR4322 with consent of instructor.

**MR4242 Advanced Tropical Meteorology (3-0) Summer**

Theories and observations of tropical motion systems. Equatorial wave theory; stratospheric biennial oscillation; tropical intraseasonal oscillations; monsoon circulations; tropospheric biennial oscillation; El Nino and Southern Oscillation; other climate variations. Tropical cyclone dynamics; influence of environmental flow on formation and motion; advanced models and forecasting of tropical motion. Emphasize among these topics will depend on the interest of the students. Prerequisites: MR3252 or consent of instructor.

**MR4250 Atmospheric General Circulation (3-0) Spring**

**MR4262 Advanced Meteorological Prediction (3-2) Fall**

The course requires previous weather forecast experience and covers advanced forecasting topics. A sample of topics covered include dust forecasting, orographic precipitation, mountain waves and downslope winds, cold-air damming and coastal frontogenesis, marine fog and stratus, ocean wind waves and swell, thunderstorms, and others. The focus is on the mesoscale aspects of forecasting and how to appropriately use observational and model tools for short-range to longer range forecasts of these phenomena. Hands-on practical forecast labs and briefings are used to demonstrate and practice the theory and techniques covered in the lectures. Prerequisites: Experience equivalent to completion of MR3262, MR3234 and MR3522.

**MR4322 Dynamic Meteorology (4-0) Spring/Fall**

Pressure coordinates, quasi-geostrophic scale analysis, perturbation method; solutions of equations of motion for sound, gravity and synoptic waves; baroclinic and barotropic instability; energetics; geostrophic adjustment. Prerequisites: MR3420, MR/OC3321, calculus and ordinary differential equations.

**MR4323 Numerical Air and Ocean Modeling (4-2) Spring/Fall**

**MR4324 Ensemble Prediction Systems (2-2) Summer**

Operational weather prediction is evolving from a deterministic forecasting focus, based on single-solution numerical weather prediction (NWP) output, to a focus on ensemble-based forecasting. This course introduces the fundamentals of chaos theory (as the scientific basis for ensemble forecasting), describes the behavior of an ideal vs. a practical ensemble, and covers details of the various components of an ensemble prediction system (EPS). The course goal is to develop weather officers knowledgeable in EPS capabilities, strengths, weaknesses, etc., so that the DOD can effectively incorporate the technology into its weather support process. Prerequisites: MR4323 or similar undergraduate course in numerical weather prediction.

**MR4331 Advanced Geophysical Fluid Dynamics I (3-0) Summer**

Advanced topics in the dynamics of the atmosphere and the oceans including scale analysis; geostrophic adjustment; dispersion, and barotropic and baroclinic instabilities. Prerequisites: Consent of instructor.

**MR4332 Advanced Geophysical Fluid Dynamics II (3-0) As Required**

Normal mode and baroclinic instability; frontogenesis; boundary layer analysis with application; finite amplitude baroclinic waves; symmetric instability. Prerequisites: Consent of instructor.

**MR4413 Air-Sea Interaction (4-0) Spring**

Fundamental concepts in turbulence. The atmospheric planetary boundary layer, including surface layer and bulk formula for estimating air-sea fluxes. The oceanic planetary boundary layer includes the dynamics of the well-mixed surface layer. Recent papers in air-sea interaction. Prerequisites: MR/OC3150 and OC3240 or MR4322, or consent of instructor.

**MR4414 Advanced Air/Sea Interaction (3-0) As Required**

Advanced topics in the dynamics of the atmospheric and oceanic planetary boundary layers. Prerequisites: MR/OC4413 or consent of instructor.

**MR4415 Atmospheric Turbulence (3-0) Spring**

Approaches for defining the structure of the turbulent atmospheric boundary layer. Review of statistical descriptions of atmospheric turbulence; averaging, moments, joint moments, spectral representation. Equations for turbulent regime in a stratified, shear flow. Scaling parameters and similarity theories for surface layer profiles, spectra; Kolmogorov hypotheses, Monin-Obukhov similarity theory. Measurement of atmospheric turbulence. Examination of observed spectra and scales of atmospheric turbulence. Prerequisites: MR/OC3150 or consent of instructor.

**MR4416 Atmospheric Factors in Electromagnetic and Optical Propagation (3-0) Spring/Fall**

Principles of microwave and optical wave propagation in the atmosphere. Effects of surface and boundary layers on propagation: refraction, scattering, attenuation, ducting, etc. Addresses existing environmental effects assessment models. Prerequisites: MR/OC4413 or MR4415 (may be taken concurrently).

**MR4520 Topics in Satellite Remote Sensing (3-0) Summer**

Selected topics in the advanced application of satellite remote sensing to the measurement of atmospheric and oceanic variables. Prerequisites: MR/OC3522.

**MR4800 Advanced Topics in Meteorology (Variable Credit 1-0 to 4-0) (V-0) As Required**

Advanced topics in various aspects of meteorology. Topics not covered in regularly offered courses. The course may be repeated for credit as topics change. Prerequisites: Consent of instructor and Department Chairman.

**MR4900 Directed Study in Meteorology (Variable Credit 1-0 to 4-0) Spring/Summer/Fall/Winter**

Directed study of selected areas of meteorology to meet the needs of the individual student. Prerequisites: Consent of instructor and Department Chairman. Graded on Pass/Fail basis only.

**MR5810 Dissertation Research (0-8) As Required**

Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.
Meteorology - Curriculum 372

Program Officer
John Dumas, CDR, USN
Code 75, Spanagel Hall, Room 304

jldumas@nps.edu

Academic Associate
Patrick A. Harr, Ph.D.
Code MR, Root Hall, Room 244
(831) 656-3787, DSN 756-3787
paharr@nps.edu

Brief Overview
This curriculum will provide qualified personnel with a sound understanding of the science of meteorology. The program is designed to provide the student with:

- A thorough understanding of the principles governing the physical and dynamic properties of the atmosphere.
- The ability to observe, assimilate, analyze, interpret, and predict atmospheric parameters and conditions using field experimentation, direct and remote sensing observational techniques, statistical analyses and numerical models.
- A thorough understanding of the effects of atmospheric properties and conditions on weapon, sensor and platform performance while conducting and supporting military warfare.
- A meteorological research experience germane to military warfare, culminating in a thesis of professional quality.

Requirements for Entry
The master’s program is open to International Officers, officers from other services, and DoD civilians. It is open to METOC (1800) officers of the U.S. Navy and officers from other services as a Ph.D. program. Students in the USAF Basic Meteorology Program (BMP) are also listed in this curriculum. The remainder of this section applies to the MS degree program.

For the master’s program, a baccalaureate degree with completion of mathematics through differential and integral calculus and a minimum of one year of college physics is required. An APC of 323 is required for direct entry. A refresher quarter is available for candidates who do not meet all admission requirements for direct entry and is normally offered in the Summer quarter prior to 372 enrollment.

Entry Date
Meteorology is a six-quarter course of study with a normal entry date in the Fall quarter. For further information contact the Program Officer. Academic questions may be referred directly to the Academic Associate.

Degree
Master of Science in Meteorology.

Brief Overview

This curriculum in meteorology and oceanography involves approximately 120 quarter-hours of classroom lectures, supplemented by an additional 35 quarter-hours of laboratory exercises. This program is designed to provide the student with:

- A thorough understanding of the principles governing the physical and dynamic properties of the oceans and atmosphere.
- The ability to observe, assimilate, analyze, interpret, and predict oceanic and atmospheric parameters and conditions using field experimentation, direct and remote sensing observational techniques, statistical analyses and numerical models.
- A thorough understanding of the effects of oceanic and atmospheric properties and conditions on weapon, sensor and platform performance while conducting and supporting naval warfare, with particular emphasis on ocean acoustics and electromagnetic/optical propagation.
- An oceanographic or meteorological research experience germane to naval warfare culminating in a thesis of professional quality.
- A knowledge of Joint and Maritime Strategic Planning.

This education will enhance performance in all duties throughout a career, including operational billets, technical management assignments and policy making positions. Students will develop graduate-level technical ability based upon scientific principles, acquire diverse professional knowledge, and develop analytical ability for practical problem solving.

Requirements for Entry

This program is open to METOC (1800) Officers, officers from other services, International Officers and DoD civilians.

A baccalaureate degree in the physical sciences, mathematics or engineering is required. Completion of mathematics through differential and integral calculus and one year of calculus-based college physics are required. An APC of 323 is required for direct entry.

Entry Date

METOC curriculum is a ten quarter course of study with entry dates in September and March. If further information is needed, contact the Program Officer. Academic questions may be referred directly to either of the Academic Associates.

Degree

Master of Science in Meteorology and Physical Oceanography.
Subspecialty
Completion of this curriculum qualifies an officer as a METOC Subspecialist with a subspecialty code of 6401P. The Curriculum Sponsor is the Oceanographer of the Navy (CNO N2/N6F5).

Typical Subspecialty Jobs
METOC Officer aboard CV(N)/LHD
Submarine Group Staff
Fleet Staff
CARSTRKGRU/EXSTRKGRU Staff
OIC Naval Meteorology and Oceanography Command Detachment
NAVMETOCCOM Mobile Warfare Teams
NGA
Office of Naval Research

Educational Skill Requirements (ESR)
Meteorology & Oceanography (METOC) - Curriculum 373

Subspecialty Code: 6401P

1. **Weapon & Sensor Performance:** The officer must have an understanding of the effects of open-ocean and near-shore ocean and atmospheric properties on weapons, sensors, and platform performance. The officer must have the ability to translate this knowledge into warfighter decision recommendations based on sound decision theory, taking into account available courses of action, assessments of vulnerability, uncertainty, and risk as indicated on performance surfaces.

2. **Integration of Oceanic & Atmospheric Parameters:** The officer must be able to observe, assimilate, analyze, and predict oceanic and littoral water
conditions, and atmospheric conditions using direct and remote sensing observation techniques, statistical analysis, and numerical models. The officer will have a sound understanding of polar, mid-latitude and tropical atmospheric and oceanographic dynamics, including the impact of regional conditions on military operations and systems.

3. Numerical Processing: The officer will have a thorough understanding of numerical modeling/processing as it applies to the physics and dynamics of the ocean and the atmosphere. This understanding should include a broad understanding of the modeling process itself to include strengths, weaknesses, and vulnerabilities; the state of current models and techniques; and appropriate applications of deterministic and stochastic techniques.

4. Ocean/Atmosphere Problem Solving: The officer must develop critical thinking skills and conduct independent analyses to solve environmentally challenging problems in the fields of Physical Oceanography and/or Meteorology as they apply to Naval/Joint operations, using modern scientific research techniques, field experience, tools, and equipment. The officer should understand the concept of developing and producing a performance surface.

5. Other NPS Requirements: The officer must successfully complete all NPS requirements for the Master’s Degree in Meteorology and Physical Oceanography.

**Thomas H.C. Herbers**, Professor (1993); Ph.D., University of California, San Diego, 1990.

**James MacMahan**, Assistant Professor (2007), Ph.D., University of Florida, 2003

**Steven Mancini**, Military Instructor (2009), M.S., Naval Postgraduate School, 2004

**Wieslaw Maslowski**, Research Associate Professor (1994); Ph.D., University of Alaska-Fairbanks, 1994.

**Jeffrey Dean Paduan**, Professor and Chair (1991); Ph.D., Oregon State University, 1987.

**Timour Radko**, Associate Professor (2004); Ph.D., Florida State University, 1997.

**Leslie K. Rosenfeld**, Research Associate Professor (1989); Ph.D., Woods Hole Oceanographic Institution, 1987.

**William J. Shaw**, Research Assistant Professor (2005); Ph.D., Woods Hole Oceanographic Institution, 2000.

**Timothy Peter Stanton**, Research Associate Professor and Associate Chair for Research (1978); M.S., University of Auckland, 1977.

**Rebecca E. Stone**, Permanent Military Professor and Associate Chair for Instruction (2004); Ph.D., Naval Postgraduate School, 1999.

**Robin T. Tokmakian**, Research Associate Professor (1997); Ph.D., Naval Postgraduate School, 1997.

**Research Associates:**

**John E. Joseph**, Research Associate (2005), M.S., Naval Postgraduate School, 1991

**Jaclyn L. Kinney**, Research Associate (2002); M.S., University of Tennessee, 2002

**Christopher W. Miller**, Research Associate (1992); M.S., Naval Postgraduate School, 1998
Mark D. Orzech, Research Associate (2001); M.S., University of Delaware, 1997

Professors Emeriti:

Robert Hathaway Bourke, Professor Emeritus (1971); Ph.D., Oregon State University, 1972.

Roland William Garwood, Professor, (1976); Ph.D., University of Washington, 1976.

Glenn Harold Jung, Professor Emeritus (1958); Ph.D., Texas A & M University, 1955, 1950.

Albert Julius Semtner, Jr., Professor (1986); Ph.D., Princeton University, 1973

Warren Charles Thompson, Professor Emeritus (1953); Ph.D., Texas A & M University, 1953.

Eugene Dewees Traganza, Professor Emeritus (1970); Ph.D., University of Miami, 1966.

Stevens Parrington Tucker, Professor Emeritus (1968), Ph.D., Oregon State University, 1972.

Joseph John von Schwind, Professor Emeritus (1967); Ph.D., Texas A & M University, 1968.

Jack H. Wickham, Professor Emeritus (1951); M.S., Scripps Institution of Oceanography, 1949.

Distinguished Professor Emeriti

Edward Bennett Thornton, Distinguished Professor Emeritus, Ph.D., University of Florida, 1970.

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

Brief Overview

Founded as a separate department in 1968, the Oceanography Department supports curricula sponsored by the Oceanographer of the Navy: #372 Meteorology, #373 Air-Ocean Science, #374 Operational Oceanography, #440 Oceanography. The department also offers the MS in Physical Oceanography to Undersea Warfare curricula #525 (USN) and #526 (international).

The department focuses primarily on Physical Oceanography, Ocean Acoustics and Acoustical Oceanography, Numerical Modeling, Air-Sea Interactions, and Nearshore and Coastal/Littoral Oceanography, and has strong interests in remote sensing and geospatial information systems.

Topics include ocean dynamics, numerical ocean prediction and simulation, satellite remote sensing of the ocean, air-sea interaction, polar oceanography, upper ocean dynamics and thermodynamics, near-shore processes, wave and surf forecasting, mesoscale dynamics, coastal ocean circulation, tactical oceanography and environmental acoustics. The department also provides core courses for Undersea Warfare and the Space Systems curricula.

Degree

A student is able to earn an academic degree listed below while enrolled in Meteorology and Oceanography (Curriculum 373), Operational Oceanography (Curriculum 374), Oceanography (Curriculum 440), and Undersea Warfare (Curriculum 525).

Master of Science in Physical Oceanography

Entrance to a program leading to the Master of Science in Physical Oceanography degree requires a baccalaureate degree. Minimal requirements include mathematics through differential and integral calculus and one year of calculus-based physics.

The Master of Science in Physical Oceanography degree requires:

1. Completion of at least eight physical oceanography graduate courses with at least four courses in the OC4000 series. The sequence of core courses in physical oceanography encompasses the fields of dynamic, acoustical, and coastal/littoral oceanography. The entire sequence of courses selected must be approved by the Department of Oceanography. Significant experience in the field using instruments is required for the degree. (OC3570 satisfies this requirement).

2. Completion of an acceptable thesis on a topic approved by the Department of Oceanography.

Master of Science in Meteorology and Physical Oceanography

Direct entrance to a program leading to the Master of Science in Meteorology and Physical Oceanography degree requires a baccalaureate degree in one of the physical sciences, mathematics, or engineering. This normally permits the validation of a number of required undergraduate courses such as physics, differential equations, linear algebra, vector analysis and various courses in meteorology and/or oceanography, which are prerequisites to the graduate program. These prerequisites may be taken at the Naval Postgraduate School; however, in that event, the program may be lengthened by one or more quarters.

The Master of Science in Meteorology and Physical Oceanography degree requires:

1. Necessary prerequisite courses in mathematics (through partial differential equations), meteorology and physical oceanography.
2. The sequence of core courses in meteorology and oceanography in the fields of dynamical, numerical and physical and synoptic meteorology and oceanography.

3. An approved selection of graduate elective courses in oceanography and meteorology.

4. Significant experience in the field using instruments.

5. An acceptable thesis on a topic approved by either department.

The total number of quarter-hours in (2) and (3) above must be at least 48. These 48 hours must include 20 hours at the 4000 level in courses other than directed study and they should show an approximate balance between the disciplines of Meteorology and Physical Oceanography.

Dual Degree in Meteorology and Physical Oceanography

The Meteorology and Oceanography Departments have adopted a policy not to recommend its award of dual master's degrees in Meteorology and Physical Oceanography.

Doctor of Philosophy

Department of Oceanography admission requirements for the Doctor of Philosophy degree include:

A bachelor's degree with a high QPR or a highly successful first graduate year in a master's program, with clear evidence of research ability.

A master's degree may be required before admission to candidacy.

The Ph.D. program is in Physical Oceanography, including areas of study in ocean circulation theory, air-sea interaction, ocean acoustics, nearshore, and coastal/littoral oceanography among others. An applicant to the Ph.D. program who is not already at NPS should submit transcripts of previous academic and professional work, plus results of a current Graduate Record Examination (GRE) general test, to the Director of Admissions, Code 01C3, Naval Postgraduate School, Monterey, California 93943-5100.

Oceanography Course Descriptions

OC Courses

OC0001 Meteorology and Oceanography Colloquium (0-1) As Required
(No credit.) Departmental lecture series covering topics of current interest by NPS and outside guest speakers. Graded pass/fail. Prerequisites: none.

OC0810 Thesis Research (0-8) As Required
Every student conducting research in oceanography will enroll in this course.

OC0999 Thesis Seminars (No Credit) (2-0) As Required
Students in the various oceanography curricula present their thesis research. Prerequisites: Preparation of a thesis.

OC2020 Computer Computations in Air-Ocean Sciences (2-2) As Required
Introduction to the programming languages, operating systems, and computing facilities which METOC students use in MR and OC courses. Laboratory assignments are elementary problems in nation's academic oceanographic research fleet, while CENCAL promotes and coordinates research vessel operations between several academic institutions in central California. The nearby Moss Landing Marine Laboratory operates the NSF-owned, 135-foot R/V POINT SUR for the benefit of CENCAL.

The Rapid Environmental Assessment Laboratory (REAL) consists of moored-equipment in Monterey Bay, the R/V POINT SUR, and the former PT SUR SOSUS underwater acoustic array provides for instruction in the practical design, deployment and collection of state-of-the-art oceanographic data. Real-time observations of currents, temperature, salinity and sound speed structure in a variety of oceanic regimes are analyzed and modeled, applying theoretical and mathematical techniques learned in the classroom to Naval Oceanography problems.

The Oceanography Department operates a graphics laboratory that is equipped with networked workstations for the analysis of numerical model output, geospatial information system (GIS) exercises, satellite imagery, acoustical data and other digital fields from REAL. Smart classrooms enable data to be brought into the classroom in real time to demonstrate signal processing, rapid environmental assessment and other state-of-the-art oceanographic and tactical decision aids.

The department is organized around thematic laboratories, each containing faculty, staff and student offices, computing facilities and special laboratory equipment. Thematic laboratories exist for Oceanic Planetary, Polar, Nearshore, Acoustics, Coastal/Littoral Modeling, Global and Polar Ocean/Sea Ice Modeling, GI&S, Naval Ocean Analysis and Prediction, Ocean Turbulence, Ocean Waves, Radar and Drifter, and Tactical Environmental Support.

Oceanographic Laboratories

NPS is a member of UNOLS (University National Oceanography Laboratory System), CENCAL (Central California Cooperative), UCAR (University Corporation for Atmospheric Research), MBCORC (Monterey Bay Crescent Ocean Research Consortium), CeNCOOS (Central and Northern California Ocean Observing Systems and CORE (Consortium for Oceanographic Research and Education). In 2007, CORE joined with JOI (Joint Oceanographic Institutions) to become CoOL (Consortium for Ocean Leadership). UNOLS operates the
Oceanography and meteorology. Prerequisites: Calculus and college physics.

**OC2022 Scientific Fortran Programming (2-2) As Required**
Structured Fortran programming as applied to elementary problems including oceanography and meteorology. Prerequisites: Calculus.

**OC2902 Fundamentals of Geospatial Information and Services (3-0) As Required**
This course will give the student an appreciation for the important facts about precision location today, from the true physical shape of the earth to the fusion of geographically labeled data in modern electronic databases. Today's military officer needs to know the fundamentals of precision location systems to operate in the battlespace of the twenty-first century. We have come from precise position being 60 nautical miles in the 1700s to a few meters in the 2000s. We have gone from dead reckoning on paper charts to GPS positions fed to fully automated navigation and weapons systems. The entire process of producing modern geospatially tagged items will be reviewed. This will include the scientific background of the processes and the advantages and limitations of the steps. Prerequisites: Students will need to have a basic understanding of algebra, geometry and trigonometry. A basic course in physics or equivalent that covers vector, conservation of energy and forces is needed. The student needs to be familiar with basic computer skills including the storage of data in arrays (spreadsheets work is sufficient for example).

**OC2910 Use of U.S. Navy Operational Ocean Circulation and Tide Models (3-2) As Required**
This course aims to provide Navy users with the information necessary to make informed and intelligent use of the Navy's operational ocean circulation and tide models. The course assumes some familiarity with physical oceanography, and experience working with output from atmospheric and/or oceanographic models. Basic concepts in physical oceanography and numerical modeling will be covered as introduction to more detailed descriptions of each of the Navy operational models and their capabilities. Students will work with output from the Navy models, and perform some model runs themselves. Evaluation of student learning will be in the form of exercises where students will be presented with several hypothetical (or real) operational scenarios and have to choose which model products to use in preparing a forecast or analysis, justify their choices, and interpret the products.

**OC3030 Oceanographic Computing and Data Display (2-2) As Required**
Course emphasizes the use of the computer as a tool in oceanography problem-solving. Use of various software packages for graphics, scientific visualization, statistics and numerical computation. Prerequisites: OC/MR2020, OC3240 or MR/OC3522, or the consent of instructor. Graded: Pass/Fail.

**OC3120 Biogeochemical Processes in the Ocean (4-3) As Required**
Basic biological, geological, and chemical processes in the ocean. Bioacoustics, deep scattering layers, and bio-deterioration. Geomorphic features of the ocean floor; kinds and distribution of ocean bottom features. Chemical composition of the ocean. Prerequisites: None.

**OC3140 Probability and Statistics for Air-Ocean Science (3-2) As Required**

**OC3150 Analysis of Air Ocean Time Series (3-2) As Required**
Analysis methods for atmospheric and oceanic time series. Fourier transforms applied to linear systems and discrete data. Correlation functions, power density spectra and cross-spectrum. Optimal design of air-ocean data network. Laboratory work involves analysis of actual atmospheric and ocean time series using principles developed in class. Prerequisites: A probability and statistics course.

**OC3210 Polar Oceanography (3-0) As Required**
Covers the ice characteristics and physical oceanography of polar seas. Sea ice: types, physical and mechanical properties, heat flux, temporal and spatial distribution, melting and freezing processes, forecasting models, and remote sensing of ice/snow covered surfaces. Physical oceanography of currents and water masses, deep and bottom water formation, fronts and eddies, polynya processes, and underwater acoustics. Discuss naval and research operations in polar warfare. Prerequisites: OC3240.

**OC3212 Polar Meteorology/Oceanography (4-0) As Required**
Operational aspects of Arctic and Antarctic meteorology, including polar lows, boundary layer and marginal ice zone influences. Polar oceanography. Sea ice amount, seasonal distribution, melting and freezing processes, physical and mechanical properties, drift and predictions. Physical oceanography of currents and water masses, deep and bottom water formation, fronts and eddies, polynya processes. Prerequisites: MR3222 and OC3240 or consent of instructor.

**OC3230 Descriptive Physical Oceanography (3-1) As Required**
Physical properties of seawater. Processes influencing the distribution of heat, salt and density in the ocean. Static stability in the ocean. Circulation and water masses in the ocean. Laboratory work involves collection and analysis of actual data using principles developed in class.

**OC3231 Descriptive Regional Oceanography (4-0) As Required**
Overview of basic concepts. Water masses and regional circulation including littoral regions and marginal seas. Recent developments dealing with ocean circulation, sea level, climate, El Nino, ocean resources and pollution, and modern observational techniques. Prerequisites: OC3230 or the equivalent.

**OC3240 Ocean Circulation Analysis (4-2) As Required**
Application of dynamic concepts of ocean circulation, including conservation of mass, momentum and energy. Oceanic currents without friction: inertial and geostrophic flows. Frictional currents: Reynolds equations, Ekman and wind-driven flows. Vorticity balance: Sverdrup transport, potential vorticity, topographic steering, western intensification and Rossby waves. Thermohaline effects and thermocline theory. Prerequisites: OC3230 and OC3321 or the equivalent.
OC3260 Fundamentals of Ocean Acoustics (4-1) As Required
The fundamentals of ocean acoustics, including the acoustic wave equation, ray theory, acoustic arrays and filters, ambient noise, scattering, absorption, an introduction to normal mode theory, and sonar equations. Laboratory emphasizes acoustic signal processing techniques. Prerequisites: OC3230, partial differential equations or equivalent.

OC3300 Ocean Policy (3-1) As Required
Students will study ocean policy issues as they relate to the use and restriction of use of waters, both international and national, by the U.S. Navy and joint forces. The course will include an introduction to the institutions and players involved in the policy formulation; the policy making process; implementation, enforcement, and compliance; and consequences and effectiveness. Several questions relevant to Navy operations will be addressed: What are the consequences of the current policy structure (protected areas, impeded exercises, etc.)? How do we operate under these policies? What alternatives exist? How do we influence the policies? Students will become familiar with current issues for the Navy Environmental Readiness staff (OPNAV N45), current policy issues for the Oceanographer of the Navy staff (OPNAV N84), with current Navy guidance on environmental programs and protections, and with the reports and recommendations of the several national-level commissions on the ocean. Prerequisites: None.

OC3321 Air-Ocean Fluid Dynamics (4-0) As Required
A foundation course for studies of atmospheric and oceanographic motions. The governing dynamical equations for rotating stratified fluid are derived from fundamental physical laws. Topics include the continuum hypothesis, real and apparent forces, derivations and applications of the governing equations, coordinate systems, scale analysis, simple balanced flows, boundary conditions, thermal wind, barotropic and baroclinic conditions, circulation, vorticity, and divergence. Prerequisites: Multi-variable calculus, vectors, and ordinary differential equations (may be taken concurrently).

OC3325 Marine Geophysics (3-0) As Required
Theory and methods of marine geophysics surveys, and emphasis on gravity, magnetism, seismic and acoustic wave propagation; geophysical anomalies associated with major sea floor features; marine geodesy. Prerequisites: OC3120 (may be taken concurrently).

OC3445 Oceanic and Atmospheric Observational Systems (2-2) As Required
Principles of measurement; sensors, data acquisition systems, calibration, etc. Methods of measurement for thermodynamic and dynamic variables in the ocean and atmosphere, including acoustics and optics. Prerequisites: OC3230 and MR3420, MR/OC3150 or consent of instructor.

OC3520 Remote Sensing of the Atmosphere and Ocean (4-0) As Required
Principles of radiative transfer and satellite sensors and systems; visual, infrared and microwave radiometry, and radar systems; application of satellite remotely-sensed data in the measurement of atmospheric and oceanic variability. Prerequisites: Undergraduate physics and differential/integral calculus; ordinary differential equations and MR3480 or consent of instructor.

OC3522 Remote Sensing of the Atmosphere and Ocean/Laboratory (4-2) As Required
Same as OC3520 plus laboratory sessions on the concepts considered in the lecture series. Prerequisites: Same as OC3520.

OC3570 Operational Oceanography and Meteorology (2-4) As Required
Experience at sea acquiring and analyzing oceanographic and atmospheric data using state-of-the-art instrumentation. Integration of satellite remote sensing and other operational products with in-situ data. Includes survey of instrumentation, pre-cruise planning, operations at sea, and post-cruise analysis. Prerequisites: OC3240, MR3220, or consent of instructor.

OC3571 Operational Oceanography and Meteorology Lecture (2-0) As Required
Introduction to the core oceanographic and atmospheric instruments used in support of environmental monitoring and modeling. Principles of instrument design and sampling protocols will be covered. Emphasis will be placed on the capabilities and limitation of autonomous platforms, on aircraft- and shore-based remote sensing, and on the major systems in place to organize and distribute environmental data. A brief introduction to data assimilation will be included to illustrate the critical link between observations and oceanic and atmospheric circulation models. Prerequisite: OC3230 or consent of instructor.

OC3572 Operational Oceanography and Meteorology Lab (0-4) As Required
This course is intended to insure a flexible hands-on experience deploying equipment in a realistic environment. Students will be required to design their individual field programs working with the instructor and the curriculum’s program officer. Approved programs include: 1) design and implementation of coastal ocean or atmosphere sampling protocols using unmanned vehicles, 2) design and implementation of monitoring plans for the surf zone or estuarine environments (in this case OC4210 may be taken as an alternative), 3) design and implementation of sampling protocols for the atmosphere using fixed-location or aircraft-based sensors, 4) design of and participation in upper-ocean or lower-atmosphere sampling protocols at polar ice camps, and 5) design of and participation in deep-water surveys onboard ocean-going research vessels using NPS vessel time or faculty-mentored cruises of opportunity. Prerequisite: OC3571 (may be taken concurrently) or consent of instructor.

OC3750 Naval Astronomy and Precise Time (2-0) As Required

OC3902 Fundamentals of Mapping, Charting and Geodesy (3-2) As Required
Basics of map/chart generation and scientific basis for their accuracy and precision. Ellipsoids, latitudes, longitudes, datums, datum transformations, map projections, geoid and heights. Map/chart generation process including satellite surveying. Use of map/charts with modern navigation systems, including GPS. Digital map characteristics. Prerequisites: Vector analysis, probability and statistics or consent of instructor.
**OC3903  Electronic Surveying and Navigation (3-0) As Required**

Introduction to the theory and practice of electronic navigation including principles of electronics, geometry, and error propagation. Covers ground-based and satellite systems. The global positioning system is covered in detail. Prerequisites: Consent of instructor.

**OC4120  Littoral Field Studies (2-4) As Required**

Employs the scientific method for studying nearshore and wave processes using field observations in littoral bays and environments. Monterey Bay, CA will be used as a natural laboratory for studying a plethora of littoral related topics. Students will design a small nearshore field experiment or set of experiments, deploy state-of-the-art instrumentation, and analyze data to test relevant nearshore hypotheses. Students will write a mini-proposal with budget focused on their scientific hypothesis, experiment, and analysis, and write a scientific final report. Introductions and limitations of instrumentation will be discussed and integrated into the field design, which will include deployment schemes and subsequent analyses. Data quality control and analysis techniques will be described and implemented. In particular, tidal harmonic analysis will be introduced and performed. The course is divided into 1) in-class discussions (instrumentation, deployment schemes, and data analysis techniques), and 2) field exercises that require student participation in performing the proposed small experiments. There is a high probability that students will get wet, but it is not a requirement. Prerequisites: OC3140; OC3150; OC4213; Matlab familiarity; or consent of instructor.

**OC4211  Ocean Waves (4-0) As Required**

Linear theory of surface, internal, inertial-internal and Rossby waves, barotropic and baroclinic instabilities. Coastal and equatorial trapped waves. Prerequisites: Partial differential equations and OC3240.

**OC4212  Tides (4-0) As Required**

Development of the theory of tides including the tide-producing forces, equilibrium tides, and the dynamic theory of tides; harmonic analysis and prediction of tides; tidal datum planes and their relationship with geodetic datum planes, short-term and secular changes in sea level. Prerequisites: OC4211.

**OC4213  Nearshore and Wave Processes (3-1) As Required**

Shallow-water wave processes, breakers and surf; nearshore water circulation; beach characteristics; littoral drift; coastal hydraulics; storm surge. Prerequisites: OC4211 or consent of instructor.

**OC4220  Coastal Circulation (4-1) As Required**

Coastal ocean physical processes. Dynamics and models of coastal ocean circulations driven by wind, thermohaline, tidal, boundary currents, and ocean eddy forces. Recent papers on coastal ocean circulation. Laboratory sessions on computing properties of tides, coastal trapped waves and wind-driven motions over the shelf and slope. Prerequisites: OC4211 (may be taken concurrently).

**OC4230  Physical Oceanography of Monterey Bay (3-0) As Required**

Monterey Bay will be used as a case study for various processes affecting the physical oceanography of coastal environments. Topics to include coastal upwelling, flow in and around submarine canyons, internal waves, air-sea interactions, and tides and seiches. Historical, recent, and ongoing studies in and around the bay will be considered. Prerequisites: OC3240 or consent of instructor.

**OC4250  General Circulation of the Atmosphere and Oceans (3-0) As Required**

Selected topics on the general circulation of the atmosphere (e.g. heat, momentum and moisture fluxes; energetics) and ocean (e.g. linear and non-linear theories of the wind-driven ocean circulation); coupled ocean-atmosphere general circulation models. Prerequisites: Consent of instructor.

**OC4262  Theories & Models in Underwater Acoustics (3-0) As Required**

Development of the underlying theories and algorithms of ray, normal mode, and parabolic equation acoustic models for both range independent and dependent environments. Examination of the strengths and weaknesses of and similarities between the various models. Prerequisites: OC3260 and partial differential equations or equivalent.

**OC4267  Ocean Acoustic Variability and Uncertainty (4-0) As Required**

Examines sound speed profiles (time and space variability), ambient noise, absorption, and reflection and scattering from the sea surface and bottom as they affect sound propagation in the ocean. Synoptic prediction techniques for ambient noise and transmission loss are reviewed. Environmental data input and computational approximations for acoustic models are evaluated against observed signal fluctuations and transmission loss. The course is designed for the Air-Ocean Science, Operational Oceanography, and USG Curricula. Prerequisites: OC3230 and OC3260 or equivalent.

**OC4270  Tactical Oceanography (3-4) As Required**

Course emphasizes the tactical use of the environment and battlespace characterization as a force multiplier in naval operations including acoustic undersea warfare, special operations, amphibious warfare, and mine warfare. Using tailored lectures, students will examine oceanographic conditions and the ability for naval forces to exploit them in nearshore, coastal and deep ocean settings. Current acoustic prediction models, remote sensing, tactical decision aids and Geographic Information Systems (GIS) will be utilized by students as they explore a broad spectrum of environmental conditions and methods for exploitation by naval forces. Students will also utilize the R/V PT SUR to perform experiments and analyze data relating to acoustic propagation and the ocean. Prerequisites: For Meteorology and Oceanography students: OC3260, OC4267 (concurrent), or consent of instructor. For USW students: OC3260 and EC4450 (concurrent), or consent of instructor. Classification: SECRET Clearance and U.S. Citizenship is required. Lecture series is UNCLASSIFIED.

**OC4271  Topics in Tactical Oceanography (3-0) As Required**

Course emphasizes the tactical use of the environment and battlespace characterization as a force multiplier in naval operations, including acoustic undersea warfare, special operations, amphibious warfare, and mine warfare. Using tailored lectures, students will examine oceanographic conditions and the ability for naval forces to exploit them in nearshore, coastal and deep ocean settings. Prerequisites: For International Meteorology and Oceanography students: OC3260, OC4267 (concurrent), or consent of instructor. For International USW students: OC3260 and EC4450 (concurrent), or consent of instructor. Classification: SECRET Clearance and U.S. Citizenship is required. Lecture series is UNCLASSIFIED.

**OC4323  Numerical Air and Ocean Modeling (4-2) As Required**

Numerical models of atmospheric and oceanic phenomena. Finite difference techniques for solving elliptic and hyperbolic equations, linear and non-linear computational instability. Spectral and finite
element models. Filtered and primitive equation prediction models. Sigma coordinates. Objective analysis and initialization. Moisture and heating as time permits. Prerequisites: MR4322 or OC4211, partial differential equations; numerical analysis desirable.

**OC4324 Advanced Numerical Ocean Modeling (3-0) As Required**
Advanced techniques for simulating and predicting ocean circulation, including recent modeling results. Topics to include multi-layer quasi-geostrophic models, multi-level primitive equation models, treatment of irregular geometry and open boundary conditions, satellite data assimilation and computer technology considerations. Prerequisites: MR/OC4323.

**OC4331. Ocean Variability (4-0) As Required**
Contemporary knowledge of ocean mesoscale eddies, fronts, meandering currents; baroclinic and barotropic instabilities; kinematics, dynamics and energetics for observations, theories and models. Prerequisites: OC4211 or equivalent.

**OC4335 Naval Ocean Analysis and Prediction (3-2) By Arrangement**
Advanced knowledge of the U.S. Navy ocean analysis and prediction systems, including the Naval Ocean Modeling Program (NOMP), naval ocean data systems, atmospheric forcing systems, data assimilation systems, Optimal Thermal Interpolation System (OTIS), Thermal Ocean Prediction Systems (TOPS), the global ocean circulation prediction system, Shallow Water Analysis and Forecast System (SWAFS), Polar Ice Prediction System (PIPS), and global wave prediction system (WAM). Prerequisites: OC4211 and MR/OC4323 (may be taken concurrently).

**OC4413 Air/Sea Interaction (4-0) As Required**
Fundamental concepts in turbulence. The atmospheric planetary boundary layer, including surface layer, and bulk formulae for estimating air-sea fluxes. The oceanic planetary boundary layer including the dynamics of the well-mixed surface layer. Recent papers on large-scale air-sea interaction. Prerequisites: MR/OC3150, and OC3240 or MR3240 or consent of instructor.

**OC4414 Advanced Air/Sea Interaction (3-0) As Required**
Advanced topics in the dynamics of the atmospheric and oceanic planetary boundary layers. Prerequisites: MR/OC4413 or consent of instructor.

**OC4415 Ocean Turbulence (3-0) As Required**
Advanced topics in the dynamics of ocean turbulence, wakes and microstructure. Prerequisites: MR/OC4413 or consent of instructor.

**OC4490 Ocean Acoustic Tomography (Same as EC4490) (3-0) As Required**
An introduction to Ocean Tomography, an underwater acoustic inverse technique for mapping ocean sound speed and current fields. Covers the major aspects of Ocean Acoustic Tomography, including the underlying concepts, the design and transmission of tomographic signals, and linear inverse methods for the reconstruction of ocean fields. Prerequisites: OC3260 or EC3450 or PH4453 or equivalent; linear algebra, partial differential equations or equivalent.

**OC4520 Topics in Satellite Remote Sensing (3-0) As Required**
Selected topics in the advanced application of satellite remote sensing to the measurement of atmospheric and oceanic variables. Prerequisites: MR/OC3522.

**OC4610 Wave and Surf Forecasting (2-2) As Required**
Theory and prediction of wind-generated ocean waves. Spectral transformation of waves from deep to shallow water. Prediction of surf and wave related influences on operations. Prerequisites: OC3150, OC4211.

**OC4800 Advanced Courses in Oceanography (Variable hours 1-0 to 4-0) As Required**
Advanced courses in various aspects of oceanography. Typically these are advanced topics not covered in regularly offered courses. The course may be repeated for credit as topics change. Prerequisites: Consent of instructor and the Department Chairman.

**OC4900 Directed Study in Oceanography (V-0) As Required**
Independent study of advanced topics in oceanography. Prerequisites: Consent of instructor and the Department Chairman. Graded on Pass/Fail basis only.

**OC5810 Dissertation Research (0-8) As Required**
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

**Meteorology and Oceanography (METOC) - Curriculum 373 (Under Department of Oceanography)**

**Program Officer**
John Dumas, CDR, USN
Code 75, Spanagel Hall, Room 304
(831) 656-2044, DSN 756-2044
jdumas@nps.edu

**Academic Associate:**
Peter Chu, Ph.D.
Code OC/, Spanagel Hall, Room 237
(831) 656-3688, DSN 756-3688
pcchu@nps.edu

**Brief Overview**
This curriculum in meteorology and oceanography involves approximately 120 quarter-hours of classroom lectures, supplemented by an additional 35 quarter-hours of laboratory exercises. This program is designed to provide the student with:

- A thorough understanding of the principles governing the physical and dynamic properties of the oceans and atmosphere.
- The ability to observe, assimilate, analyze, interpret, and predict oceanic and atmospheric parameters and conditions using field experimentation, direct and remote sensing observational techniques, statistical analyses, and numerical models.
- A thorough understanding of the effects of oceanic and atmospheric properties and conditions on weapon, sensor and platform performance while conducting
and supporting naval warfare, with particular emphasis on ocean acoustics and electromagnetic/optical propagation.

- An oceanographic or meteorological research experience germane to naval warfare culminating in a thesis of professional quality.
- A knowledge of Joint and Maritime Strategic Planning.

This education will enhance performance in all duties throughout a career, including operational billets, technical management assignments and policy making positions. Students will develop graduate-level technical ability based upon scientific principles, acquire diverse professional knowledge, and develop analytical ability for practical problem solving.

Requirements for Entry

This program is open to METOC (1800) Officers, officers from other services, International Officers and DoD civilians.

A baccalaureate degree in the physical sciences, mathematics or engineering is required. Completion of mathematics through differential and integral calculus and one year of calculus-based college physics are required. An APC of 323 is required for direct entry.

Entry Date

METOC curriculum is a ten quarter course of study with entry dates in September and March. If further information is needed, contact the Program Officer. Academic questions may be referred directly to either of the Academic Associates.

Degree

Master of Science in Meteorology and Physical Oceanography.

Subspecialty

Completion of this curriculum qualifies an officer as a METOC Subspecialist with a subspecialty code of 6401P. The Curriculum Sponsor is the Oceanographer of the Navy (CNO N2/N6F5).

Typical Subspecialty Jobs

METOC Officer aboard CV(N)/LHD
Submarine Group Staff
Fleet Staff
CARSRTKGRU/EXSTRTKGRU Staff
OIC Naval Meteorology and Oceanography Command Detachment
NAVMETOCOM Mobile Warfare Teams
NGA
Office of Naval Research

Typical Course of Study - Winter Entry

Educational Skill Requirements (ESR)
Meteorology & Oceanography (METOC) - Curriculum 373
Subspecialty Code: 6401P

1. Weapon & Sensor Performance: The officer must have an understanding of the effects of open-ocean and near-shore ocean and atmospheric properties on weapons, sensors, and platform performance. The officer must have the ability to translate this knowledge into warfighter decision recommendations based on sound decision theory, taking into account available courses of action, assessments of vulnerability, uncertainty, and risk as indicated on performance surfaces.

2. Integration of Oceanic & Atmospheric Parameters: The officer must be able to observe, assimilate, analyze, and predict oceanic and littoral water conditions, and atmospheric conditions using direct and remote sensing observation techniques, statistical analysis, and numerical models. The officer will have a sound understanding of polar, mid-latitude and tropical atmospheric and oceanographic dynamics, including the impact of regional conditions on military operations and systems.

3. Numerical Processing: The officer will have a thorough understanding of numerical modeling/processing as it applies to the physics and dynamics of the ocean and the atmosphere. This understanding should include a broad understanding of the modeling process itself to include strengths, weaknesses, and vulnerabilities; the state of current models and techniques; and appropriate applications of deterministic and stochastic techniques.

4. Ocean/Atmosphere Problem Solving: The officer must develop critical thinking skills and conduct independent analyses to solve environmentally challenging problems in the fields of Physical Oceanography and/or Meteorology as they apply to Naval/Joint operations, using modern scientific research techniques, field experience, tools, and equipment. The officer should understand the concept of developing and producing a performance surface.

5. Other NPS Requirements: The officer must successfully complete all NPS requirements for the Master's Degree in Meteorology and Physical Oceanography.

Brief Overview
This flexible oceanography curriculum involves approximately 100 quarter-hours of classroom lectures, supplemented by an additional 20 quarter-hours of laboratory exercises. This program is designed to provide the student with:

- A thorough understanding of the principles governing the physical and dynamic properties of the oceans.
- An understanding of the analysis and prediction of oceanic and atmospheric parameters and conditions using direct and remote sensing observational techniques, statistical analyses, and numerical models.
- An understanding of the effects of oceanic and atmospheric properties and conditions on weapon, sensor, and platform performance, while conducting and supporting naval warfare with particular emphasis on ocean acoustics.
- An educationally significant oceanographic experience at sea.
An oceanographic or meteorological research experience germane to naval warfare culminating in a thesis of professional quality.

A knowledge of Joint Maritime Strategic Planning.

This curriculum is designed to allow the student to meet all of the requirements for Navy PME (as established by the Chief of Naval Operations) and for Joint PME (as established by the Chairman, Joint Chiefs of Staff) for Intermediate Level Professional Military Education.

The Operational Oceanography Curriculum has a physical oceanography and ocean acoustics base. It is a very flexible program allowing students to examine oceanographic topics relevant to their warfare specialization areas, such as antisubmarine warfare, amphibious warfare, mine warfare, anti-air warfare, strike warfare and special warfare. This program is open to Unrestricted Line Officers (1110, 1120, 1310, 1320), officers from other services, International Officers and DoD civilians.

Requirements for Entry

A baccalaureate degree in the physical sciences, mathematics or engineering is desirable. Completion of mathematics through differential and integral calculus and one year of calculus-based college physics are required. An APC of 323 is required for direct entry. A refresher quarter is available for candidates who do not meet all admission requirements for direct entry and is offered in the Spring or Fall quarter prior to 374 enrollment.

Entry Date

Operational Oceanography is an eight-quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate or the Program Officer for this curriculum.

Degree

Master of Science in Physical Oceanography.

Subspecialty

Completion of this curriculum qualifies an officer as an Operational Oceanography Subspecialist with a subspecialty code of 6402P. The curriculum sponsor is the Oceanographer of the Navy (CNO N2/N6F5).

Typical Subspecialty Jobs

CV ASW Module  
CARGRU Staff  
ASW Operations Center  
Naval Laboratories  
Office of Naval Research  
Patrol Wing Detachments  
Naval Academy Instructor  
NIMA  
Naval Oceanographic Office

Typical Course of Study - Winter

Quarter 1 (Winter)
MR/OC2020 (2-2) Computer Computations in Air-Ocean Sciences  
MA1115 (1st 6wks) (4-0) Multi-variable Calculus  
MA1116 (2nd 6wks) (4-0) Vector Calculus  
MA2121 (4-0) Differential Equations  
OC3230 (3-1) Descriptive Physical Oceanography

Quarter 2 (Spring)
MA3132 (4-0) Partial Differential Equations and Fourier Analysis  
MR/OC3321 (4-0) Air-Ocean Fluid Dynamics  
NW3230 (4-2) Strategy and Policy  
NW3285 (3-0) National Strategy Decision Making

Quarter 3 (Summer)
MR/OC3140 (3-2) Probability and Statistics for Air-Ocean Sciences  
OC3240 (4-2) Ocean Circulation Analysis  
OC3260 (4-1) Fundamentals of Ocean Acoustics  
NW3275 (2-0) Joint Maritime Operations (Part 1)

Quarter 4 (Fall)
OC3902 (3-2) Fundamentals of GI&S  
OC4211 (4-0) Ocean Waves  
MR/OC3150 (3-2) Analysis of Air/Ocean Time Series  
NW3276 (2-0) Joint Maritime Operations (Part 2)

Quarter 5 (Winter)
OC4267 (4-0) Ocean Acoustic Variability and Uncertainty  
MR/OC3570 (2-4) Operational Oceanography and Meteorology  
OC4610 (2-2) Wave and Surf Forecasting  
OC4900 (V-0) Directed Study in Oceanography

Quarter 6 (Spring)
OC4220 (3-1) Coastal Circulation  
OC4213 (3-1) Nearshore and Wave Processes  
MR3480 (4-1) Atmospheric Thermodynamics and Radiative Processes  
OC0810 (0-8) Thesis Research

Quarter 7 (Summer)
OC4270 (3-4) Tactical Oceanography  
MR/OC4413 (4-0) Air Sea Interaction  
MR/OC3522 (4-2) Remote Sensing of the

**Educational Skill Requirements (ESR)**

**Operational Oceanography- Curriculum 374**

**Subspecialty Code: 6402P**

1. **Weapon & Sensor Performance:** The officer must have an understanding of the effects of open-ocean and near-shore ocean on weapons, sensors, and platform performance. The officer must have the ability to translate this knowledge into warfighter decision recommendations, taking into account available courses of action, assessments of vulnerability, uncertainty, and risk.

2. **Integration of Oceanic Parameters:** The officer must be able to observe, assimilate, analyze, and predict oceanic and littoral water conditions using direct and remote sensing observation techniques, statistical analysis, and numerical models. The officer will have a sound understanding of polar, mid-latitude oceanographic dynamics, including the impact of regional conditions on military operations and systems.

3. **Numerical Processing:** The officer will have a thorough understanding of numerical modeling/processing as it applies to the physics and dynamics of the ocean. This understanding should include a broad understanding of the modeling process itself to include strengths, weaknesses, and vulnerabilities; the state of current models and techniques; and appropriate applications of deterministic and stochastic techniques.

4. **Ocean Problem Solving:** The officer must develop critical thinking skills and conduct independent analyses to solve environmentally challenging problems in the field of Physical Oceanography as it applies to Naval/Joint operations, using modern scientific research techniques, field experience, tools, and equipment.
5. Other NPS Requirements: The officer must successfully complete all NPS requirements for the Master's Degree in Physical Oceanography.

Oceanography - Curriculum 440

Program Officer
John Dumas, CDR, USN
Code 75, Spanagel Hall, Room 304
(831) 656-2044, DSN 756-2044
jldumas@nps.edu

Academic Associate
Mary Batteen, Ph.D.
Code OC, Spanagel Hall, Room 346
(831) 656-3265, DSN 756-3265
mlbatte@nps.edu

Brief Overview
The Oceanography Curriculum provides students with a sound understanding of the science of oceanography. The student develops the technical expertise to provide and use oceanographic and acoustical data and models in support of all aspects of at-sea operations. The graduate will be able to:

- Interpret and predict oceanic and air-ocean interface conditions.
- Operate modern oceanographic data management, archival and communications systems.
- Plan, conduct, interpret and present results of research activities.

This education further enhances performance in operational billets, technical management assignments and policy-making positions. Students will develop a sound, graduate-level, technical ability based on scientific principles.

Requirements for Entry
This program is open to International Officers, officers from other services and DoD civilians. It is open to METOC (1800) officers as a Ph.D. program.

A baccalaureate degree in the physical sciences, mathematics or engineering is required. Completion of mathematics through differential and integral calculus and one year of calculus-based college physics are required. An APC of 323 is required for direct entry. A refresher quarter is available for candidates who do not meet all admission requirements for direct entry, and is offered in the Spring or Fall quarter prior to 440 enrollment.

Entry Date
Oceanography is a 6-8 quarter course of study with entry dates in January and July. If further information is needed, contact the Program Officer for this curriculum. Academic questions may be referred directly to the Academic Associate.

Degree
Master of Science in Physical Oceanography.

Typical Course of Study - Winter

Educational Skill Requirements (ESR)
Oceanography (Masters) - Curriculum 440
Subspecialty Code: Not Applicable For MS Degree

Note - there is no p-code associated with this program, thus there are no official ESRs. This list describes the skills that this program will provide students upon successful completion of the program.

This curriculum provides students with a sound understanding of the science of oceanography. The student develops the technical expertise to provide and use oceanographic and acoustical data and models in support of all aspects of at-sea operations. The graduate will be able to:

1. Interpret and predict oceanic and air-ocean interface conditions.
2. Operate modern oceanographic data management, archival and communications systems.
3. Plan, conduct, interpret and present results of research activities.

This education further enhances performance in operational billets, technical management assignments and policy-making positions. Students will develop a sound, graduate-level, technical ability based on scientific principles.
Educational Skill Requirements (ESR)  
Oceanography (Ph.D.) - Curriculum 440  
Subspecialty Code: 6402D

The officer must have a thorough theoretical and functional knowledge (obtained at the doctorate level) of the principles of oceanography and its effects on naval warfare and weapons systems.

**Department of Physics**

**Chairman**

Kevin B. Smith, Professor (1995); Ph.D., University of Miami, 1991.

David M. Trask, Col, USAF (Ret.), MASINT Chair (2001); M.B.A., Embry-Riddle University, 1991.

Professors Emeriti:

Fred Raymond Buskirk, Professor Emeritus (1960); Ph.D., Case Institute of Technology, 1958.

Alfred William Madison Cooper, Professor Emeritus (1957); Ph.D., The Queens University of Belfast, 1961.

Harvey Dahl, Professor Emeritus (1964); Ph.D., Stanford University, 1963.
Harry Handler, Professor Emeritus (1958); Ph.D., University of California at Los Angeles, 1955.

Otto Heinz, Professor Emeritus (1962); Ph.D., University of California at Berkeley, 1954.

Xavier K Maruyama, Professor Emeritus (1987); Ph.D., Massachusetts Institute of Technology, 1971.

Richard Reinhardt, Professor Emeritus (1954); Ph.D., University of California at Berkeley, 1947.

Wayne Rodeback, Professor Emeritus (1960); Ph.D., University of Illinois, 1951.

James Vincent Sanders, Professor Emeritus (1961); Ph.D., Cornell University, 1961.

Gordon Everett Schacher, Professor Emeritus (1964); Ph.D., Rutgers, 1961.

Fred Schwirzke, Emeritus Professor (1967); Ph.D., University of Karlsruhe, 1959.

Donald Lee Walters, Professor (1983); Ph.D., Kansas State University, 1971.

Oscar Bryan Wilson, Professor Emeritus (1957); Ph.D., University of California at Los Angeles 1951.

Karlheinz Edgar Woehler, Professor Emeritus (1962); Ph.D., University of Munich, 1962.

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

Current expertise in the Department of Physics includes the following specializations:

**Specializations**

Directed Energy Weapons Physics.
Physical Acoustics.
Condensed-Matter, Device and Sensor Physics.

All of these specializations are of relevance to modern and future weapons technologies. The faculty supports an ongoing research program in these areas and student thesis topics are available in all of them.

**Degree Requirements**

The Department of Physics offers the Master of Science and the Ph.D. degrees in Physics and in Applied Physics. Upon approval by the department, courses taken at other institutions may be applied toward satisfying degree requirements to the extent allowed by the general Postgraduate School regulations.

**Degree**

A student is able to earn an academic degree listed below while enrolled in Combat Systems Science & Technology (Curriculum 533), and Space Systems Engineering (Curriculum 591).

**Master of Science in Physics**

A candidate for the Master of Science in Physics degree must satisfactorily complete a program of study that includes a minimum of 30 quarter-hours of physics courses (not including thesis) distributed among courses at the graduate (3000 or 4000) level; of these 30 hours at least 15 hours must be at the 4000 level. Upon approval of the Chairman of the Physics Department, a maximum of 4 hours of courses taken in another department may be applied toward satisfying the above requirements. In lieu of the preceding requirements, students who are qualified to pursue graduate courses in physics when they arrive at the Naval Postgraduate School may complete a minimum of 20 hours entirely of 4000 level physics courses. In addition, all students must satisfy the general Postgraduate School requirements for the master's degree and present an acceptable thesis advised by a member of the Physics Department.

The following specific course requirements (or equivalent) must be successfully completed for a student to earn the Master of Science in Physics degree:

1. PH3152: Analytical Mechanics
   PH3360: Electromagnetic Waves
   PH3991: Theoretical Physics
   PH3782: Thermodynamics and Statistical Physics.
   PH4353: Topics in Advanced Electricity and Magnetism
   PH4656: Quantum Mechanics
2. In addition to the above, a graduate sequence containing at least two physics courses, at least one of which must be at the 4000 level.

All programs leading to the degree Master of Science in Physics must be approved by the Chairman of the Department of Physics.

**Master of Science in Applied Physics**

To be awarded the Master of Science in Applied Physics degree, a student must complete a program that includes at least 20 quarter-hours of Physics courses at the graduate level, including 12 at the 4000 level. The total graduate hours in Physics, Mathematics, and Engineering must be at least 32, including 20 at the 4000 level.

The program must include at least one graduate level course in each of the following areas: mechanics, electromagnetism, and quantum physics. Students will demonstrate additional breadth by taking at least one 4000 level physics course outside their concentration area.
In addition to the above required courses, a student’s program must include an area of concentration containing a four-course sequence of graduate-level courses, at least two at the 4000 level, in an area related to applied physics and approved by the Chairman of the Department of Physics. A list of courses and concentrations meeting the above requirements is available from the Chairman of the Physics Department.

All programs leading to the Master of Science in Applied Physics degree must satisfy the general Postgraduate School requirements for the master’s degree, must include a thesis advised or co-advised by a member of the Physics Department, and must be approved by the Chairman of the Department of Physics.

Master of Science in Combat Systems Technology

A candidate for the Master of Science in Combat Systems Technology degree must complete satisfactorily a program of study that includes a minimum of 32 quarter-hours of graduate work in Physics, Mathematics, and Engineering, with at least 18 quarter-hours at the 4000 level. Included in these hours must be at least 20 quarter-hours of graduate-level physics, including 12 quarter-hours at the 4000 level.

The program must include two approved sequences of courses related to combat systems technology. Each sequence must consist of at least four graduate-level courses with at least two courses at the 4000 level. A list of approved sequences is available from the Chairperson of the Department of Physics.

All programs leading to the Master of Science in Combat Systems Technology degree must satisfy the general Postgraduate School requirements for the master’s degree, must include a thesis advised or co-advised by a member of the Physics Department, and must be approved by the Chairperson of the Physics Department.

Doctor of Philosophy

The Department of Physics offers the Ph.D. in several areas of specialization which currently include acoustics, electro-optics, free electron lasers, space physics, and theoretical physics.

Requirements for the degree may be grouped into three categories: courses, dissertation research, and examinations.

The required examinations are outlined under the general school requirements for the Ph.D. In particular, the department requires a preliminary examination to show evidence of acceptability as a doctoral student. This examination may be taken before or after commencement of graduate studies at NPS.

The department offers two options for the Ph.D.: major in Physics or major in Applied Physics. For the major in Physics, a minimum of 40 credit hours of physics courses at the 4000 level is required. The major in Applied Physics also requires 40 credit hours of 4000 level courses, but a portion of these hours may be taken in other departments in technical subjects related to physics.

A more detailed description of departmental requirements for the Ph.D. is contained in the booklet "Doctoral Study in Physics or in Applied Physics at the Naval Postgraduate School," available from the Academic Associate.

An applicant to the Ph.D. program who is not already a student at NPS should submit transcripts of previous academic and professional work, plus results of a current Graduate Record Examination (GRE) general test, to the Director of Admissions, Code 01C3, Naval Postgraduate School, Monterey, California 93943-5100.

Doctor of Philosophy in Engineering Acoustics or Doctor of Engineering

The Department of Electrical and Computer Engineering and the Department of Physics jointly sponsor an interdisciplinary program in Engineering Acoustics leading to either the Doctor of Philosophy or Doctor of Engineering degree. Areas of special strength in the departments are physical acoustics, underwater acoustics, acoustic signal processing, and acoustic communications. A noteworthy feature of this program is that a portion of the student’s research may be conducted away from the Naval Postgraduate School at a cooperating laboratory or other federal government installation. The degree requirements and examinations are as outlined under the general school requirements for the doctorate degree. In addition to the school requirements, the departments require a preliminary examination to show evidence of acceptability as a doctoral student.

Physics Laboratories

The physics laboratories are equipped to carry on instruction and research work in acoustics, atomic and molecular physics, electro-optics, spectroscopy, laser physics, computational physics, optical propagation, and sensor physics.

The Optical Physics and Sensors Laboratory uses imaging, spectroscopic and sensing systems from far infrared to ultraviolet wavelengths, including instrumentation for seagoing, airborne and ground-based measurements.

The Acoustics Laboratory equipment includes a large anechoic chamber, a small reverberation chamber and a multiple-unit acoustics laboratory for student experimentation in acoustics in air. Sonar equipment, test and wave tanks and instrumentation for investigation in underwater sound comprise the Underwater Acoustics Laboratory. Also available is scale-model shallow-water waveguide. The Physical Acoustics Laboratories are equipped with a variety of modern data collection and processing equipment.
The Sensor Research Laboratory is capable of design, packaging and characterization of optical and infrared detectors using I-V measurement, Fourier transform spectroscopy and variable temperature photocurrent spectroscopy. Facilities exist for advanced microcharacterization, including cathodoluminescence, EBIC, X-ray analysis, and transport imaging in a scanning electron microscope with variable temperature capability.

**Physics Course Descriptions**

**PC Courses**

**PC2013 Introductory Applied Physics Laboratory (3-4) As Required**

This course is an introduction to basic electronic test instrumentation and basic passive and active circuit components, with emphasis on extensive, practical hands-on exposure to laboratory hardware and devices. Included are the measurement and signal processing of analog signals and analog sensors/transducers. Operational amplifiers are introduced as building blocks of analog systems. Passive LRC filters and active filters are studied with an emphasis on applications. Some background in laboratory instrumentation and simple DC and AC circuit elements is assumed. Prerequisites: College-level basic physics and mathematics, plus simple electrical circuits (e.g., PH1322)

**PC2911 Introduction to Computational Physics (3-2) As Required**

An introduction to the role of computation in physics, with emphasis on the programming of current nonlinear physics problems. Assumes no prior programming experience. Includes a tutorial on the C programming language and Matlab, as well as an introduction to numerical integration methods. Computer graphics are used to present the results of physics simulations. Prerequisites: None

**PC3014 Intermediate Applied Physics Laboratory (3-4) Spring/Fall**

This course continues with the instrumentation and signal processing topics begun in PC2013. Included are: controllable oscillators and RF modulation/demodulation techniques, basic electrical noise sources, device damage and failure modes, elementary digital logic gates and ICs. Also included are an overview of relevant microcomputer topics, such as digital encoding schemes, analog and digital interfacing, and serial communications and networking. At the discretion of the instructor, hands-on projects incorporating the course material may be assigned. Typical projects are: in-air sonar systems, radio receivers and transmitters, and opto-electronic communications links. Prerequisites: PC2013 and PC2911 or permission of instructor.

This course provides the basic physical principles applicable to airborne and water-borne missiles, as well as the fluid dynamics of shocks and explosions. Topics include: Elements of thermodynamics, ideal fluid flow, elementary viscous flows, similitude and scaling laws, laminar and turbulent boundary layers, underwater vehicles, classical airfoil theory, supersonic flow, drag and lift of supersonic airfoils with applications to missiles, fluid dynamics of combustion, underwater explosions. Prerequisites: PH2151 and PH3991.

**PC3200 Physics of Electromagnetic Sensors and Photonic Devices (4-1) Fall**

An introductory survey of the physics of active and passive electromagnetic detection systems, primarily for Combat Systems students who do not elect to follow the Electromagnetic Sensors specialization track. Basic radionavigation. Introduction to radar: ranging, pulse rate and range ambiguity, Doppler measurements, radar equation, target cross-sections, antenna beam patterns and phased arrays. Optoelectronic displays: CRTs, LEDs, LCDs, plasma displays. Introduction to lasers: transitions, population inversion, gain, resonators, longitudinal and transverse resonator modes, Q-switching, mode-locking, laser applications. Photodetection basics: noise and its characterization, photovoltaic, photoconductive and photoemissive detectors, image intensifiers, CCDs, night vision systems. Introduction to optical fibers and their applications. Prerequisites: PH2652, PH3292 and PH3352, or equivalent(s), or by permission of instructor.

**PC3400 Survey of Underwater Acoustics (4-2) Spring**

The physics of the generation, propagation, and detection of sound in the ocean. Topics include the acoustic wave equation and its limitations in fluids; plane, cylindrical, and spherical waves; the ray approximation; reflection of planes waves from plane boundaries; radiation of sound from circular piston, continuous line source, and linear array; speed of sound and absorption in the ocean; active and passive sonar equations; transmission-loss and detection-threshold models; normal mode propagation in the ocean; the parabolic equation approximation. Laboratory experiments include surface interference, noise analysis, normal modes, and acoustic waveguides. Prerequisites: PH2151 and PH3991.

**PC3800 Survey of the Effects of Weapons (4-0) Spring**

Physics of high-velocity impact including the dynamical behavior of ductile and brittle materials and shock waves in solids. Physics of projectile penetration at high velocities. Shaped charges. Nuclear weapons effects including blast and shock thermal radiation, X-rays, neutron flux, electromagnetic pulse, and radioactive fallout. Biological and chemical weapons effects, deployment, detection and countermeasures. Directed energy weapons and effects. Prerequisites: PC3172 and PH2652.

**PC4015 Advanced Applied Physics Laboratory (3-4) Summer/ Winter**

Students must integrate the material that they learned in the previous two courses (PC2013 and PC3014/PC3014), along with additional material on embedded microprocessors and controls. A working introduction to control systems theory is provided and incorporated into an autonomous weapon system or "robot." Collaborative and autonomous engagement of the robots will be performed with RF modems and Ethernet communications. The principles of cooperative engagement will be emphasized. For the final exam, teams will compete in 2-on-1 or 2-on-2 engagement contests. These contests will test the students' assimilation of both the formal and the practical aspects of the course material. Prerequisites: PC2911 or other C/C++ programming course, plus PC2013 and PC3014.

**PC4022 Combat Systems Capabilities (3-0) Spring**

An advanced study of the technical capabilities of current acquisition programs within DoD. The course begins with an overview of the Navy acquisition community and the acquisition process. This is followed by weekly presentations by program
managers and their technical experts. Overviews of each program are followed by an in-depth analysis of the critical physics and engineering issues, design trade-offs, risk areas, reliability issues, use of simulation and modeling, testing and evaluation rationale, interoperability concerns, software development issues, interfacing issues, etc. Topics of the course are dictated by the availability of program office personnel. Prerequisites: None. Classification: SECRET.

PC4860 Advanced Weapon Concepts (4-1) Spring/Fall
This course is a comprehensive overview of the components and underlying technologies of modern missile technologies. The course gives an introduction to missile guidance, missile aerodynamic design considerations, and missile propulsion technologies, followed by an introduction to the physics of modern conventional warhead designs for missile intercept and lethality and survivability considerations. Prerequisites: PC3172 and good comprehension of all aspects of mechanics and electromagnetics.

PH Courses
PH0810 Thesis Research (0-8) Spring/Summer/Fall/Winter
Every student conducting thesis research will enroll in this course.

PH0820 Integrating Project (0-12) Spring/Winter
The Naval Postgraduate School provides many opportunities for students to participate in campus-wide interdisciplinary projects. These projects encourage students to conceptualize systems which respond to current and future operational requirements. An integral part of the project involves working with other groups to understand and resolve issues involved with system integration. This course is available to students in the Combat Systems Science and Technology Curriculum who are participating in a campus-wide integrated project. Prerequisites: Consent of instructor.

PH0999 Physics Colloquium (No Credit) (0-1)
Spring/Summer/Fall/Winter
Discussion of topics of current interest by NPS and outside guest speakers.

PH1000 The Nature and Structure of Physics (4-2) As Required
The concepts and laws of physics are explored from the ancient science of Aristotle and Ptolemy through the beginnings of classical physics with Galileo and Newton through the modern quantum and relativity physics of Schrodinger and Einstein to the physics of quarks and neutrino oscillations. Physics concepts are explored and their relevance to every day and military technologies is highlighted. The course is designed for students who will not take a physics course in their second quarter or consent of the Academic Associate.

PH1001 Fundamentals of Physics I (4-2) As Required
This course meets for twelve hours per week for the first five and one-half weeks of the quarter and covers electromagnetism: electric charge, electric and magnetic fields, forces on charges in fields, electric potential, Gauss' law, Ampere's law, Faraday's law, resistance, capacitance, inductance, DC circuits, magnetic properties of matter, transient currents in circuits, complex AC circuits analysis, Maxwell's equations. Prerequisites: PH1001 or equivalent.

PH1121 Mechanics (4-2) Summer/Winter
This course covers the fundamentals of calculus-based mechanics: Kinematics and dynamics of particles, statics of rigid bodies, work, energy, systems of particles, collisions, rotations of rigid bodies, angular momentum and torque, mechanical properties of solids, elasticity, harmonic motion, fluids. Prerequisites: A course in calculus or concurrent registration in a calculus course and consent of instructor.

PH1322 Electromagnetism (4-2) Spring/Fall
Basic electromagnetism: electric charge, electric and magnetic fields, forces on charges in fields, electric potential, Gauss's law, Ampere's law, Faraday's law, resistance, capacitance, inductance, DC and AC circuits, magnetic properties of matter, transient currents in circuits, Maxwell's equations, electromagnetic waves. Prerequisites: PH1121 or consent of instructor.

PH1623 Thermodynamics and Wave Phenomena (4-2) As Required
An introduction to thermodynamics and wave phenomena. The Laws of Thermodynamics, calorimetry, thermal effects, kinetic theory of gases, heat transfer, the Carnot cycle, heat engine and refrigerator efficiency are studied followed by the general properties of wave phenomena, vibrations, acoustics, and geometrical and physical optics. Prerequisites: PH1121, PH1322 or consent of instructor.

PH1992-1998 Special Topics in Elementary Physics (V-0) As Required
Study in one of the fields of elementary physics selected to meet the needs of students without sufficient undergraduate physics to meet the prerequisites of their curriculum. The course may be conducted either as a lecture course or as supervised reading. Prerequisites: Consent of the Department Chairman.

PH2001 Research Seminar in Physics (1-0) Spring/Fall
This course will present the research expertise of the physics faculty. The course is designed to support Combat Systems Science and Technology students in their second quarter in the selection of their concentration and area for thesis research. The course is given in the Pass/Fail mode. Prerequisites: CSS&T students in their second quarter or consent of the Academic Associate.

PH2151 Particle Mechanics (4-1) Spring/Fall
After a review of the fundamental concepts of kinematics and dynamics, this course concentrates on those two areas of dynamics of simple bodies which are most relevant to applications in Combat Systems: vibrations and projectile motion. Topics include: damped and driven oscillations, projectile motion with atmospheric friction, satellite orbits, and rotating coordinate systems. Prerequisites: PH1121 or equivalent; MA2121 or equivalent course in ordinary differential equations (may be taken concurrently).
PH2203  Topics in Basic Physics: Waves and Optics (4-0) Fall
A course to provide the physical background to wave motion and optics for students in the Information Warfare and Electronic Warfare curricula, and to provide applications of analytical techniques to physical problems. Areas covered are harmonic motion—differential equations, complex notation, damped vibration and resonance; wave motion—properties of waves, electromagnetic waves, light waves; geometrical and wave optics. Prerequisites: MA1115, MA1116, MA2121.

PH2351  Electromagnetism (4-1) Summer/Winter

PH2514  Introduction to the Space Environment (4-0) As Required
Plasma concepts. Solar structure and magnetic field, particle and electromagnetic emissions from the sun, the geomagnetic field, and the magnetosphere, radiation belts, structure and properties of the earth's upper atmosphere, ionosphere, implications of environmental factors for spacecraft design. Prerequisites: A course in basic electricity and magnetism.

PH2652  Modern Physics (4-1) Winter/Summer (Fall for SE Students)
An introduction to modern physics. Theory of relativity; blackbody radiation; photoelectric effect; matter waves; atomic spectral lines; Bohr model of the atom; uncertainty relations (position-momentum and time-energy); the Schrödinger equation (time dependent and independent); probability interpretation; infinite, finite and parabolic potential wells; tunneling (single and double barriers); electron spin and exclusion principle; the periodic table; molecular energy levels; quantum statistics (Bose-Einstein, Fermi-Dirac). Prerequisites: PH1623.

PH2724  Thermodynamics (4-0) Winter/Summer
Equations of state; the concepts of temperature, heat and work; the first law of thermodynamics; heat engines and refrigerators; entropy and the second law of thermodynamics; thermodynamic potentials; phase equilibrium; kinetic theory; equipartition theorem; transport phenomena. Prerequisites: PH1121, PH1322, MA1116.

PH3002  Non-Acoustic Sensor Systems (4-0) Fall
This course covers the physical principles underlying the operation of a number of operational and proposed non-acoustic sensor systems. Geomagnetism, magnetometers and gradiometers, MAD signatures, optical and IR transmission in the atmosphere and in sea water. Image Converter, FLIR and radar systems for USW. Exotic detection schemes. Prerequisites: PH1322.

PH3052  Physics of Space and Airborne Sensor Systems (4-0) As Required
This interdisciplinary course explores the physical principles underlying the sensor systems needed for satellites and tactical aircraft, as well as limitations imposed by the atmosphere and operating environment on these systems and their communication links. Topics include: satellite orbits, the satellite environment, ionospheric interactions and atmospheric propagation, phased array and pulsed compressed radars, imaging synthetic aperture and inverse synthetic aperture radars, noise resources, thermal radiation, principles of semiconductor devices, optical and infrared imaging detector systems, and their resolution limitations and bandwidth requirements. Prerequisites: Basic physics class. Must be familiar with the concepts of energy and wave motion.

PH3119  Oscillation and Waves (4-2) Summer
An introductory course designed to present mechanics to students studying acoustics. Kinematics, dynamics, and work and energy consideration for the free, damped, and driven oscillators. The wave equation for transverse vibration of a string, ideal and realistic boundary conditions, and normal modes. Longitudinal and transverse waves in bars. Transverse waves on rectangular and circular membranes. Vibrations of plates. Laboratory periods include problem sessions and experiments on introduction to experimental techniques and handling of data; the simple harmonic oscillator analog; transverse waves on a string; and transverse, longitudinal, and torsional waves on a bar. Prerequisites: PH3991 or equivalent.

PH3152  Analytical Mechanics (4-0) Summer/Winter

PH3204  Electro-Optic Principles and Devices (4-2) As Required
The first course of a two-course sequence for the Information Warfare/Electronic Warfare Curricula. This course treats the principles and capabilities of military electro-optic and infrared systems in a Range Equation context. Topics include: target signatures and backgrounds, optical transmitter and receiver characteristics, MTF and OTF, atmospheric propagation and propagation codes, laser radiation and types, fiber optics, detectors, focal plane arrays, D* and NET, principles of imaging, and sensor performance parameters. Laboratory work provides hands-on familiarity with modern infrared devices. Prerequisites: PH1322, MA3139 or equivalent.

PH3280  Introduction to MEMS Design (3-3) As Required
This is a 4.5 credit hour class introducing the students to Micro Electro Mechanical Systems (MEMS). Topics include material considerations for MEMS and microfabrication fundamentals. Surface, bulk and non-silicon micromachining. Forces and transduction; forces in micro-nano-domains and actuation techniques. Case studies of MEMS based microsensor, microactuator and microfluidic devices. The laboratory work includes computer aided design (CAD) of MEMS devices and small group design project. Prerequisites: basic understanding of electrical and mechanical structures: EC2200 or MS2201 or PH1322 or consent of instructor.

PH3292  Applied Optics (4-2) Spring
An intermediate-level course in optics. Review of basic geometric and physical optics concepts. Laws of reflection and refraction at interfaces. Imaging systems and aberrations. Polarization; Jones matrix methods; electro-optical modulation. Matrix methods for paraxial ray tracing and optical systems analysis. Two-beam and multiple-beam interference; Young's double slit experiment, multiple-slit systems and diffraction gratings; Michelson's interferometer; Fabry-Perot interferometer. Huygens-Fresnel principle; Fraunhofer diffraction; Fresnel diffraction. Prerequisites: PH1332.
Topics include linear mechanical vibrations; introduction to vibrations of nonlinear systems; damping mechanisms; vibration and shock isolation; noise generation and control; effects of noise on man; application to problems of naval interest, such as ship quieting and industrial noise control. Prerequisites: A course in acoustics.

PH3479 Physics of Underwater Weapons (4-0) Spring
Navier-Stokes Equations and their exact solutions; Reynolds and other numbers and dynamic similarity. Incompressible inviscid hydrodynamics including flow about a circular cylinder and airfoil theory. Prandtl’s boundary layer theory: the laminar boundary layer on a flat plate; effects of pressure gradients; separation of a laminar boundary; streamline bodies. Hydrodynamics stability and transition to a turbulent boundary layer; velocity profile in the turbulent boundary layer; drag on a flat plate. Blunt bodies. Drag reduction. Supercavitation. Torpedoes: drag and lift; dynamics of a straight-running torpedo; power plants; propulsors. Review of thermodynamics. Subsonic and supersonic flows. The converging-diverging nozzle. Shock waves: Rankine-Hugoniot equations; stationary normal shocks in air and water. Underwater explosions: detonation; scaling laws for the shock wave; the bubble and its interaction with surfaces. Shaped charges. Prerequisite: MA3139 or equivalent.

PH3655 Semiconductor Device Physics (4-0) Spring/Fall
Formation of solids, crystal structure of semiconductors, X-ray diffraction, lattice vibrations, defects, electrical and thermal properties, free electron model, Seebeck effect, thermionic emission, photoemission, effects of periodic potential, formation of energy bands, E-k relation, band structure of Si and GaAs, emission, photoemission, effects of periodic potential, formation of p-n junction, I-V characteristics, bipolar and field effect transistors, fabrication technology, semiconductor alloys, quantum effect devices, fundamental limits to semiconductor device technology. Prerequisites: PH2652.

PH3782 Thermodynamics and Statistical Physics (4-0) As Required
Entropy, temperature, Boltzmann factor and Gibbs factor are developed from a quantum point of view. Blackbody radiation, chemical potential, partition function, Gibbs sum and applications to an ideal gas are covered. Fermi-Dirac and Bose-Einstein statistics and applications to degenerate systems; Gibbs free energy, Helmholtz free energy, enthalpy, kinetic theory, phase transformations, chemical reactions. Prerequisites: PH2724 and PH2652.

PH3855 Nuclear Physics (4-0) As Required
This is the first in a sequence of graduate specialization courses on nuclear weapons and their effects. This course deals with the underlying principles of nuclear physics, including nuclear forces, models, stability, reactions and decay processes, and interaction of high energy particles with matter. Prerequisites: PH3152, PH3360, and PH2652 or equivalents.

PH3858 Railgun Technology (2-0) As Required
This course provides a basic introduction to the fundamentals of railgun theory, design, and practice. Requirements for both the Army and Navy applications are discussed. Acceleration of projectiles, pulsed power sources for the railgun, barrel life, mechanical stress, projectile design, and thermal considerations will be discussed.
PH3991  Theoretical Physics (4-1) Spring/Fall
Discussion of heat flow, electromagnetic waves, elastic waves, and quantum-mechanical waves; applications of orthogonal functions to electromagnetic multipoles, angular momentum in quantum mechanics, and to normal modes on acoustic and electromagnetic systems. Applications of complex analysis to Green Function in quantum mechanics and electromagnetism. Application of Fourier series and transforms to resonant systems. Applications of partial differential equation techniques to equation of physics. Prerequisites: Basic physics, multivariable calculus, vector analysis, Fourier series, complex numbers, and ordinary differential equations.

PH3992-3998  Special Topics in Intermediate Physics
(VARIABLE HOURS 1.0 TO 4.0) (V-0) AS REQUIRED
Study in one of the fields of intermediate physics and related applied areas selected to meet special needs or interests of students. The course may be conducted as a seminar or supervised reading in different topics. Prerequisites: A 2000 level course appropriate to the subject to be studied, and consent of the Department Chairman. The course may also be taken on a Pass/Fail basis, provided the student has requested so at the time of enrollment.

PH4001  Physics Thesis Presentation (1-0) AS REQUIRED
This course provides students with the opportunity to develop the ability to deliver a briefing on a technical subject by presenting their thesis to other students and faculty. This course is required of all students working for a degree from the Physics Department and of all Combat Systems students not presenting their thesis in some other department. Prerequisites: At least two quarters of thesis research.

PH4055  Free Electron Laser Physics (3-0) AS REQUIRED
The physical principles describing free electron lasers are explained with applications to ship defense from sea-skimming missiles, and to new radiation sources for scientific research. Theory is applied to experimental facilities around the world. Topics include optical resonator design, general laser concepts, laser beam propagation, relativistic electron dynamics, phase-space analysis, and numerical simulation. Prerequisites: PH4353, E&M.

PH4056  Radiofrequency Weapons, High Power Microwaves, and Ultrawide Band Systems (4-0) AS REQUIRED
This course outlines High-Power Microwave (HPM) and radiofrequency (RF) weapons technology, design, and progress including sources, systems integration, and effects of these emerging capabilities at the SECRET/U.S. ONLY level. Definitions and terminology, and calculations concerning the effects upon electronics, such as burnout and upset; narrowband and wideband modulation; and RF radiation, propagation, and coupling will be presented. The generation of high-power electromagnetic fields in compact sources, testing, EMI/EMC fratricide/suicide issues, and transition to employment as operational systems in a variety of applications will be described. Intelligence concerning the growing RF weapons threat is analyzed with particular attention paid to IW, terrorism, and asymmetrical threat aspects of these developments. Prerequisites: PH3352, EC3600, or EO3602. Classification: SECRET/U.S. only.

PH4153  Advanced Classical Mechanics I (4-1) AS REQUIRED
The first course in a two-course sequence covering classical mechanics at the advanced graduate level. Newtonian mechanics of single-particle and two-body central force systems, including orbital motion and scattering. Constraints, Lagrangian dynamics and generalized coordinates. Euler's formulation of rigid body mechanics. Small oscillations and systems of coupled oscillators. Prerequisites: PH3152 and PH3991 or equivalents.

PH4154  Advanced Classical Mechanics II (4-1) AS REQUIRED
The second course in a two-course sequence covering classical mechanics at the advanced graduate level. Kinematics and dynamics of relativistic systems from the Lagrangian perspective. Hamilton's equations of motion and conservation laws. Poison brackets and commutation. Hamilton-Jacobi formulation of mechanics and action-angle variables. Introduction to nonlinear dynamics and chaotic systems. Introduction to classical perturbation theory. Prerequisites: PH4153 or equivalent.

PH4162  Mechanics of Continua (3-0) AS REQUIRED
The foundations of fluid mechanics presented in the tensor formulation. Scalars, vectors, and tensors; tensor differential and integral calculus; the stress tensor and rate of deformation tensor; principal values, deviators, and other invariants; fundamental laws: conservation of mass, linear momentum, angular momentum, and energy; constitutive equations; non-Newtonian fluids; Visco-Plastic materials. Prerequisites: PC3172 or equivalent.

PH4171  Physics of Explosives (4-0) Summer
This unclassified course for students in interdisciplinary curricula treats the military applications of countermeasures to electro-optic systems, including IR and EO seekers and trackers, surveillance and missile and laser warning systems, and laser rangers and designators. Scanning FLIR and IRST systems and array applications will be included. Signature suppression and generic active and passive countermeasure approached will be discussed including decoys and active IRCM. Laboratory work will deal with EO/IR devices and possible countermeasure techniques. Prerequisites: PH3204, MA3139, or equivalent.

PH4209  EO/IR Systems and Countermeasures (3-2) AS REQUIRED
This unclassified course for students in interdisciplinary curricula treats the military applications of countermeasures to electro-optic systems, including IR and EO seekers and trackers, surveillance and missile and laser warning systems, and laser rangers and designators. Scanning FLIR and IRST systems and array applications will be included. Signature suppression and generic active and passive countermeasure approached will be discussed including decoys and active IRCM. Laboratory work will deal with EO/IR devices and possible countermeasure techniques. Prerequisites: PH3204, MA3139, or equivalent.

PH4253  Sensors, Signals, and Systems (4-2) AS REQUIRED
This course treats the physical phenomena and practical problems involved in sensor systems for electromagnetic signals in the EO/IR range. Topics included are: optical modulation, nonlinear optics, acousto-optics; atmospheric molecular absorption characteristics and mechanisms of detectors for optical and infrared radiation, noise in detectors, cooling systems; image intensifiers, television and FLIR systems; detecting, tracking and homing systems; signal sources, target signatures and backgrounds; laser target designators, laser radars, the range equation. The laboratory will include experiments related to this material as well as to that of the preceding course, PH3252. Prerequisites: PH2652, PH3292, and PH3352 or equivalent.
GRADUATE SCHOOL OF ENGINEERING AND APPLIED SCIENCES (GSEAS)

PH4254 Thermal Imaging and Surveillance Systems (4-0) As Required
This course is intended as a capstone course on EO/IR systems for the Combat Systems Science and Technology Curriculum, or the Electronic Warfare Systems Technology curriculum. It addresses the system analysis and technology of infrared imaging (FLIR) and search/track systems (IRST), including the derivation of system performance measures such as Minimum Detectable Temperature Difference (MDT), and Minimum Resolvable Temperature Difference (MRTD) in terms of the optics, scanner, detectors, display, and human operator characteristics. Operational Performance Prediction codes and Tactical Decision Aids (TDAs) will be analyzed for current and developmental Forward Looking InfraRed (FLIR) Systems, and comparable codes for IRSTs discussed. Criteria for target detection and transference of contrast will be compared. Integrated Focal Plane Array Technology will be explored for application to second/third generation FLIR and Staring Imager development. Prerequisites: PH4253 or PH4209 or consent of instructor.

PH4271 Lasers, Optoelectronics and Electro-Optics I (4-1) Fall
The first course in a comprehensive two-course sequence covering the physics of lasers, optoelectronic and electro-optical devices. Review of Atomic and molecular energy levels, time-dependent perturbation theory, radiative transitions, transition rates. Einstein A and B coefficients for spontaneous and stimulated radiative transitions, blackbody radiation. Optical attenuation and amplification, rate equations. Basic laser theory, gain saturation, homogeneous and inhomogeneous effects. Optical resonators, laser modes, coherence. Q-switching, mode locking, pulse compression, laser pumping and tuning mechanisms. Gaussian beams. Introduction to multiple-mode and single mode optical fibers. Prerequisites: PH3292, PH3352, PH2652, or equivalent(s).

PH4272 Lasers, Optoelectronics and Electro-Optics II (4-1) Summer
The second course in a two-course sequence covering the physics of lasers, optoelectronic and electro-optical devices. Physics of optoelectronic detection, noise, detector figures-of-merit. Photovoltaic, photoconductive, bolometric and charge-coupled (CCD) detector families. 1-D and 2-D (focal-pave array) detectors. Image intensifiers and night vision systems. Gaussian beams. Physics of optical fibers and their practical applications. Optical properties of anisotropic media and their applications, electro-optical effects and modulators. Introduction to nonlinear optics, optical harmonic generation, parametric amplification and optical heterodyning. Prerequisites: PH3292, PH3352 and PH2652, or equivalent(s).

PH4273 Physics of Advanced Imaging Systems (4-2) Fall
A course in the physical optics of advanced imaging techniques, Introduction to Fourier optics, spatial frequency, sampling, and transfer function concepts, Beam diffraction from the linear systems/Fourier transform perspective, Wavefront coherence and its characterization, Optical transfer functions, modulation transfer functions and diffraction limited resolution of optical and RF systems, Performance characterization of imaging systems, Correlation-based reception in active systems, Computerized tomography and other projection-based imaging methods (including SAR and ISAR). Prerequisites: PH3292 or equivalent; PH4272 is recommended as a concurrent course.

PH4274 Physics of Active Electromagnetic Detection and Engagement (4-3) Summer

PH4280 Micro Electro Mechanical Systems (MEMS) Design II (2-4) As Required
This is the second course in Micro Electro Mechanical Systems (MEMS) Design. This course will expose students to advanced topics on material considerations for MEMS, microfabrication techniques, forces in the micro- and nano-domains, and circuits and systems issues. Case studies of MEMS-based microsensors, microactuators, and microfluidic devices will be discussed. The laboratory work includes computer aided design (CAD) and characterization of existing MEMS devices. The grades will be based on exams, lab projects, and a group design project. Prerequisites: ME/EC/PH3280 or ME3780 or consent of instructor.

PH4353 Topics in Advanced Electricity and Magnetism (4-0) As Required
Topics selected from: Electromagnetic radiation, including radiation from antennas and accelerating particles, and radiation scattering from charged particles. Additional topics may include Cerenkov radiation, free electron lasers, and the relativistic formulation of electrodynamics. Prerequisites: PH3152, PH3352 and PH3991.

PH4354 Advanced Electromagnetic Radiation (4-0) As Required
This course gives an in-depth coverage of scattering of electromagnetic radiation in the microwave to optical region, from randomly distributed scatterers in the atmosphere and the propagation of optical radiation in turbulent randomly fluctuating atmosphere, which has a most significant application in the high energy laser weapon program. Prerequisites: PH3352, PH3991.

PH4371 Classical Electrodynamics (3-0) As Required
Tensors in special relativity. Classical relativistic electromagnetic field theory. Lorentz electron theory. Prerequisites: PH4353 and familiarity with the special theory of relativity and Lagrangian mechanics.

PH4410 Advanced Acoustics Laboratory (1-6) As Required
Advanced laboratory projects in acoustics. Through the performance of experiments drawn from diverse fields of acoustics, the student is introduced to the problems and opportunities of acoustics research. For each experiment, the student is guided through the scientific literature on the subject, the construction of the equipment, the collection and analysis of the data, and the writing of a research report. Prerequisites: PH3451.
PH4453 Scattering and Fluctuation of Sound in the Ocean (4-0) As Required
An advanced treatment of the effects of variations of the ocean and its boundaries on ocean noise and the scattering and fluctuation of sound. Topics include: reflection of sound from ocean boundaries, normal mode propagation of sound, inhomogeneous wave equation and the point source in cylindrical coordinates; shallow water channel with fluid and solid of sound; inhomogeneous wave equation and the point source in the medium. Prerequisites: PH3452 or consent of instructor.

PH4454 Sonar Transducer Theory and Design (4-2) Winter
A treatment of the fundamental phenomena basic to the design of sonar transducers, specific examples of their application and design exercises. Topics include piezoelectric, magnetostrictive and hydro mechanical effects. Laboratory includes experiments on measurement techniques, properties of transducer materials, characteristics of typical sonar transducers, and a design project. A field trip to visit one or more transducer manufacturers is normally scheduled during the course. Prerequisites: PH3452 (may be taken concurrently).

PH4455 Sound Propagation in the Ocean (4-0) Spring
An advanced treatment of the subject. Topics include: reflection of spherical waves from ocean boundaries; normal mode propagation of sound; inhomogeneous wave equation and the point source in cylindrical coordinates; shallow water channel with fluid and solid bottoms; the deep sound channel and the WKB approximation; range-dependent channels; adiabatic normal modes and the parabolic equation; multi-path propagation; application to matched field processing and source localization. Prerequisites: PH3452 or consent of instructor.

PH4459 Nonlinear Oscillations and Waves (4-0) As Required
This is a self-contained course that emphasizes theory, classroom demonstrations, physical intuition, and applications of nonlinear oscillations and nonlinear waves. Subjects include the following: (i) Nonlinear oscillations: free motion, driven motion (direct, parametric, and maintained drives), quasiperiodicity, and chaos. (ii) Nonlinear dispersive waves (e.g. flexural waves on bars and plates, optical waves in fibers, and surface waves on water): self-interaction, wave-wave scattering, wave turbulence, and solitons. (iii) Nonlinear dispersionless waves, with concentration on acoustics: distortion, shock waves, parametric arrays, radiation pressure, levitation, jetting and streaming, acoustic caviation, and sonoluminescence. Prerequisites: PH1121 and differential equations.

PH4656 Quantum Mechanics (4-1) Spring/ Fall
Free particles and wave packets, the uncertainty principle, Schrodinger equation, eigenstates and eigen functions, stationary and scattering states, identical particles and the exclusion principle, atomic energy levels, quantum theory of angular momentum, hydrogen atom, coupling of angular momentum with spin, the periodic table, nuclear structure and radioactivity; fission and fusion, time independent perturbation theory, time dependent perturbation theory; selection rules for dipole radiation, magnetic effects (MRI, GMR etc.), quantum computing. Prerequisites: PH2652, PH3152, PH3991.

PH4661 Plasma Physics I (4-0) As Required
Introduction to plasma physics; single particle dynamics (orbit theory), MHD fluid theory, electromagnetic waves, instability, diffusion, and breakdown in gases. Prerequisites: PH3352 or equivalent.

PH4662 Plasma Physics II (3-0) As Required
A continuation of Plasma Physics I. Applications of the hydromagnetic equations to the study of macroscopic motions of plasma; classification of plasma instabilities; kinetic theory, the Boltzmann equation and the macroscopic-momentum transport equation; plasma oscillations and Landau damping; nonlinear effects, shock waves, radiations from plasma, sheath theory. Prerequisites: PH4661 or consent of instructor.

PH4670 Quantum Computing (4-0) Spring
This interdisciplinary survey course explores the evolution and direction of quantum computing technology. Topics include quantum circuits, quantum algorithms (including factoring and search), and quantum key distribution. Jointly listed as CS4670. Prerequisites: familiarity with basic notions of computing, quantum theory, and linear algebra, consistent with the material covered in CS3000, PH2652, MA3042 or PH3991.

PH4760 Solid State Physics (4-0) As Required
Fundamental theory dealing with solids: crystals, binding energy, lattice vibration, dislocations and mechanical properties, free electron theory, band theory, properties of semi-conductors and insulators, magnetism. Prerequisites: PH3655, PH3782.

PH4771 Advanced Statistical Physics (4-0) As Required

PH4857 Physics of High Velocity Impact, Weapon Lethality, and Survivability (4-0) Summer
This course is the first of a two course sequence on the physics and systems engineering concepts underlying weapon systems and weapon systems integration. Topics include: basics of stress-strain relations in various materials; elastic-plastic waves and shocks in solid materials; explosively driven fragments and materials; physics of fragment and rod-like penetration into solid targets; kill mechanisms; vulnerability, survivability and kill probability considerations; and basics of warhead design. Prerequisites: PC3172, PH3352, PH2151.

PH4858 Electric Ship Weapon Systems (4-1) Fall
This is the second of a two course sequence on the physics and systems engineering concepts underlying weapon systems and weapon systems integration. Topics include: the basic laser range equation and estimate of kill requirements; candidate laser systems for weapons applications; laser propagation effects from absorption, turbulence and blooming; laser target interaction by melting and by impulse; high power microwave principles and applications; and railgun theory and critical issues-power conditioning, barrel design and life, projectile design, cooling. Prerequisites: PH3352.
PH4859  Technical Aspects of Weapon Proliferation, Control and Disposal (3-0) As Required
This course addresses technical issues of detection of nuclear weapon materials, covert explosions, disposition of weapon grade material and nuclear reactor fuel, control and disposition of chemical and biological weapons, policy issues of arms proliferation and arms control. Prerequisites: Consent of instructor.

PH4860  Nuclear Warfare Analysis (4-0) As Required
This final course in the nuclear weapons effects graduate specialization sequence deals with technical aspects of strategic and tactical nuclear war. Effects which nuclear weapons explosion environments have on various defense platforms and systems are considered, together with methods of hardening to reduce system vulnerability in each of the affected areas: blast and shock, thermal radiation, transient effects on electronics. EMP, biological effects from contamination, atmospheric and ionospheric effects on communication, detection and surveillance systems. Prerequisites: PH4171 Classification: SECRET.

PH4911  Simulation of Physical and Weapon Systems (3-2)
Winter
The role of computation physics in modern weapons development and combat simulations is studied. The programming language is C within the UNIX, Apple, or Windows operating systems. Applications emphasize physical principles of weapon development, systems engineering, and the use of graphics. Subject matter includes random number distributions, projectile and fragment dispersion, missile defense, free electron laser simulation, laser beam propagation in a turbulent atmosphere, thermal blooming, diffraction and numerical integration methods. Optional topics include molecular dynamics in solids, liquids, and gases, wave propagation in various media, chaos, and quantum mechanical wave functions. Prerequisites: PO2911.

PH4943  Relativistic Quantum Mechanics (3-0) As Required
The goal of this course is to expose the NPS student to the basic concepts in one of physics' most successful and fundamental formalisms - quantum electrodynamics (QED). The basic topics reviewed are quantum mechanics, electromagnetism, and special relativity. Then, these fundamental theories are extended and combined into QED. Throughout the course the relativistic free electron laser is used as an application of the basic theories encountered. Prerequisites: PH4656, PH2652 (PH4984 recommended).

PH4984  Advanced Quantum Physics (4-0) As Required
Quantum mechanics in the Dirac format. Angular momentum, spin, and spin resonance. Additional topics may include group theoretical applications to selection rules and crystal fields, variational principles, self-consistent fields in the many-electron atom, scattering theory, and polyatomic molecules. Prerequisites: PH3152 and PH4656.

PH4991  Relativity and Cosmology (4-0) As Required
This course is a graduate level introduction to the current thought on the origin of space, time and matter. Topics covered are: The discovery of the cosmic evolution, Description of space in Newtonian and Einsteinian terminology, Kinematics and Dynamics of the Einstein cosmological models, the thermal history of the universe, the very early universe, the problems of a possible quantum origin of the universe and the possible future of the universe. Prerequisites: PH2652, PH3152, PH3360, PH3991.

PH4992/4998  Special Topics in Advanced Physics (Variable Hours 1-0 To 4-0) (V-0) As Required
Study in one of the fields of advanced physics and related applied areas selected to meet special needs or interests of students. The course may be conducted as a seminar or supervised reading. The course carries a letter grade and may be repeated in different topics. Prerequisites: A 3000 level course appropriate to the subject to be studied, and consent of the Department Chairman. It may also be taken on a Pass/Fail basis if the student has requested so at the time of enrollment.

PH5810  Dissertation Research (0-8) As Required
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

SE Courses (Under Dept of Physics)
None.

Combat Systems Sciences and Technology - Curriculum 533
Combat Systems Web Page:

(831) 656-2950, DSN 756-2950
rwkerchn@nps.edu

Academic Associate
Richard Harkins, MS
Code Ph/Hr, Spanagel Hall, Room 142A
(831) 656-2828, DSN 756-2828
rharkins@nps.edu

Brief Overview
This program is designed to meet the needs of the military services for an officer having a broad-based advanced technical education applicable to combat systems design, development, test and evaluation, acquisition, operation, and support. The student does not necessarily earn a degree in Combat Systems. The majority of students earn a degree in Physics or Applied Physics. Degrees in Engineering Acoustics or Combat Systems Technology are also available on a space available basis. Included in the core of the program are courses on electromagnetic radiation, applied optics, optoelectronics, servo and computer control systems, explosives and warheads, fluid dynamics of weapons, combat simulation, underwater acoustics, semiconductor devices, detection and engagement elements, combat systems integration, and computing resources for advanced combat systems. The
officer will also conduct thesis research on a military-relevant technical problem.

**Requirements for Entry**

A baccalaureate degree with mathematics through differential and integral calculus and a calculus-based basic physics sequence are required for direct input. Courses in the physical sciences and engineering are highly desirable. An APC of 323 is required.

**Entry Date**

Standard entry dates are January and July. Other entry dates are possible by special arrangement with the program officer. If further information is needed, contact the Academic Associate or Program Officer for this curriculum.

**Degree**

A student can earn one of the following degrees in the Combat Systems Sciences and Technology (Curriculum 533): Master of Science in Physics, Applied Physics, Engineering Acoustics or Combat System Technology. Required classes vary by degree.

**Subspecialty**

The Combat Systems Sciences and Technology Curriculum has options ranging from a four-quarter program for students ready to commence graduate-level courses, to an eight-quarter course of study for students who require a review of undergraduate coursework. Completion of the full eight-quarter curriculum qualifies an officer as a Combat Systems Sciences and Technology Sub-specialist with a subspecialty code of 5700-5707P depending on specialization track. U.S. Navy students entering the Combat Systems Curriculum through the one-year Immediate Graduate Education Program receive a sub-specialty code of 5701-5704I. The curriculum sponsor is Commander, Naval Sea Systems Command.

**Typical Subspecialty Jobs**

AEGIS Tech Rep, Morristown, NJ
DOE National Nuclear Security Agency, Washington, DC
Defense Threat Reduction Agency, Los Alamos, NM
Missile Defense Agency, Washington, DC (laser program)
Naval Sea Systems Command, Washington, DC (Battle Force Engineer, Systems Engineering East Coast Battle Group, NATO Sea Sparrow Surface Missile Program)
Naval Surface Warfare Center White Sands, NM (Project Support Officer, Weapons Test Officer)
Naval Surface Warfare Center Dahlgren, VA (Strategic Fire Control)
Naval Surface Warfare Center Port Hueneme, CA (Aegis Ship Qualification Trials, Test and Evaluation Project Officer)

Program Executive Officer Carriers, Washington, DC (Deputy Program Manager Combat Systems)
Supervisor Shipbuilding, Jacksonville, FL (Ship Repair Officer)
Strategic Weapons Facility Atlantic, King’s Bay, GA (Weapons Technology)
Strategic Systems Programs, Sunnyvale, CA (Arms Control Coordinator, Fire Control and Guidance Branch Head)
Program Executive Officer Strike, Washington, DC (Tech Director, Combat Systems, Air Dominance, Undersea Domain, Ship Design)
Space and Naval Warfare Systems Command, San Diego, CA (PD-18 Assistant Program Manager for Acoustic Sensor Systems)
United States Naval Academy (Physical Science Instructor)

Educational Skill Requirements (ESR)
Combat Systems Sciences and Technology-
Curriculum 533
Subspecialty Code 57xxP

1. **Mathematics, Science, and Engineering Fundamentals**: A solid foundation in mathematics, physics, and engineering underpinning combat-systems technology to support the theoretical and experimental aspects of the technical courses in the curriculum.

2. **Acoustic and Electromagnetic Systems**: A graduate-level understanding of acoustic and electromagnetic propagation; physics of solid state, and electro-optic devices; including the principles of radar and sonar systems; and signal analysis, processing, and decision theory.

3. **Communication Systems**: A graduate-level understanding of various communication systems including fiber optics, automatic control systems, and open architecture designs and their implications on integration of computing resources and in advanced combat systems.

4. **Weapons Systems and Applied Fluid Mechanics**: A graduate-level understanding of the fluid dynamics of subsonic and supersonic weapons, warheads and their effects.

5. **Combat Systems Analysis, Simulation, and Testing**: Sufficient foundation in Systems Analysis and Simulation to understand the limits of each, and their effect on required combat systems testing.

6. **Combat Systems Engineering**: An understanding of the principles of design, development, testing and evaluation; and the importance of performance and economic trade-offs in combat systems.

7. **Materials Science**: A familiarity with the concepts of materials science sufficient for an understanding of the mechanical, electrical, and thermal properties of materials important in present and future combat systems.

8. **Strategy and Policy**: Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons for future joint and combined operations, in order to discern the relationship between a nation’s policies and goals and the ways military power may be used to achieve them. Fulfilled by completing the first of the Naval War College course series leading to Service Intermediate level Professional Military Education (PME) and Phase I Joint PME credit.

9. **Technical Specialization**: Each officer will also acquire technical competence in an area related to Combat Systems:

10. **Thesis**: The graduate will demonstrate the ability to conduct independent research in combat systems sciences and technology, and proficiency in presenting the results in writing and orally by means of a thesis and command-oriented briefing.

Brij Agrawal*, Distinguished Professor, Ph.D., Syracuse, 1970.

Thomas Betterton, RADM, USN (Ret.), Professor, Chair Naval Space Technology, EAA-Massachusetts Institute of Technology, 1966.

Dan Boger*, Professor, Chairman of IS department, Ph.D., University of California Berkeley, 1979.

Alex Bordetsky*, Associate Professor, Ph.D., Chelyabinsk St Tec University, 1982.

Christopher Brophy*, Associate Professor, Ph.D., University of Alabama(Huntsville), 1997.

Daniel Bursch, CAPT, USN (Ret.), Astronaut, NRO Chair; M.S, Naval Postgraduate School, 1991.

Dan Chisholm, CDR, USN, Program Officer, M.S., Naval Postgraduate School, 1998.

Bill Colson*, Distinguished Professor, Ph.D., Stanford University, 1977.

Don Danielson*, Professor, Ph.D., Harvard, 1968.

Phil Durkee*, Professor, Ph.D., Colorado State University, 1984.

Douglas Fouts*, Professor, Ph.D., University of California Santa Barbara, 1990.

Mathias Kolsch, Associate Professor, Ph.D., University of California Santa Barbara, 2004.

Herschel H. Loomis, Jr.*, Professor, Ph.D., Massachusetts Institute of Technology, 1963.

Sherif Michael*, Associate Professor, Ph.D., West Virginia University, 1983.

James H. Newman, Professor, Astronaut Ph.D., Rice University, 1984.

Richard C. Olsen*, Professor, Ph.D., University of California, San Diego, 1980.

Clay Moltz, Associate Professor, Ph.D., University of California Berkley, 1989.

Rudy Panholzer, Professor, Ph.D., Technical University Graz, Austria, 1961, EE., Stanford University, 1957.

Charles M. Racoosin, CDR, USN (Ret.), Naval Space Systems, Chair Professor; M.S., Naval Postgraduate School, 1989.

Mark Rhoades, CDR, USN (Ret.), Senior Lecturer, M.S., Naval Postgraduate School, 1990.

Marcello Romano, Assistant Professor, Ph.D., Politecnico di Milano, Italy, 2001.

Alan Ross, Professor of Practice, Ph.D., University of California, Davis, 1978.

Michael Ross*, Professor, Ph.D., Penn State University, 1991.

Timothy Sands, Lt. Col., USAF, Assistant Professor, Ph.D., Naval Postgraduate School, 2004.

Alan Scott, CAPT, USN (Ret), Senior Lecturer; Astronautical Engineer, Naval Postgraduate School, 1996.

David Trask, MASINT Chair Professor, M.B.A., Embry-Riddle University, 1991.

Stephen Tackett, LCDR USNR (Ret.), Lecturer, M.S., Naval Postgraduate School, 1995.

Todd Weatherford*, Associate Professor, Ph.D., North Carolina State University, 1993.

(* indicates faculty member has a joint appointment to another department at NPS)

Brief Overview

The Space Systems Academic Group (SSAG) is an interdisciplinary association of faculty and academic chair professors representing eight separate academic disciplines. The SSAG has established six Chair professorships sponsored by the Aerospace Corporation/NRO, NASA, Naval Space Systems, Naval Space Technology Program, Space Systems Engineering and Acquisitions Chair, and the MASINT Chair Professor who supports the SSAG in areas of Measurement and Signature Intelligence (MASINT). The Space Systems Academic Group has responsibility for the academic content of the Space Systems Operations and Space Systems Engineering curricula. Instruction is carried out by faculty members attached to the group, as well as the following academic departments: Mechanical and Aerospace Engineering, Electrical and Computer Engineering, Mathematics, Operations Research, Physics, Information Operations, and Systems Management. The Space Systems Academic Group approves thesis topics for students in Space Systems Operations. For Space Systems Engineering, the group chairman approves the final thesis in addition to the academic department granting the degree.

Degree

Space Systems Operations

The Space Systems Operations students are awarded the Master of Science in Space Systems Operations degree. A minimum of 45 quarter-hours of graduate level work is required, of which at least 15 hours must be at the 4000 level. Graduate courses in at least four different academic disciplines must be included and in two disciplines, a course at the 4000 level must be included. There is also a requirement of three courses constituting advanced study in an area of specialization and an experience tour. Each student is required to write a thesis that is space oriented. The Chairman of the Space Systems Academic Group must approve all study programs.

Space Systems Engineering

The Space Systems Engineering students earn a master’s degree in one of the following academic areas: Astronautical Engineering, Computer Science, Electrical and Computer Engineering, or Physics. Refer to the degree requirements in the associated departments.
**Group Facilities**
- ARM (Articulated Robotics Manipulator) Laboratory
- Center for Radiation Hardened Electronics
- Cognitive Systems Laboratory
- CubeSat Development Lab
- DARK MIRROR (Spacecraft Engineering & Operations) Laboratory
- FLTSATCOM Satellite Operations Lab
- GNC (Guidance, Navigation and Control) Laboratory
- Ross Magnetic Attitude Control Test Lab
- Nanosat Advanced Concepts Laboratory
- NPS-AFRL Optical-relay Spacecraft Lab
- NPS Vision Lab
- Photogrammetric System ID Laboratory
- Rocket Propulsion Lab
- Small Satellite Development and Test Lab
- Spacecraft Attitude Dynamics & Control Laboratory
- Spacecraft Robotics Laboratory
- Sensitive Compartmented Information Facility

**Space Systems Course Descriptions**

**SS Courses**

**SS0810 Thesis Research (0-8) As Required**
Every student conducting thesis research enrolls in this course.

**SS3001 Military Applications of Space (3-2) Winter**
Space Systems and technologies of interest to the military. Strategic and tactical imagery and SIGINT requirements. Tasking and use of national space systems and ground support elements. Vulnerability considerations and impact of current R&D programs.
Prerequisites: SS3500, PH3052 and understanding of Fourier Analysis. Classification: TOP SECRET clearance with access to SCI.

**SS3011 Space Technology and Applications (3-0) As Required**
An introduction to space mission analysis with an emphasis on those space missions supporting military operations. Topics include space history, doctrine and organizations, orbital mechanics, communication link analysis, space environment, spacecraft technology, and military, civil and commercial space systems.
Prerequisites: None.

**SS3035 Microprocessors for Space Applications (3-2) Spring**
An introduction to microprocessors at the hardware/software interface. Machine language programming, assembly language programming, I/O systems and interfacing, and operating systems.
Prerequisites: EC2820.

**SS3041 Space Systems and Operations I (4-2) Fall**
Space systems mission analysis and design. This course addresses the architecture design of complex space systems. Topics include: mission characterization, mission evaluation, requirements determination, analysis and estimating, cost and operational effectiveness analysis.
Prerequisites: SS3011, SS3500, MN3331 and PH3052 (concurrently). Classification: SECRET.

**SS3051 Space Systems and Operations II (4-0) As Required**
This course covers joint space doctrine, space policy, and applications of selected military space systems. Topics include the space mission areas of space control and space force enhancement to include space-based navigation, environmental monitoring, and space surveillance systems, along with satellite command and control networks. Additional topics include space threats, tactics, ground application tools and the space annex for an operations plan.
Prerequisites: SS3500 and SS3011. Classification: TOP SECRET clearance with access to SCI.

**SS3500 Orbital Mechanics and Launch Systems (4-2) Winter**
Provides a fundamental understanding of Orbital Mechanics through study of conic sections, coordinate systems, coordinate transformations, and time. Calculation of orbital elements of the two-body problem is covered. Other Orbital Mechanics topics include: Newton's laws, Kepler's equation, orbital perturbations, and orbital maneuvering, including rendezvous and proximity operations. Launch systems topics include: the rocket equation, single and multi-stage rockets, launch windows, launch profiles, ascent and payload delivery performance, and mission design. Supporting lab work utilizes the Satellite Tool Kit (STK) as an orbit analysis tool. The use of Excel and / or MATLAB for solving problems is encouraged. Prerequisites: None.

**SS3600 Space Systems Modeling and Simulation (2-3) Fall**
SS3600 provides students with knowledge of modeling and simulation theory and the ability to apply space systems modeling and simulation tools to real world problems. Concepts covered include the development and applicability of models and simulations, with a focus on specific space applications. Students will apply these concepts through laboratory exercises and a project to simulate an end-to-end space architecture, evaluate system performance, and compare alternative solutions.
Prerequisites: SS3500.

**SS3613 Military Satellite Communications (3-0) Fall**
MILSATCOM mission analysis, systems design, and applications. This course will cover requirements, tactical employment, system architectures, satellite design and performance, terminal design and performance, associated information systems, link budget calculations, telemetry and control and I/O/JW implications.
Prerequisites: SS3011, or consent of instructor. U.S. Citizen. Classification: SECRET.

**SS3900 Special Topics in Space Systems (Variable Hours 1-0 to 5-0) (V-0) As Required**
Directed study either experimental or theoretical in nature. Prerequisites: Consent of Chairman of Space Systems Academic Group and instructor. May be taken on Pass/Fail basis if the student has requested so at the time of enrollment. Prerequisites: None.

**SS4000 Space Systems Seminars (0-1) As Required**
Seminars consist of lectures to provide perspective on Space Systems. And to expose the student to various space activities such as industry, NASA and DoD laboratories and commands.
Prerequisites: None.

**SS4051 Military Space Systems and Architectures (3-2) As Required**
This course covers the system level architectural design of selected Space Systems. Emphasis is on a balanced design of all seven components of space systems: space segment, launch segment, ground segment, mission operations, C3 architecture, subject, and...
orbit and constellation. Prerequisites: SS3001, SS3041, SS3500. Classification: TOP SECRET clearance with access to SCI.

**SS4900 Advanced Study in Space Systems (Variable Hours 1-0 to 5-0) (V-0) As Required**  
Directed graduate study based on journal literature, experimental projects, or other sources. Prerequisites: Consent of Chairman of Space Systems Academic Group and instructor. May be taken on Pass/Fail basis if the student has requested so at the time of enrollment. Prerequisites: None.

**Space Systems Certificate (SSC) - Curriculum 273**

**Program Officer**  
Jason W. Pratt, CDR  
Code 71, Bullard Hall, Room 203  
(831) 656-7517, DSN 756-7517  
jwpratt@nps.edu

**Academic Associate**  
William J. Welch  
Code IS/Ww, Glasgow Hall, Room 279  
(831) 656-3212, DSN 756-3212  
wwelch@nps.edu

**Brief Overview**

The Space Systems Certificate program is comprised of four courses (SS3011, PH3052, SS3613, and PH2514). Upon successful completion of the course work, students will be awarded a certificate of accomplishment in keeping with standard practices of the Naval Postgraduate School. The Space Systems Certificate program supports Navy and DoD space educational needs and complements existing resident training by providing cross-disciplinary science and technical education. The Space Systems Certificate program is targeted primarily at enhancing the education and preparation for the USN Space Cadre personnel. The Navy’s Space Cadre represents a distinct body of expertise horizontally integrated within the Navy active duty, reserves, both officer and enlisted, and civilian employee communities organized to operationalize space.

Individuals completing the Space Systems certificate will receive an Additional Qualification Designator (AQD) of VS1 and will automatically be considered for designation as a member of the USN Space Cadre.

Two significant events specified the requirement to establish a distance learning program for National Security Space (NSS) personnel in space systems and space applications. First, the DoD-wide space educational requirement was identified by the Undersecretary of the Air Force, as the Executive Agent for Space, as required in the “Commission to Assess United States National Security Space Management and Organization” (2001). Second, the USN Space Cadre Human Capital Strategy was signed by Commander, Naval Network Warfare Command on 25 Jan 2005, stating that completion of NPS Space Systems Certificate satisfied approved entry level space education for Space Cadre personnel.

Based upon these events, the NPS Space Systems Certificate (SSC) was developed, comprised of the following four courses:

- SS3011 Space Technology and Applications  
- SS3613 Military Satellite Communications (MILSATCOM)  
- PH3052 Physics of Space and Airborne Sensor Systems  
- PH2514 Introduction to the Space Environment

The original course and academic content for the SSC was vetted and approved by USN space and space training leaders. The Space Systems Certificate is a completely Web-based, asynchronous education program that covers fundamental areas of twenty-first century space enhancement to military operations as validated by NETWARCOM (November 2004). The learning outcomes for the SSC Certificate program directly support the Educational Skill Requirements within the Space Systems Operation (subspecialty code 6206P) degree. Evaluation of the Space Systems Certificate occurs in conjunction with the biannual Space Systems curriculum review.

**Requirements for Entry**

A baccalaureate degree with above-average grades. Completion of college level Algebra 2 with a grade of ‘C’ or better is required.

**Entry Dates**

At the beginning of the following quarters for each academic year (Oct, Apr).

**Program Length**

Four Quarters

**Graduate Certificate Requirements**

Requirements for the certificate in Space Systems are met by successful completion of all four courses. Certificate credit is obtained by maintenance of a 3.0 grade point average on a 4.0 scale.

**Required Courses: Curriculum 273**

mmrhoade@nps.edu

Brief Overview
The Space Systems Operations (Distance Learning) curriculum is designed to provide officers and U.S. government civilians with knowledge of military opportunities and applications in space. Students are provided instruction about the operation, tasking and employment of space surveillance, communications, navigation and atmospheric /oceanographic/environmental sensing systems as well as payload design—specifically for the exploitation of Space and Information products. DoD organizations or sponsors provide the students, and the Space Systems Academic Group coordinates the instruction, course materials, and experience, which are provided by faculty from various NPS departments. Courses are delivered at the students' local site using a combination of, web-conferencing tools, and web-enhanced on-line courses.

Requirements for Entry
This curriculum is open to officers of the U.S. Armed Forces and selected civilian employees of the U.S. Federal Government. Admission requires a baccalaureate degree with above-average grades, completion of mathematics through integral calculus, plus at least one course in calculus-based physics. An APC of 324 or GPA of 2.6 is required for entry. A security clearance is not required but highly recommended.

Entry Date
The Space Systems Operations (Distance Learning) curriculum is an eight-quarter course of study with a single entry date in the Fall quarter. If further information is needed, contact the Academic Associate or Program Officer.

Degree
The course of study yields the Master of Science in Space Systems Operations degree.

Subspecialty
Completion of this curriculum qualifies an officer as a Space Systems Operations Subspecialist with a subspecialty code of 6000. The curriculum sponsor is OPNAV N6, The subject Matter Expert is Naval Network Warfare Command (NETWARCOM).

Typical Course of Study - Space Systems Operations-Fall Entry

Quarter 1
SS3011 (3-0) Space Technology and Applications
PH2514 (4-0) Introduction to the Space Environment

Quarter 2
SS3500 (4-2) Orbital Mechanics and Launch Systems
PH3052 (4-0) Physics of Space and Airborne Sensor Systems

Quarter 3
EO3516 (4-2) Intro to Communication System Engineering
AE4830 (3-2) Spacecraft Systems I

Quarter 4
EO4516 (4-2) Communication Systems Analysis
AE4831 (3-2) Spacecraft Systems II

Quarter 5
SS3041 (4-2) Space Systems & Operations I
SS3613 (3-0) Military Satellite Communications

Quarter 6
SS0810 (0-8) Thesis
IO3100 (4-0) Information Operations

Quarter 7
SS0810 (0-8) Thesis
SS4051 (3-2) Military Space Systems and Architectures

Quarter 8
SS0810 (0-8) Thesis

Educational Skill Requirements (ESR)
Space Systems Operations (DL) - Curriculum 316 Subspecialty Code: 6206G

Graduates of the Space Systems Operations Specialization of the Information Sciences, Systems, and Operations (ISSO) Curriculum shall be able to determine space systems requirements which support the following operational concepts: control of space, global engagement, full force integration, and global partnerships. The graduates shall be able to analyze courses of action for the best employment of available space assets for ongoing and future military operations, and communicate this assessment to shore and afloat staffs and commanders.
Supporting these goals are the following specific requirements:

1. **ORBITAL MECHANICS AND SPACE ENVIRONMENT**
   a. Graduates will examine the basic physics of orbital motion, and calculate and distinguish the parameters used in the description of orbits and their ground tracks.
   b. Graduates will examine the design of orbits and constellations, and analyze how they are achieved, maintained, and controlled; to include spacecraft maneuver and orbit transfer calculations.
   c. Graduates will examine the fundamentals of spacecraft tracking and command/control from a ground station.
   d. Graduates will examine the various orbital perturbations, including those due to non-spherical earth and due to atmospheric drag, and interpret their effects.
   e. Graduates will analyze the relationship between various orbital characteristics and the satisfaction of mission requirements, including the advantages and disadvantages of various orbits.
   f. Graduates will design and optimize mission orbits through the analysis of common performance measures such as access, coverage, and revisit; and will employ appropriate tools to conduct these analyses.
   g. Graduates will examine the physical behavior of the upper atmosphere, ionosphere and space environment under the influence of both natural and artificial phenomena such as solar activity, geomagnetic and magnetospheric effects, and man–made disturbances.
   h. Graduates will apply this understanding of how the space environment impacts spacecraft parts, materials, and operations to spacecraft and mission design.

2. **NATIONAL SECURITY SPACE SYSTEMS**
   a. Graduates will examine the nature of space warfare (theory, history, doctrine, and policy); distinguish between the four JP 3-14 defined Space Mission Areas (Space Control, Space Support, Force Enhancement, Force Application); and interpret how current and planned space capabilities contribute to the satisfaction of these mission areas.
   b. Graduates will examine the roles, responsibilities, and relationships of National and DoD organizations in establishing policies, priorities, and requirements for National Security Space systems; and in the design, acquisition, operation, and exploitation of these systems.
   c. Graduates will examine the role of the Services / Agencies in establishing required space system capabilities, and will translate these capabilities into system performance requirements.
   d. Graduates will examine: current and planned Intelligence, Surveillance, and Reconnaissance (ISR) capabilities; how space systems contribute to these capabilities; the intelligence collection and analysis process; and how war-fighters access information from these sources.
   e. Graduates will develop and assess space tactics and/or CONOPS that integrate with and enhance or support military operations.
   f. Graduates will identify how proposed space-related capabilities / doctrine are translated from concept to real-world implementation through experimentation.

3. **COMMUNICATIONS**
   a. Graduates will examine the basic principles of communications systems engineering to include both the space and ground segments.
   b. Graduates will examine digital and analog communications architecture design, including such topics as frequency reuse, multiple access, link design, repeater architecture, source encoding, waveforms/modulations, and propagation media.
   c. Graduates will calculate and analyze link budgets to assess communication system suitability to support mission requirements, and to translate mission requirements into communications system design characteristics.
   d. Graduates will differentiate, compare, and contrast the characteristics and capabilities of current and future communications systems in use or planned by Naval operating and Joint forces afloat and ashore.
   e. Graduates will examine how these space systems are used to meet Joint war-fighters’ communications requirements.
   f. Graduates will interpret and articulate from the Joint war-fighter’s perspective the advantages and disadvantages of various frequencies used by DoD for communications across the frequency spectrum.
   g. Graduates will recognize the national and international issues involving use of the frequency spectrum.
   h. Graduates will identify and distinguish current and future MILSATCOM bandwidth allocation processes.
   i. Graduates will discuss the nature of the rapid evolution in commercial satellite communications systems, and recognize the impact of such
advancements on military operations and systems development.

j. Graduates will propose and assess potential uses of commercial systems to satisfy Joint DoD Information Operations requirements.

4. REMOTE SENSING
a. Graduates will examine principles of active and passive sensors in current or planned use.

b. Graduates will examine the effects of the space, atmospheric, and terrestrial environments (including countermeasures) on sensor performance.

c. Graduates will assess and conduct tradeoffs among various sensors and platforms, evaluating how each satisfies mission requirements such as access area, resolution, timeliness, and capacity.

5. ANALYSIS, SYNTHESIS, AND EVALUATION
a. Graduates will derive, assess, and articulate capabilities necessary for the use of National Security Space systems in support of military operations.

b. Graduates will examine various engineering and mathematical definitions of cost functions (revisit time, dwell time, local coverage, etc.) and apply emerging methods and tools to optimizing these utility measures in support of mission objectives.

c. Graduates will analyze and evaluate system characteristics to satisfy required capabilities in a cost-effective manner using modeling and simulation, field and laboratory experiments, and/or other quantitative and qualitative methods.

d. Graduates will use business case (economic) and performance data to analyze trade-offs between commercial and DoD systems to provide desired operational capabilities.

6. ARCHITECTING JOINT MILITARY SPACE MISSIONS
a. Graduates will examine and relate the principles of architecting a complex, Joint National Security Space mission, and the life cycle process by which a space system is conceived, structured, designed, built, tested, certified and operated in a way that ensures its integrity and performance.

b. Graduates will develop and assess system requirements; compose alternate architectures to satisfy those requirements; and evaluate and select the most effective alternative.

c. Graduates will examine the system design of a spacecraft including its various subsystems: propulsion; structure; thermal; attitude determination and control; electrical power; and telemetry, tracking and commanding.

d. Graduates will assess key interactions between the various subsystems and their effects on system performance; and they will demonstrate the ability to integrate these subsystems in an acceptable design.

e. Graduates will develop system design criteria from stated performance requirements, and conduct trade-offs between payloads and other spacecraft subsystems.

f. Graduates will examine the design of current and planned space-based mission payloads (e.g., ISR, Communications, PNT, SIGINT).

g. Graduates will analyze mission capabilities and conduct associated trades in order to develop associated payload design requirements.

h. Graduates will examine the basic principles and operational issues of space access to include launch vehicle performance, launch windows, and their impact on military operations.

i. Graduates will examine the capabilities of the various current and planned launch systems, and characterize the issues associated with integrating a spacecraft with a launch vehicle, to include the effects of launch environment.

j. Graduates will perform a trade-off analysis in the selection of a launch vehicle based on mission requirements, performance and design constraints, and business issues involved (e.g., pricing, insurance, policy).

k. Graduates will apply the principles of systems engineering to a Joint / National Security space project from the needs assessment phase to the final operations cycle.

l. Graduates will examine the application of systems engineering and mission assurance processes in ensuring the integrity, workmanship, and performance of a space system. They will distinguish typical spacecraft testing including electromagnetic compatibility tests, vibration and thermal tests, functional tests, deployment tests, alignment tests, mass properties determination, and final system-level tests.

m. Graduates will apply the tools of project management (e.g., scheduling, costing, budgeting, planning, resource negotiation, risk management) to a space project.

n. Graduates will prepare for and conduct program reviews, from systems requirements through critical design, during spacecraft and architecture design projects.

o. Graduates will examine the basic elements of mission operations – spacecraft commanding, payload management, anomaly resolution, orbital
maneuver planning – and will apply these concepts during satellite and architecture design projects.

p. Graduates will develop and assess both a space system concept of operations and the space systems component of an OPLAN.

7. ADVANCED CONCEPTS AND TECHNOLOGIES IN SPACE SYSTEMS
   a. Graduates will examine potential future military space requirements stemming from desired information superiority capabilities.
   b. Graduates will examine future concepts of operation published by various DoD organizations based on emerging technologies and appraise their impact on military space.
   c. Graduates will examine the advanced concepts and technologies which could be used in future military space systems.

8. INFORMATION SUPERIORITY
   a. Graduates will examine how space systems contribute to and are supported by Joint C4I, Information Warfare (IW), and Network Centric Operations capabilities and architectures; and will examine means to employ space-based capabilities to support these various information superiority domains.

9. CONDUCT AND REPORT INDEPENDENT RESEARCH
   a. Graduates will conduct independent research on a space systems problem, including resolution of the problem and presentation of the results and analysis in both written and oral form.

Brief Overview
The Space Systems Operations (International) curriculum is designed to provide international officers with knowledge of military opportunities and applications in space. It is also available to US citizens who may not have a security clearance. Students are provided instruction about the operation, tasking, and employment of space surveillance, communications, navigation, and atmospheric/oceanographic/environmental sensing systems as well as payload design and integration — specifically for the exploitation of Space and Information products. For a complete description, see the Space Systems Operations (366) section of the catalog.

Requirements for Entry
This curriculum is open to International Officers. Admission requires a baccalaureate degree with above-average grades, completion of mathematics through differential equations and integral calculus, plus at least one course in calculus-based physics. An APC of 324 is required for direct entry. Students lacking this background may matriculate through the one-quarter Engineering Science program (Curriculum 460).

Entry Date
The Space Systems Operations curriculum is a six-quarter course of study with a single entry date in the Fall Quarter. A summer academic refresher quarter is available as needed. If further information is needed, contact the Academic Associate or Program Officer.

Degree
Space Systems Operations (International) students are awarded the Master of Science in Space Systems Operations degree as specified previously in the Space Systems Academic Group section of the Catalog.

Typical Course of Study - Space Systems Operations (International)

Quarter 1
MA1113 (4-0) Single Variable Calculus
MA1114 (4-0) Single Variable Calculus II with Matrix Algebra
SS3011 (3-0) Space Technology and Applications
PH1322 (4-2) Electricity and Magnetism
MO1903 (3-0) Applied Math for Space Systems
SS4000 (0-0) Seminar

Quarter 2
OS3180 (4-1) Probability/Stats
IS3502 (3-2) Network Operations I
SS3500 (4-2) Orbital Mechanics and Launch Systems
PH2514 (4-0) Space Environment
SS4000 (0-0) Seminar
### Quarter 3
- **EO3516** (4-2) Intro to Communication Systems Engineering
- **PH3052** (4-0) Physics of Space and Airborne Sensor Systems
- **AE4830** (3-2) Spacecraft Systems I
- **MN3331** (5-1) Principles of Systems Acquisition and Program Management
- **SS4000** (0-1) Seminar

### Quarter 4
- **EO4516** (4-2) Communications Systems Analysis
- **OS3301** (3-1) Simulation Modeling
- **CC3000** (4-0) Intro to Command, Control, Communication, Computer and Intel Systems
- **SS0810** (0-8) Thesis
- **SS4000** (0-1) Seminar

### Quarter 5
- **AE4831** (3-2) Spacecraft Systems II
- **NS4677** (4-0) Space and National Security
- **SE3100** (3-2) Fundamentals of Systems Engineering
- **SS0810** (0-8) Thesis
- **SS4000** (0-1) Seminar

### Quarter 6
- **EC4590** (3-0) Communications Satellite Systems Engineering
- **SS0810** (0-8) Thesis
- **SS0810** (0-8) Thesis
- **SS4000** (0-1) Seminar

**Brief Overview**
The Space Systems Operations curriculum is designed to provide officers with knowledge of military opportunities and applications in space. Students are provided instruction about the operation, tasking and employment of space surveillance, communications, navigation and atmospheric/oceanographic/environmental sensing systems as well as payload design and integration—specifically for the exploitation of Space and Information products.

The Space Systems Operations curriculum is one of the Information Superiority (IS) curricula, which encompasses several degree tracks: Computer Sciences, Joint C4I Systems, Information Systems and Technology, Information Warfare, Intelligence Information Management, Modeling, Virtual Environments and Simulation, and Space Systems Operations. The Professional Practice Core of the Information Superiority (IS) curricula consists of material in Information Sciences and Technology, Command and Control, C4ISR Systems, Acquisition, C4ISR System Evaluation, Information Operations/Warfare, and Enterprise Policy, Strategy and Change. This specialization satisfies the Information Superiority education skill requirements as established by CNO-N6.

**Requirements for Entry**
This curriculum is open to officers of the U.S. Armed Forces and selected civilian employees of the U.S. Federal Government. Admission requires a baccalaureate degree with above-average grades, completion of mathematics through differential equations and integral calculus, plus at least one course in calculus-based physics. An APC of 324 is required for direct entry. Students lacking this background may matriculate through the one-quarter Engineering Science program (Curriculum 460). A TOP SECRET security clearance is required with SPECIAL INTELLIGENCE (SI) clearance obtainable for all students.

**Entry Date**
The Space Systems Operations curriculum is an eight-quarter course of study with a single entry date in the Fall Quarter. A summer academic refresher quarter is available as needed. If further information is needed, contact the Academic Associate or Program Officer.

**Degree**
Requirements for the Master of Science in Space Systems Operations degree are met as a milestone en route to satisfying the Educational Skill Requirements of the curricular program.

**Subspecialty**
Completion of this curriculum qualifies an officer as a Space Systems Operations Subspecialist with a subspecialty code of 6206P. The curriculum sponsor is OPNAV N6. The designated Subject Matter Expert is the Naval Networks Warfare Command (NETWARCOM).

**Typical Subspecialty Jobs**
Project Officer: OPNAV (N6) TENCAP, Arlington, VA
Project Officer: SPAWAR Space Field Activity (SSFA)/NRO, Chantilly, VA
Space Advisor: NAVNETWARCOM, Norfolk, VA
Detachment OIC: Naval Space Operations Command (NAVSOC), Colorado Springs, CO
Staff Officer, Space and Global Strike: USSTRATCOM, Omaha, NE
Assistant Crew Commander: Space Control Center, Cheyenne Mountain Operations Center, Colorado Springs, CO

Educational Skill Requirements (ESR)
Information Sciences, Systems, and Operations - Curriculum 366
Subspecialty Code: 6206P

Graduates of the Space Systems Operations Specialization of the Information Sciences, Systems, and Operations (ISSO) Curriculum shall be able to determine space systems requirements which support the following operational concepts: control of space, global engagement, full force integration, and global partnerships. The graduates shall be able to analyze courses of action for the best employment of available space assets for ongoing and future military operations, and communicate this assessment to shore and afloat staffs and commanders.

Supporting these goals are the following specific requirements:

1. **Joint Strategy and Policy:**
   a. Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s policies and goals and the ways military power may be used to achieve them. This is fulfilled by completion of the first of the Naval War College course series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.
   b. Officers gain an understanding of current Navy and USMC doctrine (e.g., Sea Power 21, Expeditionary Maneuver Warfare).
2. **Orbital Mechanics, Space Environment, and Remote Sensing:**
   a. Graduates will examine the basic physics of orbital motion, and calculate and distinguish the parameters used in the description of orbits and their ground tracks.
   b. Graduates will examine the design of orbits and constellations, and analyze how they are achieved, maintained, and controlled; to include spacecraft maneuver and orbit transfer calculations.
   c. Graduates will examine the fundamentals of spacecraft tracking and command/control from a ground station.
   d. Graduates will examine the various orbital perturbations, including those due to non-spherical earth and due to atmospheric drag, and interpret their effects.
   e. Graduates will analyze the relationship between various orbital characteristics and the satisfaction of mission requirements, including the advantages and disadvantages of various orbits.
   f. Graduates will design and optimize mission orbits through the analysis of common performance measures such as access, coverage, and revisit; and will employ appropriate tools to conduct these analyses.
   g. Graduates will examine the physical behavior of the upper atmosphere, ionosphere and space environment under the influence of both natural and artificial phenomena such as solar activity, geomagnetic and magnetospheric effects, and man-made disturbances.
   h. Graduates will apply this understanding of how the space environment impacts spacecraft parts, materials, and operations to spacecraft and mission design.

3. **National Security Space Systems:**
   a. Graduates will examine the nature of space warfare (theory, history, doctrine, and policy); distinguish between the four JP 3-14 defined Space Mission Areas (Space Control, Space Support, Force Enhancement, Force Application); and interpret how current and planned space capabilities contribute to the satisfaction of these mission areas.
   b. Graduates will examine the roles, responsibilities, and relationships of National and DoD organizations in establishing policies, priorities, and requirements for National Security Space systems; and in the design, acquisition, operation, and exploitation of these systems.
   c. Graduates will examine the role of the Services / Agencies in establishing required space system capabilities, and will translate these capabilities into system performance requirements.
   d. Graduates will examine: current and planned Intelligence, Surveillance, and Reconnaissance (ISR) capabilities; how space systems contribute to these capabilities; the intelligence collection and analysis process; and how war-fighters access information from these sources.
   e. Graduates will develop and assess space tactics and/or CONOPS that integrate with and enhance or support military operations.
   f. Graduates will identify how proposed space-related capabilities / doctrine are translated from concept to real-world implementation through experimentation.

4. **Project Management and System Acquisition:**
   a. Graduates will examine project management and DoD system acquisition methods and procedures to include contract management, financial management and control, and the Planning, Programming and Budgeting System (PPBS).
   b. Graduates will recognize the role of the Defense Acquisition University and the acquisition courses and qualifications available.
   c. Graduates will examine system acquisition organizational responsibilities and relationships (e.g., Congress, DoD, Services, Resource Sponsor, Systems Commands, Operating Forces) as they pertain to the acquisition of systems for DoD, Naval, and civilian agency users.
   d. Graduates will examine the unique nature of space acquisition programs and the differences between the DoD 5000 acquisition process and space-specific acquisition processes (e.g., NRO Directive 7). Based on this knowledge, they will plan and structure a notional space system acquisition program.

5. **Communications:**
   a. Graduates will examine the basic principles of communications systems engineering to include both the space and ground segments.
   b. Graduates will examine digital and analog communications architecture design, including such topics as frequency reuse, multiple access, link design, repeater architecture, source encoding, waveforms/modulations, and propagation media.
   c. Graduates will calculate and analyze link budgets to assess communication system suitability to support mission requirements, and to translate mission requirements into communications system design characteristics.
d. Graduates will differentiate, compare, and contrast the characteristics and capabilities of current and future communications systems in use or planned by Naval operating and Joint forces afloat and ashore.

e. Graduates will examine how these space systems are used to meet Joint war-fighters' communications requirements.

f. Graduates will interpret and articulate from the Joint war-fighter's perspective the advantages and disadvantages of various frequencies used by DoD for communications across the frequency spectrum.

g. Graduates will recognize the national and international issues involving use of the frequency spectrum.

h. Graduates will identify and distinguish current and future MILSATCOM bandwidth allocation processes.

i. Graduates will discuss the nature of the rapid evolution in commercial satellite communications systems, and recognize the impact of such advancements on military operations and systems development.

j. Graduates will propose and assess potential uses of commercial systems to satisfy Joint DoD Information Operations requirements.

6. Remote Sensing:

a. Graduates will examine principles of active and passive sensors in current or planned use.

b. Graduates will examine the effects of the space, atmospheric, and terrestrial environments (including countermeasures) on sensor performance.

c. Graduates will assess and conduct tradeoffs among various sensors and platforms, evaluating how each satisfies mission requirements such as access area, resolution, timeliness, and capacity.

7. Analysis, Synthesis, and Evaluation:

a. Graduates will derive, assess, and articulate capabilities necessary for the use of National Security Space systems in support of military operations.

b. Graduates will examine various engineering and mathematical definitions of cost functions (revisit time, dwell time, local coverage, etc.) and apply emerging methods and tools to optimizing these utility measures in support of mission objectives.

c. Graduates will analyze and evaluate system characteristics to satisfy required capabilities in a cost-effective manner using modeling and simulation, field and laboratory experiments, and/or other quantitative and qualitative methods.

d. Graduates will use business case (economic) and performance data to analyze trade-offs between commercial and DoD systems to provide desired operational capabilities.

8. Architecting Joint Military Space Missions:

a. Graduates will examine and relate the principles of architecting a complex, Joint National Security Space mission, and the life cycle process by which a space system is conceived, structured, designed, built, tested, certified and operated in a way that ensures its integrity and performance.

b. Graduates will develop and assess system requirements; compose alternate architectures to satisfy those requirements; and evaluate and select the most effective alternative.

c. Graduates will examine the system design of a spacecraft including its various subsystems: propulsion; structure; thermal; attitude determination and control; electrical power; and telemetry, tracking and commanding.

d. Graduates will assess key interactions between the various subsystems and their effects on system performance; and they will demonstrate the ability to integrate these subsystems in an acceptable design.

e. Graduates will develop system design criteria from stated performance requirements, and conduct trade-offs between payloads and other spacecraft subsystems.

f. Graduates will examine the design of current and planned space-based mission payloads (e.g., ISR, Communications, PNT, SIGINT).

g. Graduates will analyze mission capabilities and conduct associated trades in order to develop associated payload design requirements.

h. Graduates will examine the basic principles and operational issues of space access to include launch vehicle performance, launch windows, and their impact on military operations.

i. Graduates will examine the capabilities of the various current and planned launch systems, and characterize the issues associated with integrating a spacecraft with a launch vehicle, to include the effects of launch environment.

j. Graduates will perform a trade-off analysis in the selection of a launch vehicle based on mission requirements, performance and design constraints, and business issues involved (e.g., pricing, insurance, policy).

k. Graduates will apply the principles of systems engineering to a Joint / National Security space
1. Graduates will examine the application of systems engineering and mission assurance processes in ensuring the integrity, workmanship, and performance of a space system. They will distinguish typical spacecraft testing including electromagnetic compatibility tests, vibration and thermal tests, functional tests, deployment tests, alignment tests, mass properties determination, and final system-level tests.

2. Graduates will apply the tools of project management (e.g., scheduling, costing, budgeting, planning, resource negotiation, risk management) to a space project.

3. Graduates will prepare for and conduct program reviews, from systems requirements through critical design, during spacecraft and architecture design projects.

4. Graduates will examine the basic elements of mission operations – spacecraft commanding, payload management, anomaly resolution, orbital maneuver planning – and will apply these concepts during satellite and architecture design projects.

5. Graduates will develop and assess both a space system concept of operations and the space systems component of an OPLAN.

9. Advanced Concepts and Technologies in Space Systems:
   a. Graduates will examine potential future military space requirements stemming from desired information superiority capabilities.
   b. Graduates will examine future concepts of operation published by various DoD organizations based on emerging technologies and appraise their impact on military space.
   c. Graduates will examine the advanced concepts and technologies which could be used in future military space systems.

10. Information Superiority: Graduates will understand how space systems contribute to and are supported by Joint C4I, Information Warfare (IW), and Network Centric Operations capabilities and architectures and will have the ability to innovatively employ space-based capabilities to support these various information superiority domains.

11. Conduct and Report Independent Research: Graduates will conduct independent research on a space systems problem, including resolution of the problem and presentation of the results and analysis in both written and oral form.
**Degree**

A student can earn one of the following degrees in the Space Systems Engineering (Curriculum 591): Master of Science in Electrical Engineering, Astronautical Engineering, Physics, Computer Science, or Engineering Science (Astronautical Engineering). In addition to the master’s degree programs offered by the Space Systems Engineering (Curriculum 591) an Astronautical Engineers Degree, and Ph.D. in Astronautical Engineering, Electrical Engineering and Physics are also available. Required classes vary by degree. The placement of these Electives and other classes is indicated as Degree Specialization Electives.

**Subspecialty**

Completion of this curriculum qualifies an officer as a Space Systems Engineering Specialist with a subspecialty code of 5500P. The curriculum sponsor is NAVSEA and the designated Subject Matter Expert is the Space and Naval Warfare Systems Command Space Field Activity (SSFA).

**Typical Subspecialty Jobs**

Project Officer/Engineer: SPAWAR, San Diego, CA
Project Officer/Engineer: SPAWAR Space Field Activity/NRO, Chantilly, VA
Satellite Communications Engineer: NAVSOC, Point Mugu, CA
Space Advisor: Naval Network Warfare Command, Norfolk, VA
Project Officer: Space Warfare Center, USSTRATCOM, Omaha, NE
Project Officer/Engineer, C4ISR Programs: SPAWAR Systems Center, San Diego, CA

**Typical Course of Study - (Astronautical Engineering Track)**

</table>
1. Joint Strategy and Policy:
   a. Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s policies and goals and the ways military power may be used to achieve them. This is fulfilled by completion of the first of the Naval War College course series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.
   b. Officers gain an understanding of current Navy and USMC doctrine (e.g., Sea Power 21, Expeditionary Maneuver Warfare).

2. Orbital Mechanics, Space Environment and Remote Sensing:
   a. Graduates will examine the basic physics of orbital motion, and calculate and distinguish the parameters used in the description of orbits and their ground tracks.
   b. Graduates will examine the design of orbits and constellations, and analyze how they are achieved, maintained, and controlled; to include spacecraft maneuver and orbit transfer calculations.
   c. Graduates will examine the fundamentals of spacecraft tracking and command/control from a ground station.
   d. Graduates will examine the various orbital perturbations, including those due to nonspherical earth and due to atmospheric drag, and interpret their effects.
   e. Graduates will analyze the relationship between various orbital characteristics and the satisfaction of mission requirements, including the advantages and disadvantages of various orbits.
   f. Graduates will design and optimize mission orbits through the analysis of common performance measures such as access, coverage, and revisit; and will employ appropriate tools to conduct these analyses.
   g. Graduates will examine the physical behavior of the upper atmosphere, ionosphere and space environment under the influence of both natural and artificial phenomena such as solar activity, geomagnetic and magnetospheric effects, and man-made disturbances.
   h. Graduates will apply this understanding of how the space environment impacts spacecraft parts, materials, and operations to spacecraft and mission design.

3. National Security Space Systems:
   a. Graduates will examine the nature of space warfare (theory, history, doctrine, and policy); distinguish between the four JP 3-14 defined Space Mission Areas (Space Control, Space Support, Force Enhancement, Force Application); and interpret how current and planned space capabilities contribute to the satisfaction of these mission areas.
   b. Graduates will examine the roles, responsibilities, and relationships of National and DoD organizations in establishing policies, priorities, and requirements for National Security Space systems; and in the design, acquisition, operation, and exploitation of these systems.
   c. Graduates will examine the role of the Services / Agencies in establishing required space system capabilities, and will translate these capabilities into system performance requirements.
   d. Graduates will examine: current and planned Intelligence, Surveillance, and Reconnaissance (ISR) capabilities; how space systems contribute to these capabilities; the intelligence collection and analysis process; and how war-fighters access information from these sources.
   e. Graduates will develop and assess space tactics and/or CONOPS that integrate with and enhance or support military operations.
   f. Graduates will identify how proposed space-related capabilities / doctrine are translated from concept to real-world implementation through experimentation.

4. Project Management and System Acquisition:
   a. Graduates will examine project management and DoD system acquisition methods and procedures to include contract management, financial management and control, and the Planning, Programming and Budgeting System (PPBS).
   b. Graduates will recognize the role of the Defense Acquisition University and the acquisition courses and qualifications available.
   c. Graduates will examine system acquisition organizational responsibilities and relationships (e.g., Congress, DoD, Services, Resource Sponsor, Systems Commands, Operating Forces) as they pertain to the acquisition of systems for DoD, Naval, and civilian agency users.
   d. Graduates will examine the unique nature of space acquisition programs and the differences between the DoD 5000 acquisition process and space-
specific acquisition processes (e.g., NRO Directive 7). Based on this knowledge, they will plan and structure a notional space system acquisition program.

5. **Spacecraft Communications and Signal Processing:**
   a. Graduates will examine the basic principles of communications systems engineering to include both the space and ground segments.
   b. Graduates will examine digital and analog communications architecture design, including such topics as frequency reuse, multiple access, link design, repeater architecture, source encoding, waveforms/modulations, and propagation media.
   c. Graduates will calculate and analyze link budgets to assess communication system suitability to support mission requirements, and to translate mission requirements into communications system design characteristics.
   d. Graduates will differentiate, compare, and contrast the characteristics and capabilities of current and future communications systems in use or planned by Naval Operating and Joint forces afloat and ashore.
   e. Graduates will examine how these space systems are used to meet Joint war-fighters' communications requirements.
   f. Graduates will differentiate signal processing techniques, both digital and analog, as applied to missions such as spacecraft communications, surveillance, and signals intelligence.
   g. Graduates will examine spacecraft vulnerabilities in an electronic warfare context.

6. **Computers: Hardware and Software:**
   a. Graduates will apply the fundamentals of digital logic and digital system design to the modeling/design of simple digital computer subsystems.
   b. Graduates will examine the design of current and planned computer hardware and software architectures for space-based applications.
   c. Graduates will examine the use of computers in complex systems such as guidance, signal processing, communications, and control systems.
   d. Graduates will examine the fundamentals of electronic component design, fabrication, reliability, and testing (to include radiation hardening), with an emphasis on parts, materials, and processes.
   e. Graduates will examine modern Information Technology capabilities and their applications for space systems ground processing, data storage, information sharing, and network design.

7. **Spacecraft Guidance and Control:**
   a. Graduates will examine the field of spacecraft guidance and control, to include topics such as linear control, rotational kinematics, rigid body dynamics, gravity gradient, spin and three-axis stabilization design, active nutation control, sources of and response to disturbance torques, and attitude determination and associated sensors and actuators.
   b. Graduates will apply these techniques to the analysis and design of spacecraft guidance and control systems.

8. **Spacecraft Structures, Materials and Dynamics:**
   a. Graduates will examine the engineering of space structures and perform simplified sizing calculations and analytical modeling of advanced materials.
   b. Graduates will analyze the advanced dynamics and control of these structures.

9. **Propulsion Systems:**
   a. Graduates will examine the operating principles (fluid mechanics, thermodynamics, electricity and magnetism) and propulsion devices used in current and proposed space applications.
   b. Graduates will analyze and choose appropriate propulsion systems for spacecraft applications to include launch, orbit transfers, and spacecraft maneuvering.

10. **Spacecraft Thermal Control:**
    a. Graduates will examine the principles of heat transfer and how surfaces and materials are manipulated in spacecraft thermal control.
    b. Graduates will examine the design, analysis, and applications of current active and passive thermal control devices (including heat pipes, louvers, and materials).
    c. Graduates will examine the sources of heat in space (solar, terrestrial, reflected solar, internal vehicle generation) and their variation as a function of vehicle orbit, and apply this knowledge to thermal subsystem analysis and design.

11. **Spacecraft Power:**
    a. Graduates will examine the principles and operating characteristics of major power generating systems for spacecraft, including the performance of photovoltaic sources in the natural and artificial radiation environment.
    b. Graduates will examine the principles and operating characteristics of energy storage devices in power systems design.

12. **Remote Sensing and Payload Design:**
    a. Graduates will examine principles of active and passive sensors in current or planned use, to
include analysis of electromagnetic wave propagation and design of optics, detectors, and antennae.

b. Graduates will examine the effects of the space, atmospheric, and terrestrial environments (including countermeasures) on sensor performance.

c. Graduates will assess and conduct tradeoffs among various sensors and platforms, evaluating how each satisfies mission requirements such as access area, resolution, timeliness, and capacity.

d. Graduates will examine the design of current and planned space-based mission payloads (e.g., ISR, Communications, PNT, SIGINT).

e. Graduates will analyze mission capabilities and conduct associated trades in order to develop associated payload design requirements.

13. **Spacecraft Design, Integration and Systems Engineering:**

   a. Graduates will develop and assess an overall space system architecture to meet defined mission requirements through the use of systems engineering tools and processes.

   b. Graduates will derive system and subsystem performance criteria from stated mission capabilities and conduct trade-offs between payload and other spacecraft subsystems in addressing these capabilities.

   c. Graduates will examine a broad spectrum of mission assurance concerns such as reliability, risk management, configuration management, qualification and acceptance testing, and parts materials and processes.

   d. Graduates will examine various engineering and mathematical definitions of cost functions (revisit time, dwell time, local coverage, etc.) and apply emerging methods and tools to optimizing these utility measures in support of mission objectives.

   e. Graduates will examine the basic principles and operational issues of space access to include launch vehicle performance, launch windows, and their impact on military operations.

   f. Graduates will examine the capabilities of the various current and planned launch systems, and characterize the issues associated with integrating a spacecraft with a launch vehicle, to include the effects of launch environment.

   g. Graduates will perform a trade-off analysis in the selection of a launch vehicle based on mission requirements, performance and design constraints, and business issues involved (e.g., pricing, insurance, policy).

   h. Graduates will demonstrate proficiency in design, analysis, and modeling / simulation tools such as IDEAS, MATLAB / Simulink, and Satellite Tool Kit (STK).

   i. Graduates will examine the processes and methods of systems engineering including requirements analysis, functional analysis and allocation, system design, and verification.

14. **Conduct and Report Independent Research:**

   a. Graduates will conduct independent research on a space systems problem, including resolution of the problem and presentation of the results and analysis in both written and oral form.

The Systems Engineering Department offers five degrees:
- Master of Science in Systems Engineering (MSSE) – requires an undergraduate engineering degree, or equivalent
- Master of Science in Engineering Systems (MSES) – does not require an undergraduate engineering degree
- Master of Science in Systems Engineering Analysis (MSSEA) – does not require an undergraduate engineering degree
- Master of Science in Product Development (MSPD) – does not require an undergraduate engineering degree
- Master of Science in Systems Engineering Management (MSSEM) – does not require an undergraduate engineering degree

A specific curriculum must be consistent with the general minimum requirements for the degree as determined by the Academic Council.

Any student study plan leading to award of a degree offered by the SE department must be approved by the Chairman of the Department of Systems Engineering at least two quarters before completion. In general, approved curricula may require more than minimum degree requirements in order to conform to the needs and objectives of the service or agency sponsoring the student.

The Systems Engineering department has 2 programs, Systems Engineering (SE) and Systems Engineering Management (SEM). The overall objectives for both programs are the same.

Objectives

The overall educational objective of the Systems Engineering Department is to support the NPS mission by producing graduates who have, at an advanced level, knowledge and technical competence in systems engineering and an application domain; and who can use that knowledge and competence to support national security. Specific program objectives (i.e., skills and abilities that graduates can bring to their position after having graduated from NPS and receiving 3-5 more years of on-the-job training and professional development) include:

Leadership: Students will be provided with an educational foundation that prepares them for leadership roles along diverse career paths.

Program Management: Students will be provided with an educational foundation that prepares them for assignments related to research, design, development, procurement, integration, maintenance, and life cycle management of systems for defense and national security.
Operational Utilization: Students will be provided with an educational foundation that allows them to understand the capabilities and limitations of military systems engineering and to effectively employ systems engineering in diverse military settings.

Outcomes

In order to achieve the goals for the SE program, the outcomes are to produce graduates who:

- Demonstrate the ability to identify, formulate, and solve operational, technical, and engineering problems in systems engineering and related disciplines using the techniques, skills, and tools of modern practice, including modeling and simulation. These problems may include issues of research, design, development, procurement, operation, maintenance, or disposal of systems and processes for military applications.

- Demonstrate proficiency in the systems engineering process, including defining requirements, conducting functional analysis, designing and architecting a system, analyzing it against requirements, allocation of requirements to subsystems, conducting trade-off studies, determining the cost of the system, integrating human factors into the system, designing logistical supportability, and planning for its testing and evaluation.

- Demonstrate proficiency in core skills of systems analysis, to include deterministic and stochastic modeling of systems, optimization, decision analysis, risk analysis, economic models, and lifecycle supportability analysis. This includes familiarity with combat simulations and combat modeling.

- Demonstrate the ability to work as a team member or leader in a large systems engineering project, and to provide leadership in the systems engineering management process. The graduate must be able to interact with personnel from other services, industry, laboratories, and academic institutions.

- Demonstrate competence in the planning and management of large systems engineering projects.

- Demonstrate proficiency in written and oral presentation of technical material.

(∗ Means an outcome is shared with the SE program)

SE Degrees

Master of Science in Systems Engineering

A candidate shall have completed work equivalent to the requirements of this department for the ABET Bachelor of Science degree in an engineering discipline. Candidates who have not majored in engineering, or who have experienced significant lapses in continuity with previous academic work, may initially take undergraduate courses in engineering and mathematics to fulfill these requirements in preparation for their graduate program.

The Master of Science in Systems Engineering requires a minimum of 48 quarter-hours of graduate level work.

The candidate must take all courses in an approved study program, which must satisfy the following requirements:

- There must be a minimum of 36 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 16 quarter-hours at the 4000 level. The course work must include a four-course core consisting of one course each in systems engineering methods.

The candidate must complete a 12-hour equivalent team systems engineering project or thesis. This degree is offered both in residence and non-residence.

Master of Science in Engineering Systems

A candidate shall have earned the Bachelor of Science or Bachelor of Arts degree.

The Master of Science in Engineering Systems requires a minimum of 48 quarter-hours of graduate level work.

The candidate must take all courses in an approved study program, which must satisfy the following requirements:

- There must be a minimum of 36 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 16 quarter-hours at the 4000 level. The course work must include a four-course core consisting of one course each in systems engineering methods.
The candidate must complete either a 12-hour equivalent team systems engineering project or an individual thesis.

**SEM Degrees**

**Master of Science in Product Development**

Candidates do not require an undergraduate engineering background for this degree.

The Master of Science degree in Product Development requires a minimum of 48 quarter-hours of graduate level work.

The candidate must take all courses in an approved study program, which must satisfy the following requirements: there must be a minimum of 36 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 16 quarter-hours at the 4000 level. The course work must include a four-course core in systems engineering methods. Five more courses must be selected from an approved list consisting of additional systems engineering topics.

The candidate must complete an approved thesis.

**Master of Science in Systems Engineering Management**

Candidates do not require an undergraduate engineering background for this degree.

The Master of Science degree in Systems Engineering Management requires a minimum of 48 quarter-hours of graduate level work.

The candidate must take all courses in an approved study program, which must satisfy the following requirements: there must be a minimum of 36 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 16 quarter-hours at the 4000 level. The course work must include a four-course core in systems engineering methods. Five more courses must be selected from an approved list consisting of additional systems engineering management topics.

The candidate must complete an approved thesis.

**Doctor of Philosophy**

The Department of Systems Engineering offers a Doctor of Philosophy (Ph.D.) degree in Systems Engineering. Students take graduate level course in systems engineering (as needed to pass the oral and written qualifying examinations), advanced graduate courses in systems engineering and an application domain, and perform research that leads to a dissertation involving some aspect of systems engineering. Research topics may be selected from a broad variety of studies of the systems engineering process, applications of systems engineering to solving complex problems, systems level modeling and simulation, and systems suitability assessment. Subject to approval of the student's dissertation committee chairman, dissertation research may be conducted away from NPS at cooperating facilities. Students must satisfy a one-year residency requirement. This may be met by completing an NPS M.S. degree plus periodic extended stays (nominally two weeks per quarter) at an NPS campus spread throughout the duration of the student's program. The M.S. degree may be completed before enrollment in the Ph.D. program.

Applicants should possess an M.S. degree in Systems Engineering. Applicants with only a B.S. degree or an M.S. degree in another discipline will be required to take a number of systems engineering courses (equivalent to the coursework portion of an MSSE degree program) to pass the qualifying examinations. Unless an M.S. thesis and any other ABET accreditation requirements are also satisfied, an M.S. in Systems Engineering degree will not be awarded for this preparatory work. Applicants without an M.S. degree are encouraged to enroll in the M.S. in Systems Engineering program as this will satisfy both residence and preparation requirements.

**Laboratories and Research**

Students in the Systems Engineering Department participate in a variety of research activities ranging from course-based experiments and individual classroom projects to larger team-based design projects and individual thesis research. Systems Engineering Department faculty members conduct a variety of research in four broad areas.

**Systems Engineering Methodology** involves the investigation or development of tools and techniques for conceptualizing, designing, and developing systems. Study areas include discovery of fundamental principles of systems theory, elucidating the use of these principles through systems engineering tools and techniques, analyzing the conditions of employing the tools and techniques, and determining the efficacy of those tools and techniques. Specific methodology areas include system requirements generation, requirements allocation, system architecture, system dynamics and control, and risk engineering.

**Systems Engineering Applications** involves the application of systems engineering processes to the solution of specific complex problems. This can include conceptual design of systems, investigation of issues associated with integration of system components into system segments, investigation of issues associated with integration of system segments into systems, and the analysis of case studies of successful and/or unsuccessful systems engineering applied to military acquisition programs. Specific application areas include combat systems integration, ship systems engineering, and enterprise systems engineering.

**System Simulation and Modeling** involves the development of simulations and models of military systems, evaluation of the efficacy of these simulations and models in providing the information to accomplish systems engineering functions (especially system design requirements and comparison of alternative solutions), and
investigation of the characteristics of simulations and models that lead to outputs useful in the systems engineering process.

System Suitability Assessment involves the study of tools, techniques, and disciplines that permit the assessment of the suitability of systems in meeting requirements. Requirements can include performance, availability, operability, and cost. Specific suitability assessment areas include reliability engineering, system survivability, and system cost estimation and control.

The Systems Engineering Department maintains a number of laboratories to its support instructional and research objectives. These laboratories serve to:

- Provide broad, hands-on, practical engineering experiences to systems engineering students enhancing application domain understanding at the component level and subsystem levels and balancing analysis with exploratory development and prototyping.
- Provide an environment (facilities and equipment) that fosters student projects with resulting hardware prototypes and investigations that reach beyond concept definition to later stages of the life cycle.
- Provide an environment that facilitates student and faculty experimental research in applications of systems engineering.

Administratively the research facilities of the Systems Engineering Department are organized into five laboratories. Each of these laboratories contains one or more instructional/research spaces.

The **SE Demonstrations Lab** provides space & equipment for developing and housing a wide variety of demonstrations that enhance courses in the systems engineering curricula.

The **SE Computation Lab** provides computational support for large-scale simulation, modeling, and systems engineering projects. It houses Lockheed Martin systems engineering software, a variety of complex simulation & modeling software (such as the Navy Simulation System), and the 75 interconnected computers needed to run that software. The lab also provides a general-purpose computing facility that supports all systems engineering classes, thesis projects, and capstone projects. It may be utilized by distance learning students as well as resident students.

The **SE Projects Lab** provides an environment in which students can work together to pursue team-based systems engineering projects or pursue independent study related to courses or thesis research. In addition, facilities, tools, and materials are provided to permit fabrication, assembly, integration, and test of electronic and mechanical equipment in support of projects and theses.

The **SE Foundations Lab** provides direct exposure to the scientific concepts and techniques that underlie modern engineering disciplines. It provides facilities and equipment to perform basic experiments in physics, chemistry, biology, electronics, and materials science. This laboratory also provides basic equipment that facilitates hardware-oriented thesis research programs and student capstone projects. Administered within the SE Foundations Lab are the Physical Systems Lab, the Defense Applications Lab, the Nuclear Detector Lab, the Electro-Optical Sensor Systems Lab, and the Virtual Lab.

The **Physical Systems Lab** supports experiments that elucidate the fundamental properties, characteristics, and interactions of mechanical, thermodynamic, and electromagnetic systems. The Defense Applications Lab supports experiments involving wet chemistry, microorganisms, and/or biological materials. It provides facilities and equipment for simple chemical synthesis, chemical analysis, electrochemistry, microbial culture, microscopy, DNA analysis, and other biotechnologies. The Nuclear Detector Lab supports experiments involving detection of nuclear radiation. It hosts a variety of low-level radioactive sources, detector systems, signal processing electronics, and shielding against background radiation. The Electro-Optical Sensor Systems Lab supports experiments involving electro-optical sensors (television, image intensifiers, thermal imaging, etc.) that require complete darkness for some measurements. The Virtual Lab supports portable laboratory concepts, especially software-based virtual experiments and software that is not available for network use in the SE Computation Lab. It also supports distance learning activities by providing a foundation for future insertion of laboratory experiences into the DL systems engineering courses.

The **SE Applications Lab** augments lecture courses in the engineering applications tracks (including combat systems, ship systems, and enterprise systems, among others) in the SE curriculum. It provides hands-on experience with important concepts and permits direct observation of critical phenomena associated with combat systems and sensor/weapon networks. It also provides equipment that can be used in student thesis projects and capstone design projects. Experiments cover the gamut from signal propagation to sensor fundamentals to specific sensor technologies to weapons operational concepts to sensor & weapon networks to technologies associated with the integration of sensors, weapons, and control technologies into modern military platforms of all types. Administered within the SE Applications Lab are the Ship Systems/Combat Systems Lab, the Enterprise Systems Lab, and the Laser/Lidar Development Lab.
The Ship Systems/Combat Systems Lab supports experiments in the Ship Systems and Combat Systems track courses. It hosts a variety of active & passive microwave, infrared, acoustic, & magnetic sensor hardware, weapon subsystems & simulators of weapon systems, and devices permitting the investigation of platform characteristics. The Enterprise Systems Lab supports experiments in the Enterprise Systems Engineering track courses. It provides network hardware, communication systems, and electronic measurement and analysis equipment, as well as multiple sensor types to provide input and network-controllable systems to utilize output. The Laser/Lidar Development Lab provides optical tables, breadboard optical hardware, laser measurement equipment, and a variety of laser sources in a laser safety-qualified laboratory.

**Systems Engineering Course Descriptions**

**SE Courses**

**SE0811 Thesis in Systems Engineering (0-8)**

*Fall/Winter/Spring/Summer*

This course provides an introduction to selected pre- and post-calculus topics: single variable derivatives and integrals, and vector analysis. The course is intended to give students the requisite mathematics needed in SE2003. Prerequisites: Consent of instructor and enrollment in the SE or SEA curriculum.

**SE1001 Mathematics for SE I (4-2) Summer**

This course provides a brief survey of selected calculus and post-calculus topics: single variable derivatives and integrals, and vector analysis. The course is intended to give students the requisite mathematics needed in SE2003. Prerequisites: Consent of instructor and enrollment in the SE or SEA curriculum.

**SE1002 Mathematics For SE II (3-1) Summer**

This course provides an introduction to selected pre- and post-calculus topics. Covered will be complex numbers, matrix algebra and differential equations. Prerequisite: SE1001.

**SE2003 Introduction to Mechanical Systems (4-2) Summer**

This course provides a basic understanding of the physical properties underlying combat systems. It presents calculus based physics covering a broad range of topics in mechanics, heat, and sound. Relevance to military development is discussed. Practical tools are developed to describe motion, Newton's force laws, friction and drag, energy and momentum, rotation, gravitation and orbits, fluids, oscillations, chaos, waves, gases, and thermodynamics. Prerequisite: SE1001.

**SE2015 Fundamentals of Material Systems (4-2) Summer**

This is an overview course of modern materials science and engineering as applied to the design of complex systems. It describes the structures of materials and the relationship of structure to material properties. All properties of engineering significance (both mechanical and non-mechanical) will be discussed. The broad variety of materials (including single crystals, alloys, ceramics, glasses, polymers, composites, foams, etc.) available for engineering applications is also discussed. Topics include structure and bonding, mechanical properties of materials, thermal properties of materials, electromagnetic properties of materials, superconductivity, chemical properties of materials (including environmental degradation), characteristics of specific engineering materials (alloys, ceramics, etc.), the selection of materials for specific applications, and the engineering of new materials to fulfill specific requirements. Students will acquire a working vocabulary and conceptual understanding necessary for advanced study, for communication with materials experts, and for the conceptualization of advanced systems. Prerequisite: SE1001.

**SE2016 Battlespace Environments (4-2)**

This course covers the fundamentals of terrestrial science (geology, oceanography, meteorology, and near-earth space science) necessary for any systems engineer to understand how systems interact with and are influenced by their environment. Topics covered include the internal structure of the earth, tectonic processes, rocks and minerals, erosion and weathering, the water cycle, the structure and composition of the oceans, oceanic currents, wave processes, structure of the atmosphere, temperature, pressure and winds, atmospheric water, weather systems, storms, weather forecasting, the extreme upper atmosphere, solar wind and magnetic storms, and the radiation belts. Prerequisites: SE1002 and SE2101.

**SE2017 Fundamentals of Chemical Systems (4-2)**

This course covers the fundamentals of chemistry and chemical processes, necessary for any systems engineer to understand many key technologies affecting systems design. Topics covered include chemical bonding and chemical structure, chemical reactions, chemical equilibrium, reaction kinetics, solutions, and oxidation-reduction reactions. Prerequisites: SE2014 or consent of instructor.

**SE2018 Fundamentals of Biological Systems (4-2)**

This course covers the fundamentals of biological systems, especially human beings, which are necessary for any systems engineer to understand. Topics covered include basic anatomy and physiology, important biochemicals and biochemical processes, cell structure and cell processes, microbiology, disease and immunity, and bioculture. Prerequisite: SE2017.

**SE2101 Introduction to Electromagnetic Systems (4-2) Summer**

This course provides a basic understanding of the electromagnetic principles underlying combat systems. Relevance to military development is discussed. Practical tools are developed describing electric and magnetic fields, electromagnetic waves, special relativity, atomic energy levels, atomic binding, Schrodinger equation, energy bands in solids, nuclear particles, and radioactive decay. Prerequisites: SE1001, SE2003, Co-requisite: SE1002.

**SE2114 Information Systems and Operations (3-0) As required**

This course provides a basic understanding of the network era through the proliferation of N-Tier applications has significantly transformed organizational processes and provided new strategic capabilities. These new N-Tier applications have complex and dynamic components that require technical knowledge to develop and manage. This course provides an understanding of these technologies and demonstrates how networked applications may be used as a mechanism to support DoD transformation initiatives targeted at meeting the information needs of today's military. It combines the study of theory, best practices and hands-on laboratory exercises to improve understanding of how to select, develop and manage N-Tier applications. Prerequisites: None.
SE2900  Elementary Studies in Systems Engineering (V-V)  
As required  
Directed study at the undergraduate level based on textbooks, journal literature, experimental projects, or other sources. This course is designed to permit study of a selected topic at an elementary level which is prerequisite to subsequent study or use of that topic at a graduate level, and which is not available for study through regularly scheduled courses. Prerequisites: Consent of program officer, academic associate, and instructor.

SE3001  Special Topics in Strategic Analysis I (3-0)  
As required  
This course develops a realistic understanding of processes and ideas that determine our national security posture and behavior: in short, how we design, develop and acquire our forces, and how we use them to influence international events, hopefully to deter war, and eventually, if necessary, to fight and win. Additionally, this course examines the generation of combat system requirements and the relationships between operational, financial planning, and technical communities in fielding a combat system that fulfills those requirements. Prerequisites: Consent of instructor.

SE3011  Engineering Economics and Cost Estimation (3-0)  
An introduction to the cost aspects of systems engineering, exploring cost from a decision-making perspective. Examines how cost is used to select alternatives and how the cost of systems can be measured. Concepts covered include economic analysis, cost behavior, cost allocation, system cost, life cycle costs, cost over time, cost estimating techniques, cost uncertainty, and cost risk. Prerequisites: OS3180 or equivalent, or consent of instructor.

SE3030  Quantitative Methods of Systems Engineering (3-2)  
This course discusses advanced mathematical and computational techniques that find common application in systems engineering. It also provides an introduction to MATLAB, a computational tool useful in obtaining quantitative answers to engineering problems. Among the topics addressed in this course are vector analysis, complex analysis, integral transforms, special functions, numerical solution of differential equations, and numerical analysis. Prerequisites: SE1002, SE3100 or consent of instructor.

SE3100  Fundamentals of Systems Engineering (3-2)  
Introduction to systems thinking and the processes and methods of systems engineering. The course covers fundamentals of systems engineering and system architecting, requirements analysis, functional analysis and allocation, preliminary system architecture, systems analysis, system design, and the basics of test and evaluation. Various perspectives, from frameworks, processes, and standards, such as the DoD Architecture Framework (DoDAF), DoD Joint Capabilities Integration and Development System (JCIDS), EIA 632, ISO 15288, IEEE 1220, IEEE 1471, and the International Council on Systems Engineering (INCOSE) models, are presented. Students analyze case studies. Students also use spreadsheet software for modeling and analyzing requirements and conceptual design alternatives. The course includes the application of fundamental systems engineering processes and methods to an integrative project, as well as development of communication skills through oral presentations and written reports. Prerequisite: None.

SE3101  Introduction to Department of Defense Modeling and Simulation (4-0)  
This course serves as an important overview course for all students enrolled in the MOVES curricula, in addition to other curricula at NPS. It covers the origin, evolution, breadth and importance of DoD modeling and simulation (M&S), and the utilization of M&S in DoD system acquisition life cycle. The course focuses on the functional areas of DoD M&S, which are: Training, Analysis, Acquisition, Planning, Test, and Evaluation. This course also is offered as MV3101. Prerequisite: None.

SE3112  Combat Systems Engineering I - Introduction to Sensors (3-2)  
This is the first course of a survey of military sensor technology. It introduces the student to the nature of physical observables and propagators, the effects of the propagation medium on sensor performance, the relationship between signals and noise, and the characteristics of critical sensor functions (including detection, estimation, imaging, and tracking). It is designed to provide a framework for more detailed analysis of specific sensor systems in the follow-on course SE4112. Prerequisites: SE1002, SE2101 and/or consent of instructor.

SE3113  Combat Systems Engineering II - Introduction to Weapons (3-2)  
This is a survey of conventional military weapons technology. It introduces the student to both the effects that conventional weapons (artillery, bombs, and missiles) can produce as well as the technologies needed by weapons systems to create those effects. It is designed to provide familiarization of the student with critical weapons concepts that are necessary for enlightened examination of all technology development and military planning. Prerequisites: SE1002, SE2101 and/or consent of instructor.

SE3121  Introduction to C4ISR (3-0)  
Summer  
The study of command and control (C2) information processing and decision making in the context of adaptive combat organizations and the C4ISR System Infrastructure that support it. Topics include: C2 decision processes [Observe-Orient-Decide-Act Loops, Problem Sensemaking (Identification) - Solution Finding and Implementation Processes], operational architectures, intelligence preparation of the Battlespace (IPB); mission success and organizational fitness. Prerequisites: Consent of instructor.

SE3122  Naval Weapon Systems Technology - I (3-0)  
As Required  
This is the first of two courses that introduce the student to the technologies of combat systems. It starts with a brief survey of military sensor technology. It then introduces the student to effects of the propagation medium on sensor performance, the relationship between signals and noise, and the concepts of signature and signature control. The various sensor technologies involved in military applications of all kinds are presented as well as the essentials of C4ISR and the C4ISR Framework. Prerequisites: Consent of instructor.

SE3123  Naval Weapon Systems Technology - II (3-0)  
As Required  
The second of a two course sequence, this course introduces the student to both the effects that weapons can produce as well as the technologies needed by weapons systems to create those effects, including the control elements. It is designed to provide an early initial familiarization of the student with critical weapons concepts. Analytic techniques are presented that allow the student to evaluate the interrelationships between the combat systems. Prerequisites: SE3122, or consent of instructor.
**SE3151 Human Systems Engineering in Design (3-2) As Required**

This course provides an introduction to human systems engineering as it relates to military system development and life cycle sustainment. An emphasis is placed on systems engineering concepts and principles as they support effective human systems integration as part of the DOD acquisition process. The course initially focuses on human capabilities and their bearing on effective operator integration into system design. It then delves into each major human system domains of human factors, safety and health, habitability, survivability, manpower, personnel and training, underscoring primarily those factors impacting system design. It also stresses evaluating design alternatives with an objective to optimize performance, reduce risk, address constraints, and consider costs. Prerequisites: SE3100 and OS3180 or equivalent.

**SE3166 Principles of Advanced Systems Engineering (3-0) As Required**

This course is an Introduction to systems thinking and the processes and methods of systems engineering. The course covers fundamentals of systems engineering and system architecting, requirements analysis, functional analysis and allocation, preliminary system architecture, systems analysis, system design, and the basics of test and evaluation. The course also addresses specific DoD systems engineering processes, as well as the DoD life-cycle acquisition framework. Various perspectives, from frameworks, processes, and standards, such as the DoD Architecture Framework (DODAF), DoD Joint Capabilities Integration and Development System (JCIDS), EIA 632, ISO 15288, IEEE 1220, IEEE 1471, and the International Council on Systems Engineering (INCOSE) models, are presented. Students analyze case studies. Students also use spreadsheet software for modeling and analyzing requirements and conceptual design alternatives. The course includes the application of fundamental systems engineering processes and methods to an integrative project, as well as development of communication skills through oral presentations and written reports. This course provides equivalency for DAU courses SYS 101 and SYS 202. Prerequisite: None.

**SE3250 Capability Engineering (3-2) As Required**

This course presents a systems engineering approach to determining military capabilities required to execute a mission set. It introduces simulation as a method for assessing performance of a capabilities portfolio. Topics covered include current DOD and Naval practices for capabilities engineering, design and assessment of capability portfolios, and use of commercial and custom simulations to analyze capability portfolio performance. Prerequisites: OS3180 or equivalent, and SE3100. Corequisite: SE3011.

**SE3302 Systems Suitability (3-2) Spring/Fall**

This course presents the techniques of system design and assessment for operational feasibility, including reliability, maintainability, usability (including human factors and human performance), supportability, and producibility. Design methods for open architecture of hardware and software are presented. Software integration and management from a systems perspective is presented. Prerequisites: SE3100.

**SE3303 Systems Assessment (3-2) Winter/Summer**

Systems under development must be assessed for cost and effectiveness, and both cost and effectiveness must be managed during systems trades. This course presents a systems engineering perspective for framing such trade decisions. Topics include cost estimation, effectiveness estimation through the test and evaluation process and modeling, techniques for engineering trades, and managing the risk involved. The course applies these fundamental systems assessment processes and methods to an integrative system project, building on work done in SE3100. Development of communication. Prerequisites: SE3302.

**SE3321. Reliability Management and Data Systems (3-2) As Required**

The course focuses on the practical aspects of reliability analysis and management. Reliability aspects and functions are explained and illustrated using examples and calculus-level mathematics. Topics include: basic tools and methods of reliability for developing complex systems including electronic components, mechanical components, and software; data needs for effective reliability analysis and how to design and implement systems to acquire and store that data; and the principles and practices for developing cost-effective dependable (reliability and availability) systems. Case studies are used to illustrate the material. Prerequisites: None.

**SE3322 Reliability Centered Maintenance (3-2) As Required**

The course covers the fundamentals of reliability centered maintenance and current practices following both military and industry standards. It also presents modifications that have been implemented for different applications and explains their suitability. An important aspect of the course is to examine and quantify the role of maintenance on operations, safety, and its economic benefits. Software tools for implementation are presented. The course includes a class project to develop and implement a pilot application of RCM to an identified site need. Prerequisite: SE3321.

**SE3351. Human Factors in Systems Design (3-1) As Required**

This course will provide an introduction to the field of Human Factors with an emphasis on military systems. Humans are the most important element of any military system. Consequently, the design of effective systems must take into account human strengths and limitations as well as considerations of human variability. The course surveys human factors, human-centered design, and system effectiveness and safety. Topics include system design in light of human cognition and performance as they are influenced by physiological, anthropometric and environmental considerations. Prerequisite: None.

**SE3410 Modeling and Simulation Requirements and Proposals (4-0) As Required**

This course teaches students to establish and write valid modeling and simulation requirements using a process that includes modeling and simulation needs analysis, generation of valid modeling and simulation requirements, functional decomposition and conceptual model development, and issuance of “built to” or “buy to” performance specifications. The student will learn to compare M&S proposals received in response to those requirements against measurable program contributions and cost considerations. Prerequisite: MV/SE3101.

**SE3420 Modeling and Simulation in Acquisition I (2-0) As Required**

This course surveys the Pre-Acquisition modeling and simulation (M&S) activities, and the M&S used in the initial phases of the Acquisition Life Cycle, using the progression of different modeling and simulation applications in use in each phase as a benchmark. Upon completion, students are able to identify a particular M&S...
tool and apply it appropriately to the correct point in the lifecycle and to relate specific tools to the decision points that separate the acquisition phases. Prerequisite: MV/SE3313.

SE3430 Modeling and Simulation Strategy and Support Plans (4-0) As Required
This course introduces acquisition workforce professionals to the modeling and simulation (M&S) planning and the generation of support plan documents. This course presents the principles behind the development of the integrated Simulation Support Plan (SSP), surveys the System Engineering Plan (SEP) and Test and Evaluation Master Plan (TEMP), and develops the relationships between them. Prerequisite: MV/SE3101.

SE3501 Distributed Systems Engineering (3-2) As Required
This course is designed as part of the Network-Centric Systems Engineering track of the Master of Science in Systems Engineering (MSSE) program. The course provides the student with an understanding of the principles, concepts, and technology that allow a network-centric enterprise to function. Subject matter includes system communications, computer-based processes, naming conventions, process synchronization, consistency, replication, state-of-the-art middleware, and distributed information systems. Prerequisites: CS2011, SE3130, and CS2020.

SE3503 System Performance Evaluation (3-2) As Required
This course provides the student with the principles, concepts and techniques needed to analyze and plan the capacity of computer systems. The course relies on the use of analytic queuing network models of computer systems. Queueing network modeling is applied to evaluating the performance of centralized, distributed, parallel, client/server, and Web-based systems performance. The course also covers performance measurement tools for various computer operating systems and for large-scale, network-centric systems. Prerequisites: CS2011, CS2900 and SE3501, or consent of instructor.

SE3810 Systems Engineering Seminar (0-2) Fall/Winter/Spring/Summer
This weekly seminar on topics in Systems Engineering is intended to broaden and extend knowledge horizons beyond material covered in regular classes, to provide opportunities for critical discussion of systems engineering topics, to relate course work to the real world and emphasize the implications of engineering choices on a society as a whole, and to promote good lifelong learning habits. The course will provide operational, historical, cultural, and economic contexts for the material studied in the SE curriculum. It will also promote the recognition of, critical analysis of, and planning for development and exploitation of future military capabilities. Students will be required to read, analyze, and discuss in class at least four books per quarter selected by the faculty to address an overall theme that will vary from quarter to quarter. Graded on a Pass/Fail basis only. Prerequisites: None.

SE3900 Topics in Systems Engineering and Analysis (3-0) As Required
This course presents topics in systems engineering and analysis that are relevant to the across-campus project or that meet special interests of the students. Prerequisite: Consent of instructor.

SE3910 System Evolution and Technology Assessment (4-0) As Required
This course discusses technological change, its impact on systems, and ways to predict the impact of future technology developments on system development. General topics include understanding the rate of technological change, how innovations are developed and adopted, methodologies for assessing technology growth and evolution (forecasting), limits on technological growth, and examples of technology assessment. This course uses a seminar approach with out-of-classroom reading and in-class discussions of the reading replacing traditional lectures. Prerequisites: SE3100, SI3400, SE3302, and SE3303 or consent of instructor.

SE4003 Systems Software Engineering (3-2) As Required
This course is designed to teach students the basic concepts of software engineering and methods for requirements definition, design and testing of software. Specific topics include introduction to the software life cycle, basic concepts and principles of software engineering, object-oriented methods for requirements analysis, software design and development. Special emphasis is placed on the integration of software with other components of a larger system. Prerequisites: a previous programming course.

SE4007 Introduction to Systems Engineering (3-1) Spring/Summer/Fall/Winter
This course provides an overview of the art and science of systems engineering and an introduction to the systems approach and methodological framework for designing, implementing, managing, and reengineering large-scale systems and processes. Topics covered include the systems approach, understanding and defining customer (stakeholder) problems, eliciting and defining stakeholder requirements, defining stakeholder-driven value systems, developing alternative system concepts, and functional modeling and analysis of alternatives. Students will carry out projects and assignments both individually and as teams. Prerequisites: SI3400 or equivalent.

SE4008 Systems Engineering and Integration (2-1) As Required
Customer requirements modeling and subsequent system functional and architecture modeling, form the basis for engineering and integrating complex technical systems and processes. This course provides the student with the language, terminology, and concepts of system architecting and an introduction to various types of architectures and their interrelationships. Topics covered include organizational systems, architecture modeling (e.g., the Hatley/Hruschka/Pribhai Method, the Rummler-Brache Method), types and relationships of architectures and architectural frameworks (including the C4ISR Framework and the Zachman Framework), human and cultural aspects of architecting, process engineering, information engineering and architectures, and knowledge formation and distribution. Students will carry out projects and assignments both individually and as teams. Prerequisites: SE4007.

SE4009 Systems Architecture for Systems Engineering (2-1) As Required
This course provides the student with an understanding of the context and framework for carrying out a systems engineering project and the system-level responsibilities of a systems engineer. Topics covered include systems architecture, systems design and development, system test and evaluation, system reliability, system maintainability, human factors and system design, system producibility and supportability, balancing live cycle cost, schedule, suitability, and performance, and systems engineering project management and control. Types of systems considered will range from small-scale to large-scale and from primarily technical to primarily social-political. Students will work in teams to complete a system engineering project to analyze, design and architect a working prototype system. Prerequisites: SE4008, or equivalent.
SE4011 Systems Engineering for Acquisition Managers (3-2) As Required  
Systems engineers flow requirements down to detailed elements, integrate elements, and verify system performance. This course concentrates on the structural and technical elements of system engineering necessary in the product development domain. Multidisciplinary activities leading to requirements analysis, design trades, and integrated product-process development are complemented by current best manufacturing practices and design for cost principles. Structured methods, decision analysis, and quality engineering foundations are emphasized. Case studies from a variety of industrial contexts are presented and discussed. This course is taught by experts from several disciplines. Prerequisites: None.

SE4012 Management of Advanced Systems Engineering (4-0) As Required  
This course provides the student with an understanding of architecting, Object Oriented Systems Engineering, the Unified Modeling Language, and the control of complex projects with many Systems Engineers through the use of metrics. Specific emphasis is placed on exploring the relationship between science, art, deductive processes, inductive processes, systems engineering, and acquisition management. In order to solve today’s complex problems, the student will become familiar with heuristic tools. This course is equivalent to DAU SY5 301. Prerequisites: None.

SE4112 Combat Systems Engineering III (3-2) Summer  
This course applies systems engineering principles to the design of combat systems with emphasis on detection, tracking, and identification systems. Sensor technologies covered include radars, ESM, active and passive sonar, infrared, electro-optical, and magnetic/electric/gravity field sensors. The emphasis is on what the elements contribute to a combat system, their basic principles of operation, their performance limitations, trade-offs, and their interfaces with the rest of the combat system. This course builds on the material offered in SE3112 (Intro to Sensors). Prerequisites: SE3112.

SE4113 Combat Systems Engineering IV (3-2) As Required  
This course extends the coverage of SE3113 (Conventional Weapons) to include unconventional weapons. Topics include information warfare and weapons (including electronic warfare), directed energy weapons, weapons of mass destruction (nuclear, chemical, biological, and radiological), and nonlethal weapons. It introduces the student to both the effects that unconventional weapons can produce as well as the technologies needed by weapons systems to create those effects. It is designed to provide familiarization of the student with critical weapons concepts that are necessary for enlightened examination of both technology development and military planning. Prerequisite: SE4112.

SE4115 Combat Systems Integration (3-2) As Required  
This course presents systems engineering techniques for integrating combat systems into a common system, including technology development, system development and integration, network integration, and system of systems integration. Lectures and projects exploring engineering design tools and analysis methods to meet specified systems requirements are used. Topics include engineering analysis of interfaces for power, data, mechanical, and other attributes; engineering change management; advanced collaboration environments; technology readiness levels; and integration risk mitigation. Prerequisites: SE3113, SE4112 or consent of instructor.

SE4150 Systems Architecture and Design (3-2) As Required  
The use of models, from stakeholder needs to requirements, to system functional and physical architecture, through performance specification, for the basis for architecting and designing complex technical systems. This course provides the student with the language, terminology, concepts, methods, and tools of system architecting and design, including exploring the relationship between science, art, and deductive and inductive processes. Topics covered include architecture modeling (e.g. Hatley/Hruschka/Pirbhai and Rummler-Brache Methods), architectural frameworks (including Zachman and DoDAF), object oriented modeling approaches using Unified Modeling Language (UML) and Systems Modeling Language (SysML), human and cultural aspects of architecting and design, requirements generation and definition, and knowledge formation and distribution. Students carry out projects and assignments both individually and as teams. Prerequisites: SE3100 and SE3250.

SE4151 Systems Integration and Development (3-2) As Required  
This course provides the student with an understanding of the context and framework for planning and carrying out integration and development, including emergent behavior, manufacturing, and production of complex systems. Topics covered include systems and SoS integration and production with consideration of multiple suitability aspects, including availability, reliability, maintainability, embedded software, human factors, producibility, interoperability, supportability, emergent behavior, life cycle cost, schedule, and performance. Types of systems considered are large-scale spanning applications from purely technical to socio-technical. Students work in teams to complete a systems engineering project to analyze, integrate, and produce a working prototype system. Prerequisite: SE4150.

SE4321 Reliability Growth and Accelerated Testing (4-1) As Required  
This course covers mathematical and statistical models used in advanced reliability engineering and the art of their application. Reliability growth models include the AMSSA- Crow, Duane, and Lloyd-Lipow models. Accelerated testing models include the Arrhenius, Eyring, and Inverse-power Law. Statistical and practical issues in model selection and parameter estimation are discussed. Particular emphasis is placed on design of test plans. Prerequisite: OA4302.

SE4350 Logistics Engineering (4-0) As Required  
Also offered as MN4310. Prerequisites: OS3180 or equivalent, SE3100 and SI3400.

SE4353 Risk Analysis and Management for Engineering Systems (3-2) Spring/Fall  
This course covers three areas in the risk field - Qualitative Risk Analysis, Quantitative Risk Analysis, and Decision Risk Analysis. Qualitative Risk Analysis presents techniques for risk identification/evaluation, risk handling, risk monitoring and risk management. Quantitative Risk Analysis includes Probabilistic Risk Assessment (RPRA) of system performance and project cost/schedule. Decision Risk Analysis gives the students an understanding of how to apply risk and cost benefit techniques in decision making when one must deal with significant risk or uncertainty. The course will present a framework for balancing risks and benefits to applicable situations. Typically these involve human safety, potential environmental effects, and large financial and technological uncertainties. Concepts are applied toward representative problems resulting in risk and decision models that
provide insight and understanding, and consequently lead to more successful projects/programs with better system performance within cost and schedule. This is the same course as ME4753. Prerequisites: OS3180/OS3104, or equivalent graduate level course in probability, or consent of the instructor.

**SE4354 Systems Test and Evaluation (4-0) As Required**

This course is designed to cover principles of test and evaluation (T&E) and the roles, purposes, functions, and techniques of T&E within the systems engineering process. The course will cover all aspects of T&E throughout the life cycle of a system to include test planning, test resources, development of test requirements, selection of critical test parameters, development of measures of effectiveness and performance, test conduct, analysis of test results, and determination of corrective action in the event of discrepancies. The course will emphasize the application of T&E through all phases of system development to include modeling and simulation (M&S) activities for enhancing the T&E process, developmental test and evaluation (DT&E), live fire test and evaluation (LFT&E), and operational test and evaluation (OT&E). Principles of experiment design and statistical analysis of test results will be reviewed. The course content will be consistent with Congressional and DoD requirements and guidelines and will include case studies and lessons learned from actual defense system tests. This course also offered as OAA4603. Prerequisites: OS3180 or equivalent and SE3100.

**SE4420 Modeling and Simulation in Acquisition II (2-0)**

This course surveys the M&S used in the final phases of the Acquisition Life Cycle, using the progression of different modeling and simulation applications in use in each phase as a benchmark. Upon completion, students will be able to identify a particular tool and apply it appropriately to the correct point in the lifecycle and relate specific tools to the decision points that separate the acquisition phases. They will be able to identify sustainment and training support M&S for a representative system. Prerequisite: SE3420.

**SE4501 Network-Centric Enterprise Design and Engineering (3-2) Spring**

This course provides the concepts, principles, and approaches necessary to understand the enterprise (warfighting force or business organization—private or public) as a functioning system or system of systems. It also introduces a method for enterprise modeling and design and discusses the functions of enterprise engineering. As a result, the student will be given the tools to understand large-scale system (i.e., enterprise) engineering and its relationship with network-centric technologies and components. Prerequisites: CS2011, CS2020 and SE3501, or consent of instructor.

**SE4503 Technology Planning and Replacement (3-2) Spring**

Often, enterprise managers make information resource management decisions based only on costs of acquiring, maintaining, and replacing information technology—the proverbial IT tail wags the business dog. While cost is certainly important, planning and replacement of the IT infrastructure should be driven by a solid business case based on total enterprise needs. This course examines the business-driven approach to information resource management in a network-centric enterprise. Prerequisites: SE3130 or consent of instructor.

**SE4900 Advanced Studies in Systems Engineering (3-0) Quarterly**

Directed study at an advanced graduate level based on textbooks, journal literature, experimental projects, or other sources. This course is designed to permit study of a selected topic at an advanced level, and which is not available for study through regularly scheduled courses. Prerequisites: Consent of program officer, academic associate, and instructor.

**SE4930 Model-Based Systems Engineering (3-2) Quarterly**

Practical systems engineering relies heavily on models during conceptualization, system definition, system design, system integration, as well as system assessment. This course addresses the use of models in all phases of the systems engineering process. Details of widely-used processes for modeling are described and these tools are used in laboratory exercises and projects. This course uses a seminar approach with out-of-classroom reading and in-class discussions of the reading replacing traditional lectures. Prerequisites: SE3100, SI3400, SE3302, and SE3303.

**SE4950 System of Systems Engineering (4-0) Quarterly**

Systems of systems (SoS) arise when a number of independently developed systems are integrated to perform tasks of which the independent systems are incapable. This course discusses the special problems of engineering systems of systems. Topics include characteristics of SoS, engineering management of SoS, engineering methodology of SoS, SoS architecture, analysis of SoS, and tools for engineering SoS. This course uses a seminar approach with out-of-classroom reading and in-class discussions of the reading replacing traditional lectures. Case studies are used extensively. Prerequisites: SE4150 and SE4151.

**SE5810 Dissertation Research (0-8) Quarterly**

Dissertation research for doctoral students. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council. Prerequisite: Advancement to Candidacy.

**SE5900 Doctoral Research Initiation (0-8) Quarterly**

This course provides program continuity and assistance to doctoral students in finding a dissertation topic and supervisor and subsequently initiating a dissertation research program. Required in the quarter following completion of doctoral-level course work and then continuously each quarter until advancement to candidacy.

**SI Courses**

**SI0810 Integrating Project (0-8) Spring/Summer/Fall/Winter**

This course serves as a final synthesis of the entire systems engineering curriculum. The course requires completion of an integrating project where student teams provide solutions using systems engineering methods and project management techniques. Prerequisite: Consent of instructor.

**SI3400 Fundamentals of Engineering Project Management (3-2)**

This course examines modern techniques of engineering project management from a systems perspective, including project planning, organization, and control. Specific topics include discussion of the systems engineering management process, risk management, scheduling methodologies, the DoD acquisition environment, management of design activities, PERT, CPMM, and project control mechanisms. Case studies are used to examine application of principles. Large-scale system management, mitigation of technical risk, integrated product and process
development, quality management, contracting, and the international environment are discussed. Large scale systems management problems are examined using commercial software suites. Covers application of fundamental systems project management processes and methods to an integrative system project. Development of communication skills is accomplished through oral presentations and written reports. Prerequisite/corequisite: SE3100.

SI4000  Systems Engineering Seminar (2-0)  
Spring/Summer/Fall/Winter  
This weekly seminar has two objectives: the first is to present guest speakers from industry, government and academia to discuss the practical application of Systems Engineering, the second is to provide a forum for the SEA project team to present their In Process Reviews (IPRs) and meet with across campus project participants. Prerequisites: Consent of the instructor.

SI4021  Systems Engineering for Product Development (4-0)  
Summer/Winter  
Systems engineers flow requirements down to detailed elements, integrate elements, and verify system performance. This course concentrates on the structural and technical elements of system engineering necessary in the product development domain. Multidisciplinary activities leading to requirements analysis, design trades, and integrated product-process development are complemented by current best manufacturing practices and design for cost principles. Structured methods, decision analysis, and quality engineering foundations are emphasized. Case studies from a variety of industrial contexts are presented and discussed. This course is team taught by experts from several disciplines. Prerequisites: None.

SI4022  Systems Architecture for Product Development (4-0)  
Summer/Winter  
Systems architects respond to user needs, define and allocate functionality, decompose the system, and define interfaces. This course presents a synthetic view of system architecture: the allocation of functionality and its projection on organizational functionality; the analysis of complexity and methods of decomposition and re-integration; consideration of downstream processes including manufacturing and operations. Physical systems and software systems are discussed. Heuristic and formal methods will be presented. Students are given research assignments that provide opportunities to further learn how systems architecture principles are applied in a variety of application areas. This course provides an integrative forum for PD21 students to stimulate holistic, global, and innovative thinking, and to enable critical evaluation of current modes of architecture. Prerequisites: None.

SI4900  Advanced Studies in Systems Engineering and Integration (3-0) As Required  
This course presents advanced topics in Systems Engineering relevant to in depth, focused graduate research and thesis work. Course may be repeated for credit. Prerequisite: Consent of instructor.

Modeling and Simulation Management Certificate - Curriculum 265

Program Point of Contact
Dr. Gene Paulo
The Department of Systems Engineering offers a four-course academic certificate in Systems Engineering. The four courses are offered online, beginning Spring and Fall quarters.

Requirements for Entry

For entry, the officer must have at least a C+ undergraduate grade point average, with at least one calculus course with a C or better and at least one calculus-based physics course with a C or better (APC 334). If an officer is an outstanding performer but lacks the necessary academic preparation, the Naval Postgraduate School offers refresher and transition courses before the program start.

Typical Course of Study

Quarter 1
SE3100 (3-2) Fundamentals of Systems Engineering

Quarter 2
SE3302 (3-2) Systems Suitability

Quarter 3
SE3303 (3-2) Systems Assessment

Quarter 4
SI3400 (3-2) Fundamentals of Engineering Project Management

Systems Engineering Analysis Program - Curriculum 308

This curriculum is described under the Systems Engineering Analysis Curriculum and Program section of this Catalog. The Department of Systems Engineering supports this curriculum with courses, faculty and project advisors. Selected students in the 308 curriculum may earn the MS SE degree, awarded by the Department, if they meet all of the MSSE degree requirements.

Systems Engineering (DL) - Curriculum 311

Program Manager
Joe Sweeney, Ph.D.
Bullard Hall, Room 201E
(831) 656-2476
jsweene@nps.edu

Academic Associate
Gene Paulo, Associate Professor
Code D/SE, Bullard Hall, Room 201F
(831) 656-3452, DSN 756-3452
eppaulo@nps.edu

Brief Overview

The Master of Science in Systems Engineering DL degree program is designed for Navy System Commands and DoD organizations involved in a wide range of systems engineering and integration challenges. These commands can partner with NPS to educate and train engineers with tools and technologies relevant to their work, resulting in employees with greater knowledge and expertise to enable them to better meet the needs of their customers.

DoD organizations or sponsors provide the students, and the Department of Systems Engineering provides the instruction, course materials, and hands-on experience. Courses are delivered at the students’ local sites using a combination of on-site instruction, video teleconferencing, and Web-enhanced online courses. The program can begin any academic quarter, in accordance with the sponsor’s needs.

Students normally take two courses per quarter over a two-year period. There are nine core courses and a three course capstone project sequence in the 16-course program. The remaining four courses can be tailored to meet the sponsor’s need. Students must participate in a capstone design project in lieu of writing a thesis.

Students receive an NPS degree, may receive NPS Systems Engineering certificates of accomplishment, and earn DAU equivalency certificates for all SPRDE Level III training requirements.

The program manager will help establish partnership arrangements with other organizations if desired. Additional information on the program can be found at http://www.nps.edu/Academics/GSEAS/se/

Requirements for Entry

An entering student must possess a Bachelor of Science degree in an engineering or related discipline with at least a 2.2 undergraduate grade-point average. Students must have completed ACQ101 and ACQ102 if they wish to receive SPRDE credit.

Entry Dates

This is an eight-quarter curriculum that may start any quarter chosen by the sponsor.

Degree

Master of Science in Systems Engineering

To be considered for this degree, a student must enter the curriculum with an ABET accredited engineering BS degree or establish equivalency with an ABET degree, and complete all the requirements of curriculum 311.
Master of Science in Engineering Systems

Students who enter without an ABET accredited engineering BS degree and cannot establish equivalency, and who complete all the requirements of curriculum 311, will earn a Master of Science in Engineering Systems degree.

Typical Course of Study

The typical course of study for curriculum 311 involves a nine course core systems engineering sequence, a three-course project, and an agreed-upon emphasis or domain track of four courses. This track is selected by the sponsor, program manager, and academic associate.

Quarter 1
SE3100 (3-2) Fundamentals of SE
SE3011 (3-2) Eng Econ and Cost Est

Quarter 2
SE3302 (3-2) Systems Suitability
SE3250 (3-2) Capability Engineering

Quarter 3
SE3303 (3-2) System Assessment
SE4150 (3-2) Systems Architecture and Design

Quarter 4
SI400 (3-2) Fundamentals of Engineering Project Management
SE4003 (3-2) Systems Software Engineering

Quarter 5
SE4151 (3-2) System Integration and Development
Elective (3-0) Domain/Track Elective

Quarter 6
SI0810 (3-2) Capstone Project
Elective (3-2) Domain/Track Elective

Quarter 7
SI0810 (3-2) Capstone Project
Elective (0-8) Domain/Track Elective

Quarter 8
SE0810 (0-8) Capstone Project
Elective (0-8) Domain/Track Elective

Systems Engineering - Curriculum 580

Program Officer
Joe Keller, CDR, USN
Code 74, Watkins Hall, Room 107A
(831) 656-2033, DSN 756-2033
jjkeller@nps.edu

Academic Associate
Mark Stevens
Bullard Hall, Room 201I
(831) 656-3840, DSN 756-3840
mstevens@nps.edu

Brief Overview

Systems Engineering at NPS provides a broad education in systems engineering methods and tools, and depth in a particular domain of application. Several domain tracks are offered, including combat systems engineering, ship systems engineering, and network-centric systems engineering. Other tracks are added, based on sponsor and student demand. The tracks consist of seven or more courses to gain depth in the domain area. These tracks complement the standard set of systems engineering courses. The curriculum is interdisciplinary and draws on courses from across campus.

Students come from the uniformed services, civilian members of government, and from foreign military services. Navy Engineering Duty Officers constitute a substantial portion of the students.

Requirements for Entry

Students must have an academic profile code of 323, which implies a 2.2 or better undergraduate GPA, a calculus sequence with a C+ or better grade, and a calculus-based physics sequence with a C+ or better grade.

Entry Dates

Students may enter this curriculum once a year, in July. Students requiring a refresher quarter to meet entrance requirements will begin in April. For further information, contact the Program Officer or Academic Associate for this curriculum.

Degrees

Master of Science in Systems Engineering

To be considered for this degree, a student must enter the curriculum with an ABET accredited engineering BS degree or establish equivalency with an ABET degree, and complete all the requirements of curriculum 580.

Master of Science in Engineering Systems

Students who enter without an ABET accredited engineering BS degree and cannot establish equivalency, and who complete all the requirements of curriculum 580, will earn a Master of Science in Engineering Systems degree.

Subspecialty

Completion of this curriculum qualifies a naval officer as a systems engineering sub-specialist, subspecialty code 5800.
The curriculum sponsor is the Commander, Naval Sea Systems Command.

**Typical Course of Study**

Students have a wide set of options for their specialization tracks. Below is a typical course matrix for the ship systems track.

### Educational Skill Requirements

**Systems Engineering Curriculum 580**

**Subspecialty Code 5800P**

Officers entering the Systems Engineering curriculum will be offered the necessary preparatory-level courses to satisfy the equivalent of a baccalaureate degree in engineering. They shall meet, as a minimum, the requirements set forth by the Accreditation Board for Engineering and Technology (ABET). At the graduate level, the officer will acquire the competence to effectively contribute as a systems engineer to naval systems research, design, development, maintenance and acquisition. The officer will gain the ability to effectively integrate future technological, engineering, and acquisition approaches with existing practice through a combination of core systems engineering courses, specialization studies, and project/thesis research. An officer will meet the below-listed ESRs through the completion of a program of study determined by the officer, the Program Officer, and the Academic Associate. Individual programs, and how they support the officer’s attainment of the ESRs, will be specifically designed to meet the needs of the Navy and the officer’s interests.

1. **Undergraduate Mathematics and Basic Sciences:**
   Understand and apply engineering-baccalaureate-equivalent mathematics and basic sciences. For mathematics, this includes single- and multi-variable differential and integral calculus, ordinary differential equations, probability, and statistics. Basic sciences include physics, chemistry, and terrestrial sciences. This can be met by the appropriate undergraduate work.

2. **Capability Engineering:**
   Model and analyze military operations in the context of achieving needed capability. Apply model-based systems engineering approaches, based on UML or SysML, and modeling and simulation techniques, and be able to assess legacy systems, emerging technological concepts, and as-yet-to-be-developed concepts into the joint warfighting environment considering technology readiness levels, effectiveness, cost, and risk. Understand the process of warfighting gaps to synthesis of as-yet-realized system concepts to meet emerging capability needs. Understand and apply modeling and simulation to include deterministic and stochastic modeling of systems, economic models, cost models, and life-cycle suitability analyses. This includes the ability to develop original discrete-event and continuous run-time...
3. **System Architecting:** Perform system architecting, applying and integrating methods for both software and hardware aspects. Construct feasible system functional and physical architectures that represent a balanced approach to meeting stakeholder needs and expectations, stated, implied, and derived system requirements, and suitability objectives such as being open, modular, extensible, maintainable, and reusable. Understand system architecture frameworks and their role in architecture development. Use model-based systems engineering techniques, based on UML or SySML to create, define, and develop system architectures. Develop, analyze, and compare alternative architectures against appropriate, system-level evaluation criteria and select the best based on quantitative and qualitative analysis, as appropriate.

4. **System Design:** Understand and apply the system design process in a holistic context, applying and integrating methods for both software and hardware aspects including identifying capability need, defining requirements, conducting functional analysis and allocation to hardware, software, and human elements, creating a system functional design, designing a system, deriving and defining requirement specifications, allocating requirement specifications to sub-systems (for hardware, software, and human elements), design for suitability, including reliability, availability, maintainability, operability, and logistical supportability, perform system assessment by conducting trade-off studies, evaluating system design alternatives against system capability need expressed as military effectiveness, estimating and analyzing the system cost and risk, including risk mitigation strategies, integrating human elements into the system design, and analyzing and planning for system testing and evaluation.

5. **Engineering Design Analysis:** Understand and apply core qualitative and quantitative methods of engineering design analysis, to include problem formulation, alternatives development, alternatives modeling and evaluation, alternatives comparison, optimization, decision analysis, failure analysis, risk analysis, and futures analysis. Mathematical techniques may include multiple criteria optimization, design of experiments, response surface methods, set-based design, real options, systems dynamics, and probabilistic analyses.

6. **System Integration and Development:** Apply the core skills of system integration and development to include integrating relevant technological disciplines that bear on the system effectiveness and cost, including weapons, sensor and information systems, while being responsive to realistic military capability need and warfighting effectiveness, requirements, functions, specifications, cost, and risk. Integrate systems and analyze aspects during the entire life-cycle. Understand system realization methods and processes, including prototyping and production. Apply production quality methods for continuous process improvement, such as statistical process control, lean, and six sigma.

7. **System Test & Evaluation:** Apply the core skills of system test and evaluation to include system effectiveness while being responsive to realistic military capability need and warfighting effectiveness, requirements, functions, and specifications. Evaluate systems and analyze test and evaluation aspects during the entire life-cycle using inferential statistics methods, including design of experiments (DOE) and analysis of variance (ANOVA). Apply fundamental verification and validation principles to systems development methods.

8. **Human Systems Integration:** Address human factors during requirements definition, as well as workload, safety, training, operability and ergonomics during design. Conduct functional analysis and allocation to human elements, performing cost-risk-effectiveness trade-offs among hardware, software, and human elements. Evaluate proposed designs for man-machine integration, human performance testing, and usability during development test and evaluation. Understand basic human biology as applied to human systems.

9. **Project Management:** Work as a team member or leader on a military systems engineering project. Demonstrate an understanding of project management principles. Demonstrate competence in the planning and management of complex projects. Understand the principles of and apply current industry approaches and technology to manage systems design, integration, test, and evaluation for large engineering projects.

10. **Specialization:** Demonstrate in-depth understanding of the principles, technologies, and systems used in at least one major specialty area. These areas can be specific warfare areas, such as combat systems, total ship systems, EW, IW, avionics, undersea warfare, or net-centric systems, a single traditional engineering specialty, such as mechanical, electrical, software, aerospace engineering, or naval architecture, or specialized disciplines such as human factors, availability, or safety. Demonstrate in-depth understanding of the scientific and engineering principles of the respective specialty, such as sensors, weapons, C4I systems, information systems, ship
structures, hydrodynamics, power systems, and reliability. Demonstrate broad understanding of systems context of the specialization. Apply that understanding to the design of system components, sub-systems, and interfaces in the holistic context of the engineering of systems.

11. **Joint and Maritime Strategic Planning**: American and world military history and joint and maritime planning including the origins and evolution of national and allied strategy; current American and allied military strategies which address the entire spectrum of conflict; the U.S. maritime component of national military strategy; the organizational structure of the U.S. defense establishment; the role of the commanders of unified and specified commands in strategic planning, the process of strategic planning; joint and service doctrine, and the roles and missions of each in meeting national strategy.

12. **Thesis**: Conduct independent analysis and research in the area of Systems Engineering, and show proficiency in presenting the results in writing and orally by means of a thesis and command-oriented briefing appropriate to this curriculum.

**Systems Engineering PhD - Curriculum 581**

**Program Officer**

Paul Montgomery, LCDR, USN  
(831) 656-5448, DSN 756-5448  
prmontgo@nps.edu

**Academic Associate**

Gene Paulo, Associate Professor  
Code D/SE, Bullard Hall, Room 201F  
(831) 656-3452, DSN 756-3452  
eppaulo@nps.edu

**Brief Overview**

The Department of Systems Engineering offers a Doctor of Philosophy (Ph.D.) degree in Systems Engineering. Students take graduate level courses in systems engineering (as needed to pass the oral and written qualifying examinations), advanced graduate courses in systems engineering and an application domain, and perform research that leads to a dissertation involving some aspect of systems engineering. Research topics may be selected from a broad variety of studies of the systems engineering process, applications of systems engineering to solving complex problems, systems level modeling and simulation, and systems suitability assessment. Subject to approval of the student’s dissertation committee chairman, dissertation research may be conducted away from NPS at cooperating facilities. Students must satisfy a one-year residency requirement. This may be met by completing periodic extended stays (nominally two weeks per quarter) at an NPS campus spread throughout the duration of the student’s program.

Ideal applicants should possess an M.S. degree in Systems Engineering. Applicants with only a B.S. degree or an M.S. degree in another discipline will be required to take a number of systems engineering courses (equivalent to the coursework portion of an MSSE degree program) to pass the qualifying examinations. Unless an M.S. thesis and any other ABET accreditation requirements are also satisfied, an M.S. in Systems Engineering degree will not be awarded for this preparatory work.

**Systems Engineering Management (MSSEM) /Product Development (DL) - Curriculum 721**

**Program Officer**

(831) 656-2476  
jsweeney@nps.edu

**Academic Associate**

Tom Huynh, Ph.D.  
Code D/SE, Bullard Hall, Room 210  
(831) 656-7568, DSN 756-7568  
thuynh@nps.edu

**Brief Overview**

The Naval Postgraduate School (NPS), as a partner in the Massachusetts Institute of Technology’s (MIT) “Educational Consortium for Product Development Leadership in the 21st Century” (PD21), is delivering a joint executive systems engineering management degree using distance learning methods to military officers, senior enlisted, federal civilians, and a limited number of defense contractor civilians. The program’s joint focus is on joint services, joint engineering-management and joint government-industry. The executive SEM-PD21 degree program is modeled after the graduate program developed jointly by MIT’s School of Engineering and Sloan School of Management. The executive SEM-PD21 degree program is designed to produce a cadre of change agents skilled in engineering and management to bring about dramatic improvements in the way American corporations and the defense industry develop and build new systems and products.

Participants in this unique program are exposed to state-of-the-art concepts and tools, as well as world-class companies, leaders, and cross-industry best practices. Students acquire the basic skills and strategic perspective
necessary to become future leaders and senior managers responsible for driving product development and business growth through innovation and to become effective change agents at their organizations. They develop a mindset receptive to change and continuous improvement, an understanding of the enablers to business success, and an enhanced ability to recognize barriers to success early in the product development cycle when corrective actions are least costly.

The SEM-PD21 curriculum is an eight-quarter distance learning curriculum with entry in the Fall quarter, which begins in late September with an on-site two-week kickoff at NPS in Monterey, CA. After the kickoff, classes are taken at students' locations by web teleconferencing or online web-based courses. Students are expected to participate in two or three industry trips during the two-year course of study and a graduation ceremony in Monterey at the completion of the program. There will also be occasional Systems Engineering and Product Development seminars for all SEM-PD21 students within their existing course of study.

SEM-PD21 website:
www.nps.edu/DL

Requirements for Entry
For admission into the PD-21 program, the student must hold an undergraduate degree in engineering, a related scientific or technical field, with high academic achievement. The student must be sponsored by an organization committed to supporting the student's full participation and have at least five years of experience directly related to product development (three years if student holds a master's degree). The application requirements can be found at the joint executive SEM-PD21 website at: www.nps.edu/DL.

Program Starting Date
September (Fall quarter)

Program Length
Eight distance learning quarters (two years).

Degree
The student may choose one of the following three degrees. The PD-21 Academic Associate will determine if the student satisfies specific degree requirements. Degree options are necessary to meet current sponsor expectations, broad marketing appeal, and program differentiator (value proposition). Graduates also earn a MIT certificate signed by Dean of the MIT Sloan School of Management and Dean of the MIT School of Engineering.

Master of Science in Systems Engineering Management
To be considered for this degree, a student must enter the curriculum with a BS degree, complete all the requirements of curriculum 721, complete a minimum of 48 credit hours of graduate-level courses, at least 12 of which are at the 4000 level, complete an acceptable thesis, with at least one advisor from the Naval Postgraduate School and with at least one advisor holding a doctoral degree, and have approval of their program by the Chair of the Department of Systems Engineering.

Master of Science in Product Development
To be considered for this degree, a student must enter the curriculum with a BS degree, complete a minimum of 48 credit hours of graduate-level courses, at least 12 of which are at the 4000 level, complete an acceptable thesis, with at least one advisor from the Naval Postgraduate School and with at least one advisor holding a doctoral degree, and have approval of the candidate's program by the Chair of the Department of Systems Engineering.

Master of Science in Systems Engineering (and Master of Science in Engineering Systems)
To be considered for this degree, a student must enter the curriculum with an ABET engineering BS degree or establish equivalency with an ABET degree, satisfy all the requirements of curriculum 721, satisfy all the requirements of the Advanced Systems Engineering Elective Track, complete an acceptable thesis with a systems engineering focus and with at least one advisor holding a doctoral degree and at least one advisor from the Systems Engineering department or other engineering departments at the Naval Postgraduate School, and have approval of their program by the Chair, Department of Systems Engineering.

Curriculum Sponsors
Any federal organization or defense contractor can sponsor students into the SEM-PD21 program. In addition to earning a master's degree, the curriculum satisfies the mandatory Defense Acquisition University (DAU) Systems Planning, Research, Development, and Engineering (SPRDE) course requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) through Level III. Students who select the Systems Acquisition elective track also earn mandatory DAU course requirements for Program Management through Level III. The other elective tracks offer additional NPS certificates in Space Systems, Information Systems, Software Engineering, and Advanced Systems Engineering. Students who complete the program also earn a MIT certificate of recognition.

Typical Course of Study

Mgmt/Eng (4-0) Elective

Quarter 8
SE0811 (0-8) Thesis Research
Mgmt/Eng (4-0) Elective
SE3810 (0-2) Systems Engineering Seminar
(Note: Seminar used throughout program but credits given final quarter)

Elective Tracks:

Sponsors and students have great flexibility in designing their elective structure. Currently, there are five advertised elective tracks that, when taken with SEM-PD21 core/fundamental courses, earn participating students additional certifications in Systems Acquisition (DAWIA PMT352), Space Systems, Information Systems, Software Engineering and Advanced Systems Engineering. Other elective tracks can be designed by contacting the Academic Associate.

Steven Richard Baker, Associate Professor (1985); Ph.D., University of California at Los Angeles, 1985.

Mary Batteen, Chair and Professor of Oceanography (1985); Ph.D., Oregon State University, 1984.

Ronald E. Brown, Research Professor, Department of Physics (2002); Ph.D., University of Southern California, 1972.

Donald P. Brutzman, Associate Professor (1995); Ph.D., Naval Postgraduate School, Monterey, 1994.

Peter C. Chu, Distinguished Professor (1986); Ph.D., University of Chicago, 1985.

Timothy Chung, Research Assistant Professor (2008); Ph.D., California Institute of Technology, 2007.

Curt Collins, Professor of Oceanography (1987); Ph.D., Oregon State University, 1967.

John A. Colosi, Associate Professor, Department of Oceanography (2005); Ph.D. Physics, University of California, Santa Cruz (UCSC) 1993.

Roberto Cristi, Professor (1985); Ph.D., University of Massachusetts, 1983.

Bruce C. Denardo, Associate Professor (1998); Ph.D., University of California at Los Angeles, 1990.

Winford G. Ellis, RADM USN (Ret), Chair Professor of Undersea Warfare and Director of Undersea Warfare Research Center (2009); MS, M.I.T., 1974; MS, Sloan School of Management, Massachusetts Institute of Technology, 1974.

Monique P. Fargues, Associate Professor of Electrical and Computer Engineering (1989); Ph.D. Electrical Engineering, Virginia Tech, 1988.
**John Harris**, Research Assistant Professor in Physics (2009), Ph.D. University of Maryland, 2005.

**Garth V. Hobson**, Professor (1990); Ph.D., Pennsylvania State University, 1990.

**Douglas P. Horner**, Research Assistant Professor (2005); M.S., Naval Postgraduate School, 1999.

**Isaac I. Kaminer**, Professor (1992); Ph.D., University of Michigan, 1992.

**Wei Kang**, Professor (1994); Ph.D., University of California, Davis, 1991.

**Andres Larraza**, Associate Professor of Physics, Academic Associate for Combat Systems Science & Technology Curriculum (1994); Ph.D., University of California at Los Angeles, 1987.

**Knox T. Millsaps**, Professor and Chairman (1992); Ph.D., Massachusetts Institute of Technology, 1991.

**David S. Neely**, CDR, USN, Military Associate Professor and Associate Chair for Operations (2007); MSEE, Naval Postgraduate School, 1994.

**Jeffrey D. Paduan**, Associate Professor of Oceanography (1991); BSE in Engineering Science, University of Michigan, Ann Arbor, 1982; Ph.D. in Physical Oceanography, Oregon State University, Corvallis, 1987.

**Steven E. Plinick**, Senior Lecturer (1999); Ph.D., Naval Postgraduate School, 1989.

**Joseph Rice**, Research Chair of Engineering Acoustics (2000); MS, University of California at San Diego, 1990.

**I. Michael Ross**, Professor (1990); Ph.D., Pennsylvania State University, 1990.

**Clyde Scandrett**, Chair and Professor of Mathematics (1987); Ph.D., Northwestern University, 1985.

**David A. Schrady**, Distinguished Professor Emeritus (1965); Ph.D., Case Institute of Technology, 1965.

**Kevin B. Smith**, Professor of Physics, (1995); Ph.D., University of Miami, 1991.

**Rebecca Stone**, CDR, USN, Oceanography Department (2004); Ph.D., Naval Postgraduate School, 1999.

**Weilian Su**, Associate Professor (2004); Ph.D., Georgia Institute of Technology, 2004.

**Mike Traweek**, Visiting Professor (2010) Program Officer at ONR in Ocean Battlespace Sensing Department, PhD, Pennsylvania State University, 2003.

**Richard D. Williams III**, RADM, USN (Ret.), Chair Professor of Mine and Expeditionary Warfare, Assistant Director of Undersea Warfare Research Center (2005); MS Physics, Naval Postgraduate School, 1972.

**Lawrence J. Zlomek**, Professor of Electrical and Computer Engineering (1982); Ph.D., Pennsylvania State University, 1981.

*The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

**Brief Overview**

The Undersea Warfare Academic Group (USWAG) is an interdisciplinary association of faculty and academic professorships providing oversight for multiple Undersea Warfare (USW) degree programs. The USWAG has administrative responsibility for the academic content of the USW Curriculum. Teaching in this interdisciplinary program is carried out by faculty members attached to the following academic departments: Electrical and Computer Engineering, Mathematics, Oceanography, Operations Research, Mechanical Engineering and Physics. Affiliated with the USWAG is the Undersea Warfare Research Center (USWRC) and the Center for Autonomous Underwater Vehicle (AUV) Research. The Chair, USWAG approves thesis topics for students in the Undersea Warfare curricula.

**Degrees**

Students seeking the Master of Science in Applied Science degree under the cognizance of the Chair, Undersea Warfare Academic Group must successfully complete at least 20 hours of graduate level coursework from either the Electrical and Computer Engineering Department (Signal Processing), Oceanography Department (Physical
Oceanography), Physics Department (Acoustics) or the Operations Research Department (Operations Research). The program must contain at least 12 hours at the graduate level in a sequence of courses that represents specialization in some area other than that of the major. In addition, the program must include at least 12 hours at the 4000 level. All programs leading to the Master of Science in Applied Science must be approved by the Chair, Undersea Warfare Academic Group. This degree also requires completion of a thesis acceptable to the Chair.

Undersea Warfare Course Descriptions

**UW Courses**

**UW0001 Seminar (0-1) Spring/Summer/Fall/Winter**
Special lectures and discussion of matters related to the USW Program. Prerequisite: Enrollment in the USW Curriculum (for U.S. citizens). Classification: SECRET.

**UW0810 Thesis Research/Group Project (0-8) As Required**
Students in the USW curriculum will enroll in this course while doing either an individual thesis or an equivalent group project involving several students and faculty.

**UW2001 History of USW Part I, Mine Warfare (2-0) Summer**
A study of mine warfare during the 20th century. Starting with the development of mines at the end of the 19th century, the progression of the warfare area is tracked through the end of the 20th century. The lessons of this history continue to have implications for the future of naval warfare. Numerous lessons reappear from the Russo-Japanese War of 1905 on through World War I, World War II, the Korean conflict, the Vietnam War, the Cold War, Desert Shield/Desert Storm, and Operation Iraqi Freedom. Technical Innovations with significant impact on this historical period are covered as part of this course.

**UW2002 Undersea Warfare - Yesterday, Today, Tomorrow (2-0) Fall**
A study of mine warfare during the 20th century. Starting with the development of mines at the end of the 19th century, the progression of the warfare area is tracked through the end of the 20th century. The lessons of this history continue to have implications for the future of naval warfare. Numerous lessons reappear from the Russo-Japanese War of 1905 on through World War I, World War II, the Korean conflict, the Vietnam War, the Cold War, Desert Shield/Desert Storm, and Operation Iraqi Freedom. Technical Innovations with significant impact on this historical period are covered as part of this course. Prerequisite: UW2001.

**UW3303 Modeling and Simulation for Undersea Warfare (4-1) Spring**
Design, implementation and analysis using digital simulation models, with emphasis on physics-based modeling of military systems. Simulation is a discipline that cut across all technical fields complementing both theory and experiment as a component of the scientific method. Course topics include a broad view of analytic simulation, properly designing and structuring simulation problems, extending student programming skills to include the MATLAB language, use of on-line tutorials, and the use of public-domain X3D model archives. This course provides tools, techniques and repeatable methodology that can be used to support thesis work and projects in other classes. Examples and class projects are typically oriented to problems of military or scientific interests.

**UW4999 Special Studies in Undersea Warfare (V-0) As required**
Variable hours 1-0 to 4-0.) A course designed to meet the needs of students for special work in advanced topics related to USW.

**Anti-Submarine Warfare Certificate - Curriculum 274**

**Academic Associate & Technical Point of Contact**
Daphne Kapolka, Ph.D.
Code PH/KD, Spanagel Hall, Room 200A
(831) 656-1825, DSN 756-1825
Fax: (831) 656-2834
dkapolka@nps.edu

**Brief Overview**
The ASW Certificate consists of a sequence of four highly technical courses designed to provide our civilian and active-duty workforce with a learning experience which extends their general undergraduate education to include the essential concepts, equations, and skill sets needed to understand, design, and use ASW systems. The web-based courses are paced week-to-week by the instructors, but students have great flexibility to do coursework at times of their choosing during each week.

The total number of NPS credits obtained for the certificate is 11 graduate and three undergraduate.

**Requirements for Entry**
A Bachelor's degree from an accredited institution including a course in single-variable calculus, a course in calculus-based physics and calculus-based probability.

**Entry Date**
At the beginning of spring quarter in the academic year.

**Program Length**
Four quarters with a one quarter break in the fall to provide time to review calculus and/or probability if desired.

**Graduate Certificate Requirements**
The academic certificate program must be completed within three years of admission to the program. A student must maintain a 3.0 GQPR in the certificate courses to be awarded a certificate.
Required Courses

PH3401  Introduction to Sonar Equations
OC2930  Oceanography for Undersea Warfare
EO3404  Applied Signal Processing
OS3680  Naval Tactical Analysis

Undersea Warfare - Curriculum 525 (US Students)/526 (International Students)

Program Officer
John Dumas, CDR, USN
Code 75, Spanagel Hall, Room 304
(831) 656-2044, DSN 756-2044
jldumas@nps.edu

Academic Associate
Daphne Kapolka, Ph.D.
Code PH/Kd, Spanagel Hall, Room 200A
(831) 656-1825, DSN 756-1825
dkapolka@nps.edu

Brief Overview
The Undersea Warfare Curriculum is jointly sponsored by N87 and N85 to educate officers in the engineering fundamentals, physical principles and analytical concepts that govern operational employment of undersea warfare (USW) sensors and weapons. The USW program is interdisciplinary and integrates many subjects: mathematics, physics, oceanography, electrical and mechanical engineering, and operations analysis.

The 525 curriculum is designed to allow the student to meet all of the requirements for Navy PME (as established by the Chief of Naval Operations) and for Joint Professional Military Education for Intermediate Level Professional Military Education (JPME Phase I) as established by the Chairman, Joint Chiefs of Staff.

The 526 curriculum, modeled after the 525 curriculum, is available for international students. The international version replaces U.S. PME courses with courses specifically developed for international students.

Requirements for Entry
A baccalaureate degree, or equivalent, from a program with a calculus sequence and a calculus-based physics sequence that results in an APC of 323 is required for direct input. Courses in the physical sciences and engineering are desirable. Officers not meeting the academic requirements for direct input enter the program via one or two quarters of refresher math and/or physics as needed.

Entry Date
The Undersea Warfare curriculum is an eight-quarter course of study with entry dates in March and September. If further information is needed, contact the Academic Associate or Program Officer. A four-quarter course of study has been designed for students that are accepted in the Immediate Graduate Education Program (IGEP). IGEP students begin their program in July.

Degrees
Students in the Undersea Warfare Curriculum can choose from a variety of technical degrees including:

Master of Science in Engineering Acoustics
(with emphasis on underwater acoustics, hardware design, and signal processing)

Master of Science in Physical Oceanography
(with emphasis on the prediction of the littoral battlespace environment, ocean acoustics and environmental effects on sonar performance)

Master of Science in Electrical Engineering
(with emphasis on communications or signal processing)

Master of Science in Mechanical Engineering
(with emphasis on autonomous systems)

Master of Science in Engineering Science
(with emphasis on autonomous systems)

Master of Science in Applied Mathematics
(with emphasis on autonomous systems or secure communications)

Students who have limited time for degree completion or whose technical backgrounds are weak may choose to pursue a Master of Science degree in Applied Science (Signal Processing), (Physical Oceanography), (Acoustics), or (Operations Research).

Students seeking the Master of Science in Applied Science degree under the cognizance of the Chair, Undersea Warfare Academic Group, must successfully complete at least 20 hours of graduate-level coursework from either the Electrical and Computer Engineering Department (Signal Processing), Oceanography Department (Physical Oceanography), Physics Department (Acoustics) or the Operations Research Department (Operations Research). The program must contain at least 12 hours at the graduate level in a sequence of courses that represents specialization in some area other than that of the major. In addition, the program must include at least 12 hours at the 4000 level. All programs leading to the Master of Science in Applied Science must be approved by the Chair, Undersea Warfare Academic Group. This degree also requires completion of a thesis acceptable to the Chair.
Anti-Submarine Warfare Certificate Program (274)

The Anti-Submarine Warfare Certificate program comprises four courses (PH3401, OC2930, EO3404, and OS3680). Upon successful completion of the coursework, students will be awarded a certificate of accomplishment in keeping with standard practices of the Naval Postgraduate School.

The Anti-Submarine Warfare Certificate program supports Navy ASW needs and complements existing ASW training by providing cross-disciplinary science and engineering education at the graduate level for the four primary technical disciplines involved:

- Physical Oceanography (Oceanography for USW)
- Electrical Engineering (Applied Signal Processing)
- Operations Research (Naval Tactical Analysis)
- Engineering Acoustics (Introduction to Sonar Equations)

Since completion of the distance-learning ASW Certificate introduces students to each of the four disciplines in USW, it is an excellent way for students to decide on their area of interest. Arriving at NPS for a master's degree with an already-completed ASW certificate can either reduce on-board tour duration or increase thesis research time at NPS.

Subspecialty

Completion of this curriculum qualifies an officer as an Undersea Warfare Subspecialist with a subspecialty code of 6301P. The curriculum sponsors are N87 (Submarine Warfare) and N85 (Expeditionary Warfare).

Typical Subspecialty Jobs

Naval Undersea Warfare Center COMINEWARCOM
- Naval Air Warfare Center
- Submarine Development Squadron Twelve
- Program Executive Offices
- Patrol Wing Staffs
- Carrier Group Staffs
- Naval Air Systems Command
- Naval Surface Warfare Development Group
- OPNAV
- Destroyer Squadron Staffs
- Fleet Mine Warfare Training Center
- Operational Test and Evaluation Force

Typical Course of Study - Spring Entry

Notes: Courses indicated by * are Joint Professional Military Education courses and are applicable to U.S. Navy students only. UW0001 (0-1) Seminars on Undersea Warfare related topics are offered approximately bi-weekly throughout the program. USW students are expected to attend UW0001 seminars as offered.

Quarter 1
- MA1115 (6wks) (4-0) Multi-variable Calculus
- MA1116 (6wks) (4-0) Vector Calculus
- MA2121 (4-0) Ordinary Differential Equations
- PH3401 (3-0) Introduction to Sonar Equations
- OC2020 (2-2) Matlab

Quarter 2
- MA3139 (4-0) Fourier Analysis and Partial Differential Equations
- OC3230 (3-1) Descriptive Physical Oceanography
- NW3230* (4-2) Strategy and Policy

Quarter 3
- OC3260 (4-1) Fundamentals of Ocean Acoustics
- PH3002 (4-0) Non-Acoustic Sensors
- NW3285* (4-0) National Security Decision Making
- ME3720 (3-2) Intro to Unmanned Systems

Quarter 4
- OS2103 (4-1) Applied Probability for Systems Technology
- UW2001 (2-0) History of USW I
- OC4270 (3-4) Tactical Oceanography

Quarter 5
- ME3720 (3-2) intro to Unmanned Systems
- OS3604 (4-1) Statistics and Data Analysis

Quarter 6
- UW2002 (2-0) History of USW
- OA3602 (4-0) Search Theory and Detection
- EO2402 (4-1) Introduction to Linear Systems
- UW9999 (4-0) Specialization Elective
- UW0810 (0-8) Thesis Research Group/Project

Quarter 7
- UW2002 (2-0) USW, Yesterday, Today, Tomorrow
- UW9999 (4-0) Specialization Elective
- OA4607 (4-0) Tactical Decision Making
- EO3402 (3-1) Signals and Noise
- NW3275* (4-0) Joint Maritime Operations (Part 1)
- UW0810 (0-8) Thesis Research Group/Project

Quarter 8
- NW3276* (2-2) Joint Military Operations (Part 2)
- UW9999 (4-0) Specialization Elective
- EC4450 (4-1) Sonar Systems Engineering
- UW9999 (4-0) Specialization Elective
- UW0810 (0-8) Thesis Research
Typical Course of Study - Fall Entry

Notes: Courses indicated by * are Joint Professional Military Education courses and are applicable to U.S. Navy students only. UW0001 (0-1) Seminars on Undersea Warfare related topics are offered approximately bi-weekly throughout the program. USW students are expected to attend UW0001 seminars as offered.

Educational Skill Requirements (ESR) Undersea Warfare- Curriculum 525 Subspecialty Code: 6301P

Maintaining superiority in Undersea Warfare is an essential goal for our Navy and one of the CNO's top priorities. Small, quiet targets, rising ambient noise levels, technologically sophisticated asymmetric weapons, and an emphasis on the littoral make conducting successful offensive and defensive naval operations in the undersea environment a most challenging task. The Undersea Warfare curriculum at the Naval Postgraduate School seeks to improve the performance of officers throughout their careers in the operation, evaluation, development, and acquisition of USW systems. To accomplish this requires a broad, interdisciplinary education in the fundamental principles of USW. The conceptual tools and techniques provided by courses in mathematics, physics, oceanography, operations research, signal processing, and autonomous systems prepare the officer to understand and solve new problems. In addition to the broad education provided by the core courses of the curriculum, each student will obtain their degree in a specific field such as Operations Research, Electrical Engineering, Engineering Acoustics, Applied Physics, Physical Oceanography, Mechanical Engineering, or Applied Mathematics. The combined breadth and depth of this education provide the Navy with a cadre of officers prepared to respond to future challenges in a wide variety of USW-related jobs. The specific ESRs include:

1. Mathematics: The officer will master the mathematical principles and techniques necessary to complete graduate level course work and research related to undersea warfare.
2. Physics: The officer will understand physical principles applicable to acoustic, non-acoustic USW systems.
3. Acoustics: The officer will understand acoustical phenomena affecting the design, performance, and operation of acoustic USW systems.
4. Oceanography: The officer will understand atmospheric and oceanographic processes influencing the performance and tactical use of USW systems.
5. Signal Processing: The officer will understand principles of signal processing as they apply to USW systems.
6. Operations Research: The officer will understand the principles of USW search, detection, and localization. The officer will understand principles of tactical...
decision aids and data analysis in the evaluation of USW systems.

7. **Unmanned Systems:** The officer will understand the fundamental technologies and capabilities of unmanned underwater systems and tactical robotics.

8. **Joint Professional Military Education:** Graduates will complete the Navy Joint Professional Military Education Phase I requirements. Additionally, they will understand the history of USW and its implications to today's Navy.

9. **Programming and Simulation:** The officer will be able to program solutions to essential engineering problems. The officer will be able to assess models and perform simulations.

10. **Problem Solving and Practical Applicability:** The officer will demonstrate the ability to conduct independent analysis in Undersea Warfare and proficiency in written and oral presentations.

**Curriculum Sponsor and ESR Approval Authority**

The Graduate School of Operational and Information Sciences consists of the following departments:

Computer Science    CS
Defense Analysis    DA
Information Sciences    IS
Operations Research    OR

Overview
The Graduate School of Operational and Information Sciences includes Graduate Resident Programs consisting of 15 technical curricula and awards Master of Science and Ph.D. degrees across four academic departments. The faculty number approximately 100 and educate approximately 600 military and DoD students annually.

In the domains of education and ideas, staying current in these dynamic times is basic to the Graduate School of Operational and Information Sciences. Unlike a civilian university, at GSOIS we know we are educating our students for military related careers. First we teach them scientific principles and mathematical methods, and then we teach them how to apply them to military objectives when they return to service.

Another university could not tailor a curriculum, adapt to change, or transform its courses as swiftly as do the GSOIS faculty. For example, pedagogically, we have embraced the shift to distance learning, especially in the past five years, as Web-based instruction has become an efficient delivery mode, and we supplement it with Video TeleEducation so that students will benefit in widely dispersed locations, sometimes in ships at sea.

Mission Statement
To deliver graduate-level education and conduct cutting-edge research in four nontraditional knowledge domains in response to the needs of naval and DoD customers. Our four knowledge domains are:
- Information Science and Technology
- Military Computer Science
- Military Operations Analysis and Research
- Special Operations and Related Defense Analysis

lepeitso@nps.edu

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

Bruce Allen, Research Associate (2008); B.S., California State University at Sacramento, 1989.

Pranav Anand, Visiting Assistant Professor (2008); Ph.D., Massachusetts Institute of Technology, 2006.

Mikhail Auguston, Associate Professor (2003); Ph.D., Glushkov Cybernetics Institute, 1983.

Eric R. Bachmann, Research Assistant Professor, (1997); Ph.D., Naval Postgraduate School, 2000.

Valdis Berzins, Professor (1986); Ph.D., Massachusetts Institute of Technology, 1979.

Robert Beverly, Assistant Professor (2009); Ph.D., Massachusetts Institute of Technology, 2008.

Karen Burke, Research Associate Professor (2003); M.S., Southern Illinois University, 1979.

Paul Clark, Research Associate (1999); M.S., Naval Postgraduate School, 1999.

Richard S. Cote, Senior Lecturer (2001); M.S., Naval Postgraduate School, 2000.

Chris Darken, Associate Professor (2001); Ph.D., Yale University, 1993.

Rudy Darken, Professor (1996); D.Sc., George Washington University, 1995.

Arijit Das, Research Associate (2003); M.S., University of Nevada, 1989.

Peter J. Denning, Chairman, Department of Computer Sciences, Director of the Cebrowski Institute for Innovation and Information Superiority, and Distinguished Professor (2002); Ph.D., Massachusetts Institute of Technology, 1968.

George W. Dinolt, Professor of the Practice of Cyber Operations (2002); Ph.D., University of Wisconsin at Madison, 1971.

Doron Drusinsky, Associate Professor (2002); Ph.D., Weizmann Institute of Science, 1988.

Chris Eagle, Senior Lecturer (1997); M.S., Naval Postgraduate School, 1995.

John Falby, Senior Lecturer (1991); M.S., Naval Postgraduate School, 1986.

John D. (JD) Fulp, Senior Lecturer (2001); M.S., Naval Postgraduate School, 1996.

Simson L. Garfinkel, Associate Professor (2006); Ph.D., Massachusetts Institute of Technology, 2005.

John H. Gibson, Research Associate (2001); B.S., University of California at Santa Barbara, 1969.

Mark Gondree, Research Associate (2009); Ph.D., University of California at Davis, 2009.

John Hiles, Research Professor (1999); B.S., University of California at Santa Barbara, 1969.

Ted Huffmire, Assistant Professor (2007); Ph.D., University of California at Santa Barbara, 2007.

Cynthia E. Irvine, Professor and Director, Center for Information Systems Security Studies and Research (1994); Ph.D., Case Western University, 1975.

Mathias N. Kölsch, Assistant Professor (2005); Ph.D., University of California at Santa Barbara, 2004.

Timothy E. Levin, Research Associate Professor (2001); B.S., University of California at Santa Cruz, 1991.

Theodore G. Lewis, Professor (1993); Ph.D., Washington State University, 1971.
G.M. Lundy, Associate Professor (1988); Ph.D., Georgia Institute of Technology, 1988.

Luqi, Professor (1986); Ph.D., University of Minnesota, 1986.

Craig Martell, Associate Professor, (2003); Ph.D., University of Pennsylvania, 2004.

Bret Michael, Professor (1998); Ph.D., George Mason University, 1993.

Thuy D. Nguyen, Research Associate (2002); B.A., University of California at San Diego, 1982.

Thomas W. Otani, Associate Professor (1985); Ph.D., University of California at San Diego, 1983.

Loren E. Peitso, Senior Lecturer (2004); M.S., Naval Postgraduate School, 2002.

Zachary N. J. Peterson, Assistant Professor (2010); Ph.D., Johns Hopkins University, 2006.

Charles Prince, Research Associate (2006); B.S., Oregon State University, 1993.

Neil C. Rowe, Professor (1983); Ph.D., Stanford University, 1983.

Alan Shaffer, CDR, USN, Military Associate Professor (2009); Ph.D., Naval Postgraduate School, 2009.

David Shifflett, Research Associate (2000); B.S., California State University at Northridge, 1985.

Man-Tak Shing, Associate Professor (1988); Ph.D., University of California at San Diego, 1981.

Gurmander Singh, Professor and Director, Center for the Study of Mobile Devices and Communications (2002); Ph.D., University of Alberta, 1989.

Joseph A. Sullivan, CDR, USN, Military Lecturer and MOVES Institute Acting Director (2001); M.S., Naval Postgraduate School, 1998.

Dennis M. Volpano, Associate Professor (1991); Ph.D., Oregon Graduate Institute, 1986.

Daniel F. Warren, Senior Lecturer (1996); M.S., University of California at Santa Cruz, 1986.

Duminda Wijesekera, Visiting Associate Professor (2006); Ph.D., University of Minnesota, 1997.

John W. Wulff, Research Associate (2011); B.I.T., American Intercontinental University, 2011.

Joel Young, Assistant Professor (2007); Ph.D., Brown University, 2004.

Geoffrey Xie, Professor (1996); Ph.D., University of Texas at Austin, 1996.

Emeritus Professors

Robert B. McGhee, Professor Emeritus (1986); Ph.D., University of Southern California, 1963.

Degrees

The Department of Computer Science provides graduate training and education in major areas of computer science; thus, both basic and advanced graduate courses are offered. Course work and research lead to either the Master of Science or Doctor of Philosophy degree. The requirements to complete either program are rigorous and are comparable to those of other major universities.

Master of Science in Computer Science

Master of Computing Technology

Master of Science in Modeling, Virtual Environments, and Simulation

Master of Science in Software Engineering

Doctor of Philosophy in Computer Science

Doctor of Philosophy in Modeling, Virtual Environments, and Simulation

Doctor of Philosophy in Software Engineering

Laboratories

There are currently 14 laboratories:

Computer Science Learning Resource Center

This laboratory provides a general purpose, networked, PC desktop environment for a variety of programming languages and software packages. It is used both as a teaching lab for a number of courses and as an open lab for NPS-wide coursework.

Introductory Computer Security Laboratory

This lab is primarily used by the Center for Information Security Studies and Research (CISR). The lab consists of a virtual infrastructure of clients and servers serving the needs of multiple CS department classes such as:

The studies of information assurance, computer security, high assurance system architecture and authentication where it is used to introduce students to studies in high assurance systems, public key infrastructure, mandatory access control, viruses, covert channels and the reference monitor concept.

The security manager’s view of diverse management concerns associated with administering and operating an automated information system facility with minimized risk.
Also used in certifying that students have met the requirements for educational standards published by the Committee on National Security Systems (CNSS).

The fundamentals of computer forensics in the context of DoN/DoD information operations. Students examine how information is stored and how it may be deliberately hidden and/or subverted.

The basis for understanding the potential vulnerabilities in networked systems by applying a problem-solving approach to obtain information about a remote network and exploit or subvert those systems using various techniques and tools along with discussing vulnerability discovery and mitigation.

Students taking the course this lab primarily serves are from multiple departments across campus. For more information, please contact Professors Cote or Clark.

**Computer Information Security Research (CISR) Laboratory**

This lab is primarily used by the Center for Information Security Studies and Research (CISR). The lab consists of a virtual infrastructure of clients and servers to allow the student to study network vulnerabilities, intrusion detection, secure system management and computer forensics; where tools used by administrators and hackers can be freely researched and studied. Students are given full administrator privileges on virtual machines so that multiple operating systems and tools can provide a basis for understanding the potential vulnerabilities and their mitigation in networked systems by studying methods to: (1) obtain information about a remote network, (2) to possibly exploit or subvert systems residing on that network and (3) techniques to mitigate risks to networked systems. For more information, please contact Professors Cote or Clark.

**Public Key Infrastructure Laboratory**

This computer lab is primarily used by the Center for Information Security Studies and Research (CISR). This reconfigurable lab is dedicated to studies of network security, secure computer systems, security policies, modeling, and formal methods. Additionally through the use of a Virtual Private Network (VPN), it is utilized for the Inter-Service Academy Cyber Defense Exercise (CDX). This annual exercise involving NPS, AFIT, and all four U.S. Service Academies; acting as network defenders (Blue Teams) against network attackers (Red Teams) from NSA, and DoD Information Warfare agencies. Each exercise involves approximately 32 students who spend over 640 man-hours to: install, configure, harden, and operate the defended Blue network against a week-long attack from the Red forces. Installation and configuration starts approximately four months prior to that attack. Students are given administrator/root privileges to install and configure: e-mail, Web, FTP, VTC, DNS, and SQL database servers. Students install and utilize DoD PKI certificates to digitally sign and encrypt sensitive exercise traffic. For more information, please contact Professors Cote or Clark.

**Network Research and Experimentation Laboratories**

**Introductory PC Network Laboratory**

These two labs support the Networks Track and provide students the opportunity to apply network theory in concrete applications. The Introductory PC Network Laboratory enables students to install network hardware and software, learning firsthand the advantages, limitations, and intricacies of various components and operating systems. The Intermediate Local Area Network Laboratory allows students to participate in ongoing Next Generation INTERNET research, advanced protocol development, future high-speed digital switching systems experimentation, network management, and control design and analysis. These labs also directly support DoD-funded research for the Defense Advanced Research Projects Agency and the National Science Foundation (NSF).

**Wireless and Mobile Computing Laboratory**

The Wireless and Mobile Computing Lab provides the majority of academic computing needs to support the wireless and mobile computing track within the Department of Computer Science. This lab provides students with the opportunity to program and examine security aspects of mobile computing devices ranging from personal digital assistants (PDAs) through cellular phones.

**Autonomous Robotics Coordination Laboratory**

This teaching and research computer lab supports graduate students and faculty work on sponsored classes/research projects regarding the coordination between multiple autonomous robots to achieve a coordinated result. The lab is equipped with several types of programmable robots and a wide range of intelligent software tools, including programming languages, planners, language processors, image processors, and neural-computing.

**Software Engineering Laboratory**

This laboratory provides a state-of-the-art engineering systems environment to support graduate students and faculty work on sponsored classes and projects in software automation. The laboratory provides a test bed for DoD software-intensive systems and software for embedded/safety-critical systems can be precisely tested in the lab. Evaluation and assessment on network-based system integration and interoperability, and the risk assessment on systems of systems can be conducted effectively in the lab. The lab also provides support for
requirements analysis, prototyping, specification, and computer-aided system architecture design.

**Forensics Exploitation Lab**

This laboratory provides a state-of-the-art forensics exploitation environment to support graduate students and faculty work on sponsored classes and projects in basic and applied forensics exploitation research projects. Primary work is done with new techniques for automatically processing data recovered from disk drives and other types of storage devices. Using forensic techniques, the data on a hard drive can reveal who used or broke into a computer system, what it was used for or what was done during a break-in, and the identities of those in question.

**Biometrics Research Lab**

This lab is primarily used by the Center for Information Security Studies and Research (CISR). The lab consists of a virtual infrastructure of clients and servers with is used to support reimbursable and direct funded basic and applied research projects in Biometrics. The lab is used to demonstrate some of the major biometric approaches (fingerprints, facial recognition, etc.) and supports the new NPS Identity Management certificate series jointly hosted between CS and IS. For more information, please contact Professors Clark or Hopfner.

**SCIF Security Lab**

This laboratory provides a state-of-the-art forensics exploitation environment to support graduate students and faculty work on sponsored classes and projects in security areas that are required to be conducted in high-security, compartmented classifications and dedicated air-gapped hardware/networks.

**Virtual Environments Lab**

The Virtual Environments Lab provides the equipment necessary to experience and study virtual and augmented environments. Head-worn displays and associated tracking hardware display the visual content of artificially created environments. The immersive nature of these environments cannot be studied on other hardware such as computer monitors. Virtual and augmented environments are integral to the MOVES Institute’s mission goals. They are of instrumental importance to many DoD training applications as well as military operations. Cross-disciplinary classes and even student research projects can be performed with this equipment as well, for departments including Computer Science, Mechanical and Electrical Engineering, and Operations Research.

**Vision Lab**

The NPS Vision Lab is a research and education lab in the MOVES Institute and the Computer Science Department at the Naval Postgraduate School in Monterey, CA. Our expertise is at the crossroads of computer vision, computer graphics and human-computer interaction. We collaborate with NPS-wide efforts on training systems, robotics and autonomous systems, sensor networks and embedded systems. We strive to accomplish projects with educational goals while incorporating and advancing current research into prototype systems.

**Computer Science Course Descriptions**

**CS Refresher Courses**

**CSR100 Refresher for Beginning Programming (2-2)**
Winter/Summer
(No credit) An introduction to computer algorithms, programs, and hardware. Using structured programming and stepwise refinement techniques, students receive classroom instruction plus design and test programs in the laboratory. Computer projects of increasing difficulty are assigned. This course is not graded. Prerequisite: None.

**CSR101 Refresher for Laboratory Systems (2-1) As Required**
Intended for Computer Science majors, to provide an introduction to computer science and computing laboratory facilities. Both Unix and the MS-DOS operating systems are introduced from a user perspective, as well as operation of corresponding workstation and personal computer hardware. Each system’s user interface, text processing, programming environment, network and communication facilities are surveyed. Students are exposed to basic principles and procedures for productive software and document development through both lecture and hands-on tutorials. Should be taken concurrently with CSR100. Not graded. No credit. Prerequisite: None.

**CS Courses**

**CS0001 Colloquium (0-1) As Required**
(No credit) Departmental lecture series. Attendance is required by students in their fourth quarter. Graded on a Pass/Fail basis. Prerequisite: None.

**CS0809 Capstone Project in Computing (0-V)**
Fall/Winter/Spring/Summer
For degree programs that require a capstone project. Every student in degree programs for which a capstone project is required will register for this course during each quarter of study. This course is intended to provide a set of incremental activities, reports, and presentations that will ensure student progress toward the completion of the capstone project within the time frame of the standard degree program. This course may be repeated for credit. Prerequisite: None.

**CS0810 Thesis Research (0-8) Fall/Winter/Spring/Summer**
Every student conducting thesis research will enroll in this course. Prerequisite: None.

**CS0820 Integrated Project (0-1)**
Fall/Winter/Spring/Summer
The Naval Postgraduate School provides many opportunities for students to participate in campus-wide interdisciplinary projects. These projects encourage students to conceptualize systems which respond to current and future operational requirements. An integral part of the project involves working with other groups to understand and resolve issues involved with system integration.
This course is available to Computer Science students who are participating in a campus-wide integrated project. Graded on a Pass/Fail basis. Prerequisite: None.

**CS2011 Computing Systems Principles (4-0) Fall/Spring**
Designed to provide computer science majors with a basic understanding of computer systems hardware. The course includes the following topics: basic computer concepts, number systems and data representation, digital logic and Boolean algebra, storage devices and organization, basic computer organization and control, and instruction formats, addressing modes and the assembler process. No previous background in computer hardware is assumed. Prerequisite: None.

**CS2020 Introduction to Programming (4-2) Fall/Spring**
This course teaches the fundamental programming concepts. Topics covered include data types, variables, expressions, parameter passing, control structures, strings, arrays, exception handling, software development, and testing techniques. Python is used in the course, but the focus of the course is not to teach any specific features of Python. The primary focus of the course is to teach core programming concepts that are universally available in modern programming languages. Prerequisite: None.

**CS2071 Fundamental Object-Oriented Programming in C++ (4-2) Fall/Spring**
This course is an introductory course in program development techniques and the structured and object-oriented programming paradigms using C++. The topics covered include: problem-solving, documentation, C++ Integrated Programming Environment (IDE), control flow, native types and statements, operators, structures, functions, pointers, arrays, object-oriented programming, encapsulation (class and objects), and I/O. Weekly programming or written assignments will be assigned. Prerequisite: None.

**CS2073 Fundamental Object-Oriented Programming in Java (4-2) As Required**
This course is an introductory course in program development techniques and the structured and object-oriented programming paradigms using Java. The topics covered include: problem-solving, documentation, Java Integrated Programming Environment (IDE), control flow, native types and statements, operators, structures, functions, pointers, arrays, object-oriented programming, encapsulation (class and objects), and I/O. Weekly programming or written assignments will be assigned. Prerequisite: None.

**CS2121 Fundamentals of Automata Algorithms (4-0) As Required**
This course presents the basic concepts in automata and algorithms that are essential to computer professionals. Practical examples are used to illustrate course material. Topics covered include finite state automata, pushdown automata, regular and context-free languages, limits of what can be solved on a computer (undecidability), the Halting Problem, algorithms for sorting and searching, binary search trees, hash tables, graph algorithms for shortest paths and minimum spanning trees, as well as measures of algorithm complexities (big-O notation and intractability). Prerequisite: None.

**CS2140 Low-level Programming I (3-2) Fall/Spring**
This course is an accelerated survey of the C programming language for computer scientists. Introduces students to the fundamentals of the C language as well as the tools needed to effectively write and debug C programs. The class illustrates the design decisions associated with the low-level operations not implemented in other modern programming languages, demonstrating C’s performance and control capabilities. Students will learn to cultivate good programming practices and will master the programming skills needed for later courses. Prerequisites: Students are expected to know how to program in at least one language, or exempted by permission of the instructor. Familiarity with Linux, and other UNIX-like operating systems will be helpful.

**CS2170 ADA as a Second Language (4-2) As Required**
A first course in ADA for students experienced in another programming language. Students learn to implement problem solutions using the procedural and object-oriented language features of ADA. The procedural programming topics include: data types, operators, input/output, control structures, repetition structures, functions, arrays, and pointers. The object-oriented topics include: data abstraction and encapsulation, packages, inheritance, polymorphism, and generics. Weekly programming projects will be assigned. Prerequisite: Recent completion of the complete series in another programming language course, or programming experience in another programming language.

**CS2171 C++ as a Second Language (4-2) As Required**
A first course in C++ for students experienced in another programming language. Students learn to implement problem solutions using the procedural and object-oriented language features of C++. The procedural programming topics include: data types, operators, input/output, control structures, repetition structures, functions, arrays, and pointers. The object-oriented topics include: data abstraction and encapsulation, classes, objects, operator overloading, inheritance, polymorphism, templates, and reusable class libraries. Weekly programming projects provide students the opportunity to implement techniques covered in class. Prerequisite: Recent completion of the complete series in another programming language course, or programming experience in another programming language.

**CS2173 Java as a Second Language (4-2) Winter/Summer**
A first course in Java for students experienced in another programming language. Students learn to implement problem solutions using the procedural and object-oriented language features of Java. Topics include: program structures and environment, arrays, exceptions, constructors and finalizers, class extension, visibility and casting, overriding versus overloading, abstract classes and interfaces, files and streams, class loaders, threads, and sockets. Programming projects provide students the opportunity to implement techniques covered in class. Prerequisite: Recent completion of the complete series in another programming language course, or programming experience in another programming language.

**CS3000 Great Principles of Computing Technology (4-1) Fall/Spring**
An introduction to computing technology that underlies all of information technology (IT). Offers a holistic view of the computing field and its connections with other fields in science, business, and philosophy. Covers deep principles of information technology in the areas of computation, communication, coordination, storage, and automation. Emphasizes the historical development of these principles, why they have stood the tests of time, how they relate to one another, and how they relate to issues in other fields. Prepares students for graduate study in computing-related fields. Prerequisite: None.
CS3004 Human-Computer Interaction (3-2) Fall/Spring
This course studies the principles of human-computer interaction (HCI) and computing system usability. The design of an interactive system is much different than that of a conventional, non-interactive one. A successful software application depends on how well the designer understands the users of the system and how best to design for their needs and capabilities. In addition, an understanding of system design constraints and operational implementation issues are equally important. The primary focus of the course is to build the knowledge and skills needed to develop an effective and usable human interactive system. All students will participate on a design project that will take them through an entire interactive design process, from problem statement and requirements definition through prototyping and implementation, test, and evaluation. The course material will survey the field of HCI including interaction techniques and styles, design methodologies, evaluation techniques, software development, and input/output devices. The student will learn how to approach design problems from the user's point of view, how to study usability issues, and how to consider the strengths and limitations of the user during the design process. Prerequisite: None.

CS3021 Introduction to Data Structures and Intermediate Programming (4-2) Winter/Summer
This second course in the programming practices sequence builds upon the topics covered in CS2020. The first objective of the course is the teaching of data structures and abstract data types. The second objective is the teaching of object-oriented programming concepts such as inheritance and polymorphism. Topics covered include recursion, file input and output, dynamic memory allocation, lists, binary search trees, balanced binary search trees, and hashing techniques. C++ is used in the course. Prerequisite: CS2020.

CS3022 Programming Paradigms (4-2) Winter/Summer
This is the third course in the programming practice sequence. Based on the knowledge of Java, this course introduces students to other programming paradigms. Many concepts are illustrated using C++ and ADA Functional programming using Lisp and Haskell and logic programming using Prolog are also introduced in the course. Prerequisite: CS3021.

CS3030 Computer Architecture and Operating Systems (4-0) Winter/Spring
(For non-CS students.) This course provides an overview of basic computer hardware concepts and operating systems software. The following topics are covered: basic computer concepts; data representation; elements of computer architecture and operation; processor and process management; multiprogramming; memory management; and file management. Future trends in computer hardware and operating systems will be discussed. Prerequisites: CS2020 and CS2971, or consent of the instructor.

CS3060 Database Systems (3-1) Winter/Spring
This course presents an up-to-date introduction to database systems including database system architectures, physical file organizations, data models, query languages, and design of databases. Prerequisite: CS2020 or consent of the instructor.

CS3070 Operating Systems (3-2) Fall/Spring
A theoretical and practical treatment of operating concepts. Major course topics include concurrency, Ada tasking, virtual memory including demand paging and segmentation, dynamic linking and loading, file structures, and information security. The laboratory portion of the class will give students the opportunity to write and test components of a modern operating system. Prerequisites: CS2020 and CS3021 and CS3111.

CS3071 Advanced Object-Oriented Programming in C++ (4-2) As Required
This is a course in advanced object-oriented programming using C++ for students having an intermediate-level experience with C++. Students will learn guidelines for using C++ effectively through general design strategies and language specific features to make C++ programs and object-oriented designs more efficient, robust, maintainable and portable. Topics include: Memory management; Constructor and Assignment Operator Issues; Classes and Functions; Inheritance and Object-Oriented Design; Standard Template Library; Exceptions; Efficiency. Prerequisite: CS2971 or CS2171 or consent of the instructor.

CS3101 Theory of Formal Languages and Automata (4-0) Winter/Summer
This course will cover the Chomsky hierarchy of Formal Languages (regular sets, context-free languages, context-sensitive languages, and recursively enumerable languages) and the types of grammars and automata associated with each class in the hierarchy. Emphasis is placed on the major results of the theory as they apply to language and compiler design. In addition, the major results involving the concept of in decidability are covered. Prerequisite: MA3025.

CS3111 Principles of Programming Languages (4-0) As Required
This course is an introduction to the design, evaluation, and implementation of programming languages. Imperative, functional, logic, and concurrent programming methodologies are investigated, with an emphasis on practical issues. Tradeoffs in choosing different programming languages for a given task are discussed and principles on which an objective assessment of programming language design can be made are presented. Prerequisite: CS2020 or consent of the instructor.

CS3113 Compilers and Translation (3-2) Winter/Summer
This course is intended to explore the basics of modern compiler design and construction techniques. The fundamentals of scanning, parsing, and compiler semantics are developed in the framework of modern compiler-compiler and translator-writing systems technology. The laboratory periods will be used to develop a small model compiler/assembler. Prerequisite: CS3022 and CS3101 or consent of instructor.

CS3130 Software Design for Mobile Computers (3-2) As Required
This course introduces the student to rapid application development environments, programming languages, and operating systems used by commercial off-the-shelf handheld computers running operating systems such as Newton Intelligence, Magic Cap, GEOS, and PalmOS. The course includes a survey of devices, architectures, operating systems, and programming languages. Laboratory programming exercises will be required for at least one PDA-class operating system platform. Prerequisite: CS3021.

CS3140 Low-level Programming II (3-2) Winter/Summer
Assembly language is used as the vehicle to introduce students to the principles of program construction at the machine code and assembly language levels. Students will be exposed to assembly languages as formally documented by CPU designers. By studying real-world processors, the differences between complex and reduced instruction set are illustrated. Students will study the use of assemblers, linkers, and loaders in the program creation process.
Common executable file formats are studied as well as standard calling conventions used to interface assembly language functions with high order languages, viz., C, functions and operating system services. The theory and disassembly and tools for disassembling executable files are covered for the purpose of analyzing binary programs. Prerequisites: CS2140 or consent of instructor.

**CS3150 Design and Analysis of Algorithms (4-0) Fall/Spring**

This course focuses on the design and analysis of efficient algorithms. Techniques for analyzing algorithms in order to measure their efficiency are presented. Control structure abstractions, such as divide and conquer, greedy, dynamic programming, backtrack (branch and bound), and local search methods are studied. The theory of NP-completeness is presented, along with current approaches to NP-hard problems. Prerequisites: CS3021 and MA3025.

**CS3200 Computer Architecture (3-2) As Required**

This course examines the organization of computer and processor architectures. Instruction set design alternatives, processor implementation, memory system hierarchy, and I/O systems are the main topics of study. A quantitative approach is taken in which different design alternatives are evaluated and compared through analysis and/or experimentation. The course is accompanied by a set of labs which reinforce and extend the lecture subject matter. Prerequisites: CS2011 and either CS2020 or consent of the instructor.

**CS3310 Artificial Intelligence (4-1) Fall/Spring**

Survey of topics and methods of Artificial Intelligence. Methods include rule-based systems, heuristic search and exploitation of natural constraints, means-ends analysis, semantic networks, and frames. Emphasis is placed on solving problems that seem to require intelligence rather than attempting to simulate or study natural intelligence. Projects to illustrate basic concepts are assigned. Prerequisites: CS2011 and one college-level course in programming.

**CS3502 Computer Communications and Networks (4-2) Fall/Spring**

This course covers basic computer networking concepts and technology through the study of protocols at each layer of the Internet architecture. Materials taught in class are reinforced through laboratory projects. Prerequisites: CS2011 and CS3030 and a solid background in Computer Architecture, Algorithm and Data Structures; and programming experience with C/C++ or Java are important for success in this class.

**CS3505 Introductory Computer Communications (3-2) Winter/Summer**

This introductory course in computer networking focuses on high-level core inter-networking concepts and the relative merits of different architectures in relation to security, performance, economic, and reliability objectives. Students will develop a deeper understanding of the Internet and Internet applications, and in particular how the end-to-end arguments, robustness principle, layering, naming, and hierarchy have enabled the Internet to scale through orders of magnitude in size and speed while accommodating widespread heterogeneity. It introduces principles of reliable communication, wireless channels, naming and directory services, content distribution networks, networks for cloud computing, overlays, and peer-to-peer communication models. This course is intended for all graduate students. Prerequisite: None.

**CS3600 Introduction to Computer Security (4-2) Fall/Winter/Summer**

This course provides a comprehensive overview of the terminology, concepts, issues, policies, and technologies associated with the fields of Information and Software Assurance. It covers the notions of threats, vulnerabilities, risks, and safeguards as they pertain to the desired information security properties of confidentiality, integrity, authenticity, and availability for all information that is processed, stored, or transmitted in/by information systems. This is the entry point prerequisite for all other Computer Security Track courses. Prerequisites: CS2011 or CS3030.

**CS3606 An Introduction to Information System Security (4-0) Fall/Winter/Summer**

Due to the rapid development and ubiquitous deployment of computer and information systems, and the very nature of insecurities they may hold, professionals involved with the design, development, deployment, and management of these systems now require a familiarity with information assurance (IA) and security. This course will introduce topics relevant to IA and computer security necessary to create a foundation of knowledge for the information management professional. The domains of knowledge to be introduced during the course include: access control systems and methodology; telecommunications and network security; security management practices; application and systems development security; cryptography; security architecture and models; operations security; business continuity and disaster recovery planning; laws, investigations, and ethics; and physical security. This course is meant to introduce the topics and will lay the foundations for further studies in any of the domains listed. Prerequisite: None.

**CS3610 Information Ethics, Crime, and Law (4-0) Fall**

This class examines the major controversies affecting today's Internet resulting from the interplay of policy, law, technology and human nature. Topics include computer crime; intellectual property; privacy; encryption; free speech; identity; data mining and additional DoD specific issues. Readings include laws, judicial opinions, popular articles, and academic computer science articles. Assignments include written exercises, a midterm quiz analyzing a public policy problem, and term paper. Prerequisite: None.

**CS3621 Applications Project and Research for Identity Management and Cyber Security Students (0-Variable) Fall/Winter/Summer**

This program requires either an Application project or a Thesis. Every student conducting an Applications Project or Thesis research in the Identity Management and Cyber Security degree program will register for this course during each quarter of study. This course is intended to provide a set of incremental activities, reports, and presentations that will ensure student progress toward the completion of the Applications Project or thesis research within the timeframe of the standard degree program. This course may be repeated for credit. Corequisites: Enrollment in the MA in Identity Management and Cyber Security degree program.

**CS3633 Data Security (3-2) Fall/Winter/Summer**

Where is my data and how is it being protected? This course examines the major technologies, procedures, and controversies affecting the secure storage and use of data. Historical context; access controls vs. encryption algorithms; computer forensics and media exploitation; privacy and data recovery; security for data-at-rest vs. data-in-flight vs. data-in-computation; translucent databases; private information retrieval, data mining; cloud
computing. Prerequisites: CS3600 or equivalent, and CS3505 or equivalent.

**CS3636 Data Fusion with Online Information Systems (3-0) Spring**
Explores data fusion as applied to personal information in both the online and offline world. Topics include credit and criminal databases, Information Surveillance, GSP, Satellite imagery, online search, text mining, anonymization, reidentification, and privacy policy. Familiarity with statistics useful but not mandatory.

**CS3640 Analysis of DoD Critical Infrastructure Protection (3-1) Fall/Spring**
The DoD relies on the correct functioning of an extensive information and control infrastructure to accomplish its mission. To assist in ensuring the survivability of assets that comprise this infrastructure, the DoD has formulated a CIP lifecycle, which includes: Analysis and Assessment, Remediation, Indicators and Warnings, Mitigation, Incident Response, and Reconstitution. This course introduces students to this lifecycle, and how the criticality and survivability of mission-critical infrastructures within the DoD are assessed. Prerequisite: CS3600.

**CS3645 Cyber Threats and Mitigation (3-0)**
This course will cover threats to information systems within the enterprise and will provide students with options for their mitigation. An objective of the course is to allow the student to understand the potential losses associated with today's major threats in terms of data disclosure, alteration or disruption of data, and the costs associated with mitigation techniques. Topics include: current state of the art in virus, worm and Trojan technology; botnets and their uses; common attack vectors and mitigations; data eXfiltration techniques; intrusion detection and prevention systems; application log analysis. Prerequisite: CS3600. Security Clearance Required: classified and unclassified versions available.

**CS3651 Computability Theory and Complexity (3-1) As Required**
This course covers the concepts needed to argue the decidability and computational complexity of problems. Topics include recursive enumerability, undecidability, diagonalization, computational complexity classes, intractability, Turing reduction, and many-one reducibility. Basic techniques are presented for proving undecidability and for establishing a lower bound on the computational complexity of a problem. Prerequisites: CS3101 and CS3150.

**CS3660 Critical Infrastructure Protection (4-0) Spring**
Open to students of the Center for Homeland Defense and Security. This course examines the critical infrastructure of the USA. Eight sectors of the critical infrastructure are examined: Banking/Finance; Health Care/Health Affairs; Space/ISR, Power/Energy; Logistics/Postal System; Transportation; Telecommunications/Satellites; and Internet/IA. Each sector and its components is characterized in terms of its vulnerabilities, especially its interdependencies and couplings with other sectors. Finally, the course identifies potential counter measures that mitigate sector and system vulnerabilities and assesses their costs and benefits. Prerequisite: NS3180.

**CS3670 Information Assurance: Secure Management of Systems (3-2) Fall/Spring**
This course provides students with a security manager's view of the diverse management concerns associated with administering and operating an automated information system facility with minimized risk. Students will examine both the technical and non-technical security issues associated with managing a computer facility, with emphasis on DoD systems and policies. Students have the opportunity to earn the following CNSS (formerly NSTISSI) certifications: INFOSEC Professional, System Administration in Information Systems Security, and ISBO. Prerequisite: CS3600.

**CS3686 Identity Management Infrastructure (3-0)**
This course covers a broad range of topics related to the standards, protocols, technology, and management infrastructure necessary to field an enterprise-level identity management (IdM) solution. Lecture and reading assignments span the gamut of IdM issues: from low-level authentication protocol mechanics, to high-level identity federal initiatives. This course is one of several that will collectively compose the requirements for Identity Management specialization tracks in the Information Science and Computer Science degree programs. Completion of four courses: CS3686, CS3699, IS3710, and IS3720, will meet the requirements for earning the Federal/DoD Identity Management Certificate offered by NPS. Prerequisites: None.

**CS3690 Network Security (4-1) Winter/Summer**
This course covers the concepts and technologies used to achieve confidentiality, integrity, and authenticity for information processed across networks. Topics include: fundamentals of TCP/IP-based networking, core network security principles, traffic filtering types and methodology, packet-level traffic analysis, employment of cryptography, tunneling/encapsulation, Public Key Infrastructure (PKI), remote authentication protocols, and virtual private networks based on the IPSec, L2TP, and SSL protocols. Prerequisites: CS3600 and CS3650 and IS3502.

**CS3695 Network Vulnerability Assessment and Risk Mitigation (3-2) Winter/Summer**
This course provides a basis for understanding the potential vulnerabilities and their mitigation in networked systems by studying methods to: (1) obtain information about a remote network, (2) possibly exploit or subvert systems residing on that network and (3) techniques to mitigate risks to networked systems. Labs provide practical experience with current network attack and vulnerability assessment tools, as well as tools and methodologies for a systematic approach to reducing vulnerabilities. A final project that demonstrates skill and knowledge is required. Prerequisite: One of the following: CS3502 or IS3502 or CS3690 or permission of the instructor.

**CS3699 Biometrics (3-0) As Required**
This course reviews the technical details of biometric identification and verification. The major biometric approaches (fingerprints, iris, etc.) are covered in detail with respect to acquisition of biometric data, matching techniques, anti-spooking techniques, and current standards. The uses and limitations of biometrics are covered, as well as some of the legal, ethical, and privacy concerns of maintaining and using biometric data. This course is one of several that will collectively comprise the requirements for Identity Management specialization tracks in both the Information Science and Computer Science degree programs. Completion of four courses, CS3686, CS3699, IS3710, and IS3720, will meet the requirements for earning the Federal DoD Identity Management Certificate offered by NPS. Prerequisites: None.

**CS3800 Directed Study in Computer Sciences (0-V) As Required**
(Variable hours 0-2 to 0-8.) Individual research and study by the student under the supervision of a faculty member. The course is intended primarily to permit interested students to pursue in-depth...
subjects not fully covered in formal class work. Graded on a Pass/Fail basis only. Prerequisite: Consent of the instructor.

CS3920 Topics in Computer Science (V-V) As Required
(Variable hours 2-4 to 4-1) Designed to support subject matter of special interest, dependent on faculty availability. Topics will either be drawn from areas not covered by core courses or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic. Prerequisite: Consent of the instructor.

CS4112 Distributed Systems (3-2) Winter
An advanced treatment of distributed systems. Major course topics include models of distributed computing; design and assessment of distributed algorithms, including clocks, mutual exclusion, resolution of conflicts for resources, control and termination of distributed computations, leader election, message ordering, synchronizers, slicers, distributed shared memory, consensus, self-stabilization, and fault tolerance; and current topics in distributed systems, such as distributed operating systems, distributed multimedia systems, sensor and peer-to-peer networks, and web services. Prerequisite: CS3070.

CS4113 Advanced Language Topics (4-0) As Required
This course is designed to explore concepts considered essential to the study of programming languages. These concepts include the lambda calculus, the Church-Rosser Theorem, reduction strategies, continuations, semantics, and recursion. Prerequisites: CS3111 and CS3070.

CS4182 Capstones in Computer Science (4-0)
Winter/Summer
This is the capstone course for the CS curriculum. It surveys the transforming effects of seminal papers on ten subject areas within computer science. Each paper illustrates how the introduction of an organizing framework, a suitable form of analysis, or a set of supporting principles was able to change the way problems within the subject area were approached; a change that led to integrated and lasting solutions. Students will be responsible for reading and evaluating key papers that have helped to shape modern computer science. Prerequisite: CS3000.

CS4310 Sensory Artificial Intelligence (4-1) As Required
A study of methods of computational simulation in natural-language processing, computer vision, and sensor networks. Issues in natural-language processing include modeling of syntax, semantics, morphology, discourse, phonetics, and stochastic phenomena. Issues in computer vision include low-level processing, segmentation, shape inference, and object identification. Issues in sensor networks include deployment, local inference, and communications. Prerequisite: CS3310.

CS4312 Advanced Database Systems (3-1) As Required
This course is a sequel to CS3060, Database Systems. The course will provide an in-depth coverage of relational database theory, distributed database systems, semantic data models, query processing and optimization, transaction management, recovery, security, and other advanced topics. Topics will be illustrated using both commercial and prototype database systems. Prerequisite: CS3060 or consent of the instructor.

CS4313 Advanced Robotic Systems (3-2) As Required
AI methods for robots and unmanned vehicles. The first part of the course will discuss generic sensing and control mechanisms, including reactive and hierarchical control. The second part of the course will focus on specialized areas of robotics, swarm robotics and unmanned autonomous vehicles. Prerequisite: CS3310.

CS4315 Learning Systems and Data Mining (3-1) Winter
A survey of methods by which software and hardware can improve their performance over time. Methods include case-based reasoning, concept learning, neural networks, simulated annealing, and genetic algorithms. Students will do projects with software tools. Prerequisites: CS3000 and one college-level course in programming.

CS4317 Language Systems (3-1) As Required
This course introduces the computational aspects of processing language. Topics include lexicography, morphology, grammars, parsing, semantics, stochastic grammars. Hidden Markov models, speech understanding, language generation and language translation systems. Prerequisites: CS3310, CS3150, CS3101.

CS4322 Internet Information Systems Technology (3-2) Summer
A course exploring the implementation of recent Internet tools for supporting databases, intelligent systems, and information retrieval. Topics include browsers and server technology including servlets, XML, data mining, and data warehousing. Students will do programming to build their own tools. Prerequisites: CS2020, CS3310 or CS3060, or consent of the instructor.

CS4330 Introduction to Computer Vision (3-2) Fall
This course introduces students to the main concepts that allow computers to "see" and understand visual information. It teaches methods and skills in image processing, pattern recognition, statistical analysis, classification, and learning. These are exemplified on applications such as military intelligence, surveillance, object tracking, robotic navigation, human-computer interfaces, and visual effects. Students complete a small class project that demonstrates the use of computer vision for an application of their interest. In laboratory activities, students get hands-on experience with the most important tools for building practical vision systems. Experiments and projects are tightly coupled with the material covered in class. Students must be familiar with a programming language such as C, C++, or Java (CS2020, CS2171, CS2173, etc.). Prerequisites: Helpful, but not necessary, is knowledge of basic linear algebra, probability or game theory, and Matlab (EC1010), or consent of the instructor.

CS4450 Advanced Computer Architecture (4-0) Summer
This course covers advanced topics in computer architecture and the application of concepts in computer architecture to the design and use of computers. The topics discussed include classes of computer architecture, application-oriented architecture, and high performance architecture. Prerequisites: CS2011, and CS3200 or equivalent.

CS4533 Wireless Mobile Computing (3-2) Fall/Spring
This course will focus on a new paradigm in computing: wireless mobile computing. Portable, handheld, computing devices are now being used for many applications previously accomplished by larger desktop computers or dedicated small devices. Some of these devices contain powerful RISC CPUs, user-accessible flash RAM storage, networking and peripheral connectivity, handwriting recognition, and built-in infrared networking capabilities. The goal of this course is to provide a fundamental understanding of the devices, communications, and design and implementation issues in building such mobile networked applications. Students will be required to research, design, and/or implement a project that
integrates multiple technologies to solve a real-world problem requiring mobile computing. Prerequisites: CS3502 and CS3021.

**CS4535 Mobile Devices (3-2) Spring**

There are a large number of mobile devices, including cellular phones, personal digital assistants (PDAs), PDA/cellular phone combinations, pagers, badges, and other wearable devices, in use today in a variety of applications. The number and variety of such devices keeps growing at a fast pace, as new processing, display, and battery and wireless technologies are invented, and as new applications for these devices are envisioned. This is a practical, hands-on course that covers the architecture, usability, and applications of mobile devices. From an application perspective, this course will discuss mobile devices as tools to support homeland security applications, military applications for capability enhancement, and communications and computing needs of mobile professionals. The study of principles is combined with hands-on laboratory exercises to develop applications on mobile devices. The ultimate objective of the course is to show students how they can exploit the capabilities of mobile devices to implement innovative applications to enhance productivity and effectiveness in a variety of domains. Prerequisite: CS2020.

**CS4537 Wireless Data Services (3-2) Summer**

Tremendous progress has been made in mobile device and wireless networking technologies. Many different PDAs, cell phones, smartphones, and specialized devices have been introduced in the marketplace, and been enthusiastically adopted by millions of people around the world. Wireless networking technology development and adoption has moved even faster! The combination of mobile devices and wireless networking lends itself to data applications that can make a significant difference in a wide variety of application areas. The aim of this course is provide an understanding of the issues, technologies, and applications related to wireless data services. In addition to other topics, this course will cover wireless Internet, SMS, MMS, WAP, iMODE, J2ME, and BREW. Prerequisites: CS4533 and CS4535.

**CS4538 Mobile Device and Wireless Security (3-1) Winter**

The application of mobile and wireless devices has grown rapidly in military and commercial environments. The functionality and reliability of these devices has grown tremendously. The mobile and wireless nature of these devices raise new and important security challenges not usually present in static environments. This course will address these challenges including the security functionality, protocol, and assurance issues associated with this emerging technology. Prerequisites: CS3600 and CS3690 and CS4537.

**CS4550 Computer Networks II (4-0) As Required**

This course covers advanced and emerging topics in computer networking. Some topics taught in CS3502 will be reviewed and studied in more detail. Other course subjects may vary from instructor to instructor and they include: multimedia networking, wireless networks, multicasting, peer-to-peer networks, quality of service, network management, network architecture, and security. Prerequisite: CS3502.

**CS4552 Network Design and Programming (3-3) Fall/Spring**

The course is intended for CS and non-CS majors. Students will develop research and troubleshooting skills through experiments performed on real networks. The networking protocols covered in this course typically include: DNS, HTTP, FTP, SMTP, DHCP, TCP, UDP, RIP, OSPF, EIGRP, BGP, and VPN. Students will explore an emerging networking technology or issue and provide a technical report discussing the selected topic. Prerequisites: An advanced programming course, CS3502 and CS4550, or equivalent with consent of the instructor.

**CS4554 Network Modeling and Analysis (4-0) Winter/Summer**

The purpose of this class is to learn to formally specify and analyze network protocols, emphasizing wireless protocols, and in the process acquire a thorough understanding of these protocols. Formal protocol models, such as communicating finite state machines and systems of communicating machines, will be used as a tool for this purpose. Some protocols other than wireless protocols may also be covered. Several research papers from recent years will be assigned reading. Cellular networking, IEEE 802.11, Bluetooth, and wireless local loop networks will be covered as well. The class will study these protocols in the context of the network architectures and physical environments they are intended to perform in. Students should acquire an increased knowledge of formal tools, experience in protocol and system analysis, and a better understanding of protocols and networks. At the discretion of the instructor, other advanced topics such as simulation and statistical analysis of networks and network protocols may be added and/or substituted for some of the topics above. The emphasis is on application of mathematical rigor to the analysis and description of networking protocols. Prerequisite: CS3502.

**CS4556 Business Economics Network Technology (4-0) Fall/Spring**

This class teaches a different side of the networking world—the business and economics areas, which necessarily include relevant laws and government policies. The course reviews the history of telecommunications, including the major inventions and the development of the business and resulting regulations. The importance of capital and investment is taught by studying actual decisions of telecom companies and their results in the ensuing years. In this way, the students learn how the telecom industry developed and how the current regulatory structure came about. All of the major telecom laws and court decisions are studied. Basic business and economics principles are also studied, and numerous real-life examples are given. Students learn to write business plans and to analyze a telecom company or industry. The influence of the stock market on major companies is shown. The results of having either too much capital or too little are examined. The divestiture of AT&T in 1984, the resulting competition, the Telecom Act of 1996, and the telecom boom and bust of 1996-2003 are all examined in detail. Students in this class will gain a thorough understanding of the telecom industry, the major companies, and the effects of government regulation (too much or too little) and capital investment. Prerequisite: None.

**CS4558 Network Traffic Analysis (3-2)**

Explores fundamentals of packet-switched network traffic analysis at the network layer and above as applied to problems in traffic engineering, economics, security, etc. Explores the design and integration of analytic tools and techniques into the fabric of the network including: spatial and temporal anomaly detection, origin-destination matrix estimation, application mix determination, deep-packet inspection, fingerprinting, intrusion detection and insider threat mitigation. Finally, the course covers active defense and offensive methods reliant on traffic analysis. Prerequisites: CS3502 and CS4550 or equivalent.

**CS4600 Secure System Principles (3-2) Fall/Spring**

An advanced course that focuses on key principles of a constructive approach to secure systems. A brief review of operating systems
and computer architecture is provided. Major topics include threat characterization and subversion; confinement; fundamental abstractions, principles, and mechanisms, such as reduced complexity, hierarchical relationships, least privilege, hardware protection, resource management and virtualization, software security, secure system composition, mutual suspicion, synchronization, covert and side-channel analysis, secure metadata, secure operational states, usability, and life cycle assurance. Current developments will include advances in security hardware, components, and systems. Prerequisites: CS3600, CS3070 and CS3502.

CS4603 Database Security (3-1) Spring
Course topics include: policies for information integrity and confidentiality of database (DB) systems, modeling of secure DB systems, security in statistical DBs, security approaches for object-oriented DBs, multilayer architecture security issues, privacy, aggregation and inference, military applications of secure DBs, and other important implementation issues, such as atomicity, serialization, and view-based controls. Prerequisites: CS3600, CS3060 and CS3070.

CS4605 Security Policies, Models, and Formal Methods (3-1) Winter/Summer
This course covers the methods used to specify, model, and verify the access control mechanisms of computational systems. The identification of the security policy and its interpretation in terms of a technical policy is covered. Several security policy and access-control models are explored. Prerequisites: CS3150, CS3600 and CS3101.

CS4610 Information Ethics (3-0) Fall
Rapid and revolutionary advances in IT confront society with novel choices and opportunities. This course attempts to identify the kinds of ethical choices that may arise from its use. While a few may be clear choices, most will be between the greater of goods or the lesser of evils. These choices will be difficult because the values are difficult to identify, the right choices are more difficult than the wrong, and their consequences are neither certain nor easily predicted. Prerequisite: None.

CS4614 Advanced Topics in Computer Security (3-1) Winter/Summer
This course applies graduate-level knowledge and reasoning skills in written essays and verbal discussion of current topics in computer security. Students read academic papers regarding information assurance topics, and discuss issues that they derive from the readings. This pedagogical approach is constructivist in encouraging the students to develop their own viewpoints and conclusions. Prerequisites: CS3600 and CS4600 and CS4605, or consent of the instructor.

CS4615 Formal Analysis of Cryptographic Protocols (3-1) Spring
Cryptographic protocols (such as key-exchange and mutual-authentication protocols) are essential to the security of all distributed computer networks. Such protocols are often simple, but they also often fail to "structural" attacks (attacks that do not need to break the underlying cryptography). This course considers the "protocol analysis problem": finding structural attacks against a protocol (if they exist) or proving their absence (if they do not). We will examine several protocol-analysis techniques and compare their strengths and weaknesses. Advanced topics include (as time permits) protocol-design heuristics, trust-management and higher-level protocol goals, interactions between protocols, computational soundness, and decidability results. Prerequisites: CS3600 or permission of instructor.

CS4648 Advanced Cyber Munitions (3-2) As Required
This course will explore how malware is constructed through the analysis of existing malware. Techniques to provide attribution to malware will be explored. Topics include: malware obfuscation, insertion, dynamic updates, encryption and key management, and the use of malware to drive covert channels. The construction and operation of malware such as large scale distributed Botnets will be used in case studies. Prerequisites: CS2011, CS3070, CS3113.

CS4650 Fundamentals of Information Systems Security Engineering (3-1) Spring
This course presents the fundamental principles and processes of information systems security engineering (ISSE). The ISSE life cycle model consists of five stages: requirements definition, design, implementation, testing and deployment. The processes involved in these stages are explained in the context of a Defense-in-Depth protection strategy, with an emphasis on the role of security requirements engineering (SRE) in the construction of a secure system. This course covers the concepts and techniques needed to systematically elicit, derive and validate security requirements. It introduces how these techniques can be used in practice, and addresses the relationship between SRE and secure system design. Course work will be a combination of lectures, case studies and a team-based SRE project. Prerequisite: CS4600.

CS4652 Applied Information Systems Security Engineering (3-2) Fall, Spring
This course focuses on the key concepts and practices of information systems security engineering from a system life cycle perspective. Core topics include security architecture and design analysis, system implementation traceability, requirements/implementation traceability correspondence, security test and evaluation strategy, certification and accreditation (C&A) requirements analysis, and risk management. The Systems Thinking approach is introduced for assessing system security behaviors based on dependencies, interactions and emergent properties of its components in the context of functionality, scalability, interoperability and maintainability. Case studies and laboratory projects will demonstrate security engineering practices through the life cycle of a secure system. Prerequisite: CS4650.

CS4670 Quantum Computing (4-0) Spring
This interdisciplinary survey course explores the evolution and direction of quantum computing technology. Topics include quantum circuits, quantum algorithms (including factoring and search), and quantum key distribution. Jointly listed as PH4670. Prerequisites: familiarity with basic notions of computing, quantum theory, and linear algebra, consistent with the material covered in CS3000, PH2652, MA3042 or PH3991.

CS4675 Intrusion Detection and Response (3-1) Winter/Summer
This is an introduction to methods of intrusion detection in computer systems and networks and the possible methods of automatic responses to those events. It will cover types of intrusion detection, inference of suspicion, implementation, and management, and will examine at least one specific product. A special focus in response management will be the use of deliberate deception in defense of systems, including the psychology and ethics of deception in general. Prerequisite: CS3600.
CS4677  Computer Forensics (3-2) Fall/Spring
This course covers the fundamentals of computer forensics in the context of DoD/DoN information operations. Students examine how information is stored and how it may be deliberately hidden and/or subverted. Coverage includes: practical forensic examination and analysis, techniques of evidence recovery, legal preparation of evidence, common forensic tools, principle of original integrity, disk examination, and logging. Prerequisites: CS2011 and CS3600 and CS3670.

CS4678  Advanced Vulnerability Assessment (4-2) Winter/Summer
This course provides a basis for understanding the potential vulnerabilities in networked systems by applying a problem-solving approach to: (1) obtaining information about a remote network, (2) possibly exploiting or subverting systems residing on that network, (3) understanding the theory of operation of existing tools and libraries, along with how to measure the effectiveness of those tools, and (4) understanding tools and techniques available for vulnerability discovery and mitigation. Labs provide practical experience with current network attack and vulnerability assessment tools as well as development of new tools. Foot printing, scanning, enumeration, and escalation are addressed from the attacker’s perspective. A final project that demonstrates skill and knowledge is required. Prerequisites: CS3140 and CS3070 and CS3690, or consent of the instructor. Classification: UNCLASSIFIED FOUO, U.S. only.

CS4679  Advances in Cyber Security Operations (4-1) As Required
Unfettered by rules, ethics, or government acquisition politics, the cyber underground has created sophisticated and innovative mechanisms for digital crime. Spanning all layers from hardware and firmware to human-computer interfaces, these command and control systems are both clandestine and dynamic. Using case studies, this course explores the techniques, tactics and procedures of cyber security operations used to identify and track emerging adversarial behavior. By addressing computer network attack, defense, and exploitation topics associated with disruptive technologies, students will gain an understanding of the threats, vulnerabilities, and appropriate mitigating security controls. Sample topics include: supply chain attacks; driving forces of the cyber underground; operations involving a variety of cyber technologies and infrastructures; tracking, location, and identification: security implications of new hardware and firmware interfaces; and covert and side channels. Based upon the choice of case studies, this course will be taught at either the unclassified or TS/SCI levels. Prerequisites: CS3140 and CS3070 and CS3690, or consent of the instructor.

CS4680  Technology and Transformation I (2-0) Winter/Spring
This is a two-quarter course that supports students in the selection of thesis topics with potential for transformation. The thesis process is a microcosm of transformation processes. Topics include: meaning of transformation and innovation, innovation process, skills of innovation, selection of thesis topic, design of an effective thesis document, and organizing an effective writing process. Frequent faculty guest speakers will discuss different research areas and current problems under study. The emphasis in the first quarter is on the range of possible research, and in the second quarter on the transformation process as it applies to thesis. Includes weekly readings and exercises. Prerequisite: None.

CS4681  Technology and Transformation II (2-0) Fall/Spring
This is a two-quarter course that supports students in the selection of thesis topics with potential for transformation. The thesis process is a microcosm of transformation processes. Topics include: meaning of transformation and innovation, innovation process, skills of innovation, selection of a thesis topic, design of an effective thesis document, and organizing an effective writing process. Frequent faculty guest speakers will discuss different research areas and current problems under study. The emphasis in the first quarter is on the range of possible research, and in the second quarter on the transformation process as it applies to thesis. Includes weekly readings and exercises. Prerequisite: None.
the transformation process as it applies to theses. Includes weekly readings and exercises. Prerequisite: None.

**CS4902 Practices of Transformation (0-2) As Required**
This course will examine the current and planned research of Computer Science faculty in multiple fields of study. The course is designed to support Computer Science students in their third quarter of study in the selection of an emphasis track and an area for thesis research. Completion of this course requires submission of an approved thesis proposal during finals week. Prerequisite: Computer Science students in third quarter or consent of the department chairman.

**CS4910 Advanced Readings in Computer Science (0-V)**
Fall/Winter/Spring/Summer
(Variable hours 0-2 to 0-8.) Directed readings in computer science on a subject of mutual interest to students and faculty member. The course allows in-depth study of advanced topics not fully covered in formal class work or thesis research. May be repeated for credit with a different topic. Prerequisite: Consent of the instructor.

**CS4920 Advanced Topics in Computer Science (V-V)**
Fall/Winter/Spring/Summer
(Variable hours 2-4 to 4-1.) Designed to support advanced group study of a subject matter of special interest, dependent on faculty availability. Topics will be drawn from areas not covered by other advanced courses, or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

**CS4921 Advanced Topics in Computer Science I (V-V) As Required**
(Variable hours 2-4 to 4-1.) Designed to support advanced group study of a subject matter of special interest, dependent on faculty availability. Topics will be drawn from areas not covered by other advanced courses, or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

**CS4922 Advanced Topics in Computer Science II (V-V) As Required**
(Variable hours 2-4 to 4-1.) Designed to support advanced group study of a subject matter of special interest, dependent on faculty availability. Topics will be drawn from areas not covered by other advanced courses, or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

**CS4923 Advanced Topics in Computer Science III (V-V) As Required**
(Variable hours 2-4 to 4-1.) Designed to support advanced group study of a subject matter of special interest, dependent on faculty availability. Topics will be drawn from areas not covered by other advanced courses, or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

**CS5810 Dissertation Research (0-8) As Required**
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

**MV Courses**

**MV0810 Thesis Research (0-8) As Required**
MOVES Thesis Research. Prerequisite: None.

**MV0820 Integrated Project (0-12) As Required**
The Naval Postgraduate School provides many opportunities for students to participate in campus-wide interdisciplinary projects. These projects encourage students to conceptualize systems which respond to current and future operational requirements. An integral part of the project involves working with other groups to understand and resolve issues involved with system integration and to lend MOVES-specific expertise to these projects. This course is available to Modeling, Virtual Environment and Simulation Students who are participating in a campus-wide integrated project. Course is grade on a Pass/Fail basis. Prerequisite: None.

**MV1000 Becoming a Master Learner (3-2) As Required**
This course teaches fundamental skills associated with success in higher education, with a focus on improving learning strategies and self-management skills to help students better organize, prepare, and perform effectively in an academic or work environment. The course teaches students to improve study habits, develop critical thinking skills, use time management principles, hone communication skills, and develop their own individual success strategies. The course helps students understand their own cognitive processes, and what strategies work best for them in order to improve their learning and lead them to success academically, personally, and in their careers. Graded on a Pass/Fail basis only. Prerequisite: None.

**MV2920 Introductory Topics in Modeling, Virtual Environments, and Simulation (V-V) As Required**
(Variable hours 2-4 to 4-1.) This course is designed to support introductory subject matter of special interest and is dependent on faculty availability. Topics will typically augment those offered in the basic core courses. This course may be lecture- or lab-oriented, or self-paced, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic. Prerequisite: None.

**MV2921. Introduction to Modeling, Virtual Environments, and Simulation (2-0) Fall/Spring**
This course is an introduction to the Modeling, Virtual Environments, and Simulation discipline. Topics include Combat Modeling, Networked Visual Simulation, Web-Based Simulation, Agents and Cognitive Modeling, Training Systems, Human Factors, Physically Based Modeling, and Optimization. Graded on a Pass/Fail basis only. Prerequisite: None.

**MV3101. Introduction to Department of Defense Modeling and Simulation (4-0) Fall/Spring**
This course serves as an important overview course for all students enrolled in the MOVES curricula, in addition to other curricula at NPS. It covers the origin, evolution, breadth and importance of DoD modeling and simulation (M&S), and the utilization of M&S in DoD system acquisition life cycle. The course focuses on the functional areas of DoD M&S, which are: Training, Analysis, Acquisition, Planning, Test, and Evaluation. This course also is offered as SE3101. Prerequisite: None.

**MV3202 Introduction to Computer Graphics (3-2)**
Winter/Summer
This course introduces you to computer graphics — its powerful capabilities, a history of its technologies as well as up-to-date developments, to its far-reaching potentials across the consumer,
industrial, and military domains, and how to achieve these potentials. You will learn about the principles of hardware and software used to create computer-generated images, about basic rendering and ray-tracing, 3D graphics programming in OpenGL, lighting and shading, textures, and scene graph architectures. MV3202 prepares you to design and implement 3D graphics simulations and to understand the theory of modern graphics rendering. The course is intended for students who have taken a basic course in, or have recent programming experience in, a programming language such as C++ or Java. Prerequisite: None.

**MV3203 Graphical Simulation (3-2) Fall/Spring**
Teaches the theory and techniques relevant to rapid construction of small to medium-sized graphical simulations using existing simulation platforms, such as Delta3D, VBS2, Unreal, etcetera, including web browsers with plug-ins for Flash or X3D. For use as a stimulus for human performance experiments; as partial task trainers; as visualizations to support analysis; as testbeds for new hardware or software technology. Prerequisite: MV3202.

**MV3204 Computer Graphics Modeling Using X3D/VRML (4-0) Winter/Summer**
This course provides an introduction to the principles of hardware and software used for computer-generated 3-D graphics via the World Wide Web. The focus of the course is authoring interactive 3-D scenes and a major design project. The course is intended for MOVES and Computer Science students working in virtual simulation, or students in other majors interested in the basics of 3-D modeling and rendering. Prerequisites: CS2971 and CS2073, or equivalent.

**MV3250 Introduction to Extensible Markup Language (XML) (4-0) Fall/Spring**
XML and related technologies provide platform independent representation, description, and validation of data. This is necessary for the data communication among different networks, computers, and applications that is essential for contemporary military and civilian applications. The course will present the benefits of XML and how to use software tools to construct and process XML documents using XML editors, XML parsers, XML Schema for validation, XSLT to transform documents, and DOM, SAX, and JDOM to access and manipulate XML documents within a computer program. Much of the programming code in contemporary computer applications that is used to construct data files, access databases and spreadsheets, check and validate data values, and output data can be replaced by these more general software tools. Prerequisite: None.

**MV3302 Introduction to Discrete Event Simulation Modeling (4-1) Summer**
This course provides an introduction to Discrete Event Simulation (DES) methodology, modeling, and analysis. Use of DES formalism, such as Event Graph methodology, for design of models. Component-based implementation of event graph models on a platform such as Simkit. Use of simulation components for building models using composition. DES modeling of movement and sensing. Random variate generation. Simple output analysis. Prerequisites: Java programming, at the level of CS2973, CS3773, or equivalent; or permission of instructor; Basic Probability and Statistics at the level of OA3101 and OA3103.

**MV3472 Graphical Simulation of Physical Systems in Virtual Worlds (3-2) Winter**
Design and construction of reusable software modules for real-time computer simulation of physical systems in graphical virtual worlds. Rigid body kinematics and dynamics, perspective transformations, and wire-frame graphical models. Time domain and transform domain analysis of linearized dynamic systems. Laboratory is concerned with development and testing of software. Prerequisites: CS2020 or CS2971 or CS2973 or equivalent; MA3042 or consent of the instructor.

**MV3500 Internetwork Communications and Simulation (3-2) As Required**
An introduction to network communications in simulation applications. Topics include an introduction to the TCP/IP protocol stack; TCP/IP socket communications, including TCP, UDP, and multicast; and protocol design issues, with emphasis on Distributed Interactive Simulation and High Level Architecture. The emphasis will be on Windows and Web-browser applications. Prerequisites: CS2971 and CS2173.

**MV3800 Directed Study in Modeling, Virtual Environments, and Simulation (0-V) As Required**
Individual research and study by the student under the supervision of a member of the faculty. The course is intended primarily to permit interested students to pursue in-depth subjects not fully covered in formal class work. Graded on Pass/Fail basis only. Prerequisite: Consent of the instructor.

**MV3920 Topics in Modeling, Virtual Environments, and Simulation (V-V) As Required**
(Variable hours 2-4 to 4-1.) Designed to support student interest in limited topics of special interest, dependent on faculty availability. Topics will either be drawn from areas not covered by core courses or be focused on studies of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic. Prerequisite: Consent of the instructor.

**MV3922 Introduction to Virtual Environmental Technology (2-0) Winter/Summer**
This course is an introduction to the technology used in virtual environments and discusses applications that use virtual environments. It is intended to give the student an introduction to the items they are likely to use throughout the master’s degree program in Modeling, Virtual Environments, and Simulation (MOVES). Graded on a Pass/Fail basis only. Prerequisite: MV2921.

**MV3923 Introduction to Research in Modeling, Virtual Environments, and Simulation (2-0) Fall/Spring**
This course will examine the current and planned research of Modeling, Virtual Environments, and Simulation (MOVES) faculty in multiple fields of study. The course is designed to support MOVES students in the selection of emphasis blocks and an area for thesis research. Includes readings and exercises. Prerequisite: MV3922.

**MV4000 Hamming: Learning to Learn (3-2) Winter**
Richard W. Hamming’s original capstone course, EC4000, “Learning to Learn: Future of Science and Engineering” has been fully digitized and placed online. This course presents the distilled career insights of a preeminent thinker. In 1968, Dr. Hamming was the recipient of the Turing Award, the highest honor in computer science, for his work on numerical methods, automatic coding systems, and error-detecting and error-correcting codes. This course is intended to instill a “style of thinking” that will enhance one’s ability to function as a problem solver of complex technical issues. With respect, students sometimes called the course “Hamming on Hamming” because he relates many research
collaborations, discoveries, inventions, and achievements of his own. This collection of stories and carefully distilled insights relates how those discoveries came about. Most importantly, these presentations provide objective analysis of the thought processes and reasoning that took place as Dr. Hamming, his associates, and other major thinkers in computer science and electronics progressed through the grand challenges of science and engineering in the twentieth century. Prerequisite: None.

**MV4001 Human Factors of Virtual Environments (4-1) Winter**

This course focuses on human factors issues in virtual environments (VEs). While the similarities of VEs to the real world can often make VE interfaces intuitive and easy to use, the differences between VEs and the real world can often be the cause of serious performance problems and physical inability to effectively use a system. The design of effective VE systems depends on an understanding of humans and their interaction with their environment. Only then can a VE system hope to achieve reasonable performance levels and acceptability. This course will survey the VE literature on issues of human performance, perception, cognition, multimodal interfaces, locomotion, wayfinding, object selection and manipulation, visualization, simulator sickness, and performance differences between individuals. Prerequisite: None.

**MV4002 Simulation and Training (4-1) Summer/Winter**

This course focuses on training issues in virtual environments (VEs). VEs have often been considered to be general purpose trainers. However, systems are often built without an understanding of how to build a trainer that can verify that it improves subsequent performance without forming bad habits or other reverse training artifacts. This course will first investigate VE training systems from a theoretical perspective, focusing on learning, memory, and cognition. From this framework, actual training systems will be studied with the focus being on an actual study of training transfer of a real training system. Prerequisite: None.

**MV4015 Agent-Based Autonomous Behavior for Simulations (4-2) Winter**

Covers the concepts and skills required to apply agent-based programming to models and simulations of complex adaptive systems (CAS). Concepts covered will include: complex systems—including their properties of path dependence, sensitivity to initial conditions, emergence of self-organized structure, adaptation to a changing environment, and criteria for evaluation model or simulation fidelity; distinctions between agent-based methods and other kinds of programming; goal-directed behavior and decision making; situational reasoning and the elements of rational behavior. The course will survey specific works and key contributors to this subject: John Holland, Complexity Science at the Santa Fe Institute, Artificial Life, Brian Arthur (the El Farol Problem and Bounded Rationality), SWARM, Sugarscape, ISAAC, Daniel Dennett (Intentionality), and Richard Dawkins. Within this conceptual and historical framework, the course will emphasize design, specification, and programming skills that will equip the student to know when and how to apply agent-based methods to models and simulations. The programming skills will involve genetic algorithms, classifier systems, applications of game theory and reinforcement learning, and the treatment of collaboration and defection in groups. Finally, the course will discuss agent-based simulations in the context of distributed, virtual environments. Prerequisite: None.

**MV4025 Cognitive Behavioral Modeling for Simulations (3-2) Summer**

This course focuses on the primary technologies used to model cognition and behavior in order to create agents that represent human beings in simulations. Topics include the dominant technologies in use, the tools used to support them, and their application to the various capabilities required of an agent. The modeling technologies covered include the production-system approaches common in artificial intelligence/cognitive science/psychology, as well as the finite-state, automata-inspired approaches that are part of engineering practice in computer-generated force simulations and the computer entertainment industry. The full scope of the modeling problem will be addressed, from sensation and perception through situation awareness and action selection, to action execution. Approaches to modeling communication and behavior moderators (e.g., experience, emotion, fatigue) will also be discussed. Prerequisite: CS3310.

**MV4030 Modeling and Simulation in Ocean Environments (3-2) Spring**

This course focuses on modeling and simulation (M&S) issues in ocean environments. While virtual environments (VEs) serve as M&S tools, the design of effective VE systems needs realistic physical environments. This course will cover the basic physics of ocean environments, visualization of the ocean from satellites, visualization of the ocean from Navy METOC model output, METOC information flow in M&S, the impact of the environment on human behavior, and physically-based modeling. Prerequisite: None.

**MV4100 Cognitive Engineering (4-1) Winter**

This course is about a cognitive approach to engineering systems. It is partly about artificial intelligence and agent-based technologies, and partly about human-computer interaction. The objective is to build intelligent interactive systems where we maximize the performance and capabilities of the combined human-machine system. Prerequisite: None.

**MV4205 Advanced 3-D Modeling with X3D/VRML (4-0) Fall/Spring**

This course teaches advanced principles and practice of web-based 3D computer graphics using X3D (formerly the Virtual Reality Modeling Language, VRML). Examples and class projects are typically oriented to problems of military or scientific interest. Topics include event scripting, optimized geometry representations, prototype extensibility, X3D Earth geospatial models, humanoid animation and IEEE Distributed Interactive Simulation (DIS) networking. Prerequisite: MV3204 or approval of the instructor.

**MV4250 Advanced Extensible Markup Language (XML) Authoring and Design (4-0) Winter/Summer**

MV4250 presents advanced principles and practices for Web-based document design and authoring using XML data structures, XML applications, and XML-based languages. Examples and class projects are typically oriented to problems of broad Navy, military, or scientific interest. Because this new course deals with principles of all Web-based languages, and since XML authoring tools are becoming more intuitive and accessible, MV4250 will be of interest to many other departments and curricula. Prerequisites: OAA3250 and MV3250, or sufficient background knowledge of XML.

**MV4302 Advanced Discrete Event Simulation Modeling (3-2) Fall/Spring**

This course is an in-depth study of modern methods of Discrete Event Simulation (DES) modeling. The focus will be on learning
advanced methods for designing and implementing DES models using the most current methodologies, including component-based simulation modeling, listener design patterns, XML and Web-based models. Students will implement a nontrivial DES model of military relevance as a final project. Prerequisite: OA3302.

MV4460 Management of Modeling and Simulation Development (4-0) Summer
The purpose of this course is to prepare MOVES students to manage large-scale modeling and simulation projects. The course traces the development life cycle of modeling and simulation systems, including, but not limited to, project management, measurement, life cycle models, requirements, implementation, testing, verification, and deployment of large-scale systems typical of DoD acquisition. Prerequisite: None.

MV4470 Image Synthesis (3-2) Spring
This course covers advanced topics in computer image generation. The focus of the course is quality and realism in computer image synthesis. Topics include illumination, shading, transparency, antialiasing, shadows, raytracing, radiosity, texture mapping, and parametric surfaces. Labs are directed towards providing students with experience working with scene graph architecture. Prerequisites: CS2173 and MV3002, or consent of the instructor.

MV4471 Computer Animation (3-2) Winter
This course covers advanced topics in state-of-the-art, animated, 3-D, computer models. Computational techniques for real-time animation, motion control, interactive key-frame systems, kinematic methods for figure animation, dynamics for figure animation, soft object animation, procedural animation and other high-level approaches will be examined. Labs utilize state-of-the-art animation software and equipment. Prerequisite: MV3202 or MV3204 or consent of the instructor.

MV4472 Physics for Game Developers and Virtual Environments (3-2) Spring
This course enables you to produce convincing graphical virtual reality representations of the motion of vehicles and human actors or avatars. Basic linear algebra and vector-matrix calculus are explained, and the ANSI Common Lisp programming language is used, in the context of examples. This is a hands-on, project-oriented course. After studying basic topics, each student will focus on developing and presenting an individual project during the second part of the course. Prerequisite: MV3472 or equivalent.

MV4474 Virtual Environment Network and Software Architecture (3-2) Spring
This course covers the design and implementation of network and software architectures for real-time, interactive 3-D virtual environments (VEs). Network architecture topics include a taxonomy for networked virtual environments, distributed interactive simulation protocols (DIS and HLA), virtual reality modeling language (VRML), agent-based network protocols (Java/Telescript), proposed solutions for large-scale networked virtual environments (area of interest managers and object brokers), multicast backbone tools and developments, and virtual reality transfer protocol proposals. Software architecture topics include representative software architectures for VEs (NPSNET, DIVE, MASSIVE, etc.), commercial toolkits for VE development (WorldToolKit, Division’s dvs, Performer, etc.), lag in multiprocessor virtual environments, and the HCI implications on VE network and software architectures. Prerequisite: MV3500 or consent of the instructor.

MV4655 Introduction to Joint Combat Modeling (4-0) As Required
This course covers the basic tools and concepts of joint combat modeling. Both the science and the art are emphasized. Topics include the role of combat modeling in analyses, taxonomies of models, an introduction to some important models and organizations, measures of effectiveness, approaches to effectively using models to assist decision making, object-oriented approaches to designing entities to simulate, firing theory, one-on-one and few-on-few engagements, introduction to aggregated force-on-force modeling (including the basic Lanchester model and some of its derivatives), sensing algorithms, simulation entity decision making, simulating C4ISR processes, terrain and movement algorithms, verification, validation, and accreditation (VV&A), stochastic versus deterministic representations, hierarchies of models, and variable resolution modeling. The primary course objective is for you to understand the enduring fundamentals of how combat models are built and used to support decision making. This will be done, in part, through several small projects that will require students to design, implement, and analyze models. Prerequisites: Probability and Statistics (through third course in the sequence), familiarity with a programming language (Java recommended), Stochastic Models (OA3301), Calculus, and concurrent instruction in computer simulation (e.g., OA3302).

MV4657 Modeling and Simulation for Stability, Security, Transition, and Reconstruction (SSTR) Operations (3-2) Fall/Spring
The purpose of this course is to explore the challenges of modeling non-traditional combat for today’s war fighters. This course investigates issues, challenges, and opportunities for application of modeling and simulation (M&S) to military support for Stability, Security, Transition, and Reconstruction (SSTR) operations. The course considers application of M&S for SSTR from the perspectives of analysis, training, acquisition, and mission planning/rehearsal. Students are given hands-on experience with current and emerging SSTR M&S simulations and computational tools. Meet prerequisites or consent of the instructor. Prerequisite: MV4655.

MV4800 Directed Studies in Advanced Modeling, Virtual Environments, and Simulation (0-V) As Required
Advanced group studies in modeling, virtual environments, and simulation on a subject of mutual interest to students and faculty member. The primary intent of this course is to permit students to pursue in-depth subjects not fully covered in formal class work or thesis research. This course may be repeated for credit with a different topic. Graded on Pass/Fail basis only. The variable credit hours are 0-2 to 0-8. Prerequisite: Consent of the instructor.

MV4900 Research Seminar in Modeling, Virtual Environments, and Simulation (0-2) As Required
A seminar series designed to give a broad-brush introduction to MOVES. Presentations include the major areas of MOVES and are presented by subject matter experts within MOVES. Also covered are ongoing research projects within MOVES at NPS and around the world. All first and second quarter MOVES students are required to take this course. Prerequisite: None.

MV4910 Advanced Readings in Advanced Modeling, Virtual Environments, and Simulation (0-V) As Required
(Variable credit hours 0-2 to 0-8.) This course is centered on directed readings in modeling, virtual environments, and simulation on a subject of mutual interest to students and faculty member. The course allows in-depth study of advanced topics not fully covered in
formal class work or thesis research. This course may be repeated for credit with a different topic. The course can be taken either Pass/Fail or graded. Prerequisite: Consent of the instructor.

**MV4920 Advanced Topics in Advanced Modeling, Virtual Environments, and Simulation (V-V) As Required**
(Variable credit hours 2-4 to 4-1.) This course is designed to support the advanced group study of a subject matter of special interest, dependent on faculty availability. Topics will be drawn from areas not covered by other advanced courses, or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

**MV4924 Current Topics in Modeling, Virtual Environments, and Simulation (1-1) Fall/Winter/Spring/Summer**
The course is designed to provide breadth in MOVES not normally provided by other classroom material, as well as focus in major areas of MOVES. Faculty and research staff attend class sessions, providing the opportunity to interact with a broad group once a week, and with a focused group of the student’s choosing once a week. Course is expected to be repeated and is required of all MOVES students every quarter starting with their fourth quarter in the curriculum. Graded on a Pass/Fail basis only. Includes student presentations and readings. Prerequisite: MV3923.

**MV4925 Advanced Rendering Techniques for Visual Simulation (2-3) Summer**
Currently, the number of transistors on a certain consumer-level graphics processing units exceeds the number of transistors on a Pentium IV processor. Until recently, however, programming these powerful units has been done using a limited assembly-like instruction set targeted for a specific vendor's hardware. This has made cinematic effects difficult to program, update, and transport. Recent developments such as High Level Shading Language (HLSL), Nvidia's C for Graphics (CG), and the OpenGL 2.0 specification could revolutionize the process of programming GPUs. This class will provide an overview of current technology and will explore in-depth its application to DoD. Prerequisite: MV4470 or consent of the instructor.

**MV4930 Advanced Topics in Advanced Modeling, Virtual Environments, and Simulation (0-2) As Required**
This course is part of the seminar series in advanced research topics in MOVES. Topics are drawn from current student thesis research, funded research projects, proposed research projects, and other research directions within the MOVES Institute. This course is required by all MOVES students in their second quarter and beyond, as well as all CS Graphics Track students. Presentations are made by M.S. and Ph.D. students, as well as by MOVES faculty and researchers. This course may be repeated multiple times. Prerequisite: None.

**MV5810 Dissertation Research (0-8) As Required**
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

**SW Courses**

**SW0810 Thesis Research (0-8) As Required**
Every student conducting thesis research will enroll in this course.

**SW2920 Introductory Topics in Software Engineering (V-V) As Required**
(Variable hours 2-4 to 4-1.) Designed to support introductory subject matters of special interest in software engineering, dependent on faculty availability. Topics will typically augment those offered in the basic core courses. This course may be lecture- or lab-oriented, or self-paced, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic. Prerequisite: Consent of the instructor.

**SW3460 Software Methodology (3-1) Winter/Summer**
The course is designed to teach students the basic concepts of software engineering and methods for requirements definition, design, and testing of software. Specific topics include introduction to the software life cycle, basic concepts and principles of software engineering, object-oriented methods for requirements analysis, software design, and development. Prerequisite: OO programming experience (CS2020) or consent of instructor.

**SW3800 Directed Study in Software Engineering (0-V) As Required**
(Variable hours 0-2 to 0-8.) Individual research and study by the student under the supervision of a member of the faculty. The course is intended primarily to permit interested students to pursue in-depth subjects not fully covered in formal class work. Graded on Pass/Fail basis only. Prerequisite: Consent of the instructor.

**SW3920 Topics in Software Engineering (V-V) As Required**
(Variable hours 2-4 to 4-1.) Designed to support subject matters of special interest in software engineering, dependent on faculty availability. Topics will either be drawn from areas not covered by core courses, or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic. Prerequisite: Consent of the instructor.

**SW4150 Programming Tools and Environments (4-0) As Required**
This course covers the design and implementation of tools to aid software development, including syntax-directed editors, version-control systems, language-oriented debuggers, symbolic execution vehicles, programming databases, type checkers, and automatic programming tools. These topics are discussed in the context of an integrated, language-oriented, programming environment. Prerequisite: SW3460 or consent of the instructor.

**SW4500 Introduction to Formal Methods in Software Engineering (3-1) Fall**
This course covers formal methods for specification and analysis of software systems. The course introduces application of mathematical logic to software design, program verification, and formal specification languages. The laboratory sessions will cover special topics and case studies. Prerequisite: SW3460 or consent of the instructor.

**SW4510 Computer-Aided Prototyping (3-0) As Required**
This course covers the concept and application of computer-aided prototyping to the development and acquisition of DoD software systems. Specific topics include the prototyping software life cycle, system models, design methods, automatic code generation, prototyping languages and tools, and their unique systematic for increasing productivity, reliability, and portability of software development in comparison with other development methods. Prerequisite: SW3460 or consent of the instructor.
SW4520 Advanced Software Engineering (3-0) As Required
This course covers methods for specifying, designing, and analyzing software systems, with emphasis on automatable techniques and their mathematical basis. The techniques are applied to construct and check programs using a formal specification language. The course concludes with a summary of current research areas in software engineering. Prerequisite: SW4500 or consent of the instructor.

SW4530 Software Engineering Research and Development in DoD (3-1) Summer
This course builds on the material covered in SW4500. Fundamental principles of computer system/network security and distributed computing are covered, along with advanced methods, techniques, and standards aimed at improving the development and acquisition of DoD software systems. Specific topics include: the application of software engineering principles for designing large, secure, embedded real-time computer systems; the application of software engineering principles for the design of distributed systems; automated tools for the specification, design, and generation of code for applications; and existing and emerging standards for software development, security, and acquisition. Prerequisite: SW3460 or consent of the instructor.

SW4540 Software Testing (3-1) Spring
This course covers the theory and practice of testing computer software with the intent of preventing, finding, and eliminating bugs in software. Planning and executing software tests are covered, including requirements-based testing, functional testing, static analysis, code reading, symbolic testing, structural testing, and advanced testing techniques. These topics are discussed in the context of a realistic development environment, illustrated using a variety of software testing tools. Prerequisite: SW4540 or consent of the instructor.

SW4555 Engineering Network Centric Systems (3-1) As required
This course covers the concepts, methods, techniques, and tools for engineering the development of network centric systems. Specific topics include the evolution of client/server models to distributed objects, an introduction to and comparison of CORBA/OpenDoc and OLE/COM, intelligent software agents, application development in distributed environments, security issues in network centric computing, and DoD software system development. Prerequisite: SW4500.

SW4560 Software Evolution (3-0) Fall
This course covers the concepts, methods, techniques, and tools for supporting the evolution and maintenance of software systems. Specific topics include the use of formal specifications to support software evolution, design databases, configuration management, software change merging, and software re-engineering. Prerequisite: SW3460 or consent of the instructor.

SW4570 Software Reuse (3-0) Spring
This course covers the concepts, methods, techniques, and tools for systematic reuse of software components and systems. Specific topics include design and re-engineering for reuse, mechanisms for enhancing reuse, domain specific reuse and software architectures, reuse of requirements models, specifications and designs, tools for reuse, software library organization, and methods for component search. Prerequisite: SW3460 or consent of the instructor.

SW4580 Design of Embedded Real-Time Systems (3-0) Summer
This course covers the concepts, methods, techniques, and tools for supporting the design of embedded real-time systems. Specific topics include real-time systems and concurrency models, object-oriented methods for real-time system design, real-time scheduling, and programming language support for concurrent and real-time systems. Prerequisite: SW3460 or consent of the instructor.

SW4581 Software Reliability (3-1) Fall
This course covers the concepts, methods, and techniques for evaluating and improving the engineering of software reliability. Specific topics include system-level dependability and reliability modeling concepts; software reliability prediction and estimation models and metrics; and techniques for model evaluation, fault/failure forecasting, fault removal, fault prevention, and fault tolerance. Prerequisite: SW3460 or consent of the instructor.

SW4582 Weapon System Software Safety (3-1) Fall
This course provides an introduction to software system safety. The course covers the principles and processes of system safety engineering, including the basics of hazard analysis and risk assessment. Emphasis is placed in this course on both planning and managing acquisition programs involving safety-critical software. Concepts and principles are applied to the acquisition of weapon systems. An advanced course in system safety is offered as SW4920. Prerequisite: SW3460 or consent of the instructor.

SW4583 Principles of Software Design (3-1) Winter
The course is designed to teach students the role of design in software engineering. Specific topics include the software system design process, design qualities, principles and strategies, design models, design methods, and the use of patterns in the design of object-oriented software systems. Prerequisite: SW3460 or consent of the instructor.

SW4590 Software Architecture (3-1) Winter
This course covers both high- and low-level software architectures, including software patterns and pattern-oriented architectures, from the module level through the enterprise level. Where appropriate, we examine formalisms, and actual software architecture practice. Special attention is given to interoperability of architectural components. Case studies of existing DoD systems are used throughout the course. Prerequisite: SW3460 or consent of the instructor.

SW4591 Requirements Engineering (3-1) Spring
This is an in-depth treatment of requirements engineering concepts, methods, and tools. The role of requirements engineering within software engineering is explored, as well as consistency, cost-benefit analysis, resolving multiple viewpoints, dependency tracing, and automated decision support. Topics are reinforced with examples from DoD applications. Prototyping is introduced as a means of assessing requirements early in the design process. Prerequisite: SW3460 or consent of the instructor.

SW4592 Software Risk Assessment In DoD (3-1) Summer
This course introduces concepts, techniques, and tools for software risk management. The course examines various risks of software practice and evaluates them in terms of mathematical models (e.g., probability theory). Students learn techniques for mitigating, avoiding, and handling risks throughout the software life cycle. The course depends on software metrics; we also look at reliability theory and its application to software risk management. Prerequisite: SW3460 or consent of the instructor.
SW4593 Advanced Logic and Algebra for Software R&D in DoD (3-1) As Required
The aim of this course is to present fundamentals of advanced logic and algebra for software R&D. Specific topics include equation calculus, term rewriting, first and second order logic, temporal logic, model theory, and generalized induction. Prerequisite: SW4500 or consent of the instructor.

SW4594 Formal Models for Software Automation (3-1) As Required
This course covers the concepts, methods, techniques, and tools for designing and developing systems. Specific topics include the use of knowledge-based tools for software evolution and techniques for specification, methods for program derivation and generation, domain-specific program synthesis techniques, and cognitive and planning approaches to software design. Prerequisite: SW4500.

SW4595 Lightweight Inference Techniques (3-1) As Required
This course covers the fundamental principles and technologies for automated decision support and automated software evolution with an emphasis on techniques for lightweight inference. Specific topics include: decision support systems, software evolution systems, gaps in existing technology that prevent automation, models and methods for lightweight inference, and state of the art theory and practice. Prerequisite: SW4500 or consent of the instructor.

SW4596 Algorithm Design and Analysis in Software Engineering (3-1) As Required
This course covers algorithm design and analysis in software engineering. Specific topics include advanced data structures (such as Binomial Heaps and Fibonacci Heaps), graph algorithms (such as minimum spanning trees, maximum flow, all-pairs shortest paths, and single-source shortest paths), and advanced design and analysis techniques (such as dynamic programming, greedy algorithms, linear programming, and amortized analysis). Prerequisite: SW4500 or consent of the instructor.

SW4597 Robust Generation of Control Software (3-1) As Required
This course covers the concepts, methods, techniques, and tools needed to methodically generate robust software for system control. Specific topics include specification and analysis of control requirements, hard and soft real-time constraints, embedded software control, code generation, software reliability through software reuse and redundancy, and DoD requirements for control systems. A survey of computer-aided tools that support the generation of robust systems is provided. Prerequisite: SW4500 or consent of the instructor.

SW4598 Software Merging and Slicing Techniques (3-1) As Required
The fundamental concepts, methods, and tools for software merging and slicing are covered in this course, with applications to software evolution, configuration management, and testing. This is followed by advanced topics including recent advancements in this field. Prerequisite: None.

SW4599 Automated Software/Hardware Integration in DoD (3-1) As Required
Automated software/hardware integration is a key problem for current software development in DoD. This course covers some important aspects of this field, including software prototyping, interface integration, data integration, and control integration. Automatable decision support methods for software/hardware integration are also discussed. Prerequisite: SW4500 or consent of the instructor.

SW4600 Automata, Formal Specification, and Run-Time Verification (3-1) Fall
This course focuses on run-time monitoring and verification, a practical software verification technique based on automata and formal specifications. The automata section consists of finite automata (deterministic and nondeterministic), languages, and regular expressions. The formal specification section consists of temporal logics, real-time and time-series constraint specification, statecharts, and TLCharts. The run-time verification section will cover the practical application of formal specifications to monitoring and verification of safety critical systems. The course combines theory, examples, and practical, student-driven projects. After taking this course, students will know how to apply formal specifications and run-time verification to improve the dependability of defense systems. Prerequisites: CS3150 and MA2025.

SW4800 Directed Study in Advanced Software Engineering (0-V) As Required
(Variable hours 0-2 to 0-8.) Advanced group studies in software engineering on a subject of mutual interest to students and faculty member. Intended primarily to permit students to pursue in-depth subjects not fully covered in formal class work or thesis research. May be repeated for credit with a different topic. Graded on a Pass/Fail basis only. Prerequisite: Consent of the instructor.

SW4900 Research Seminar in Advanced Software Engineering (0-2) As Required
This course will examine the current and planned research of software engineering faculty. The course is designed to support software engineering students in the selection of an area for thesis research. Completion of this course requires submission of an approved thesis proposal during finals week. Graded on a Pass/Fail basis only. Prerequisite: None.

SW4910 Advanced Readings in Software Engineering (0-V) As Required
(Variable hours 0-2 to 0-8.) Directed readings in software engineering on a subject of mutual interest to students and faculty member. The course allows in-depth study of advanced topics not fully covered in formal class work or thesis research. May be repeated for credit with a different topic. Can be taken Pass/Fail or graded. Prerequisite: Consent of the instructor.

SW4920 Advanced Topics in Software Engineering (V-V)
Winter
(Variable hours 2-4 to 4-1.) Designed to support advanced group study of a subject matter of special interest in software engineering, dependent on faculty availability. Topics will be drawn from areas not covered by other advanced courses, or be focused treatments of subjects of limited scope. This course may be lecture- or lab-oriented, with prerequisites determined by the instructor. Students may repeat this course for credit with a different topic.

SW4931 Core Area of Software Engineering Doctoral Studies (3-2) As Required
Designed to prepare Ph.D. students for the core area of the Software Engineering written qualifying examination - software development process and techniques. It introduces the most important references from each subject areas, highlights the important issues in each area, and helps students become familiar with the Software Engineering research. Topics covered include: software life cycle models; software engineering concepts and
principles; specification and verification of software - modeling, analysis, and assessment; design of large software systems - architectures, patterns, and protocols; maintenance of large software systems - reengineering, transformations, recovering specs and rationale. Intended for Software Engineering PhD students. Prerequisite: SW4930 or consent of instructor. Graded on Pass/Fail basis only.

SW4932 Advanced Area of Software Engineering Doctoral Studies (3-2) As Required
Designed to prepare Ph.D. students for the advanced area of the Software Engineering written qualifying examination - software automation. It introduces the most important references from each subject area, highlights the important issues in each area, and helps students become familiar with the Software Engineering research. Topics covered include: reducing coding efforts - program generation, synthesis techniques, static checking; computer-aided prototyping - models, languages, methods; software reuse - search methods, library organization; software evolution - models, automation methods, merging and slicing; domain specific systems - real-time systems. Intended for Software Engineering PhD students. Prerequisite: SW4931 or consent of instructor. Graded on Pass/Fail basis only.

SW4933 Supporting Areas of Software Engineering Doctoral Studies (3-2) As Required
A seminar designed to prepare Ph.D. students for the supporting areas of the Software Engineering written qualifying examination. Topics covered include: computer science - mathematical fundamentals, algorithms and data structures, compilation technology, artificial intelligence, and security: management and economics - project planning and management, quality assurance, software economics, knowledge bases, decision support, and fundamentals for system modeling; computer systems - real-time systems, networks and distributed systems, hardware/software integration, interoperability of network based systems, computer graphics and interfaces and signal processing and embedded control systems. Intended for Software Engineering PhD students. Prerequisite: SW4932 of consent of instructor. Graded on Pass/Fail basis only.

SW4934 Application of Advanced Concepts in Software Engineering (3-2) Spring
An advanced seminar designed to assist Ph.D. students to prepare for their written qualifying examination through a combination of lectures and problem-solving sessions. Intended for Software Engineering Ph.D. students. Students may repeat this course for credit. Graded on Pass/Fail basis only. Prerequisite: Consent of the instructor.

SW4935 Software Engineering Dissertation Proposal Preparation (3-0) As Required
A seminar designed to introduce Ph.D. students to the open problems in software engineering and teach students the skills to identify research topics; find, read and analyze relevant parts of the research literature; and present their findings in the form of research proposals. Intended for Software Engineering Ph.D. students. Prerequisite: SW4934.

SW4936 Seminar on Solving Software Engineering Research Problems (3-0) As Required
A seminar designed to assist Ph.D. students in preparing for their oral qualifying examination through a combination of lectures, assigned readings, student presentations, and problem-solving sessions. Intended for Software Engineering Ph.D. students. Prerequisite: SW4934.

SW4937 Software Engineering Dissertation Research (4-0) As Required
A seminar designed to provide a forum for Ph.D. students to present their dissertations and critique each other's work. Intended for Software Engineering Ph.D. students. Prerequisite: None.

SW4938 Communicating Research Results in Software Engineering (4-0) As Required
A seminar designed to provide a forum for Ph.D. students to present their dissertations and critique each other's work. Intended for Software Engineering Ph.D. students. Prerequisite: None.

SW5810 Dissertation Research (0-8) As Required
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

Cyber Security Fundamentals Certificate – Curriculum 256 (DL), Curriculum 257 (RES)

Program Manager
Cynthia Irvine, Ph.D.
Code CS/Ic, Glasgow East, Room 211
(831) 656-2461, DSN 756-2461
irvine@nps.edu

Brief Overview
The Cyber Security Fundamentals graduate certificate is intended to provide a technically rigorous foundation upon which to build knowledge and skills in computer network defense, attack and exploitation. Each course is comprised of both instruction and laboratory exercises involving cyber security aspects of computers and networks. These synergistic activities allow students to internalize key concepts in cyber security. The courses and material covered in the Cyber Security Fundamentals certificate satisfy prerequisite requirements for advanced courses in cyber security offered in the Computer Science Department of the Naval Postgraduate School. In addition, the Cyber Security Fundamentals certificate satisfies requirements for the following Committee on National Security Systems (CNSS) certificates: CNSSI 4011, CNSSI 4013, and CNSSI 41014 for which NPS was recertified on 31 July 2008.

All four of the courses in the sequence are extracted from the current set of graduate courses in the Computer and Network Security specialization track offered by the CS Department. Of these, three are core track courses. The total number of NPS graduate credits obtained for the certificate is 17, where laboratory credits are counted as half. This certificate program can also be applied toward a master’s degree program, e.g. Curriculum 368.

Convenes
Fall, Winter, Spring, Summer
Required Courses

- CS3600 Introduction to Computer Security
- CS3670 Information Assurance: Secure Management of Systems
- CS3690 Network Security
- CS3695 Network Vulnerability Assessment and Risk Mitigation

Program Manager
Cynthia Irvine, Ph.D.
Code CS/Ic, Glasgow East, Room 211
(831) 656-2461, DSN 756-2461
irvine@nps.edu

Brief Overview
Using the foundation established through the Cyber Security Fundamentals certificate, students enrolled in Cyber Security Defense graduate certificate, will obtain a detailed understanding of and ability to function in real operational situations involving cyber security. They will gain the technical depth required to actively prepare for and respond to attacks. Students will learn to analyze network traffic to extract the observable characteristics of networks and network devices, thus providing a basis for defensive strategies. They will learn to build tools and how to configure systems and networks to permit systems to foster resiliency and continuity of operations, perhaps with reduced capacity, through attacks. Students will learn how to construct systems and tools to mitigate the impact of malicious software. Students will learn forensic techniques to retrieve and analyze stored information that may be corrupted or hidden. Considerable programming and hands-on work with systems and networks will be required. Entire courses, or units within them, may be taught at the classified level, thus facilitating classroom discussions on emerging challenges and capabilities.

Students entering this program are expected to have a strong foundation in cyber security and networking. In addition, entering students will be expected to understand and use the languages and techniques of operating system and network component development: the C programming language, assembly, shell scripting, use of linkers, loaders, and debuggers.

The total number of NPS graduate credits obtained for the certificate is 12, where laboratory credits are counted as half. This certificate program can also be applied toward a master's degree program, e.g. Curriculum 368.

Convenes
Fall, Winter, Spring, Summer

Required Courses

- CS4558 Network Traffic Analysis
- CS4677 Computer Forensics
- CS4684 Cyber Security Incident Response and Recovery

Cyber Security Adversarial Techniques Certificate – Curriculum 260 (DL), Curriculum 261 (RES)

Program Manager
Cynthia Irvine, Ph.D.
Code CS/Ic, Glasgow East, Room 211
(831) 656-2461, DSN 756-2461
irvine@nps.edu

Brief Overview
Using the foundation established through the Cyber Security Fundamentals certificate, students enrolled in Cyber Security Adversarial Techniques graduate certificate, will obtain a detailed understanding of and ability to function in real operational situations in which adversarial techniques are being used. An understanding of overarching principles, computer and network architectural concepts, and exemplar cases will allow students to analyze current and future malware. Students will learn how to use network traffic analysis to extract the characteristics of ongoing attacks and to identify exploitable vulnerabilities. They will learn how to decipher subtle, clandestine host-based attack mechanisms and how these mechanisms are inserted into target systems. They will learn, in detail, how attack and exploitation software mechanisms are built and deployed, including the distributed command and control techniques used to manage large-scale malware networks. Considerable programming and hands-on work with systems and networks will be required. Entire courses, or units within them, may be taught at the classified level, thus facilitating classroom discussions on emerging challenges and capabilities.

Students entering this program are expected to have a strong foundation in cyber security and networking. In addition, entering students will be expected to understand and use the languages and techniques of operating system and network component development: the C programming language, assembly, shell scripting, use of linkers, loaders, and debuggers.

The total number of NPS graduate credits obtained for the certificate is 17, where laboratory credits are counted as half. This certificate program can also be applied toward a master's degree program, e.g. Curriculum 368.
Convenes
Fall, Winter, Spring, Summer

Required Courses
- CS4558 Network Traffic Analysis
- CS4648 Advanced Cyber Munitions
- CS4678 Advanced Cyber Vulnerability Assessment
- CS4679 Advances in Cyber Security Operations

Master of Computing Technology (MCT) - Curriculum 357 (Distance Learning)

Program Manager and Academic Associate
Loren E. Peitso
Code CS/Lp, Glasgow East, Room 335
(831) 656-3009, DSN 756-3009, FAX (831) 656-3238
MCTDegProg@nps.edu

Brief Overview
The MCT degree offers its graduates the knowledge and skills necessary to specify, evaluate, and manage computer system development, as well as the ability to provide technical guidance in the analysis, design, and application of software and firmware used in the Navy. The MCT program consists of 12 courses selected to provide breadth and depth in the latest computing technologies. Four courses provide a foundation in computing for those without a Computer Science background. Four specialization fundamentals courses provide breadth in computing technologies and techniques examined with respect to a consistent specialization theme, and the final four specialization depth courses develop strong expertise in the specialization area. A capstone paper completes the degree.

The MCT degree provides a graduate education for those in unique circumstances. State-of-the-art distance learning (DL) technology is used to bring the MCT program straight to the student on duty. With fully Web-based courses, there is no required "class time"—no need to get off the flight schedule, miss any watches, or adjust a duty schedule. MCT offers a seamless transition from duty station to duty station; when you move the program goes with the student, even on the road. For organizations that desire to sponsor groups of students, we can arrange to deliver courses at an accelerated pace via video tele education (VTE), this option requires scheduled on-duty classroom time.

The MCT degree is fully accredited and taught by the same faculty that teaches NPS resident courses. All courses are web-based conversions of existing NPS courses. These fully-online versions are taught by faculty that teach the courses in residence and have also completed the Interactive Distance Learning faculty development course offered by the NPS Center for Educational Design, Development, and Distribution (CED3).

MCT is an excellent fit for those officers and government service (GS) personnel whose career track would not otherwise lend itself to receiving a resident technical graduate education. Available anywhere in the world, at home, on detachment, and at sea.

Requirements for Entry
A baccalaureate degree, or the equivalent, with above average grades in mathematics, (including differential and integral calculus) resulting in an academic profile code (APC) of at least 325 is required. Undergraduate degrees in applied science or engineering are highly desirable. Students lacking these prerequisites may be acceptable for the program, providing their undergraduate records and/or other indicators of success, such as the Graduate Record Examination (GRE), indicate an ability to work in quantitative subjects. While previous academic or practical experience in computer science is certainly helpful and can enhance the applicant's potential for admission, such experience is not a prerequisite. Active/Active Duty Reserve U.S. military and GS personnel are eligible.

Entry Date
The MCT is a 12-quarter (one course per quarter), fully-online curriculum with entry dates in January/July. If further information is needed, contact the Program Officer or the Academic Associate for this curriculum.

Degree
Master of Computing Technology
The Master of Computing Technology program is awarded after the satisfactory completion of a program which satisfies, as a minimum, the following degree requirements:
- At least 40 quarter-hours of graduate-level work, of which at least 12 quarter-hours must be at the 4000 level.
- Completion of an approved sequence of courses constituting specialization in an area of computing technology.
- Completion of a capstone paper.

Subspeciality
None currently assigned. DL students desiring a computer science subspecialty code (6203P) may be able to arrange a resident assignment at NPS with their sponsor/community detailer to add a research element to their degree program and complete the ESR requirements for a computer science subspecialty code. Six months of resident study will be required.

If a transition to a MS in Computer Science (MSCS) degree is also desired, the research element must be
arranged before the MCT curriculum is finished. A MSCS (in lieu of the MCT degree) will be granted after completion of the research element and thesis. The MSCS cannot be granted if the MCT has been awarded for the same coursework.

Typical Course of Study

1st Year Computer Science Foundations
CS2020 (4-2) Introduction to Programming
CS3030 (4-0) Computing Architecture and Operating Systems
CS2121 (3-2) Essential Automata and Algorithms
CS3502 (4-1) Computer Communications & Networks

2nd Year Specialization Fundamentals
Four-course sequence, all courses at the 3000 or 4000 level, in one of the listed specializations:

3rd Year Specialization Depth
Four-course sequence, minimum 12 credits at the 4000 level, continuing the specialization sequence:

Specialization Options

Information Security Systems Engineering (ISSE)
The role of Information Security Systems Security Engineering (ISSE) is to help ensure that the security requirements of systems are met. Lacking proper security engineering, systems fail to be certified and accredited, causing costly delays or failures. Ideally the Information Security Systems Security Engineer (also known as an ISSE) will be a member of the system development team throughout its lifecycle; however, for preexisting systems, the ISSE may be required to assess existing system vulnerabilities and determine mitigating strategies. As systems have grown more complex and adversaries continue to successfully exploit numerous vulnerabilities, the need for improved secure system engineering and the formation of a larger cadre of skilled ISSEs has become more acute. The ISSE course sequence will provide the knowledge and analytical skills required to contribute productively in system developments and assist in building a larger cadre of skilled ISSEs to combat adversaries.

Principles of Cyber Defense
The Principles of Cyber defense fundamentals sequence is comprised of the courses offered in the Cyber Security Fundamentals graduate certificate. It is intended to provide a technically rigorous foundation upon which to build knowledge and skills in computer network defense, attack and exploitation. Each course is comprised of both instruction and laboratory exercises involving cyber security aspects of computers and networks. These synergistic activities allow students to internalize key concepts in cyber security. The specialization depth sequence will give the student a detailed understanding of and ability to function in real operational situations involving cyber security sharing courses with the Cyber Security Defense Certificate. They will gain the technical depth required to actively prepare for and respond to attacks. Students will learn to analyze network traffic to extract the observable characteristics of networks and network devices, thus providing a basis for defensive strategies. They will learn to build tools and how to configure systems and networks to permit systems to foster resiliency and continuity of operations, perhaps with reduced capacity, through attacks. Students will learn how to construct systems and tools to mitigate the impact of malicious software. Students will learn forensic techniques to retrieve and analyze stored information that may be corrupted or hidden. Considerable techniques will be required.

Networking
The Computer Networks specialization is designed to provide knowledge of computer architecture, networks, and system software for real-time and multicomputer systems and in the rapidly growing areas of wireless networking, mobile devices, and related topics, including mobile computing and wireless security.

Generalist
The generalist specialization concentrated on understanding a broad cross section of the computing field with respect to the technologies in defense communications and weapons systems the unrestricted line officer will work with in the near to medium term. Topic areas include computer and network security, autonomous and robotic systems, networked distributed systems including cloud technologies and emerging wireless mobile computing technologies.

Computer Science - Curriculum 368 (Resident), Curriculum 376 (Distance Learning)

Program Officer
Duane T. Davis
Code CS, Glasgow East, Room 309
(831) 656-7980, DSN 756-7980
FAX (831) 656-3681
dtdavi1@nps.edu

Academic Associate
Thomas W. Otani, Ph.D.
Code CS/To, Glasgow East, Room 307
(831) 656-3391, DSN 756-3391
Brief Overview

The Computer Science curriculum is designed to provide the officer with the technical knowledge and skills necessary to specify, evaluate, and manage computer system design; to provide technical guidance in applications ranging from data processing to tactical embedded systems; to educate the officer in the analysis and design methodologies appropriate for hardware, software, and firmware; and provide practical experience in applying modern computer equipment and research techniques to solve military problems.

Ours is the first curriculum in the United States to be organized around the great principles of computing. The principles have two layers: computing mechanics deals with the workings of computations, communications, computers, and memories; design deals with the ways of organizing software systems for simplicity, reliability, performance, security, and value. Our curriculum begins with a unique course in the great principles of computing technology.

Our curriculum also provides for concrete experience in computing practices—the skills and ways of thinking that mark a computing professional. These include programming, engineering of systems, modeling, and innovating. We offer a unique course called Technology, Innovation, and Leadership that teaches the practices and discipline of innovation.

The two dimensions—great principles and practices—define the space in which the core technologies of computing exist and serve application domains: algorithms, architecture, artificial intelligence, database, networking, operating systems, security, and more.

Requirements for Entry

A baccalaureate degree, or the equivalent, with above average grades in mathematics, (including differential and integral calculus) resulting in an APC of at least 325 is required for direct entry. Undergraduate degrees in applied science or engineering are highly desirable. Students lacking these prerequisites may be acceptable for the program, through a 12-week refresher, provided that their undergraduate records and/or other indicators of success, such as the Graduate Record Examination (GRE), indicate an ability to work in quantitative subjects. While previous academic or practical experience in computer science is certainly helpful and can enhance the applicant’s potential for admission, such experience is not a prerequisite.

Entry Date

Computer Science is an eight-quarter course of study with entry dates in March and September. Those requiring the 12-week refresher will begin study prior to those entry dates. If further information is needed, contact the Academic Associate or Program Officer for this curriculum.

Degree

Master of Science in Computer Science

The degree of Master of Science in Computer Science is awarded after the satisfactory completion of a program which satisfies, as a minimum, the following degree requirements:

- At least 40 quarter hours of graduate-level work, of which at least 12 quarter hours must be at the 4000 level.
- At least 28 of the 40 graduate-level credit hours listed above must be CS/MOVES/SW courses.
- To ensure a sufficient breadth across the field of Computer Science, the following course topics must be satisfied as part of the course of study or through validation prior to graduation: Artificial Intelligence (CS3310), Networks (CS3502), Automata (CS3101), and Introduction to Computer Security (CS3600).
- Completion of an approved sequence of courses constituting specialization in an area of computer science.
- Completion of an acceptable thesis in addition to the 40 quarter hours of course work.

Requirements for the Master of Science in Computer Science degree are met as a milestone en route to satisfying the Educational Skill Requirements established by the sponsor for the curricular program.

Doctor of Philosophy in Computer Science

Specifics on the Ph.D. in Computer Science program are found in the linked CS Department Ph.D. Handbook.

Subspecialty

Completion of this curriculum qualifies an officer as a Computer Science Subspecialist with a subspecialty code of 6203P.

Typical Subspecialty Jobs

Computer Science Instructor, U.S. Naval Academy Preoperational Test and Evaluation, SPAWAR, Washington, D.C.
Typical Course of Study

Quarter 1
CS2020 (4-2) Introduction to Objects and Programming
CS2011 (4-0) Computing Systems Principles
MA3025 (4-1) Logic and Discrete Mathematics II
CS3000 (4-1) Great Principles of Computing Technology

Quarter 2
CS3021 (4-2) Introduction to Data Structures and Intermediate Programming
CS3600 (4-2) Introduction to Computer Security
OS3307 (4-1) Modeling Practices for Computing
CS3101 (4-0) Theory of Formal Languages and Automata
CS4900 (2-0) Technology and Transformation I

Quarter 3
CS3502 (4-2) Computer Communications and Networks
CS3150 (4-0) Design and Analysis of Algorithms
CS3070 (3-2) Operating Systems
CS3310 (4-1) Artificial Intelligence
CS4901 (0-2) Technology and Transformation II

Quarter 4
CS3113 (3-2) Introduction to Compiler Writing
CS3022 (4-2) Programming Paradigms
CS3060 (3-1) Database Systems
SW3460 (3-1) Software Methodology

Quarter 5
CS3004 (3-2) Human-Computer Interface
CSXX (4-0) Track Core Requirement*
CSXX (4-0) Track Core Requirement*
NW3230 (4-2) Strategy & Policy: The American Experience

Quarter 6
CSXX (4-0) Track Core Requirement*
CSXX (4-0) Track Specialization Requirement*
XXXX (4-0) Service Required Course or Elective
CS0810 (0-8) Thesis Research

Quarter 7
CSXX (4-0) Track Core Requirement*
CSXX (4-0) Track Specialization Requirement*
XXXX (4-0) Service Required Course or Elective
CS0810 (0-8) Thesis Research

* Note: Track Core Requirement courses will be determined by the selection of one of the following specialization track options.

Specialization Track Options

- **Information Security and Assurance** - provides knowledge in all areas of Information Security (INFOSEC) and develops the necessary skills for those who will be involved in development, evolution, or implementation of secure computer systems.

- **Network and Mobile Systems** - provides fundamental and advanced knowledge in network architecture and system software for real-time and multicomputer systems and in the rapidly growing areas of wireless networking, mobile devices, and related topics, including mobile computing and wireless security.

- **Autonomous Systems** - provides an understanding of artificial intelligence and human factors techniques for creating highly capable software agents that interact effectively with human users.

- **Software Engineering and Architecture** - provides knowledge of all aspects of software development and develops skills needed to efficiently and reliably implement military systems and application software using the best available tools and techniques.

- **CS-MOVES Option** - Students interested in an MSCS degree with a focus on modeling, simulation, and virtual environments may choose the CS-MOVES Option as their track. Specialization sequence course work will be coordinated by the student working with his/her MOVES thesis advisor, and must be approved as part of the thesis proposal.

Educational Skill Requirements (ESR)

Computer Science - Curriculum 368
Subspecialty Code: 6203P

All officers with graduate education in computer science must be competent in computer science core subjects including advanced expertise in a specific computer science functional area. These competencies will enable graduates to serve in positions that design, acquire, operate, or secure military networks and systems and/or deny potential adversaries the effective use of their own. The skills and competencies are detailed below.

1. **Mathematics:** The officer will have a thorough knowledge of mathematical tools and concepts that are intrinsic to Computer Science, including, but not limited to, logic, discrete math, combinatorics, statistics, and modeling and simulation.
2. **Networking:** The officer will have a sound understanding of networking theory and practical application as it pertains to the design and operation of military Information Systems and Computer Network Operations (CNO) within the Information Warfare domain. This includes structure, architecture, protocols, communications and security in modern networks, network engineering, and distributed networks. The officer will also be introduced to the fundamental hardware and software components of networks.

3. **Programming and Systems:** The officer will be proficient in programming and programming languages, and in analyzing large software-intensive systems. The officer will demonstrate advanced knowledge and understanding of programming practices and programming paradigms and be familiar with assembly languages. The officer will demonstrate advanced knowledge and understanding of system modules, interfaces, testing and validation, risk factors, and project management.

4. **Practices and Foundational Principles:** Officers will have competence in computer science practices and principles including design and mechanics of computing and their applications to military needs. They will be proficient in core technologies including algorithms, architectures, operating systems, data structures, databases, software engineering, reverse translation, intelligent systems, and human-computer interactions.

5. **Program/Project Management:** This includes, but is not limited to, planning and implementing a major programming project and developing the appropriate technical and acquisition documentation, performing financial, cost-benefit and tradeoff analyses and performing required planning, programming and budgeting actions in order to develop means to exploit technology advantages in a network-centric environment to achieve operational objectives.

6. **Computer Science Specialization:** The officer will complete a specialization track that integrates computer science in DoD systems, software, and operations. These specializations require further emphasis in focused areas of study through sequences of courses. The specialization will include a thesis project in a framework that exercises the practice of innovation, problem solving, systems-thinking, and real-world applicability.

7. **Joint Professional Military Education (JPME) per community requirements:** Graduates will develop understanding of warfighting within the context of operational art, to include: national military capabilities and command structure, joint and service doctrine, joint planning and execution, and joint and multinational forces and systems integration at the operational level of war. This requirement is fulfilled by completing the Naval War College four-course series leading to Service Intermediate-level Professional Military Education and Phase I JPME credit.

**Brief Overview**

The software engineering curriculum is designed to address the seemingly never-ending “software crisis” within the defense community. It builds on the student’s knowledge of both computer science and engineering sciences, in addition to leveraging the student’s real-world, problem-solving experience working with software-intensive systems.
systems. The curriculum introduces the students to the theory, principles, and practices of software engineering. These engineering practices enable acquisition professionals to procure highly dependable, trustworthy software-intensive systems on schedule, within budget, and with the correct functionality. The program offers both M.S. and Ph.D. degrees in Software Engineering.

**Requirements for Entry**

An accredited bachelor's degree in computer science, computer engineering, or related field, with above average grades in mathematics, resulting in an APC of at least 325.

**Entry Date**

The MSSwE is a four-quarter curriculum with a preferred entry dates in January/July. Contact the Program Officer or the Academic Associate for further information.

**Degree**

**Master of Science in Software Engineering (MSSwE)**

The degree of Master of Science in Software Engineering is awarded after the satisfactory completion of a program which satisfies, as a minimum, the following degree requirements:

- At least 12 graduate-level Software Engineering courses.
- Completion of an acceptable thesis in addition to the required course work.

Requirements for the Master of Science in Software Engineering degree are met as a milestone en route to satisfying the Educational Skill Requirements of the curricular program.

**Doctor of Philosophy in Software Engineering**

The Ph.D. program in Software Engineering is designed for DoD software practitioners who want to acquire the skill and knowledge to perform state-of-the-art research on issues related to the development and evolution of large, complex, software systems, and to intelligently manage the research of other software practitioners. It offers the software professionals a unique program of study and advances software engineering principles and technology vital to DoD researchers and program managers.

The Ph.D. degree is awarded after successful defense of a dissertation that advances the state of the art in Software Engineering. Ph.D. seminars are available to assist students in reaching that goal. See the online handbook for details on admission, requirements, and procedures:

Software Engineering - Curriculum 369

All officers with advanced degree education in Software Engineering must possess skills and competencies in software design, development processes, and related software technology applicable to large-scale military systems. The skills and competencies are detailed below.

1. **Software Development**: The officer must have a thorough knowledge of software development processes to plan, evaluate, and manage major software projects:
   a. Requirements engineering (elicitation, specification, and validation) and management, software system architecture and design rationales, configuration management, quality assurance, cost estimation, and system evolution.
   b. Feasibility assessments of complex computer-based systems via prototyping, simulation, and static analysis.
   c. Weapon system software safety assessments and engineering.
   d. Software development risk assessment and software development processes improvement to reduce costs and produce more reliable systems.

2. **Software Design**: The officer must have a thorough knowledge to design systems that are readily adaptable to changing military needs:
   a. System modeling and engineering models for software, software architecture, design patterns and framework, and their application to the automation of military processes.
   b. System interoperability and end-to-end system integration, real-time weapon system control, network-centric computing.
   c. Software reuse, software system reengineering.
   d. Quality assurance for achieving high software reliability; and the ability to understand, diagnose, and recover from software failures.

3. **Software Technology**: The officer must have a thorough knowledge to apply software technology to solve military problems:
   a. The structure, control, and design of software systems involving multiprocessing, distributed processing, network-centric computing, and service-oriented architecture.
   b. The engineering and assurance of anti-cyber-terrorist systems.
   c. Tools and techniques for simulation and modeling of systems.
   d. Engineering automation capabilities for design and assessment of software systems, software validation and verification, program generation, and computer-aided software design tools.

4. **Problem Solving and Military Applicability**: The officer shall possess skills that enable a realistic perspective on problem solving and provide an appreciation of the difficulty and power of applying theory to military concerns such as information warfare and command and control. This includes:
   a. Completing a significant project applying software engineering skills to Navy and/or relevant problems.
   b. Exercising skills in problem formulation, criteria specification, analysis, design, and evaluation of results as they relate to military requirements.
   c. Clearly communicating the results of a project orally and in writing.

5. **Joint and Maritime Strategic Planning**: The officer will have a graduate-level understanding of strategy, especially maritime strategy, naval doctrine, and the effect of technical developments on warfare. The officer must become familiar with the following subjects for the United States, its allies, and opponents: The roles and missions of military services, policy-making processes regarding the armed forces, history of joint and general staffs, joint planning for acquisition and operations, and current issues in defense reform and reorganization.
Master of Arts in Identity Management and Cyber Security (MAIDMCS) – Curriculum 377 (Hybrid)/Curriculum 378 (Resident)

Identity Management and Cyber Security - Curriculum 377 (Hybrid- 18 months)

Overview
The Master of Arts in Identity Management and Cyber Security (MAIDMCS) degree provides individuals whose organizations depend upon cyberspace a broad overview of cyber security technology and how to create a balance between risks and benefits based upon the physical and virtual assets requiring protection. The program focuses on cyber security as enabling technology for a broad range of enterprise initiatives and is intended for leaders in a wide range of government activities regardless of organizational specialization. The MAIDMCS program consists of 12 courses selected to provide breadth and depth in the latest security technologies.

Designed to accommodate busy individuals, the Master of Arts degree program is offered in a hybrid mode that requires participants to be in residence (at the Naval Postgraduate School in Monterey, California or possibly another location to be determined) two weeks each quarter (for a total of 12 weeks). Participants complete the balance of their coursework via network-based distance learning methods. The program can also be taken entirely at NPS and is of shorter duration in this mode. Participants complete an applications project for which a written report is required.

The degree provides participants with the knowledge and skills to:

- Understand the synergistic nature of many aspects of cyber security. These include the interrelationships between cyber defense, cyber operations, cyber attack, and cyber exploitation, as well as major security objectives for next generation cyber systems.
- Develop strategies and plans for securing information assets on IT systems in the face of cyber attacks.
- Understand the impact of acquisition and architectural decisions on the security of information and systems.
- Appreciate the nature of cyber threats and how coherent and holistic choices can support requirements for sharing and productivity.
- The MAIDMCS degree is fully accredited and taught by the NPS faculty.

Requirements for Entry
A baccalaureate degree, or the equivalent, resulting in an academic profile code (APC) of at least 344 is required. While previous academic or practical experience in computer science or a related field is not a prerequisite. Active/Active Duty Reserve U.S. military, DoD civilian, and US Government civilian personnel are eligible.

Entry Date
The MAIDMCS degree is designed to be either a 6-quarter (two courses per quarter) hybrid mode or a 4-quarter fully resident model. For further information, contact the Program Manager or Academic Associate for this curriculum.

Degree
Master of Arts in Identity Management and Cyber Security

The Master of Arts in Identity Management and Cyber Security degree is awarded after the satisfactory completion of a program that satisfies, as a minimum, the following degree requirements:

- At least 40 quarter-hours of graduate-level work, per NPS requirements.
- Completion of the specific sequence of courses satisfying the breadth and subject matter requirements of Identity Management and Cyber Security.
- Completion of an applications project.

Subspecialty
None currently assigned.

**Chair, MOVES Academic Committee and Academic Associate**

Chris Darken, Ph.D.  
Code CS/Cd, Watkins Hall, Room 382  
(831) 656-2095, DSN 756-2095  
FAX (831) 656-7599  
cjdarken@nps.edu
Brief Overview

The Modeling, Virtual Environments and Simulation (MOVES) Academic Program of the Naval Postgraduate School provides the MS and Ph.D. student both fundamental and specialized courses in applied visual simulation technology, combat models and systems, and the application of quantitative analyses to training and simulation technology.

The MS program is a two-year, eight-quarter program whose core covers the fundamentals of modeling and simulation, data analysis, visual simulation, intelligent systems, computer vision, training, and human performance. These topics include object-oriented programming, probability, statistics, stochastic modeling, data analysis, acquisition and program management, artificial intelligence, computer graphics, simulation and training, and combat modeling systems.

Specialization by the MS student is accomplished by completing four concentration areas (listed at the end of this section) providing depth in the selected areas. Once the MOVES core courses have been taken and while the specialization courses are underway, the final step in the MS degree is the completion of a written thesis. This thesis is conducted on a research problem under the supervision of a MOVES faculty thesis advisor.

The MOVES Academic Program also has a program leading to the degree Doctor of Philosophy. Areas of special strength amongst the MOVES Academic Faculty are combat modeling and analysis, networked and web-based visual simulation, agents and cognitive modeling, training systems and human factors, and discrete-event simulation.

Requirements for Entry

A baccalaureate degree, or the equivalent, with above average grades in mathematics (including differential and integral calculus), resulting in an APC of at least 325 is required for entry. Undergraduate degrees in applied science or engineering are highly desirable. Students lacking these prerequisites may be acceptable for the program, through the 12-week technical refresher or 12-week Engineering Science program, providing their undergraduate records and/or other indicators of success, such as the Graduate Record Examination (GRE), indicate an ability to work in quantitative subjects. While previous academic or practical experience in modeling, virtual environments, and simulation is certainly helpful and can enhance the applicant’s potential for admission, such experience is not a prerequisite.

Entry Date

MOVES is an eight-quarter course of study starting annually in September. Those requiring the 12-week refresher will begin study in July. If further information is needed, contact the MOVES Academic Associate or the MOVES Program Officer for this curriculum.

Degree

Master of Science in Modeling, Virtual Environments, and Simulation

The degree of Master of Science in Modeling, Virtual Environments, and Simulation is awarded after satisfactory completion of a program which satisfies, as a minimum, the following degree requirements:

1. At least 40 quarter-hours of graduate-level work, of which at least 12 quarter-hours must be at the 4000 level.
2. Completion of an approved sequence of courses constituting specialization in an area of Modeling, Virtual Environments, and Simulation.
3. Completion of an acceptable thesis in addition to the required course work.

Requirements for the Master of Science in Modeling, Virtual Environments, and Simulation are met as a milestone en route to satisfying the Educational Skill Requirements established by the sponsor for the curricular program.

Doctorate in Modeling, Virtual Environments, and Simulation

The Ph.D. degree requires the equivalent of at least three academic years of study beyond the baccalaureate level (some of which may be for another post-baccalaureate degree), with at least one academic year (or its equivalent) being spent in residence at NPS. The student must complete, in order, the following steps, which are detailed at www.movesinstitute.org.

1. Form a dissertation committee
2. Pass a written qualifying examination
3. Declare a secondary specialization
4. Pass an oral qualifying examination
5. Pass a final examination
6. Complete a dissertation

No courses are required for the Ph.D. degree besides the secondary specialization unless the student’s doctoral committee so stipulates.

Ph.D. Minor in Modeling, Virtual Environments, and Simulation

A Ph.D. minor in Modeling, Virtual Environments, and Simulation consists of:

1. Three courses at the 4000 level that form a coherent sequence relating to Modeling, Virtual Environments, and Simulation.
2. The courses must be from at least two departments or academic groups.
3. The head of the MOVES Ph.D. program will write a letter attesting that the student has fulfilled the requirements upon request of the student.

Subspecialty

Completion of this curriculum qualifies an officer as a modeling, virtual environments, and simulation subspecialist with a subspecialty code of 6202P.

One concentration area/block course

Concentration Blocks

Select three concentration blocks: no more than two from Group A and no more than two from Group B. A block typically consists of two required courses and one elective.
chosen with assistance from your thesis advisor. A course may only count towards one block. U.S. Navy students must take the JPME block. All U.S. Army students must take the Systems Engineering block.

**Group A**

**A1. Combat Modeling**

MV4302 - Advanced Discrete Event Simulation

**Recommended Electives**

OA4602 - Joint Campaign Analysis
OA4604 - Wargaming Applications
OA4656 - Advanced Combat Models

**A2. Visual Simulation**

Choose any three:

MV4205 - Advanced 3D Modeling with X3D/VRML
MV4471 - Computer Animation
MV4472 - Physics for Game Developers and Virtual Environments
CS4330 - Computer Vision

**A3. Agents and Cognitive Modeling**

MV4025 - Cognitive and Behavioral Modeling for Simulations
MV4100 - Cognitive Engineering

**Recommended Electives**

CS4330 - Computer Vision
MV4015 - Agent-Based Autonomous Behavior for Simulations

**A4. Discrete Event Modeling and Analysis**

MV4302 - Advanced Discrete Event Simulation Modeling
OA4333 - Simulation Analysis

**Recommended Electives**

OA4108 - Data Mining
OA4308 - Time Series Analysis - not yet decided

**Group B**

**B1. Human Factors & Training**

OA3401 - Human Factors in System Design
MV4001 - Human Factors of Virtual Environments

**Recommended Electives**

MV4xxx - Advanced Topics in Training Systems
OA4407 - Human Anthropometry and Biomechanics
OA3402 - Research Methods for Performance Assessment

**B2. Systems Engineering and Acquisition**

* Required of all U.S. Army students - Available to others

SE3100 - Fundamentals of Systems Engineering
SI3400 - Fundamentals of Engineering Project Management

**Recommended Electives**

OA4680 - Naval Systems Analysis
SE3302 - System Suitability

**B3. JPME**

* Required for non-JPME-qualified U.S. Navy students - Not available to others. All four courses required.

NW3230 - Strategy and Policy
NW3275 - Joint Maritime Operations, Part I
NW3276 - Joint Maritime Operations, Part II
NW3285 - National Security Decision Making

**MOVES Research Courses (Required)**

MV2921 - Introduction to Modeling, Virtual Environments, and Simulation
MV3922 - Introduction to Virtual Environment Technology
MV3923 - Introduction to Current Research in MOVES
MV4924 - Current Topics in Modeling, Virtual Environments, and Simulation

**Educational Skill Requirements (ESR) Modeling, Virtual Environments, and Simulation (MOVES) - Curriculum 399**

**Subspecialty Code: 6202P**

6202 Subspecialists are the Department of Defense's (DoD) experts in Modeling, Virtual Environments and Simulation. Modeling and Simulation (M&S) is a discipline that uses models – including emulators, prototypes, simulators, and stimulators – either statically or over time, to develop the data needed for making managerial or technical decisions. Such data and phenomena are often visualized in virtual and augmented environments, facilitating efficient data manipulation and the users’ perceptual immersion, all essential for effective analysis, training and operation.
All 6202 Subspecialists can design, build, manage and apply Modeling, Virtual Environments, and Simulation best practices and tools in support of training, analysis, acquisition, testing and operational capabilities. The Subspecialists have highly developed analytical and critical thinking skills, and the ability to innovate and solve domain problems. They have also completed a program of original research, culminating in a Master’s Thesis. 6202 Subspecialists are proficient in the general principles of M&S and have acquired in-depth knowledge about select areas of concentration.

6202 Subspecialists can, for example:
· Manage virtual environment technology and help solve human-machine interaction problems;
· Employ virtual environments for treating post-traumatic stress disorders;
· Define and apply next-generation combat models to real-world problems;
· Apply modeling and simulation to facilitate the DoD acquisition process;
· Evaluate operational and training effectiveness and human performance in virtual environments and apply this to performance in real environments.

All subspecialists earning an advanced degree in compliance with the 6202 subspecialty code obtain skills and competencies in the following areas:
1. History and Fundamentals of M&S: The officer will have competence in the history and fundamental concepts of Modeling and Simulation (M&S), with a focus on DoD M&S.
2. Applied Mathematics: The officer will have a practical understanding of linear algebra, discrete mathematics, statistics, data analysis, stochastic modeling and experimental design, as well as their effective application in the domain of M&S.
3. Computer Systems: The officer will have a sound understanding of computer programming, software development, networks, and distributed simulations.
4. Virtual Environments: The officer will be knowledgeable in computer graphics, virtual and augmented reality, visualization, and simulation systems.
5. Training and Human Systems: The officer will have a sound understanding of human systems engineering, training systems, human behavior modeling and human performance evaluation.
6. M&S Systems Life-Cycle Management: The officer will be knowledgeable in systems engineering management, requirements analysis, program management and policy, and acquisition.
7. Modeling: The officer will be knowledgeable in system modeling, combat modeling and modeling physical phenomena, including verification, validation and accreditation (VV&A).
8. Joint Professional Military Education (JPME) per community requirements: The officer will develop an understanding of warfighting within the context of operational art, to include: national military capabilities and command structure, joint and service doctrine, joint planning and execution, and joint and multinational forces and systems integration at the operational level of war. This requirement is fulfilled by completing the Naval War College four-course series leading to Service Intermediate-level Professional Military Education and Phase I JPME credit.

Specialization: Each 6202 Subspecialist will select a number of areas of specialization that integrate Modeling, Simulation, and Virtual Environments in DoD systems, practices and operations. These specializations require further emphasis in particular areas of study, both through completing the appropriate sequences of courses and conducting original research for a Master's thesis.

Area specializations might include:
· Environmental models, 3D modeling, and web-based technologies;
· Game-based systems, computer animation and computer vision;
· Discrete event simulation;
· Advanced combat modeling, including social, cultural and behavioral modeling;
· Training systems and human factors.

Curriculum Sponsor and ESR Approval Authority
Director, Navy Modeling and Simulation Office (NMSO).

Information Assurance Certificates
Program Manager
Cynthia Irvine, Ph.D.
Code CS/Ic, Glasgow East, Room 211
(831) 656-2461, DSN 756-2461
irvine@nps.edu

Brief Overview
The NPS Computer Science Department is authorized to award five Committee on National Security Systems (CNSS) Information Assurance Certificates. The certificates are awarded to students who successfully complete specified sets of Computer Science and Information Assurance courses.

The certificates are based on training and education standards that were established by the National Security
Telecommunications and Information Systems Security Committee (NSTISSC).

Certificate Sponsor
Committee on National Security Systems (CNSS), www.cnss.gov

Certificates Awarded
- NSTISSI 4011 - Information Systems Security Professionals
- CNSS 4012 - Senior System Managers
- CNSS 4013 - System Administrators
- CNSS 4014 - Information System Security Officers
- NSTISSI 4015 - System Certifiers

Required Courses
NSTISSI 4011 - Information Systems Security Professionals
- CS3030 or CS2011 (Basic Computer Architecture)
- IS3502 or CS3502 (Basic Computer Networks)
- CS3600 Information Assurance: Introduction to Computer Security
- CS3670 Information Assurance: Secure Management of Systems

CNSS 4012 - Senior System Managers
- CS4680 Introduction to Certification and Accreditation

CNSS 4013 - System Administrators
- CS3030 or CS2011 (Basic Computer Architecture)
- IS3502 or CS3502 (Basic Computer Networks)
- CS3600 Information Assurance: Introduction to Computer Security
- CS3670 Information Assurance: Secure Management of Systems

CNSS 4014 - Information System Security Officers
- CS3030 or CS2011 (Basic Computer Architecture)
- IS3502 or CS3502 (Basic Computer Networks)
- CS3600 Information Assurance: Introduction to Computer Security
- CS3670 Information Assurance: Secure Management of Systems

NSTISSI 4015 - System Certifiers
- CS4680 Introduction to Certification and Accreditation

Information Systems Security Engineering (ISSE) Certificate – Curriculum 270

Program Manager
Cynthia Irvine, Ph.D.
Code CS/Ic, Glasgow East, Room 211
(831) 656-2461, DSN 756-2461
irvine@nps.edu

Brief Overview
The role of Information Systems Security Engineering (ISSE) is to help ensure that the security requirements of systems are met. Lacking proper security engineering, systems fail to be certified and accredited, causing costly delays or failures. Ideally the Information Systems Security Engineer (also known as an ISSE) will be a member of the system development team throughout its lifecycle; however, for preexisting systems, the ISSE may be required to assess existing system vulnerabilities and determine mitigating strategies.

As systems have grown more complex and adversaries continue to successfully exploit numerous vulnerabilities, the need for improved secure system engineering and the formation of a larger cadre of skilled ISSEs has become more acute. The ISSE course sequence will provide the knowledge and analytical skills required to contribute productively in system developments and assist in building a larger cadre of skilled ISSEs to combat adversaries.

Certificate Sponsor
National Security Agency (NSA)

Required Courses
- CS3690 Network Security
- CS3695 Network Vulnerability and Risk Mitigation
- CS4600 Secure System Principles
- CS4650 Fundamentals of Information Systems Security Engineering
- CS4652 Applied Information Systems Security Engineering

Identity Management Certificate – Curriculum 278

Program Manager
Cynthia Irvine, Ph.D.
Code CS/Ic, Glasgow East, Room 211
(831) 656-2461, DSN 756-2461
irvine@nps.edu

Brief Overview
Identity Management (IDM) is a growing concern throughout defense, government, and private sector
organizations. It includes an infrastructure that supports the identification of humans in physical space, and the logical identification of human and non-human subjects, hardware, and software in cyber space.

The IDM Certificate is offered each academic quarter and is conducted in a hybrid mode that involves a one-week program of intense IDM education at NPS followed by 9 weeks of remote learning, and culminates with an on-site (NPS campus) course work at the end of the academic quarter. The hybrid approach reduces student attrition and has resulted in considerable esprit de corps and camaraderie among the students who represent a mixture of military and government civilians. The IDM Certificate takes 2 quarters, or 6 months, to complete.

Upon completion of the courses with adequate grades, students may apply IDM course credits toward Identity Management specialization tracks in either the Computer Science or Information Sciences degree programs. For more information, please visit the IDM website at: imep.nps.edu.

**Certificate Sponsor**

Biometrics Task Force

**Required Courses**

- CS3686 Identity Management Infrastructure
- CS3699 Biometrics
- IS3710 Identity Management Operations
- IS3720 Identity Management Policy

**Software Engineering Certificates**

**Program Manager**

Loren E. Peitso

FAX (831) 656-2814  
twotani@nps.edu

**Brief Overview**

The Naval Postgraduate School offers programs of study in specialized areas of software engineering, with the aim of providing DoD personnel with both knowledge and problem-solving skills needed for acquiring software-intensive, large-scale systems. Each certificate requires completion of four graduate-level courses in a specialty area of software engineering. The certificate programs are tailored by NPS to meet the needs of the DoD sponsor and the required courses are specified accordingly. Upon completion of the four courses in a specialty area, the student receives a certificate of completion. A student may apply three certificates in partial fulfillment of the requirements for a master's degree in software engineering. Courses are offered online, by VTC, or in person, depending on the arrangements made with the student's sponsoring organization. Requirements for entry into the certificate programs are the same as those for the M.S. in Software Engineering.

**Certificates Awarded**

Certificates are offered as requested and tailored to the individual needs of the sponsor.

As an example, these two certificates were offered in FY06:
- DoD Software Engineering Certificate
- Weapon Systems Software Development Certificate

**Required Courses**

As an example, a previous offering of the SwE Certificate program consisted of the following courses:
- IS4300 Software Engineering and Project Management
- SW3460 Software Methodology
- SW4591 Requirements Engineering
- SW4592 Software Risk Assessment in DoD Department of Defense Analysis

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

John Arquilla, Professor (1993); Ph.D., Stanford University, 1991.

Mark T. Berger, Visiting Professor (2006); Ph.D., University of New South Wales, 1992.

Leo Blanken, Associate Professor (2008); Ph.D., University of California, Davis, 2006.

Douglas Borer, Associate Professor (2004); Ph.D., Boston University, 1993.

Randy Burkett, National Intelligence Chair; Central Intelligence Agency Representative (2010); M.A., Naval Postgraduate School, 1989.

Dorothy Denning, Professor (2002); Ph.D., Purdue University, 1975.

Jennifer J. Duncan, Program and Research Manager (1992); M.S., City University of New York, 1985.

William P. Fox, Professor (2006); Ph.D., Clemson University, 1990.

Michael Freeman, Assistant Professor (2005); Ph.D., University of Chicago, 2001.

Frank Giordano, Professor (2002); Ph.D., University of Arkansas, 1975.

Heather S. Gregg, Assistant Professor (2006); Ph.D., Massachusetts Institute of Technology, 2003.

Erik Jansen, Senior Lecturer (1994); Ph.D., University of Southern California, 1987.

Michael Jaye, Associate Professor (2009); Ph.D., Rensselaer Polytechnic, 1998.

Doowan Lee, Visiting Lecturer (2008); ABD, University of Chicago.

George Lober, Senior Lecturer (1998); M.A., California State University at Fresno, 1986.

Gordon H. McCormick, Chairman, Defense Analysis Department and Professor (1992); Ph.D., Johns Hopkins University, 1986.

Guillermo Owen, Professor (1983); Ph.D., Princeton University, 1962.

Robert O’Connell, Visiting Professor (2004); Ph.D., University of Virginia, 1976.

Nancy C. Roberts, Professor (1986); Ph.D., Stanford University, 1983.

Glenn Robinson, Associate Professor (1991); Ph.D., University of California at Berkeley, 1992.

Hy Rothstein, Senior Lecturer (2002); Ph.D., Tufts University, 2003.

Kalev (Gunner) Sepp, Senior Lecturer (2003); Ph.D., Harvard University, 1992.

Anna Simons, Associate Professor (1998); Ph.D., Harvard University, 1992.

Kristen Tsolis, Lecturer (1999); M.S., Monterey Institute of International Studies, 1999.

David Tucker, Associate Professor (1998); Ph.D., Claremont Graduate School, 1981.

Greg Wilson, COL, USA, Chair of Special Operations (2005); M.S., Naval Postgraduate School, 1995.

Brief Overview
The Department of Defense Analysis is an interdisciplinary association of faculty, representing a wide range of academic and operational specialties. The Department has two curricula: the Special Operations/Irregular Warfare curriculum and the Joint Information Operations curriculum.

The Special Operations/Irregular Warfare curriculum provides a focused course of instruction in irregular warfare, sub-state conflict, terrorism and counterterrorism, and other "high leverage" operations in U.S. defense and foreign policy. The core program also provides every student with a strong background in strategic analysis, decision modeling, organization theory, and formal analytical methods. The student's program is built around a common set of core courses and a selected specialty track. Currently the tracks offered are: Irregular Warfare, Information Operations, Terrorist Operations and Financing, Operations Analysis, Combat Systems, Financial Management, C4I Systems, National Security Affairs (Stability / Reconstruction), and National Security Affairs (Regional Studies). The individual student, depending on his or her interests and academic background, chooses the specialty track. In selected cases, students are also able to develop a tailored area of specialization to satisfy a particular interest or requirement. Graduates are awarded a Master of Science in Defense Analysis, with their specialty track so specified.
While the Special Operations/Irregular Warfare curriculum is sponsored by U.S. Special Operations Command, the curriculum actively solicits student participation from across the services, regardless of branch. International students are an important element of the program. Students are encouraged to apply for the Winter or Summer Quarter, permitting them to take maximum advantage of the program's sequenced course of instruction. Exceptions are approved by the Academic Associate. The program is 18 months long and requires a completed thesis.

The Joint Information Operations curriculum educates military personnel and civilian officials in the strategic and operational dimensions of information relative to the use of force as an instrument of statecraft. Graduates will be able to develop information strategies to support military action by taking advantage of information technology, exploiting the growing worldwide dependence on automated information systems, and capitalizing on near real time global dissemination of information to affect adversary information systems, and capitalizing on near real time global dissemination of information to affect adversary decision cycles with the goal of achieving information superiority. This capability will be possible only after students develop a thorough understanding of the enduring nature of war.

The curriculum is designed for both the specialist who will be assigned to an information operations position and the generalist who will be assigned to an operations directorate. The curriculum includes a core of military art and operations, the human dimension of warfare (psychosocial), analytical methods, and a technical sequence customized for each student. Additionally, each student will have an elective sequence designed to further develop an in-depth understanding of joint information operations. Graduates are awarded a Master of Science in Information Operations. The program is 18 months long and requires a completed thesis.

Navy, Air Force, USMC, and select Army (SF, PO, CA) graduates who also complete the approved 4-course Naval war College JPME curriculum also receive credit for JPME 1 and their Service-particular Intermediate Level Education (ILE).

Degree

Master of Science in Defense Analysis

Master of Science in Information Operations

Defense Analysis Course Descriptions

DA Courses

DA0810 Thesis Research (0-8) Fall/Winter/Spring/Summer
This is a thesis research block. Prerequisite: None.

DA2010 Technical Writing and English Composition (4-0) Winter
This course provides a review of the rhetorical and grammatical principles necessary for successful academic writing. Course content emphasizes standard English grammar and syntax, as well as mastery of two rhetorical modes: comparison and contrast; and persuasion. Emphasis is also placed on the correct use of both parenthetical and traditional footnote notation and documentation for traditional and electronic sources. Prerequisite: None.

DA2410 Modeling for Military Decision Making, I (4-0) Winter/Summer
This course introduces mathematical modeling processes and concepts. Deterministic models in a graphical setting will be emphasized, including experimental modeling, curve fitting, and optimization. Applications include arms race models, Lanchester combat models, exponential growth and decay models, the Logistic model for social diffusion, supply/demand economic models, and inventory models. The computer is used as a tool with emphasis on the Excel spreadsheet package. Prerequisite: College algebra.

DA3010 Technical Writing and English Composition II (4-0) Fall
This course provides an in-depth analysis of the rhetorical principles applied in effective academic writing. Course content emphasizes rhetorical analysis, research, formal academic documentation, and a further review of English grammar and syntax. This course is writing intensive and intended to further the principles introduced in DA2010. Prerequisite: DA2010.

DA3101 Conflict in the Information Age (4-0) Fall/Winter
Given that the emerging Information Age heralds stark changes in future military and security policy, this course begins with a survey of the literature on the current revolution in military affairs (RMA), as well as studies of similar periods earlier in history. While significant attention is focused on information technologies, the principle emphasis in this course lies in an endeavor to understand the ways in which new technologies affect military strategy, doctrine, and organization. In particular, the rise of networked organizations, nonlinear military operations, and the further blurring of the line between war and peace are examined. Prerequisite: None.

DA3102 Psychological Warfare and Deception (4-0) Summer/Fall
This course surveys current theories of behavior, cognition, and perceptual bias, linking them to applied military issues across the spectrum of conflict, from irregular to high-intensity warfare. The effects of increased information flows on the prospects for accurate assessments in crisis and war are also considered in detail. Case studies and experimentation complement the theoretical framework initially advanced, with students working in teams during this portion of the course. Prerequisite: None.

DA3104 Computer Network Attack and Defense (4-1) Winter
This course introduces the basic principles of attacking and defending computer networks. On the attack side, it covers system intrusions, denial of service attacks, viruses, worms, and Trojan horses. On the defense side, it covers security policies and objectives, access control, authentication, firewalls, intrusion detection, cryptography, security management, and incident response. Basic networking concepts, including TCP/IP, are also covered. No background in computer science or networking is
required. The course includes some hands-on work with hacking and security technologies. Prerequisite: DA3101.

**DA3105 Conflict and Cyberspace (4-1) Summer**
This course examines how cyberspace, particularly the Internet, can serve as a tool, target, and source of conflict for both state and nonstate actors. Topics include: characteristics of cyberspace, technology trends, power in cyberspace, cyber-based information operations (IO), cyber surveillance, domestic and international laws governing cyber operations, cyber crime, cyber activism and hacktivism, cyber terrorism, cyber warfare, and cyber defense. Prerequisite: None.

**DA3120 Jihadi Information Operations (4-0) Spring**
This course traces the rise and evolution of the Jihadi movement since its birth in the 1960s; analyzes the symbols, discourses, and media that Jihadis use in their own information operations, primarily vis-à-vis the larger Muslim community; and examines the impacts on and receptiveness of the broader Muslim community to these information operations. The focus of the course is on the transnational Jihadi movement, but some examples of local Jihadism will be discussed as well. Prerequisite: None.

**DA3180 Electronic Warfare Principles and Applications (4-0) Summer**
This course provides students in the Joint Information Operations Curriculum (698) an introduction to Electronic Warfare (EW) principles and how they apply to operational and strategic level planning, and executing throughout the spectrum of conflict. The student focus is on understanding the basics of EW, being able to recognize the advantages and disadvantages of EW employment by both friendly and enemy forces, being familiar with resources to assist in strategic/operational level EW planning, and be able to discuss and advise military leaders on basic EW employment. The course will include studies on radar and communication systems, jamming and collection systems, spectrum management and exploitation, friendly and adversary EW systems, and finally EW tactics employed by adversaries. Advanced topics include modern threat systems, innovative uses of older systems and emerging EW trends such as Remote Controlled Improvised Explosive Devices. Throughout this module students will be required to apply the concepts of the course to two case studies involving EW. These studies will be based on EW support to a conventional and unconventional scenario.

**DA3210 The Unconventional Threat to HLS (4-0) Spring**
The purpose of this course is to provide an introduction to the operational and organizational dynamics of terrorism. It considers those who act as individuals, in small groups, or in large organizations; it considers indigenous actors, as well as those who come to the United States to raise money, recruit, or commit their acts of violence. In every instance, its focus is on violent clandestine activity that, whatever its motivation, has a political purpose or effect. The course addresses such specific topics as suicide terrorism, the role of the media, innovation and technology acquisition, the decline of terrorism, and ways of measuring the effect of counterterrorism policies and strategies. The course also looks briefly at sabotage. By the end of the course, students should be able to design effective measures for countering and responding to terrorism based on an understanding of its organizational and operational dynamics. Prerequisite: None.

**DA3250 Anatomy of Intelligence (4-0) Spring**
This course will be devoted to providing students with an improved understanding of the structure, capabilities, and shortcomings of U.S. intelligence, with particular emphasis being placed on Special Operations (SO) and Information Operations (IO). In general, the course approach will be from the general to the specific—beginning with an orientation aimed at familiarizing students with the basic nature of the U.S. Intelligence Community (IC), followed by a closer look at the issues surrounding the provision of intelligence to SO and IO. Prerequisite: None.

**DA3260 Human Intelligence in Irregular Warfare (4-0) Fall**
The course examines human intelligence operations in irregular warfare. It covers espionage, various source operations, counterintelligence, and covert action. It also briefly discusses the intelligence community and issues of coordinating the various human intelligence activities of the U.S. government. A central purpose of the course is to understand what changes may be necessary to human intelligence operations in order to increase their effectiveness in irregular warfare. Prerequisite: None.

**DA3270 Intelligence in the Information Age (4-0) Spring**
The course examines intelligence in light of the information revolution. It examines collection, analysis, covert action and counterintelligence. It also discusses the intelligence community and issues of coordinating the various intelligence activities of the U.S. government. A central purpose of the course is to increase understanding of the relationship between intelligence and information operations. Prerequisite: DA3101.

**DA3410 Modeling for Special Operations II (4-0) Summer/Fall**
This course continues the mathematical modeling process and concepts introduced in DA2410. Models will now entail the use of probability to find solutions. Introductory probabilistic models will be discussed, along with rudimentary statistical concepts needed to analyze data generated from those models. The course will also introduce simulation modeling. Decision modeling includes decision making under both risk and uncertainty. Use of Excel and the Minitab statistical package continues from DA2410. Prerequisite: DA2410.

**DA3600 Geographical and Temporal Dimensions of Dark Networks (4-0) Winter/Summer**
Using a task-based approach, the first course introduces a terror network that students analyze using Google Earth, ArcGIS, and software tools that elicit temporal and geospatial aspects of terror network activity. This class will teach students to think critically and creatively about how different forms of spatial data can be integrated into their research. While the class will briefly cover fundamentals of remote sensing and coordinate systems, this lab-intensive course primarily focuses on real world situations that students will face in the field. No prerequisite.

**DA3610 Visual Analytics (4-0) Fall**
Visual Analytics is the first course in the CORE Lab sequence. It addresses a common problem we all face—the collection of data at a faster rate than our ability to analyze it. The course’s purpose is to introduce methods to examine and analyze massive, multidimensional, multi-source, time-varying data. It offers new tools and technology to integrate and fuse data to support the analytical process so we are better prepared to make decisions in a time-critical manner. Ultimately, the course opens the door to what some consider a new multidisciplinary field:

- Visual representations and interaction techniques that enable us to see, explore, and understand large amounts of information at once
• Data representations and transformations that convert all massive, multidimensional, multi-source, and time varying information in ways that support visualization and analysis.
• Analytical reasoning techniques that enable us to obtain deep insights that directly support assessment, planning, and decision making.
• Techniques that support the production, presentation, and dissemination of analytical results and the communication of information to a variety of audiences (Thomas and Cook, 2005:4).
Prerequisite: None.

DA3701 Choice, Chance, and Consequence (4-0) Fall
This course examines the dynamic relationship that exists between Choice, Chance, and Consequence. Specifically, this course examines many of the influential factors associated with effective decision making in stochastic environments, and explores the reasons why choices made in such environments often produce a host of unintended consequences. Incorporating Molton’s Theory of The Unanticipated Consequences of Purposive Action, Machiavelli’s The Prince, and Kahneman and Tversky’s Prospect Theory, the course draws on case studies and examples from ancient Western literature, philosophy, American history, modern literature, and biography. Prerequisite: None.

DA3720 The Rise of Religious Violence (4-0) Fall/Winter
This course aims to explore the conditions under which religious groups engage in violent activity as a means of achieving various political, social and religious goals. In particular, this course will a) offer an introductory foundation in the world’s major religious traditions; b) investigate how religion influences conflict, violence and war; c) compare the rise and fall of religious groups engaging in violent activity with the intent of better understanding the conditions under which religious groups resort to and abandon violent activity; d) compare other examples of religious violence with the conditions under which religious groups engage in violent activity as a means of achieving various political, social and religious goals. Prerequisite: None.

DA3721 Religion, Politics and Collective Action (4-0) As Required
The relationship between religion and political behavior is not as straightforward as many people assume, and there is considerable debate as to what the relationship between religion, politics and civil society should be. Some think that particular religious traditions should play no part; others believe that they should. In this class, we will briefly consider these arguments, but we will spend the majority of our time exploring the interplay between religion and collective action, introducing students to the major theories, topics and debates in the field of social movements and collective action. It seeks to discover the conditions under which social movements emerge, thrive, and decline, and why some people get involved in social movements and others do not. It also explores why religious traditions are often at the center of collective action. Prerequisite: Must have completed at least one full quarter.

DA3750 Anthropology of Conflict (4-0) Fall/Spring
The focus of this course is cross-cultural conflict and violent confrontation with a view to considering how anthropology might be better used to study modern warfare and large-scale ethnic conflict. For instance, military historians, political scientists, and foreign policy analysts increasingly refer to “culture” and religion, identity politics, and ideology to help explain the new world disorder. From an anthropological perspective, are they using these social science concepts correctly? This course is designed to not only expose students to anthropological concepts useful for understanding the motivations of combatants from other cultures and the nature of warfare as fought by different people(s), but the extent to which cross-cultural miscommunication can complicate the role of U.S. military personnel abroad. Prerequisite: None.

DA3760 The Soul of the Sword: the History of Weapons (4-0) Fall/Spring
This course provides an in-depth examination of the origins, nature, and political/military roles of contemporary international terrorism. It briefly examines the early history of terrorism, the contending theories that purport to explain the sources of terrorist behavior, the different types of terrorism and terrorist actions, and the challenge international terrorism poses for American interests and foreign policy. Functional topics, such as the special problems posed by state-sponsored terrorism, the relationship between terrorism and the media, and the range of possible military responses to terrorism are also examined. The course will conclude by comparing and contrasting different national responses to the problem of international terrorism, and examining the difficulties faced by the United States in its efforts to find an effective policy response. Prerequisite: None.

DA3800 Theory and Practice of Social Revolution (4-0) As Required
This course provides an overview of insurgency and counterinsurgency. It reviews the theoretical literature and offers an operational focus on social revolution by examining the alternative models of insurgency provided by the doctrine of “people’s war,” “foco theory,” and the urban guerrilla. The course goes on to examine the development of U.S. counterinsurgency doctrine, the difference between the “hearts and minds” and “systems” prescriptions of counterinsurgency, and alternative British, French, and Russian concepts of counterinsurgency. Prerequisite: None.

DA3801 International Terrorism (4-0) Summer/Fall
This course provides an in-depth examination of the origins, nature, and political/military roles of contemporary international terrorism. It briefly examines the early history of terrorism, the contending theories that purport to explain the sources of terrorist behavior, the different types of terrorism and terrorist actions, and the challenge international terrorism poses for American interests and foreign policy. Functional topics, such as the special problems posed by state-sponsored terrorism, the relationship between terrorism and the media, and the range of possible military responses to terrorism are also examined. The course will conclude by comparing and contrasting different national responses to the problem of international terrorism, and examining the difficulties faced by the United States in its efforts to find an effective policy response. Prerequisite: None.

DA3802 Seminar in Guerrilla Warfare (4-0) Winter/Summer
Have you ever wanted to seize state power from below? Have you ever been responsible for keeping others from doing so? This reading seminar is designed to examine the strategy and operational art of substate conflict. It examines the problems of social mobilization; underground organization, command and control, and security; alternate strategies of internal war, and competing theories of counterinsurgency. These and related issues are examined analytically and historically. Comparative cases are discussed and evaluated. Throughout the course, attention is also given to the manner in which such wars are conducted in the future. Prerequisite: None.
DA3880 History of Special Operations (4-0) Summer/Fall
What constitutes a "special" operation? This course considers special operations in a historical context, with emphasis given to their impact on war outcomes, the necessary conditions for their success, and the patterns of civil-military relations that emerge when elite forces are formed. Successes and failures in air, ground, and naval actions are equally considered. Historical studies from World War II to the present will provide the principle means of analysis to gain insights into the theory, practice, and effects of special operations and irregular warfare. Prerequisite: None.

DA3882 Deterrence, Coercion, and Crisis Management (4-0) Summer/Winter
This course surveys current theories of deterrence and coercive diplomacy, relating them to a variety of applied problems in crisis management. Special attention is given to political psychological factors, crisis communication styles, extended deterrence, and the implications of proliferation of weapons of mass destruction for conventional deterrence. Prerequisite: None.

DA3883 The Rise, Transformation and Future of the Nation-State System (4-0) Spring
This course provides students with a broad overview of the rise, proliferation, and possible fall of the major international organizing tool of the modern era: the nation-state. The course examines the rise of the nation-state in Europe, focusing on the specific political and economic factors that shaped the nation-state; the adoption of the nation-state system around the world, where it did not emerge organically; and the possible decline of the nation-state in the age of globalization. Does globalization mean the end of the nation-state, and if so, what kinds of organizational arrangements are likely to compete with and perhaps replace the nation-state? Prerequisite: None.

DA3900 Directed Studies in Special Operations and Low-Intensity Conflict (4-0) Fall/Winter/Spring/Summer
Supervised study in selected areas of special operations and low-intensity conflict to meet the needs of individual students. Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers, projects, and/or examinations. May be repeated for credit if course content changes. Variable 1.0 - 4.0. Prerequisite: Consent of the instructor.

DA4101 Concepts in Information Operations (4-0) As Required
The emergence of information operations (IO) signaled a broadening of the original concept of information warfare (IW) beyond its early emphasis on electronic warfare and/or cyberspace-based attack and defense, to also include such notions as managing others’ perceptions, public diplomacy, and the media. This broadening implied a new emphasis on content-based concepts of information operations as opposed to conduit-oriented issues of attack and defense of communications. This course surveys the entire scope of IO, keeping in mind the critical importance of IW, but also emphasizing the more conceptual issues having to do with strategy, doctrine, and organization. Applied issues are also examined, including such topics as the methods for sharing sensitive data with semitrusted allies, and the impact of information attack and defense on the future of force projection. Prerequisite: DA3101 or DA3103.

DA4102 Special Information Operations (4-0) Summer
This course serves as a project-oriented culmination of the studies of those specializing in the SOLIC "IO track." Students are given a specific, real-world problem and challenged to find the place for IO in developing solutions. The goal is both to mobilize the knowledge amassed from previous study and to use practical experience to gain insight into the issues of how IO can support special operations, and how special operations can support IO. Another key element of the course is the requirement that the students work as a team, employing either organizational concepts they have learned about or developing new ones that may be most suitable to the particular problem at hand. The course concludes with briefings to the sponsors of the given project undertaken. Prerequisite: None. Classification: TOP SECRET.

DA4104 Militaries and Technological Change (4-0) Summer
Technological advances have always influenced developments in military affairs, particularly fighting doctrines and forms of organization. This course surveys the major technological changes that accompanied industrialization: including advances in weapons, transportation, and communications systems; and examines the ways in which professional militaries adapted to these developments. Special attention is given to advances in information systems, as the goal of the course is to derive insights into how militaries might respond, doctrinally and organizationally, to an extended period of information-technology-driven changes in military affairs. Prerequisite: DA3101 or consent of the instructor.

DA4105 Special Topics in Information Operations (4-0) As Required
This course will focus on special topics in information and special operations. The list of topics to be analyzed for the seminar is announced at least one quarter prior to the offering of the seminar. Advanced study and research is conducted on topics not covered in other seminars. A major, graded research paper is required. Prerequisite: None.

DA4106 Trust, Influence, and Networks (4-0) Summer
This course examines the underlying nature of trust and influence, especially as they shape and are shaped by social networks. Students will acquire a theoretical foundation for these concepts and how they apply to a broad spectrum of activity, including work processes, military operations, underground movements, information and intelligence operations, governance, and the media; how trust and influence are established, maintained, exploited, and lost; and the functions they serve for individuals, organizations, and societies. Concepts will be illustrated with examples drawn from a variety of contexts. The course is aimed especially at students concerned with unconventional warfare, information operations, network-centric warfare, nation building, civil and military affairs, public affairs, terrorism, and intelligence. Prerequisite: None.

DA4107 Public Diplomacy to Psychological Operations (4-0) Fall
A nation uses various tools to minimize its weaknesses and limitations, and to maximize its strengths and capabilities in the international arena. This course aims to stimulate serious thought about a forgotten aspect of strategy and lay the groundwork for a revival of political-psychological planning and operations within a larger framework of U.S. national security strategy. Topics include: a historical overview of the sources of American diplomacy and values; strategic public diplomacy and the war of ideas; military public affairs and the media; and the power and utility of psychological operations. Case studies will be used throughout the course to reinforce important concepts. Prerequisite: None.
DA4108 Deception, Denial, Surprise, and Counterdeception (4-0) Summer/Fall
An impression about the threats a nation faces shapes its policies and actions in both war and peace-time. Consequently, information has a vital role in understanding threats and creating impressions. At the same time, it is uncertain whether the proliferation of communications technologies and the dissemination of vast amounts of information will keep senior leaders better informed or simply create more confusion. This course aims to stimulate serious thought about how deception, denial, and counterdeception can influence the outcome of a war or contribute to the favorable resolution of an international crisis. Topics include: the theory and process of deception; the role of intelligence; the process of protecting information that could be used by opponents to uncover some truth; and detecting deception. Case studies will be used throughout the course to reinforce important concepts. Prerequisite: None.

DA4110 Culture and Influence (4-0) Quarterly
This seminar aims to provide analytical tools for thinking about culture and the ways in which interacting with different cultures affects U.S. actions abroad, including military operations, democratization, economic development and foreign relations. The first section of the course offers a theoretical overview of academic debates about culture, drawing on literature from the fields of anthropology, political science, and economics. It includes topics such as the role of ethnicity, nationalism and identity in politics, efforts to democratize, economically develop and nation-build in other countries, and the possibility of a current global “clash of civilizations” in international affairs. The second section of the course aims to use first-hand experiences of students’ interactions with various cultures - especially Iraq and Afghanistan - as case studies to apply and test the theoretical debates on culture presented in the first section of the class. Prerequisite: DA3101 and must have completed at least one full quarter of classes.

DA4120 Seminar on Jihadi Information Operations (4-0) Winter/Summer
This advanced seminar is designed as a follow-on course to DA 3120 for students pursuing theses or advanced research projects relevant to the field of Jihadi information operations. Course material will provide a more robust examination of the nature and types of IO campaigns used by both local and transnational Jihadi groups, but will also allow students to pursue and present specialized research on the topic. Prerequisites: DA3120 and a one-page statement of research.

DA4301 Fighting Undeclared Wars: American Approaches (4-0) Spring
How do the United States Government and its armed forces engage in undeclared wars, expeditions, and conflicts below the threshold of wars for the survival of the United States? This course examines those elements of American strategic culture that affect the United States’ capacity to fight these “savage wars of peace.” Historical studies from the American colonial period to the present will enable students to determine the defining aspects of the American approaches to small wars. Prerequisite: None.

DA4303 The Scientific Study of War (4-0) Winter
This course is designed to treat the ‘scientific study of war’ as a debate. Can we study war and warfare using science as a model? If so, why is there such seeming reticence to doing so among policy circles, significant portions of the military community, and general public? What are the strengths and weaknesses of various scientific tools and what do we risk by eschewing science altogether? The course proceeds in two parts. In the first part of the class we examine the history of military thought as it pertains to the question of ‘scientism’. In the second part of the course we look at various methodological approaches to understanding organized conflict and assess their strengths and limitations. These will include theory building (both rhetorical and formal), hypothesis testing using quantitative and qualitative approaches, as well as various forms of simulation. The substantive issues covered include the outbreak of war, the conduct of war, the termination of war, and the relationships between war, civil society, and economics. Prerequisite: Student must have completed at least two full quarters.

DA4410 Models of Conflict (4-0) Summer/Winter
This course deals with the problems faced by a rational decision maker, trying to maximize some payoff in a social setting. A distinction will be made between Type I behavior (optimization in a game against nature), Type II (optimization when faced with agents who react against the decision maker’s perceived behavior), Type III (optimizations against strategic agents), and Type IV (cooperation with other agents). Applications include arms race models, treaty inspections problems, monopolistic behavior, coalition formation, and pursuit games. The computer is used as a modeling tool. Prerequisites: DA2410.

DA4450 Analytical Methods (4-0) Summer/Winter
This course will provide a basic understanding of social science research methodology. The emphasis will be on qualitative research methods to balance the analytical course sequence (including DA2410 and DA3410). The course will also discuss the key concepts of theory, law, and hypotheses. Finally, paying particular attention to case study methodology, we will focus on how theories should be tested. In the end, students will learn how to develop an argument; how to marshal evidence to support your argument; how to test your hypotheses; and how to anticipate and address counter-arguments. Prerequisite: DA2410.

DA4460 Alternate Research Methods and Defense Analysis (4-0) Fall/Spring
This course is the first in a two-quarter sequence intended to familiarize students with a range of methodological approaches applicable to graduate research across the spectrum of topics included within the concept of defense analysis. Both qualitative and quantitative methods are considered in this course, with equal emphasis given to case studies, heuristics, sociological approaches, statistical analyses and formal modeling and game theory. More esoteric approaches will also be briefly considered, as will the blending of methodologies, with the degree of attention given to these approaches being dependent upon specific student interest and need. Beyond the conceptual study of research methods, students will also be exposed to many examples of scholarly works that employ one or more of the methods being studied. The course, though focused on methods, also introduces the concept of research design to help prepare students for the second course in the sequence. Prerequisite: permission of instructor.

DA4470 Designing Operationally Oriented Research Studies (4-0) Winter/Summer
A wide range of concepts of research design are studied in this course, the goal of which is to bring the student to the point of crafting a thesis proposal to guide his or her own master’s level research. The close ties between choices about methodological approach and the forms of research design employed are considered, but the course’s clear emphasis is on design. The larger concepts examined begin with strategic choices about the
"placement" of studies on axes that range from pure theoretical to more policy-oriented applied research, and also reflect choices about pursuing research by quantitative or qualitative means, or some blending of the two. Many examples from scholarly works are used. Further design questions that are explored relate to the nuances of time-based "longitudinal" research of one or a few types of phenomena, and more "latitudinal," cross-sectional studies of a wider range of phenomena observed roughly simultaneously. Other detailed issues considered include how to avoid "selection bias," skewed analysis, omission of relevant variables at the inception of a research project. The ultimate focus of the course is on fostering research designs and methods that are rigorously fair-minded, thorough and impartial in application. Prerequisite: DA4460.

**DA4500 Special Topics in Strategic Analysis (4-0) As Required**
This course will focus on special topics in special operations and low-intensity conflict. The list of topics to be analyzed for the seminar is announced at least one quarter prior to the offering of the seminar. Advanced study and research is conducted on topics not covered in other seminars. A major, graded research paper is required. Prerequisite: DA3802.

**DA4600 Tracking and Disrupting Dark Networks (4-0) Spring/Fall**
This course focuses on dark networks—covert and illegal activity such as drug-trafficking and terror networks. The course's first objective is to identify and describe these networks. We use various social network software packages (e.g., UCINET, NetDraw, Pajek) to aid our identification and description efforts. The second objective is to design intervention strategies to disrupt, destabilize and possibly destroy dark networks once they have been identified and described. The course's focus is on the tactical and operational levels, although the implications for strategic and policy levels also may inform our discussions. Prerequisite: DA2410 or consent of the instructor.

**DA4601 Terrorist Financing (4-0) Summer**
This course will examine how terrorists fund their activities and how they can be tracked and thwarted through their financial networks and footprints. It will cover sources and methods of terrorist financing, including the role of charities, legitimate businesses, and crime; the use of both formal banking systems and informal hawala systems to transfer funds; and money laundering. It will also cover national and international structures, regulations, tools, and efforts to identify, track, capture, and eliminate terrorists and their financial support through their financial transactions. Concepts will be illustrated with case studies of terrorist groups and regions where terrorism is present. Prerequisite: DA3801.

**DA4610 Dynamic Network Analysis (4-0) Winter/Summer**
This course builds on DA4600 (Dark Networks) by offering additional substantive and methodological tools for analyzing relational networks. The course is pragmatically oriented in that it pays particular attention to issues concerning the collection and preparation of relational data in software programs such as Palantir, Analysts Notebook, Microsoft Excel and Microsoft Access and moving to traditional social network analysis tools such as UCINET, Pajek and ORA (Organizational Risk Analyzer). This course will also explore what is being called dynamic network analysis where users not only examine the effects of actual ties (e.g., friendship, kinship) but also "virtual" ties (e.g., shared ideology, skills, knowledge, etc.). Finally, the course will introduce students to techniques using social network data (regression) and geospatial data (geospatial statistics) that will help students tease out which variables (e.g., centrality, education level) are causally related from those that are not. Prerequisite: DA4600 and with permission from instructor.

**DA4710 Critical Thinking and Ethical Decision Making (4-0) Fall**
This course explores both the contemporary and classical Western frameworks used to define effective ethical leadership and decision making. Emphasis is placed on the development of critical thinking and decision-making skills, the recognition of logical fallacies, the analysis of both civilian and military case studies, and the exploration of current ethical issues. Readings for this course span classical selections from such writers as Plato, Rousseau, Kant, and Mill through contemporary papers from the Joint Services Conferences on Professional Ethics. Prerequisite: None.

**DA4760 The Military Advisor (4-0) As Required**
This course examines the many roles of the military advisor as leader, trainer, liaison—in a wide variety of settings, among very different groups of people, and under significantly different conditions. Lessons will be drawn from first-person accounts. What field craft lessons can be learned from past endeavors? What challenges might advisors expect to encounter in the future? This course is open to Department of Defense Analysis students only or by consent of the instructor. Prerequisite: Consent of the instructor.

**DA4770 Ethnic Conflict (4-0) As Required**
This course poses a series of questions, such as “what is a state?” and “what is a nation?”, in order to better understand when and why ethnic conflict erupts and persists. Often cited as the most prevalent form of warfare today, “ethnic conflict” as a term may conceal more that it reveals. For instance, strife in Northern Ireland and in Israel is often explained away as ethno-nationalist and ethno-religious in nature. On the face of it, both cases would seem to have much in common. However, once local histories and regional politics are considered, the two represent radically different models of (and for) ethnic conflict. This course will examine a series of such examples in order to better understand the origins, trajectory, and virulence of ethnic conflict. Prerequisite: DA3750.

**DA4780 Political Anthropology: Methods of Social Control (4-0) Winter**
The aim of this course is to examine in greater detail a variety of methods of controlling: social interactions, resources, societies, states, liberties. Whatever it is that humans feel a need to—or discover they can—control. Questions that will lurk throughout the course are: Why does control matter? To whom does it matter most? Can we draw any generalizations cross-culturally? And to what extent might control differ across societies, strata, time, and space? The course is designed to be comparative and will draw on a series of case studies. Prerequisite: DA3750.

**DA4810 Countering International Terrorism (4-0) Winter**
This course examines the U.S. government's response to international terrorism. It examines policy, strategy, bureaucracy, the role of intelligence, and the media and information campaigns, as well as specific responses to terrorism, such as military force, covert operations, policing, economic sanctions, and diplomacy. The purpose of the course is to provide students a sound basis for developing and evaluating responses to terrorism. Prerequisite: None.

**DA4820 Regional Seminar in Low-Intensity Conflict: Africa (4-0) Winter**
This course teaches students how to analyze the nature of conflict in sub-Saharan Africa—who is likely to fight, where, why, and
when, with special attention paid to the significance of regional complexities and local particularities. Eight cases are presented with two aims: to present a history of post-colonial conflict and to achieve regional balance. Students are specifically taught how to compare and contrast among different sets of factors that tend to feed conflict in Africa. Students also learn about sources of information to which they can turn in the future should conflict flare up in places with which they are unfamiliar. Prerequisite: Student must have completed at least two quarters of instruction in the Defense Analysis Department or NSA or consent of the instructor.

**DA4830 Regional Seminar in Low-Intensity Conflict: Middle East (4-0) Spring**
As part of the regional seminar series, this course examines political violence in the Middle East. The course focuses on the major systemic causes of violence in the Middle East at both the state and nonstate levels. At the state level, sources of violence include the consolidation of state power in fragmented societies, survival strategies by weak states, and competition for scarce regional resources. Violence by nonstate actors is also examined, including violence associated with the Jihadist movement and with the conflict over Palestine. Prerequisite: None.

**DA4840 Regional Seminar in Low-Intensity Conflict: Europe and the Transcaucasus (4-0) Spring**
As part of the regional seminar series, this course examines low-intensity conflict issues in Europe and the Caucasus. The seminar reviews the theoretical literature on political violence and analyzes the recent history of European and Caucasus-based terrorism and insurgency. It offers a series of detailed historical case studies of local organizations and conflict, and focuses on functional issues in Europe and the Caucasus. Prerequisite: None.

**DA4850 Regional Seminar in Low-Intensity Conflict: Latin America (4-0) Spring**
As part of the regional seminar series, this course examines insurgencies in Latin America. The seminar reviews the history of the continent and the Caribbean from colonial times to the present; examines theoretical literature on political violence; and analyzes the recent history of Latin American-based terrorism and insurgency. It offers a series of detailed historical case studies of insurgent organizations and conflicts. Prerequisite: None.

**DA4860 Regional Seminar in Low-Intensity Conflict: Far East (4-0) Spring**
As part of the regional seminar series, this course examines low-intensity conflict issues in the Far East. The seminar reviews the theoretical literature on political violence and analyzes the recent history of Asian-based terrorism and insurgency. It offers a series of detailed case studies of local organizations and conflict, and focuses on functional issues in the Far East. Prerequisite: None.

**DA4900 Advanced Directed Studies in Special Operations and Low-Intensity Conflict (4-0)**
*Fall/Winter/Spring/Summer*
(Variable hours 1.0 - 4.0.) Supervised study in selected areas of special operations and low-intensity conflict to meet the needs of individual students. Format and content may vary. Normally involves individual research under the direction of the instructor and submission of a substantial paper of graduate seminar quality and scope. May be repeated for credit if course content changes. Prerequisite: Consent of the instructor.

**Brief Overview**

The goal of this curriculum is to educate military personnel and civilian officials of the United States in the strategic and operational dimensions of information and its use as an instrument of statecraft.

Graduates will be able to employ information in support of full-spectrum dominance by exploiting the growing worldwide dependence on information systems, and by capitalizing on near real-time global dissemination of information to affect adversary decision cycles, with the goal of achieving information superiority for the United States.

The curriculum is designed for both the specialist who will be assigned to an information operations position and the generalist who will be assigned to an operations directorate. The curriculum includes a core of military art and operations, the human dimension of warfare (psychosocial), analytical methods, and a customized elective sequence designed for each student. Additionally, each student will have an elective sequence designed to further develop an in-depth understanding of joint information operations. Finally, each student will write a thesis relevant to the field of information operations.

**Requirements for Entry**

The Joint Information Operations curriculum is open to officers and civilian employees of the U.S. Government and other countries. U.S. officers must be eligible for a TOP SECRET clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the last five years. A baccalaureate degree earned with above average academic performance and a minimum APC of 355 is required.
Entry Date

The Joint Information Operations curriculum is a six-quarter course of study with entry dates in January and July. If further information is needed, contact the Academic Associate or the Program Officer for this curriculum.

Degree

Requirements for the degree of Master of Science in Information Operations are met as a milestone en route to satisfying the Educational Skill Requirements of the curricular program.

Master of Science in Information Operations

The Master of Science in Information Operations degree will be awarded in accordance with the following degree requirements:

- This degree requires 45 quarter-hours of graduate-level work, of which 15 hours must represent courses at the 4000 level.
- Completion of an acceptable thesis.
- The Chairman of the Defense Analysis Department and the Academic Associate of the Joint Information Operations curriculum approve each individual program.

Subspecialty

Completion of the 698 curriculum qualifies an officer as an Information Operations Subspecialist. The curriculum sponsor is the U.S. Strategic Command.

Typical Subspecialty Jobs

Command Positions at the LTC/CDR level and above
Staff Officer, Plans or Operations: Joint Headquarters Information Operations Officer at the LTC/CDR level and above on service staffs, JTFS, and combatant commands

Typical Course of Study

**Quarter 1**
- DA3882 (4-0) Deterrence, Coercion, and Crisis Management
- DA2010 (4-0) Technical Writing and English Composition
- MN3121 (4-0) Organizational Design
- DA2410 (4-0) Modeling for Military Decision Making, I

**Quarter 2**
- DA3101 (4-0) Warfare in the Information Age
- DA3250 (4-0) Anatomy of Intelligence
- DA4450 (4-0) Analytical Methods
- DA3410 (4-0) Modeling for Military Decision Making, II

**Quarter 3**
- DA4107 (4-0) Public Diplomacy to Psychological Operations
- DA4106 (4-0) Trust, Influence, and Networks
- DA3104 (4-0) Computer Network Attack and Defense
- DA3802 (4-0) Seminar in Guerrilla Warfare

**Quarter 4**
- DA3180 (3-2) Electronic Warfare Principles and Applications
- DA4108 (4-0) Deception, Denial, Surprise Attacks and Counterdeception
- DA3750 (4-0) Anthropology of Conflict
- DA3120 (4-0) Jihadist Information Operations

**Quarter 5**
- DA3801 (4-0) International Terrorism
- DA3720 (4-0) The Rise of Religious Violence
- DAXXXX
- DA4600 (0-8) Tracking and Disrupting Dark Networks

**Quarter 6**
- DA4105 (4-0) Special Topics in IO
- DA4104 (4-0) Militaries and Technological Change
- DA3105 (0-8) Conflict in Cyberspace
- DA4710 (0-8) Critical Thinking and Ethical Decision-making

Educational Skill Requirements (ESR)

Joint Information Operations - Curriculum 698
Subspecialty Code: None

1. **Military Art and Operations**: Graduates will understand the organization, formulation, and execution of national security strategy and national military strategy; the effects of technical developments on warfare; the capabilities and roles of military forces throughout the entire spectrum of conflict; and current defense issues.

2. **Emerging Security Challenges**: Graduates will explore major security issues among states and between states and nonstate actors, with emphasis placed on examining the sources of instability and violence including ethnic conflict, insurgency, and terrorism.

3. **Information Operations (IO)**: Graduates will understand the role of information in winning wars. An important aspect of this requirement is to examine the principles of information operations, to include psychological operations, military deception, computer network operations, electronic warfare, public affairs and command and control warfare, and how the proper integration of IO can contribute to U.S. information dominance of the twenty-first century battlefield. Additionally, graduates will understand the role of
physical (kinetic) attack and civil-military operations (CMO) in support of DoD informational objectives.

4. **Analytical Methods and Applications**: Graduates will have a foundation in analytical methods and their application to military modeling, simulations, and gaming. Close attention will be given to the ways in which such analytical techniques can be used in heuristic and decision-making tools for strategic and operational planning. Attention will be given to both historical and contemporary military applications with particular focus on the ways in which such techniques can be used to address issues of interest to the joint information operations community.

5. **Information Systems**: Graduates will have a systems-level understanding of information systems and their vulnerabilities as well as capabilities.

6. **Intelligence Processes and Applications**: Graduates will know intelligence processes and their applications to joint warfare through the national level, with particular emphasis given to the role of intelligence in planning, executing, and terminating information operations.

7. **Thesis**: Graduates will demonstrate their ability to conduct independent research and analysis, and demonstrate proficiency in presenting the results in writing by means of a thesis appropriate to this curriculum.

**Special Operations/Irregular Warfare - Curriculum 699**

**Academic Associate**
Gordon H. McCormick, Ph.D.
Code DA/Mc, Root Hall, Room 214
(831) 656-2933, DSN 756-2933
FAX (831) 656-2649
GMcCormick@nps.edu

**Program Manager**
Jennifer J. Duncan
Code DA, Root Hall, Room 219
(831) 656-3584, DSN 756-3584
jduncan@nps.edu

**Brief Overview**
The Special Operations/Irregular Warfare curriculum is designed to provide a focused course of study of the conflict spectrum below general conventional war. Graduates of this curriculum will possess a thorough knowledge of the broad range of factors involved in the planning and conduct of these forms of conflict and a detailed understanding of the role of special operations and related forces in U.S. foreign and defense policy. The curriculum examines the sources and dynamics of inter-state and intra-state conflict; the challenge these forms of conflict have posed and are likely to increasingly pose for U.S. security planning; the doctrinal and institutional evolution of the U.S. special operations community; the recent history of political violence and “small wars”; the history of irregular warfare; and contemporary perspectives on low-intensity conflict resolution. The curriculum provides the graduate with a strong background in the areas of strategic analysis, decision making, organization theory, the technological revolution in military affairs, and advanced analytical methods.

**Requirements for Entry**
The Special Operations/Irregular Warfare curriculum is open to officers and civilian employees of the U.S. Government and other countries. U.S. officers must be eligible for a TOP SECRET clearance with access to Sensitive Compartmented Information based on a Special Background Investigation completed within the last five years. A baccalaureate degree earned with above average academic performance and a minimum academic profile code (APC) of 355 is required.

**Entry Date**
The Special Operations/Irregular Warfare curriculum is a six-quarter course of study with entry dates in January and June. If further information is needed, contact the Academic Associate or the Program Manager/Officer for this curriculum.

**Degree**
Requirements for the Master of Science in Defense Analysis degree are met as a milestone en route to satisfying the Educational Skill Requirements of the curricular program. The program currently offers eight specialty tracks. Other specialty tracks can be tailored to meet student interests. The current tracks include Irregular Warfare, Information Operations, Operations Analysis, C4I Systems, Combat Systems, Financial Management, National Security Affairs, and Terrorist Operations and Financing.

**Master of Science in Defense Analysis**
The Master of Science in Defense Analysis degree will be awarded in accordance with the following degree requirements:
- This degree requires 45 quarter-hours of graduate-level work, of which 15 hours must represent courses at the 4000 level in at least two disciplines. Within the course program there must be a specialization sequence consisting of at least six courses.
- In addition to the 45 hours of course credit, an acceptable thesis must be completed.
The Department of Defense offers the Special Operations/Irregular Warfare curriculum 699 and the Information Operations curriculum 698. The Chairman of the Defense Analysis Department approves each individual program.

**Subspecialty**
Completion of the 699 curriculum qualifies an officer as a Special Operations Subspecialist with a subspecialty code of 2500P. The curriculum sponsor is the Commanding General, Special Operations Command.

**Typical Subspecialty Jobs**
Command Positions at the LTC/CDR level
Assistant Operations Officer, U.S. Army Special Forces Group
Staff Officer, Plans or Operations: USSOCOM
Action Officer, Counterterrorism Directorate, ASD (SO/LIC)
Staff Officer, Plans or Operations: Theater Special Operations Commands
Special Warfare Plans: CINCLANT/CINCPAC/NAVEUR
Chief, Intelligence/Plans: COMNAVSPECWARCOM
Joint Plans/Doctrine: COMNAVSPECWARCOM
Joint Staff Action Officer: J-3, Special Operations Directorate (J-3, DDSO)

**Typical Course of Study**

XXXXXX (4-0) Emphasis Elective
DA0810 (0-8) Thesis Research

* Five courses in Low-Intensity Conflict covering different regions of the world will be offered; students will select two of the three.

**Educational Skill Requirements (ESR)**
Special Operations/Irregular Warfare - Curriculum 699

**Subspecialty Code: 2500P**

1. **Strategy and Policy:** Graduates will develop an ability to think strategically, analyze past operations, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s political interests and goals and the ways military power may be used to achieve them. This requirement is fulfilled by completing the first of three Naval War College courses leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit. (Required only for USN and USMC students.)

2. **The Dynamics of Inter-State and Intra-State Conflict:** Students will have an understanding of the political, ethnic, and cultural dynamics that explain the outbreak of war between and within modern states. Particular attention should be given to the issues of intra-state conflict; unconventional forms of inter-state military rivalry; the integrated role of force and diplomacy in crisis management operations short of war; problems of escalation in a crisis environment; military alliance behavior; the dynamic differences between zero-sum and nonzero-sum conflicts; the special problems associated with suppressing and resolving zero-sum engagements; and military and nonmilitary approaches to conflict resolution. Students must have a close understanding of the prevailing analytical literature on these and related subjects and be able to apply this...
literature to a broad range of contemporary and historical cases.

3. **Terrorism, Social Revolution, and Unconventional Warfare**: Graduates will have a detailed understanding of the problems of domestic and international terrorism, social revolution, and other forms of irregular conflict. Close attention must be given to problems of both threat and response. The student must have a close knowledge of the prominent contending theoretical perspectives on the problems of terrorism and social revolution; a detailed knowledge of the operational and organizational dynamics underlying each of these forms of conflict; and a strong working understanding of the ways in which these and similar forms of irregular conflict have been countered historically. Where appropriate, the courses designed to satisfy this requirement should survey the U.S. experience in irregular warfare as well as that of other states that have been prominently engaged in such actions in the past, such as Great Britain, France, Israel, and the former Soviet Union.

4. **Historical and Comparative Perspectives on Special Operations**: Students will have a close understanding of the historical use of special operations forces, to include how these and similar forces have been organized, trained, equipped, directed, and employed. Attention should be given not only to the U.S. experience, but to other national experiences as well, such as those of Great Britain, Germany, Italy, and the former Soviet Union. Similarly, this examination should not be restricted to contemporary history alone, but should extend back into the historical record to examine the ways in which special operations and related forces have been employed creatively to support state objectives in the more distant past. Throughout this inquiry, attention should be given to the contemporary lessons that can be drawn from historic experience.

5. **Special Operations Doctrine, Concepts, and Institutions**: Graduates will have a detailed and conceptual understanding of the development of doctrine for special operations. Work in this area should focus, first, on the defining events and experiences that have stimulated doctrinal and institutional innovations in SO and, second, on the forms these innovations have taken. This examination should cover the period from the end of World War II through the post-Cold War era. These and related issues should be explored creatively in an effort to uncover the appropriate roles, missions, strengths, and limitations of military power in the emerging multipolar environment.

6. **Crisis Management and the Contingent Use of Military Power**: Students will have an understanding of the political role played by military power in operations short of war, the problem of military crisis management, and the contingent use of force in support of local U.S. policy objectives. Attention should be given to the "signaling" role that can be played by military force, the special problems of deterrence and coercion in a crisis environment, and the military consequences of deterrence failure. The student should have a close knowledge of the historical record of "armed diplomacy" throughout the post-war period. This should include knowledge of the individual cases of U.S. military intervention in the Third World, from Lebanon (1958) to Somalia (1993). Attention should be given to both the theoretical and empirical literature on these subjects to provide the student with an understanding of the special political and operational issues associated with operating in a crisis environment.

7. **Comparative Cases of and Responses to Regional Conflict**: Graduates will have a close knowledge of historical and contemporary "small wars" and other forms of low-intensity conflict in Latin America, Asia, and the Middle East. The courses that satisfy this requirement should examine the pertinent theoretical literature on political violence in the region in question, review the recent history of regionally-based terrorism, insurgency, and communal conflict, the regional and international implications of these conflicts, and any functional issues that are of particular interest or concern in the particular area under investigation, such as the religious or communal sources of political violence or the relationship between narcotics and insurgency.

8. **Special Operations and the Revolution in Military Affairs**: Students will have an understanding of the ways in which the proliferation of new and emerging technologies is changing the shape of modern warfare. An important aspect of this requirement is to examine the likely impact of these developments on the dynamics and characteristics of twenty-first century warfare within both the inter-state and intra-state arena. The student must have a working knowledge of the major technological developments and trends in this area (both lethal and nonlethal) and their conflict implications.

9. **Special Operations and Information Warfare**: Graduates will have an understanding of the likely and potential implications of information warfare on future special operations. An important aspect of this requirement is to examine the principles of information warfare and
examine the ways in which SOF can contribute to U.S. information dominance on the twenty-first century battlefield. This examination should address the problem of information dominance at the inter-state and intra-state level of war.

10. **Weapons of Mass Destruction (WMD) Proliferation and Counter-Proliferation**: Students will have an understanding of the developing problem of WMD proliferation and counter-proliferation. Students may have a technical or operational perspective on WMD. The student must have an understanding of the political dynamics of WMD proliferation and an understanding of recent and possible future trends in these areas. Close attention should also be given to the problem of counter-proliferation and the ways in which SOF might approach this task. Students having a technical focus should have a working knowledge of nuclear and non-nuclear WMD technologies.

11. **Analytical Methods and Applications**: Each student will receive grounding in analytical methods and their application to military modeling, simulations, and gaming. Close attention will be given to the ways in which such analytical techniques can be used as heuristic and decision-making tools for strategic and operational planning. Attention will be given to both historical and contemporary military applications, with particular focus on the ways in which such techniques can be used to address issues of interest to the special operations community.

12. **Strategic and Operational Complexity**: Special Operations (SO) is a style of warfare. No traditional single academic discipline can adequately address the educational requirements of the SO community, so an interdisciplinary approach is required. Each student will develop a course of study that permits him or her to pursue a disciplinary orientation that best suits their particular academic background and interests within the substantive limits of the other ESRs.

**Department of Information Sciences**

**Chairman**

Dan C. Boger, Ph.D.
Code IS, Glasgow West, Room 3005

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

Tarek Abdel-Hamid, Professor (1986); Ph.D., Massachusetts Institute of Technology, 1986.

Wolfgang Baer, Research Associate Professor (1994); Ph.D., University of California at Berkeley, 1972.

Albert Barreto, Lecturer (2006); M.S., University of Phoenix, 2005.

Richard Bergin, Visiting Assistant Professor (2002); M.S., University of Southern California, 1998.

Dan C. Boger, Chairman, Department of Information Sciences and Professor (1979); Ph.D., University of California at Berkeley, 1979.

Alexander Bordetsky, Associate Professor (2000); Ph.D., Chelyabinsk State Technical University of Russia, 1982.

Eugene Bourakov, Research Associate (2002); MSEE, Chelyabinsk State Technical University of Russia, 1974.

Donald Brutzman, Associate Professor (1994); Ph.D., Naval Postgraduate School, 1994.

Rex A. Buddenberg, Senior Lecturer (1993); M.S., Naval Postgraduate School, 1986.

Raymond J. Buettner, Jr., Associate Professor (1999); Ph.D., Stanford University, 2003.

Dale M. Courtney, Lecturer (2000); M.S., Naval Postgraduate School, 1996.

James Ehler, Research Associate (2004); M.S., Naval Postgraduate School, 1995.

Raymond Elliott, Lecturer (2001); MBA, Golden Gate University, 2001.

Edward Fisher, Lecturer (2005); M.A., California State University, 1989.

Shelley P. Gallup, Research Associate Professor (1999); Ph.D., Old Dominion University, 1998.

Frederick Hayes-Roth, Professor (2002); Ph.D., University of Michigan, 1974.

Thomas J. Housel, Professor (2001); Ph.D., University of Utah, 1980.

Susan Hutchins, Research Associate Professor (1994); M.S., San Diego State University, 1983.

Steven J. Iatrou, Senior Lecturer (2000); M.S., Naval Postgraduate School, 1992.

Nelson J. Irvine, Research Assistant Professor (2003); Ph.D., Case Western Reserve University, 1973.

Erik Jansen, Senior Lecturer (1994); Ph.D., University of Southern California, 1987.

Magdi N. Kamel, Associate Professor (1988); Ph.D., University of Pennsylvania, 1988.

William G. Kemple, Associate Professor (1990); Ph.D., University of California at Riverside, 1991.

Anthony Kendall, Lecturer (1999); M.S., Naval Postgraduate School, 1980.

David Kleinman, Research Professor (1994); Ph.D., Massachusetts Institute of Technology, 1967.

Randall Maule, Visiting Associate Professor (2003); Ph.D., University of Florida, 1987.

Mark Nissen, Professor, (1996); Ph.D., University of Southern California, 1996.

John Osmundson, Research Associate Professor (1995); Ph.D., University of Maryland, 1968.

Karl D. Pfeiffer, Assistant Professor (2004); Ph.D., North Carolina State University, 2001.

David Roberts, LCDR, USN, Lecturer (2010); MBA, Naval Postgraduate School, 2010.

Brian J. Steckler, Lecturer (2002); M.S., Naval Postgraduate School, 1994.

John Van Hise, Research Associate (2001); M.S., Naval Postgraduate School, 1979.

Emeritus Professors

Daniel R. Dolk, Professor (1982); Ph.D., University of Arizona, 1982.

Carl R. Jones, Professor Emeritus (1965); Ph.D., Claremont Graduate School, 1965.

Michael G. Sovereign, Professor Emeritus (1970); Ph.D., Purdue University, 1965.

Brief Overview

The Department of Information Sciences provides in-residence graduate education, as well as a continuum of career-long learning opportunities, in support of defense requirements in the areas of information sciences, systems, and operations. The Department maintains an internationally respected research program in selected areas of information sciences, systems, and operations, and has the capability of developing research programs in additional areas of information sciences that are required to support graduate education.

Degrees

The Department provides the following degree programs:

Master of Science in Information Technology Management

The degree of Master of Science in Information Technology Management will be awarded at the completion of the appropriate interdisciplinary program in Curriculum 370. The Master of Science in Information Technology Management requires:

- Completion or validation of core courses in each of the following disciplines: Information Systems, Computer Science, Electrical and Computer Engineering, and Systems Management.
- Completion of a minimum of 52 hours of graduate-level courses, at least 20 hours of which are at the 4000 level.
- Completion of an acceptable thesis.
- Approval of the candidate’s program by the Chairman, Information Sciences Department.
Master of Science in Information Warfare Systems Engineering/Master of Science in Electronic Warfare Systems Engineering

The degree of Master of Science in Information Warfare Systems Engineering/Master of Science in Electronic Warfare Systems Engineering will be awarded at the completion of a multidisciplinary program in Curricula 595 and 596, respectively. The Master of Science in Information Warfare Systems Engineering/Master of Science in Electronic Warfare Systems Engineering programs have not been reviewed by ABET. The Master of Science in Information Warfare Systems Engineering/Master of Science in Electronic Warfare Systems Engineering requires:

- Completion of a minimum of 45 quarter-hours of graduate-level work, of which at least 15 hours must represent courses at the 4000 level.
- Graduate courses in at least four different academic disciplines must be included and a course at the 4000 level must be included in two disciplines.
- An approved sequence of at least three courses, constituting advanced specialization in one area, must be included.
- In addition to the 45 graduate hours of course work, an acceptable thesis must be completed.
- The candidate’s program must be approved by the Chairman, Information Sciences Department.

The Master of Science in Remote Sensing Intelligence

The degree of Master of Science in Remote Sensing Intelligence will be awarded at the completion of the appropriate interdisciplinary program in Curriculum 475. The Master of Science in Remote Sensing Intelligence requires:

- Completion or validation of core courses in each of the following disciplines: Space Systems, Operational Science, Information Systems, Computer Science, and National Security.
- Completion of a minimum of 40 graduate level credits, including the required course sequence with optional components approved by the Department Chair.
- Completion of an acceptable thesis.
- Approval of the candidate’s program by the Chairman, Information Sciences Department.

Master of Science in Systems Technology

The degree of Master of Science in Systems Technology (Command, Control, and Communications) will be awarded at the completion of the Joint Command, Control, Communications, Computers, and Intelligence (C4I) interdisciplinary program, Curriculum 365, carried out in accordance with the following degree requirements:

- Completion of a minimum of 45 quarter-hours of graduate-level work in four different academic disciplines, of which at least 15 hours must represent courses at the 4000 level in at least two of the disciplines.
- Within the course program there must be a specialization sequence consisting of at least three courses.
- In addition to the 45 hours of course credit, an acceptable thesis must be completed.
- The program must be approved by the Chairman, Information Sciences Department.

Master of Science in Information Systems and Operations

The degree of Master of Science in Information Systems and Operations will be awarded at the completion of the Information Systems and Operations interdisciplinary program, Curriculum 356, in accordance with the following degree requirements:

- Completion of 40 quarter-hours of graduate course work, of which 15 hours must be at 4000 level.
- An acceptable thesis or project approved by the Chairman, Information Sciences Department.
- Individual student programs to be approved by the Chairman, Information Sciences Department.

Doctor of Philosophy in Information Sciences

The Department offers the Ph.D. degree in Information Sciences. The program begins with advanced course work guided by the Departmental Ph.D. Committee, which leads to qualifying examinations. The primary emphasis then shifts to the student's research program, culminating in the Ph.D. dissertation. Three areas of primary concentration within the field of information sciences are available: information systems, command and control, and information operations/warfare. Interested potential students may obtain further details by contacting the Information Sciences Ph.D. Program Director, Code IS, 589 Dyer Road, Room 200A, Naval Postgraduate School, Monterey, CA 93943-5100. An applicant to the Ph.D. program will need to apply to the School Admissions Office formally (see www.nps.edu/Admissions/PhD/index.html), and will need to submit: an application letter describing general background, interests and experience in research, and career goals; official or certified copies of all academic transcripts; results of a GRE general examination taken within the past five years; and three letters of references relating to your suitability to pursue a doctoral degree. Send these materials to the Director of Admissions, 1 University Circle, He-022, Naval Postgraduate School, Monterey, CA 93943. Detailed admission procedures may vary depending on the individual’s location and position. However, in all cases, the student must fulfill the general school requirements for the doctoral degree. Residence for this program is one year at the minimum, and the program
generally requires three years beyond completion of a master’s degree to complete.

### Information Sciences Course Descriptions

#### CC Courses

**CC0001. Seminar Series in C4I (0-2) As Required**
Seminars (consisting of guest lectures, video teleconferences, and field trips) are scheduled to provide background information on specific Joint C4I systems and activities. Prerequisite: None.

**CC0810 Thesis Research for C4I Students (0-8) As Required**
Thesis research time for JC4I students. Prerequisite: None.

**CC3000 Command and Control (4-0) As Required**
No single activity in military operations is more important than C2! This course focuses on the fundamental theories of both command and control as they apply in current and emerging operational environments including but not limited to the nuances of cross domain C2 involving cyber, information, and kinetic operations. Emphasis is placed on understanding established theories associated with control of forces and systems and how application of these theories varies according to changing and evolving environments, technologies and organizations. Theoretical concepts may include but are not limited to decision making, organizational design, control, motivation, and information theories. Additionally, the course will explore the evolution of information systems to include current enterprise and cloud architectures and how they impact control processes and the ability to command. Cases involving US national security and military events are studied as a means of identifying successes and failures in the application of these theories. Prerequisites: none. Classification: SECRET.

**CC3102 Combat Modeling and Analysis for Command and Control (3-2) As Required**
Emphasis is on the use of mathematical and computer models to help solve operational problems or improve the efficiency and effectiveness of control. Topics include but are not limited to the evolution of computer based experimentation and modeling, fundamental mathematical modeling techniques, examination and evaluation of current modeling software, and the interpretation and application of model outputs to real-world situations. The course is the basis for later courses on the use of modeling techniques to conduct detailed analysis and evaluation of command and control processes and systems. Prerequisites: CC3000 and OS3105 (may be concurrent). Classification: U.S. Only, SECRET.

**CC3250 Command, Control and Communications (C3) (4-0) Winter, Summer**
CC3250 is designed to introduce technical curriculum students to command and control theory and processes as well as the first principles associated with modern electronic communication systems of interest to military operations. Specific course topics include command and control (C2) elements and concepts, the technology influence on C2 as well as fundamental communications principles and concepts to include: signal representations, noise considerations, link analysis, analog/digital modulations and Defense Department systems within the Global Information Grid concept. Prerequisites: SI1001, SI1002, or equivalent; SI2011 or equivalent.

**CC3900 Special Topics in C4ISR (V-V) As Required**
Supervised study in selected areas of command, control, and communications to meet the needs of individual students. May be repeated for credit if course content changes. Graded on Pass/Fail basis only. Prerequisite: Consent of the Academic Associate.

**CC4101 Systems Engineering for Joint C4I (4-2) Summer**
Provide an introduction to systems engineering by performing systems engineering activities, using the tools that a systems engineer uses, analyzing the procedures a systems engineer follows, and performing an actual systems design on a joint C4I system element. The course will use practical examples to explain the fundamental principles, while maximizing the hands-on practical systems design activities. A required course for the 365 curriculum. Prerequisites: CC3000 and OS3604. Classification: TOP SECRET.

**CC4103 Joint C4I Systems Evaluation (2-4) As Required**

**CC4250 Enterprise Architecture (4-0) Winter, Summer**
The focus of the course is the DoD enterprise and extended enterprise in terms of its information architecture. The course will look at Enterprise Architecture at the strategic, tactical and operational levels. The activities will include analysis of state of the art architectures, modeling enterprises, viewpoints and communications requirements. The student will analyze existing architectures, learn the relevance and limitations of enterprise architectures and to learn to appreciate the strengths and limitations of various approaches. The student will also become familiar with Service oriented architecture, the Information Technology Infrastructure Library and the role of components in the delivery of infrastructure products and standards. Prerequisites: CC3000, IS3502.

**CC4900 Advanced Study in C4ISR (V-V) As Required**
Supervised study in selected areas of command, control, and communications to meet the needs of individual students. May be repeated for credit if course content changes. Graded on Pass/Fail basis only. Prerequisite: Consent of the Academic Associate.

**CC4913 Policies and Problems in C2 (4-0) As Required**
Study of the fundamental role C2 systems fulfill in operational military situations, including the full range of military operations. Analysis of the changing role of organizational structures and processes as well as technologies and impacts on C2 systems requirements and designs. Consideration of the complexities imposed on C2 systems as the force structure becomes more heterogeneous, as in the case of NATO and NGOs. Case study of selected incidents and systems with a focus on current problems. This course is specifically for students in the 365 curriculum. Prerequisite: CC4103.

**CC4920 Multi-Criteria Analysis (4-0) Winter, Summer**
The major goal of this course is to learn where and how to search for the best solutions for problems with contradictory criteria. This course will introduce methodology for correct statement and solution of engineering optimization problems, called the Parameter Space Investigation (PSI) method. This technique has been widely integrated into various fields of industry, science, and technology. The PSI method is implemented in the comprehensive software system MOVI (Multicriteria Optimization...
and Vector Identification) that will be used and distributed during the course. Prerequisites: None.

**IO Courses**

**IO0001 Seminar Series in IO Topics (0-2) As Required**
Seminar lectures in Information Operations. Prerequisite: None.

**IO0810 Thesis Research for IO (0-8) As Required**
Information Operations thesis research. Prerequisite: None.

**IO3100 Information Operations (4-0) Fall/Winter/Summer**
This course, available in the classroom or through asynchronous Internet-based education, provides a survey of Information Operations (IO) along the time line of peace, to conflict, and back to the cessation of hostilities. Students study the specific methods and elements of IO and how they integrate with other elements of national power to meet national security objectives. Prerequisite: None.

**IO4300 Planning and Execution of Military Operations in the Information Environment (3-2) Spring/Summer**
This course refines the students' ability to develop and analyze IO plans. Students learn to integrate seemingly disparate disciplines (national security affairs, information warfare/operations, computer science, physics (kinetic warfare), and operations analysis) into a cogent operations plan as an integral part of a theater campaign plan. Prerequisites: NW3230, IW3101 or IO3100, OS3105 or equivalent OS course. Classification: US only with SECRET clearance.

**IS Courses**

**IS0001 Seminar Sessions (0-2) As Required**
Seminar Sessions in Information Systems for IST Students. Prerequisite: None.

**IS0810 Thesis Research (0-8) As Required**
Thesis research time for IST Students. Prerequisite: None.

**IS2000 Introduction to Information Technology (3-1) As Required**
Provide an introduction to the field of Information Technology Management and the functions and responsibilities of the information technology manager. Offered as part of the E-FIST certificate for distance learning only. Prerequisite: None.

**IS2010 Introduction to Information Technology (1-2) Fall/Winter/Spring/Summer**
This course provides an overview of the technology used to implement modern information systems. Extensive use of hands-on laboratories and demonstrations provide students with a thorough introduction to microcomputer architecture and design, the Internet and Web page development, local area network (LAN) operation and administration, databases, management information systems, and computer security. The strong emphasis on hardware and software technical issues in this course establishes the foundation necessary for studying IT management issues during the follow-on course. Prerequisite: None.

**IS2020 Introduction to Object-Oriented Programming Using Visual Basic (2-3) As Required**
A first course in computer programming using VB, DoN's IT21 mandated standard, as a high-level, event-driven, object-oriented, programming language. Course emphasis will be on planning, program development, graphical user interfaces, rapid prototyping, program construction, data types, operations, control flow, arrays, records, file I/O, database access, random number generators, and event-driven OOP structures. Prerequisite: None.

**IS2025 Fundamentals of Networks (3-2) Spring**
Undergraduate level Network fundamentals class for the E-FIST program. Security Clearance: CONFIDENTIAL.

**IS3001 Information Sciences for Defense (3-0) Fall/Spring**
The purpose of this overview course is to introduce first quarter students from the Information Systems and Technology and the Joint C4I curricula to an overview of the information environment in the Department of Defense. During this quarter students will be exposed to the tactical and business systems, technologies, organization, culture, policies and issues regarding the acquisition, operations and management of technology. Specific topics include the DoD information environment, enterprise architecture and systems, systems development polices and processes as well as critical issues of security, privacy and issues of identity. Prerequisite: None.

**IS3181 Integrating and Leveraging Information Technologies (3-0) As Required**
The attributes of information technology are studied in conjunction with the management aspects of developing and maintaining systems in support of DoN and the joint services. This course is heavily project- and case-study oriented. Minicases force the student to apply theory from reading to realistic DoN settings. These case studies will force trade-offs, resource allocation decisions, development of strategy for specific problems, etc. Prerequisite: Lead program students only.

**IS3200 Enterprise Systems Analysis and Design (3-2) Fall/Spring**
This course covers the concepts, models, and processes used by enterprise systems analysts to determine: 1) The current situation of an organization that desires to improve itself; 2) The problems and opportunities in this situation; and 3) The plans and specifications that can be formed to feasibly address these problems or opportunities. The course covers how enterprise -level system analysis is performed to successfully define and develop systems requirements how to apply these to system design. Additionally, the fundamentals of information system design are discussed and applied. The overall goal for the course is for the students to understand the system development life cycle, system analysis and design methodologies, and have applied them in a team project within the class. Prerequisite: None.

**IS3201 Enterprise Database Management Systems (4-2) Fall/Spring**
Enterprise database management systems are the core of all information systems capabilities. The course provides the foundational knowledge, language, and capabilities to create, operate and manage enterprise-level data management systems. Students will learn the essential activities of how to store, retrieve, manage, and control data using a relational database management system. They not only will learn how to build a database application using modern database tools, but also how to deploy database technology in a larger, organizational context to support problem solving. Further, by the time students have completed the course, they will understand the major steps required to manage complex database projects. Prerequisite: None.

**IS3202 Thin-Client Database Systems Development (4-2) Winter/Summer**
At the core of modern information systems is the ability for remote users to gain access to centralized data management services. This
course is designed to familiarize students with the various approaches for developing database-driven, interactive, dynamic capabilities for accessing data through thin-client systems. These approaches include client-side scripting using Java scripts; server-side scripting using Active Server Pages; and Extensible Markup Language (XML) technologies. An integrated development environment is used throughout the course to demonstrate the application of these approaches. Students are expected to develop a fully functional, dynamic capability using the approaches/technologies learned in class. Prerequisites: IS3200 and IS3201, or consent of the instructor.

**IS3210 Information and Knowledge Management Issues in Defense (4-0) Spring**
This elective course on defense knowledge and information management integrates theory with practice to help prepare current and future leaders to leverage knowledge and knowing for competitive advantage in learning organizations. Knowing refers to knowledge in action and is concerned with activities (e.g., decisions, behaviors, work) in the organization. Using emerging knowledge-flow theory as its intellectual base, the theoretical part of the course helps professionals understand: how knowledge is both critical and unique; how it builds and depends on information; and how to design effective work processes, organizations, and technologies around dynamic knowledge and information. Using application cases for group critique, the problem-based learning part of the course examines a diverse set of knowledge-based processes and organizations in operation today, and it offers both principles for and experience in identifying strengths and weaknesses. Students also select new or operational knowledge-based processes for evaluation, and work individually as consultants to assess and redesign them around knowledge flows. This course may be offered as an online course. You can view more details at the NPS online website. Prerequisite: None.

**IS3301 Computer-Based Tools for Decision Support (3-2) Fall/Spring**
This course introduces the principles for designing, implementing, and using computer-based tools to support a variety of decision-making situations. A key objective of the course is to introduce managerial decision-making technology in a format that is not too abstract or too mathematical. We cover a variety of analytical techniques for decision making in complex environments, involving single or multiple criteria made under certainty and uncertainty. Students learn the difference between building "private" models and "public" models and are introduced to software engineering practices for engineering quality models. Exemplary computer-based applications that support or involve the use of formal decision making methods and tools are discussed. Group projects will supplement and reinforce the course’s learning objectives. Prerequisites: IS3200, IS3201.

**IS3302 Database Management for Decision Support (3-2) Summer/Winter**
Database management systems that support decision making constitute essential components of information-driven organizations. These systems are employed in a wide array of activities, ranging from combat support to logistics and administration. This course covers the essential aspects of database management systems and their role in supporting decision making. The course is a hands-on, technically oriented course that provides students with an understanding of conceptual database management techniques as well as the application using decision support tools. This course is intended for students in the ISO (356) and IC4I (365) curricula. Prerequisite: None.

**IS3330 Research Methods for Information Sciences (3-0) Summer/Winter**
The purpose of this course is to provide an overview of research design for research in the Information Sciences (IS) field. This overview consists of understanding the preliminary considerations that go into selecting a qualitative, quantitative, or mixed methods research design. These include knowing the definition for these different approaches, considering philosophical worldviews, reviewing the literature, understanding the use of theory, anticipating ethical issues, and developing writing strategies. We will discuss the process of research as it relates to each approach in IS research. This process includes writing an introduction, specifying a purpose statement, and developing research questions and/or hypotheses. This course will focus on the methods and procedures for quantitative, qualitative, and mixed methods studies. Prerequisites: None.

**IS3333 Thesis Research for Information Sciences (2-0) Fall/Spring**
Introduction to the thesis research process and requirements for IS Department students. Prerequisite: None.

**IS3502 Network Operations I (4-2) Winter/Summer**
This course introduces the basics of network operations. Topics covered include but are not limited to configuring and managing networks, routers, and servers (file, e-mail, web, DNS, printer, etc.); network monitoring and traffic analysis; storage and bandwidth allocation; quality of service, performance monitoring and analysis; deploying and managing firewalls and malware/intrusion detection/prevention systems; configuring access controls; managing and retaining logs; setting up VPNs and secure connections; business continuity and disaster recovery planning; managing software patches; and network policy and compliance. Prerequisites: None.

**IS3504 Modern Network Operating Systems: Windows 2003 Server (3-2) As Required**
This course focuses on the planning, design, installation, configuration, and management of network operating systems used throughout DoD and private industry. Network operating systems are compared with single-user operating systems to understand differences and similarities. Popular client/server and peer-to-peer systems are examined to provide a thorough understanding of the correct applications of each. Network labs provide in-depth analysis of such topics as file server configuration and administration, multilevel network security procedures, and global file server synchronization processes. Prerequisite: IS3502.

**IS3710 Identity Management Operations (3-0) As Required**
This course will integrate theory with practice to help prepare students with ways of thinking about how to leverage Identity for competitive advantage in operational environments. The focus of this course is on the design architecture for integrated systems which will allow for the collection, analysis, storage, and dissemination of information related to the identity of a person. This course is one of several that will collectively comprise the requirements for Identity Management specialization tracks in both the Information Science and Computer Science degree programs. Completion of four courses: CS3686, CS3699, IS3710, and IS3720, will meet the requirements for earning the Federal/DoD Identity Management Certificate offered by NPS. Prerequisites: None.
IS3720 Identity Management Policy (3-0)
The goals for the Identity Management Policy Course are to provide the student with the necessary ways to think about the creation or implementation of Identity Management policies. The focus is to provide students with a background on the approaches to the verification of personal identity and the implications in a digital environment. As individuals become more conscious of the collection of data regarding their actions, the student must understand the implications of privacy in this changing environment. There will be a strong, case-based focus on the laws, ethics, and moral implications of the collection, analysis, storage, and dissemination of personal data so that the student can prudently apply the appropriate policy. Additionally, the policies and procedures for the provisioning, propagating, maintaining, and removal of personally identifiable information will be discussed. The student will be required to develop a case study for a scenario that will address the policy implications and create a solution to meet the operational requirements. Prerequisite: None.

IS4010 Technology in Homeland Security (4-0)
Fall/Winter/Spring
Government agencies in today's Information Age are more dependent than ever on technology and information sharing. This course provides students involved in homeland security with a broad overview of homeland security technology, information systems, sensors, networks, knowledge management, and information security. The course focuses on technology as a tool to support homeland security personnel regardless of functional specialty. The study of principles and theory is combined with homeland security examples and cases. The student will gain a perspective on the important role of senior management in enterprise-level computing and their personal role as change agents. The knowledge and skills acquired will make the students more effective technology users and help them recognize opportunities where the application of technology solutions can provide a strategic advantage and therefore make a contribution to homeland security. The ultimate objectives are to show students how homeland security professionals can exploit technology and not be exploited by it, and to wisely use technology in the most efficient and productive manner. This course is open to students in the Homeland Security Program only. Prerequisite: None.

IS4031 Economic Evaluation for Enterprise Technology Investments (4-0) Fall/Spring
The objectives of this course are to provide the student with the tools and methodologies that will allow for the objective economic evaluation of enterprise information systems from a business perspective. The course will focus on the alignment of IT investment to strategic goals and productivity, the methods of obtaining IT services through outsourcing, and the importance of managing to the needs of the enterprise. Included in this course are the components for creating a Defense Business Case, options theory/real options and market comparables. The goal is for the students to be able to include critical economic factors into IT investment decision-making. Prerequisite: None.

IS4052 Imaging Spectrometry Theory, Analysis, and Applications (3-2) Winter
This course is designed to enable scientists to analyze and exploit data from hyperspectral sensors. The course utilizes a blend of lectures, demonstrations, case histories, and hands-on imaging spectrometer data analysis. The physical properties of Earth surface materials are defined as the basis for imaging spectrometry utilizing visible/near-infrared (VNIR), short wave infrared(SWIR), and long wave infrared (LWIR) data. Students will learn the theory behind imaging spectrometry measurements and systems, how to analyze the data, and apply lessons learned to analysis of a variety of imaging spectrometer datasets. Prerequisites: PH3052. Corequisites: IS4053.

IS4053 Spectral and Polarimetric Tools and Analysis Techniques (3-2) Winter
Analysis of multi-dimensional data sets, from multispectral and optical polarimetric imaging systems. Nature of spectral data, analysis methods with application to military and civil problems. Primary focus is on the use of statistical techniques (spectral imaging). Basic theory of optical polarimetric imaging and analysis. Prerequisite: PH3052.

IS4054 Remote Sensing III: Analysis Techniques for Passive Imaging Systems (3-1) Spring
Analysis techniques for data from national Means, tools and applications for systems, applications to military and intelligence problems. TS(SCI) Prerequisites: SS3001.

IS4055 Analysis Techniques for Active Imaging Systems (3-2) Summer
Active imaging systems (RADAR), tools for analysis, application to civil and military problems. Theory of non-literal analysis techniques for RADAR(interferometric synthetic aperture RADAR). Application of RADAR to development of digital elevation models (DEMs) and terrain classification. Application of radar polarimetry to terrain classification. Prerequisites: PH3052.

IS4056 Geospatial Intelligence Applications (3-2) Summer
Theory and application of geographic information systems. Topics include spatial data models, map projections, data fusion, satellite surveying, spatial query and analysis, and cartographic principles. Application of GIS to decision making processes and the solution of current real-world problems. Prerequisites: None.

IS4060 Analysis Techniques for Laser Imaging Systems (LiDAR) (3-2) Spring
Exploitation of terrestrial and airborne laser scanning systems for military and intelligence purposes. Technology basics are defined, operational systems described, and analysis techniques developed. Applications developed include the production of Digital Elevation Models and terrain classification, and are addressed by examples and in laboratory applications of commercial software. Current state of the art single return and waveform system exploitation is developed. Prerequisites: PH3052.

IS4182 Enterprise Information Systems Strategy and Policy (4-0) Fall/Spring
Enterprise Information Systems Strategy and Policy: How to Be an Effective CIO or IT Strategist. This course aims to make students fluent in architecture-based decision making for enterprise systems strategy and policy. Students should become capable of significantly enhancing the prospects of an enterprise through effective, strategic use of IT architecture. The student should be capable of suggesting significant improvements in existing or proposed architectures, demonstrating both analysis and synthesis skills. Topics include: the enterprise and extended enterprise; information processing for competitive superiority; technology evolution and adaptive stresses; the role of the era; information systems architecture and enterprise architecture; architecting; U.S. Government architecture efforts; 000 imperatives; information superiority; network-centric warfare; and architecture synthesis and evaluation. Prerequisite: None.
IS4188 Collaborative Technologies (3-2) As Required
Collaborative technologies and multiple-agent, decision-support architectures become the central application elements of emerging GIG, FORCEnet, DARPA NICCI, and other sensor/decision maker networking initiatives. The first part of the course is based on the analysis of collaboration in different human organizations and the requirements of agent-based, decision-support architecture. The second part of the course is focused on studies of intelligent agents and multiple-agent architecture. From the beginning of the course, students are involved in hands-on practice with wireless collaborative environments including GPS units, pocket PCs, laptops, and other devices. We start with using the peer-to-peer Groove collaborative tool and NPS agents-facilitators. We later move on to several demonstrations, including the client-server GENOA system implementation for Homeland Security and PACOM POST virtual meetings via the Lotus Same Place System. Prerequisite: None.

IS4201 Enterprise Data Management (4-2) As Required
An elective course that will focus on the technological infrastructure, as well as the management processes, related to the operations and maintenance of enterprise data management systems. Prerequisite: IS3201.

IS4210 Knowledge Superiority (3-0) As Required
This elective course on knowledge superiority integrates theory with practice to help prepare current and future leaders to leverage knowledge and knowing for competitive advantage in learning organizations. Knowing refers to knowledge in action, and is concerned with activities (e.g., decision, behaviors, work) in the organization. Using emerging knowledge-flow theory as its intellectual base, the theoretical part of the course helps professionals understand how knowledge is both critical and unique, and equips them to design effective work processes, organizations, and technologies around knowledge flows. Using real-time cases for group critique, the problem-based learning part of the course examines a diverse set of knowledge-based processes and organizations in operation today, and offers both principles for and experience in identifying strengths and weaknesses. Students also select new or operational knowledge-based processes for evaluation, and work individually as consultants to assess and redesign them around knowledge flows. This course may be offered as an online course. You can view more details at the NPS web site. Prerequisites: IS3201 and IS3301, or IS3302, or equivalent with consent of the instructor.

IS4220 Technology Enabled Process Improvement (3-2) Winter/Spring
The focus of this class is on practical application of Business Process Reengineering (BPR), lean six sigma (L6S) and TQM principles to enable innovative redesigns of core defense processes. These tools are principles that define a set of heuristics or “rules-of-thumb” that help the analyst accomplish the transformational goals required in dramatically changing core processes to create greater value. The course makes use of process analysis and measurement methodologies to ensure productivity increases as a result of the process redesigns. The students will define an existing process, model it in simulation software and analyze the current state. Then through the application of learned principles, demonstrate the application of IT to the process and compare the before and after to determine impact. Prerequisites: IS3200 and IS4031, or consent of the instructor.

IS4300 Project Management for Enterprise Systems (3-2) Fall/Spring
The objective of this course is to educate the student in areas of great concern to the DoD in the field of IT project management to include software engineering and risk management. The course examines both the technological tools of software production as well as the software engineering techniques for software project management. Software testing, metrics, and reliability are also covered. DoD software standards and metrics programs are included. Prerequisites: CS3030 and IS3200 and IS3171 and OS3004.

IS4301 Data Warehousing, Data Mining, and Visualization (4-2) Winter
This elective course is designed to provide students with the basic concepts of data warehousing, data mining, and visualization. The course emphasizes both technical and managerial issues and the implications of these emerging technologies on those issues. The course has a distinctly “real-world” and DoD orientation that emphasizes application and implementation over design and development. A state-of-the-art system/tool will be used to help students understand and apply the concepts presented in the class. Prerequisites: IS3201 and IS3301 and IS3200, or consent of the instructor.

IS4505 Wireless Networking (3-2) Winter/Summer
This course provides students with wireless networking fundamentals essential to design, install, administer, and support IEEE 802.11-compliant wireless networks. The course content and format is aligned with the Planet3 Wireless Certified Wireless Network Administrator (CWNA) Official Study Guide. Students who successfully complete this course will be prepared to take the CWNA certification exam. Prerequisites: IS3502 or CS3502 and EO3052, or consent of the instructor.

IS4520 Systems Thinking and Modeling for a Complex World (4-0) Spring
This course introduces system dynamics modeling for the analysis of organizational policy and strategy. Students will learn to visualize an organization in terms of the structures and policies that create dynamics and regulate performance. The goal is to use the analysis and modeling techniques of system dynamics to improve their understanding of how complex organizational structures drive organizational performance, and then to use that understanding to design high-leverage interventions to achieve organizational goals. We use computer-based simulations to model long-term side effects of decisions, systematically explore new strategies, and develop our understanding of complex systems (analogous to the “flight simulators” that pilots use to learn about the dynamics of flying an aircraft). Prerequisite: None.

IS4550 Internet Appliances and Me-Centric Computing (3-2) Winter
In the next decade, computing as we know it will be radically transformed around highly personalized devices that know their users, know how to get work done, and can interact with billions of devices and services over the Internet. Computing empires built up on traditional OSI 7-level stacks will lose their preeminence. In the emerging new world of Internet appliances, the center of the universe will become the individual and risk management. The course will be built around knowledge of how to serve that user. Billions more people will gain access to computing power this way, and our daily experience will shift from endless efforts to tame incomprehensible software products to being masters of a universe of appliances and services that aim to please. This transition is inevitable, because
hyper-complex technology isn’t welcomed or assimilated fast enough, and pressures exist to find better paths to market. The clear path for powerful technology is to reach many more customers through a radical simplification of what customers must do to employ it. This revolution is underway now, and it will fundamentally alter the landscape for IT, IT management, and strategic uses of technology. The course will look into various technologies including personalization, services, wireless communications, Internet (including IP v. 6), and identity services that are driving the changes. Student projects will create Me-Centric innovations pertinent to their domains of interest. Prerequisite: None.

**IS4700 Introduction to the Philosophy of Science (3-2) Winter**

This course is designed to help prepare the prospective Ph.D. in Information Sciences candidate to engage in original research. The focus will be on understanding the underpinnings of doing science by studying the work of modern philosophers of science. The course will review the epistemologies (economic, behavioral, physics-based, and general systems-based) serving as a scaffolding for the development of original theory development in the field of IS. The characteristic features of the received view, hypothetico-deductive formalism will be reviewed, along with the modern challenges to this framework. The distinction between the instrumental-realist positions will be examined in light of its implications for theory development in IS. Students should understand the requirements for theory generation in terms of the underlying assumptions of given epistemic perspectives as a result of taking this course. Prerequisite: None.

**IS4710 Qualitative Methods for Research (3-2) Winter**

Qualitative Methods for research will be explored in this course. Quantitative research methods are powerful, but not all research questions and settings are amenable to such methods. In particular, early stage exploratory research (e.g., "how" and "why" questions), studies in which the phenomena of interest are intertwined with their contexts (e.g., where people, technology, and organizations interact), investigations of individual and small-group behaviors (e.g., leaders, project teams, user groups), understanding rare and idiosyncratic events (e.g., catastrophes, new technology introductions, organizational changes), and research in which potential sample sizes are small, or measures cannot be operationalized practically, are all candidates for qualitative research methods. Additionally, combining qualitative and quantitative methods represents a compelling tactic for triangulation through data analysis. In this course, students learn to appreciate when qualitative research methods are appropriate, and they gain both theoretical and experiential knowledge about how to employ such methods. Prerequisite: None.

**IS4720 Quantitative Methods for Research (3-2) Summer**

This course equips IS doctoral students with the quantitative methods necessary to support dissertation research, using real-world project data and case studies. Topics include: defining research objectives, formulating and testing hypotheses, designing experiments, developing analytic and simulation models, collecting data, analyzing data, validating models, using quantitative software tools, and presenting results in written and oral reports. Prerequisite: None.

**IS4730 Design of Experiments for Research (3-2) Fall**

Design of experiments for Ph.D. students. Prerequisites: IS4700 and IS4710 and IS4720.

**IS4790 Research Seminar for Ph.D. Students (0-3) Fall/Winter/Spring/Summer**

Research seminar for students in the IS Ph.D. program. Prerequisite: None.

**IS4800 Directed Study in Information Sciences (V-V) Fall/Winter/Spring/Summer**

Directed study of selected areas of information science to meet the needs of the individual student. Intended primarily to permit students to pursue in-depth subjects not fully covered in formal class work or thesis research. Prerequisites: Consent of instructor and department chairman. Grading on Pass/Fail basis or standard grading criteria are both available.

**IS4925 Special Topics in Information Systems (V-V) Summer**

Special topics courses are first-run courses that are intended to gauge student response and interest. After a course has run once, if successful, it will be submitted to the academic council for final approval. Prerequisite: None.

**IS4926 Network Operating Centers (4-0) Winter**

The course provides analytical background for implementing telecommunications management systems and integrating management infrastructure into the information grid design. It targets operations support for GIG, terrestrial, satellite, and mobile wireless network operation centers. The course combines classroom activities with research and design experience in telecommunication networks configuration, fault, and performance management. In the center of analytical work is the project-based study of management functions and information models for SNMP MIBs, TMN, and architectures. The advanced study issues include an introduction to knowledge-based management and intelligent agent technology. The applications target the needs of GIG operations, C4ISR networks management, Joint Experimentation, Fusion Centers, and Network Operation Centers environment. They employ features of LAN/WAN networks, ATM networks, PCS networks, satellite/wireless networks, UAV, HALO, and other platforms. During the course work, students will gain basic knowledge of several commercial telecommunications management systems used by the NOCs: Spectrum, HP Open View, Tivoli, Unicenter TNG, Micro Muse, etc. The classroom, studies, and projects teamwork are facilitated by the on-line distance learning and shared electronic workspace environment. Prerequisite: None.

**IS4927 Special Topics in Information Systems II (V-V) Fall/Winter/Spring/Summer**

Special topics courses are first run courses that are intended to gauge student response and interest. After a course has run once, if successful, it will be submitted to the academic council for final approval. Prerequisite: None.

**IS5810 Dissertation Research (0-8) As Required**

Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

**IW Courses**

**IW0001 Seminar Series for IW Students (0-2) As Required**

Seminar series for IW students. Prerequisite: None.

**IW0810 Thesis Research for IW Students (0-8) As Required**

Thesis research work for IW students. Prerequisite: None.
IW3101 Military Operations in the Information Environment (4-0) As Required
This course provides a survey of military operations in the information environment along the time line of peace, to conflict, and back to cessation of hostilities. This is accomplished by studying the theoretical underpinnings and implementation of military actions in the information environment to influence decisions in both the biological domain (human) and non-biological/cyber domain (hardware, software and spectra). Topics include but are not limited to military-civilian relationships, human cognition and decision-making, social influence, cyberspace operations, C2 structures, legal issues and considerations in IO, the joint planning process, and intelligence support to IO. Prerequisite: None. Classification: SECRET; U.S. Citizenship.

IW3301 Influence Modeling (3-2) As Required
This course explores influence models and analysis in support of military requirements. Students will learn the strengths and weaknesses of modeling techniques as applied to operations in the information environment whether through cyberspace or other media, how to determine whether or not an influence model is appropriate for use and how to evaluate the utility of various models and modeling techniques. The student will become familiar with the process of designing, constructing and applying influence models within the context of military operations. Prerequisites: IW3101 or IO3100.

IW3502 Information Warfare Networks (4-2) Summer

IW3921 Non-Kinetic Targeting I (2-0) Summer
This course describes the joint targeting process as it applies to the employment of non-kinetic munitions associated with military operations in the information environment including cyber and information operations. Targeting will be discussed in reference to information, cyber and kinetic weapons that can be used to garner effects in the physical domain. Specific areas of discussions will include but are not limited to: The joint planning process, network centric warfare, links and nodes analysis for target selection, effects-based targeting, time-critical targeting, information operations systems characteristics, cyber operations, intelligence requirements for analysis and damage/effects assessment, and lethal versus non-lethal options. This course is conducted at the unclassified level utilizing open-source information. Prerequisite: IW3101 or IO3100 or consent of instructor.

IW3922 Non-Kinetic Targeting II (2-0) As Required
This course is taught in conjunction with IW3921 and explores the practical application of non-kinetic targeting concepts as described for IW3921 through lecture and laboratory work. Prerequisite: IW3101 or IO3100 or by consent of the instructor; Corequisite: IW3921. Classification: This course is conducted at the SECRET level.

IW4301 Advanced Topics in Influence Modeling (4-0)
Summer
This course provides students with the opportunity to develop an Influence Model and to use this model to conduct analysis in support of actual military requirements. Students will design, construct, and analyze Influence Models in collaboration with fellow students. Work completed as part of this course may be included in one or more Naval Postgraduate School Technical Reports. Each project may be briefed to appropriate senior DoD leadership as well, if deemed suitable for such briefings by the instructor. Students must have access to a United States Government computer network and have access to "For Official Use Only" (FOUO) data. SECRET-level work may be conducted as well by special arrangement with the instructor. Prerequisite: IW3301.

IW4500 Information Warfare Systems Engineering (3-2)
Spring
This course applies Systems Engineering Principles to design an Information Warfare System. Project teams will develop an Information Warfare System from requirements determination through and including preliminary design. The five pillars of Information Warfare will be used in the design process, including information security considerations. Lectures will discuss both Systems Engineering principles and Information Warfare concepts. Prerequisite: IW3101.

IW4800 Directed Study for IW Students (V-V) As Required
Directed Study for IW/EW students. Credit hours are variable and must be chosen on a case-by-case basis. Prerequisite: None.

IW4925 Special Topics in Information Warfare (V-V) Summer
Special topics courses are first-run courses that are intended to gauge student response and interest. After a course has run once, if successful, it will be submitted to the academic council for final approval. Prerequisite: None.

IW4950 Advanced Information Warfare Systems (3-2) Fall
This course examines the use of modern EW systems in support of information warfare operations. Modern EW systems studied include IDECM, Towed FO decoys, AIEWS, MAWS, ASJP, Advanced Standoff Jammers, Stand-in Jamming, DECM, and Situational Awareness. Advanced topics, including stealth, directed energy weapons, modern threats, GPS jamming, Hard kill/Soft kill interactions, MASINT, and DRFM systems, are discussed. The laboratory includes visits to EW manufacturers and invited lecturers on advanced topics. Prerequisite: None. Classification: SECRET.

IW4960 Advanced Information Warfare Systems (3-2) Winter
The characteristics and performance of modern EW systems are discussed. Course topics include: the Advanced Radar Threat, Architecture and Technology of EA systems, EA against modern radar systems, Noise and DECM EA systems, DDS and DRFMs, characteristics of modern ES systems, Expendables and Towed Decoys, directed energy systems, and stealth principles. Prerequisite: EO4612 or consent of the instructor.

Information Systems and Operations (ISO)
Academic Certificate in Information Systems and Operations - Curriculum 271

Program Officer
Steven J. Iatrou
Code IW/Is, Glasgow West, Room 3011
(831) 656-3770, DSN 756-3770
FAX (831) 656-3679
isoaa@nps.edu

Brief Overview
The Information Systems and Operations (ISO) academic certificate program is designed to provide DoD personnel with an opportunity to obtain advanced education in the
operational arts supporting Information Operations via asynchronous web-based media. The four courses in the ISO program represent the foundation on which modern warfare is built: Command and Control, Space Operations, Network Operations, and Information Operations. This four-course sequence is also the bedrock of all operations-oriented, NETWARCOM-sponsored curricula at the Naval Postgraduate School: Information Systems and Operations; Information Warfare; Information Systems and Technology; Joint Command, Control, Communications, Computers, and Intelligence; Computer Science; and Space Systems Operations.

The ISO academic certificate provides the fundamental education needed to achieve information superiority, thus enabling full spectrum dominance in the information and cognitive domains. The actions associated with information operations are wide-ranging—from physical destruction to psychological operations to cyber operations.

All courses in the ISO academic certificate are graduate-level courses carrying full NPS academic credit. They provide the baseline for advanced education in operationally essential disciplines. As such, they do not carry graduate prerequisite requirements; however, you must have demonstrated academic proficiency through completion of a baccalaureate degree program.

**Requirements for Entry**

Applicants must have earned a baccalaureate degree to be considered for admission.

**Entry Date**

At the beginning of any quarter in the academic year (January, April, July, October). These courses may be taken in any sequence and they need not be taken all in the same academic year.

**Program Length**

Four quarters.

**ISO Academic Certificate Requirements**

To earn the ISO academic certificate you must pass all four courses with a C+ (2.3 Quality Point Rating (QPR)) or better in each course and an overall QPR of 3.0 or better. Students earning grades below these standards will need to retake the courses to bring their grades within standards or they will be withdrawn from the program.

**Program Sponsors/Advisors**

OPNAV N2/6, Naval Network Warfare Command (NETWARCOM), Naval Education and Training Command (NETC)

**Required Courses**

CC3000 Introduction to Command and Control
IO3100 Introduction to Information Operations
IS3502 Network Operations I
SS3011 Space Technology and Applications

**Information Systems Technology (IST) - Academic Certificate in Information Systems Technology - Curriculum 272**

(831) 656-3770, DSN 756-3770
FAX (831) 656-3679
isoaa@nps.edu

**Brief Overview**

The IST academic certificate provides education in the fundamentals of information systems technology. This education is essential to helping the U.S. military reach information superiority in the operational environment. It also offers advanced education in areas essential to enabling global networked communications, including: databases, systems analysis and design, decision support systems, and network security.

The IST academic certificate is provided through asynchronous Web-based media (i.e., the Internet) because DoD recognizes that this education should be available to their personnel regardless of geographic limitations. If you have access to the Internet, you have access to tools necessary to help meet U.S. national security objectives in the information domain.

All courses in the IST academic certificate are graduate-level courses carrying full NPS academic credit. They provide the baseline for advanced education in essential disciplines in information technology. As such, they do not carry graduate prerequisite requirements; however, you must have demonstrated academic proficiency through completion of a baccalaureate degree program.

**Requirements for Entry**

Applicants must have earned a baccalaureate degree to be considered for admission.
Entry Date

Program entry dates are at the beginning of any quarter in the academic year (January, April, July, October). These courses may be taken in any sequence.

Program Length

Four quarters.

IST Academic Certificate Requirements

To earn the IST academic certificate students must pass all four courses with a C+ (2.3 Quality Point Rating (QPR)) or better in each course and an overall QPR of 3.0 or better. Students earning grades below these standards will need to retake the courses to bring their grades within standards or they will be withdrawn from the program.

Brief Overview

This program has been designed to enhance students’ knowledge of and productivity in the Navy’s information technology fields. The courses are Web-based and will be delivered entirely online. They provide an introduction to the field of Information Technology Management and the functions and responsibilities of the information technology manager.

The programming course meets DoN’s IT21 mandated standard, as a high-level, event-driven, object-oriented, programming language. Course emphasis is on planning, program development, graphical user interfaces, rapid prototyping, program construction, data types, operations, control flow, arrays, records, file I/O, database access, and event-driven OOP structures.

A fundamentals course focuses on the basics of computer networking. Since networking is an underpinning to our technology-driven forces, understanding the basics of computer networking is important to any technology professional interested in building a solid technology understanding, and is an essential precursor to other courses in the Information Systems and Information Technology arenas.

All courses in the eFIST academic certificate are undergraduate-level courses carrying full NPS academic credit. They provide the baseline for advanced education in essential disciplines in information technology.

Requirements for Entry

A bachelor’s degree is not required. There are no prerequisites.

Entry Date

Contact the Program Manager.

Knowledge Superiority (KS) Academic Certificate in Information Systems and Operations - Curriculum 277

Program Officer

Mark E. Nissen, Ph.D.
Code 06/IS, Glasgow West
Room 2006
(831) 656-3570, DSN 756-3570
FAX (831) 656-3679
mnissen@nps.edu

Brief Overview

Knowledge is hailed widely as one of the very few, sustainable sources of competitive advantage for organizations in the Information Age. But knowledge is
distributed unevenly through the enterprise, clumping noticeably in particular people, organizations, locations, and times of application. Getting knowledge to flow—from where and when it is located to where and when it is needed for action—represents an essential aspect of knowledge-based competition.

However, knowledge is distinct from information and data, and competing on a knowledge basis requires more than just setting up high-bandwidth computer networks, shunting great volumes of data bits around the world, and making large online information repositories broadly accessible. Although such network, data, and information steps are important for knowledge flows, they are clearly insufficient. Rather, flows of knowledge build upon flows of network signals, data, and information, as knowledge—particularly tacit, experiential knowledge—resides principally in the minds of people and the routines of organizations. Hence, competing on a knowledge basis involves more than technology: it requires deft integration of people, processes, organizations, and technologies alike. This pushes knowledge-based competition beyond the limited, technical realm of many information sciences, and makes it a relatively challenging, but quintessentially effective basis for sustainable competitive advantage. The study of Knowledge Superiority focuses precisely on such sustainable, knowledge-based, competitive advantage.

The Knowledge Superiority Track develops and builds upon technical systems understanding in networks, databases, systems analysis, decision support systems, and like subjects, to develop a higher level design capability in students. To wit, students learn more than designing only technical systems: they learn to integrate such technical system designs into socio-technical system designs, the latter of which include people, processes, and organizations, in addition to technology. This higher level design capability enables graduates to escape the relatively narrow confines of purely technological jobs, and to support direct knowledge flows, attention focusing, and decision making at the highest levels of the military and government.

The Knowledge Superiority academic certificate is provided through asynchronous, Web-based media (i.e., the Internet) because DoD recognizes that this education should be available to their personnel regardless of geographic limitations. So, if students have access to the Internet, they have access to the tools necessary to help meet U.S. national security objectives in the information domain. All courses in the Knowledge Superiority academic certificate program are graduate-level courses carrying full NPS academic credit.

**Requirements for Entry**

Applicants must have earned a baccalaureate degree to be considered for admission and have completed fundamental college-level courses in databases and computer networks.

**Program Length**

Four Quarters

**KS Academic Certificate Requirements**

To earn the KS academic certificate you must pass all four courses with a C+ (2.3 Quality Point Rating (QPR)) or better in each course and an overall QPR of 3.0 or better. Students earning grades below these standards will need to retake the courses to bring their grades within standards or they will be withdrawn from the program.

**Program Sponsors/Advisors**

**Required Courses**

The curriculum consists of two core courses and two electives.

**Core Courses:**

- **IS3210** Issues in Defense Knowledge & Information Management
- **IS4210** Knowledge Superiority

**Elective Courses:**

- **CC3000** Command Control Communication Computer and Intelligence Systems in DoD
- **CS3606** An Introduction to Information System Security
- **IO3100** Information Operations
- **IS3200** Fundamentals of Systems Analysis and Design
- **IS3201** Fundamentals of Database Management Systems
- **IS3301** Computer-Based Tools for Decision Support
- **IS3302** Fundamentals of Database and Decision Support
- **IS3502** Network Operations I
- **IS4201** Enterprise Database Management
- **IS4301** Data Warehousing, Mining & Visualization
- **SS3011** Space Technology and Applications
**Information Systems and Operations -
Curriculum 356**

**Brief Overview**

Our armed forces must be prepared to "win" across the full range of military operations in any part of the world, to operate with multinational forces, and to coordinate military operations, as necessary, with government agencies and international organizations. This requires a Total Force composed of well-educated, motivated, and competent people who can adapt to the many demands of future joint and coalition missions. The ability of the joint force to reach this full spectrum of dominance rests on information superiority as a key enabler, and our capacity for innovation.

Information operations are essential to achieving information superiority, thus enabling full spectrum dominance. The actions associated with information operations are wide-ranging—from physical destruction to psychological operations to computer network defense. The task of integrating information operations with other joint force operations is complicated by the need to understand the many variables involved, and integrate these variables across the spectrum of conflict, whether facing an adversary during a conflict or engaged in humanitarian relief operations. Achieving this aspect of JV 2020 will require exceptional officers, well versed in information operations and its integration with national security and national military objectives.

Technological innovation must be accompanied by intellectual innovation leading to changes in organization and doctrine. Only then can we reach the full potential of the joint force—decisive capabilities across the full range of military operations. The Naval Postgraduate School graduate studies program in Information Systems and Operations (ISO) provides the education necessary to meet the Chairman's vision and answer the call for officers capable of conducting experimentation, analysis, and conceptual thought in the arena of information operations.

All of the curricular programs at the Naval Postgraduate School take you far beyond the level of proficiency achieved in standardized training programs. NPS educates individuals and enables them to take the U.S. Armed Forces far beyond present capabilities, and ensures domination in all dimensions of the present and future operational environment.

Be advised: The ISO curriculum is not for everyone. The ISO matrix of courses is designed to provide the United States with officers capable of exploiting all elements of national power to reach our national security objectives: officers capable of operating in all dimensions of the operational environment, including: physical, informational, and psychological (cognitive). This is an 18-month curriculum balancing operational and technical courses and the full series of JPME Phase I courses—it is intense and will require the students' highest level of commitment to succeed.

**Requirements for Entry**

A baccalaureate degree or the equivalent resulting in an academic profile code (APC) of at least 334 is required for acceptance into the program. Students not meeting the minimum APC may be considered for acceptance after satisfactorily completing a refresher course in calculus or advanced mathematics. Eligibility for TOP SECRET security clearance with access to SPECIAL COMPARTMENTED INFORMATION (SCI) is also required.

**Entry Date**

Information Systems and Operations is a six-quarter course of study with an entry date in September. If further information is needed, contact the Academic Associate or Program Officer for this curriculum.

**Degree**

Requirements for the Master of Science in Information Systems and Operations degree are met en route to satisfying the Educational Skill Requirements established by the sponsor for the curricular program. These requirements are met by completing the approved matrix of courses and phase I JPME.

**Master of Science in Information Systems and Operations**

The Master of Science in Information Systems and Operations degree will be awarded at the completion of the appropriate interdisciplinary program in accordance with the following degree requirements:

- Completion of 40 quarter-hours of graduate course work, of which 15 hours must be at the 4000 level.
- An acceptable thesis approved by the Chairman, Information Sciences Department.
Individual student programs to be approved by the Chairman, Information Sciences Department.

Subspecialty

Completion of this curriculum qualifies a Navy officer as an Information Systems and Operations Subspecialist with a subspecialty code of 6100P. Other services have analogous coding. The curriculum sponsor is OPNAV N2/N6.

Typical Course of Study

Quarter 1
- CS3600 Introduction to Computer Security
- MO1901 Mathematics for Information Sciences, Systems and Operations
- IW3101 Introduction to Information Warfare
- NW3230 Strategy & Policy: The American Experience (JPME)

Quarter 2
- EO3502 Telecommunications and Systems Engineering
- IS3502 Network Operations I
- MN3154 Financial Management in the Armed Forces
- OS3105 Statistics for Technical Management

Quarter 3
- CC3000 Introduction to Command and Control
- IS4031 Information Systems Economics
- DA3101 Warfare in the Information Age
- IW3301 Influence Modeling

Quarter 4
- IO4300 Information Operations Planning and Targeting
- IS3302 Fundamentals of Database and Decision Support Systems
- IW4301 Advanced Influence Modeling
- IO0810 Thesis Research

Quarter 5
- NW3275 Joint Maritime Operations I (JPME)
- NW3285 National Security Decision Making (JPME)
- SS3011 Space Technology and Applications
- IO0810 Thesis Research

Quarter 6
- NW3276 Joint Maritime Operations II (JPME)
- CC4250 Enterprise Architecture
- IO0810 Thesis Research
- IO0810 Thesis Research

Educational Skill Requirements

Information Systems and Operations - Curriculum 356

Subspecialty Code: 6100P

1. **Science and Technology**: The graduate shall understand the terminology, methods, application and effect of the following information sciences and technologies: communications, computer systems, databases, information assurance, sensors, signal processing, space systems, networks, simulation, and gaming.

2. **Strategy, Policy, and Doctrine**: The graduate shall understand the terminology and processes; analyze and formulate; and synthesize strategy, policy, and doctrine as it is affected by information operations utilizing the concepts found in the theories of conflict in the information age, network-centric warfare, and the requirements found in policy and doctrine planning, national directives, and rules of engagement.

3. **Organization and Systems**: The graduate shall understand the terminology, processes, and structures; analyze and develop organizational elements and agile organizations utilizing the best current practices found in Command and Control, complex systems, cybernetics, networks and grids, and operational architecture theories.

4. **Methods and Elements**: The graduate shall understand the terminology and processes associated with all aspects of Information Operations to include: deception, psychological operations, operational security, military intelligence, electronic warfare, C4ISR, special operations, and military operations in space.

5. **Strategy and Policy**: Graduates will develop an ability to think strategically, analyze past operations, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s political interests and goals and the ways military power may be used to achieve them. This requirement is fulfilled by completing the first of three Naval War College courses leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit. (Required only for USN and USMC students.)

6. **Program/Project Management**: This includes (but is not limited to) planning and implementing a major programming project and developing the appropriate technical and acquisition documentation, performing financial, cost-benefit, and trade-off analyses, and performing required planning, programming, and budgeting actions, and developing means to exploit
technology advantages in a network-centric environment to achieve operational objectives.

7. **Problem Solving and Real World Applicability**: The officer shall possess skills that permit a realistic perspective on problem solving and provide an appreciation of the difficulty and power of applying theory to the real of Information Operations. This includes:
   - Completing a significant project applying academic skills outside of the classroom.
   - Exercising skills in problem formulation, synthesis, criteria specification, analysis, and evaluation and presentation of results.
   - Clearly communicating the project in writing and verbally.

**Curriculum Sponsor and ESR Approval Authority**

OPNAV N2/6 and Commander, Naval Network Warfare Command, April 2009.

**Joint Command, Control, Communications, Computers, and Intelligence (C4I) Systems - Curriculum 365**

**Program Officer**
Joshua Green, Lt Col, USAF
Glasgow, Room 3010
(831) 656-3635, DSN 756-3635
jdgreen@nps.edu

**Academic Associate**
Steven J. Iatrou
Glasgow West, Room 3011
(831) 656-3770, DSN 756-3770
FAX (831) 656-3679
sjiatrou@nps.edu

**Brief Overview**

The Joint C4I curriculum is designed to meet broad educational objectives endorsed by the Joint Chiefs of Staff. The overall objective is to provide officers and DoD civilian equivalents, through graduate education, with a comprehensive operational and technical understanding of the field of C4I systems as applied to joint and combined military operations at the national and unified command levels. The program is designed with the following goals: enable individuals to develop an understanding of the role C4I systems play in the use of military power and the ability to interpret the impact of C4I on operating philosophy; provide adequate background knowledge in basic technology, human capabilities, and joint military operations and how these factors are exploited in current C4I systems; and provide the framework whereby students can perform requirement and planning studies of new C4I systems and contribute to crisis management.

These officers should be able to undertake a wide range of assignments in C4I (both joint and intra-service) over the full span of their careers.

**Requirements for Entry**

The Joint C4I curriculum is open to all U.S. military services and selected civilian employees of the U.S. Government. Admission requires a baccalaureate degree with above-average grades and mathematics through differential and integral calculus. Eligibility for a TOP SECRET security clearance with access to SPECIAL COMPARTMENTED INFORMATION (SCI) is required. An academic profile code (APC) of 334 is required for direct entry. Officers not meeting the APC may be admitted based on transcript reviews by the Director of Admissions and the Program Officer.

**Entry Date**

Joint C4I Systems is a seven-quarter course of study with a single entry date in October. If further information is needed, contact the Academic Associate or the Program Officer.

**Degree**

Requirements for the Master of Science in Systems Technology (Joint Command, Control, and Communications (C3)) degree are met as a milestone en route to satisfying the Educational Skill Requirements of the curricular program.

**Master of Science in Systems Technology (Command, Control, and Communications)**

The Master of Science in Systems Technology (Joint C3) degree will be awarded at the completion of the appropriate interdisciplinary program carried out in accordance with the following degree requirements:

- Completion of a minimum of 45 quarter-hours of graduate-level work in four different academic disciplines, of which at least 15 hours must represent courses at the 4000 level in at least two of the disciplines.
- Within the course program there must be a specialization sequence consisting of at least three courses.
- In addition to the 45 hours of course credit, an acceptable thesis must be completed.
- The program must be approved by the Chairman, Information Sciences Department.

**Subspecialty**

Completion of this curriculum qualifies an officer as a Joint C4I Systems Subspecialist with a subspecialty code of 6204.
for U.S. Naval officers. U.S. Army graduates are awarded the 3K Special Skill Identifier. U.S. Air Force graduates fill OYTA coded billets. U.S. Marine Corps graduates are awarded the 9658 Special Skill Identifier. The curriculum sponsor is the Director for Command, Control, Computer, and Communications Systems (J6), Joint Staff.

Typical Course of Study

**Quarter 1**
- **CC3000 (4-0)** Introduction to Command and Control
- **IS3001 (4-1)** Computer and Software Technology
- **NW3230 (4-2)** Strategy and Policy
- **MO1901 (3-0)** Mathematics

**Quarter 2**
- **CC3101 (4-0)** Combat Analysis for C4I
- **IS3502 (3-2)** Network Operations I
- **OS3105 (4-0)** Statistics for Technical Management
- **CS3600 (4-2)** Introduction to Computer Security
- **EO2513 (4-2)** Introduction to Communication Systems Engineering

**Quarter 3**
- **IW3101 (4-1)** Introduction to Information Warfare
- **OS3008 (4-0)** Analytical Planning Methodology
- **PH3052 (3-0)** Sensors
- **EO3513 (4-2)** Communication Systems Engineering

**Quarter 4**
- **CC4101 (4-2)** Systems Engineering for Joint C4I
- **SS3011 (3-2)** Space Systems
- **IS3302 (3-0)** Fundamentals of Database and Decision Support Systems
- **EO4513 (4-2)** Communication Systems Analysis

**Quarter 5**
- **SS3613 (3-0)** Military Satellite Communications
- **CC0810 (0-4)** Thesis Research for C4I Students (4-0) Emphasis Elective

**Quarter 6**
- **CC4103 (2-4)** Joint C4I Systems
- **MN3331 (5-0)** Acquisition and Program Management
- **CC0810 (0-4)** Thesis Research for C4I Students (4-0) Emphasis Elective

**Quarter 7**
- **CC4913 (4-0)** Policies and Problems in Joint C4I
- **CC0810 (0-8)** Thesis Research for C4I Students (4-0) Emphasis Elective

**Educational Skill Requirements (ESR)**
**Joint Command, Control, Communications, Computers, and Intelligence (C4I) Systems**

**Curriculum - 365**
**Subspecialty Code: 6204P**

The graduate shall be able to:

1. **Technologies:** Develop adequate background knowledge to evaluate and apply current and emerging technologies to include digital and analog communications systems; application, database and network architecture and topology; maritime, ground, aerial and space-based platforms and sensors; and human and system interfaces; to conduct operational assessments.

2. **Systems Engineering and Analysis:** Perform systems engineering studies; develop operational, technical, and systems architectures to support a C4I enterprise; integrate systems including mission requirements determination; conduct experimental design including modeling, simulation and quantitative analysis of the results; evaluate human-in-the-loop C4I systems; analyze current and emerging C4I technologies and architectures with respect to assured information delivery, availability and protection, with an awareness of attack and exploitation capabilities; understand and apply standard and alternative acquisition process.

3. **Joint C4I:** Understand the joint, coalition and interagency C4I enterprise, including concepts, policies, doctrine, processes, and organizational design; apply current and emerging joint C4I technologies and architectures; understand the employment and effects of combined operations to include operations within the cyber domain.

4. **Strategy and Policy:** Develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s policies and goals and the ways military power may be used to achieve them.

5. **Practice:** Demonstrate the ability to conduct independent analysis of a joint, coalition or interagency C4I enterprise, and the proficiency to present the results in writing and orally by means of a thesis and a command-oriented briefing.

**Curriculum Sponsor and ESR Approval Authority**

Director, C4 Systems (J6); Director, Space and Electronic Warfare (N6); June 1997.

**Information Systems and Technology - Curriculum 370**

**Program Officer**

David Roberts, LCDR, USN
Brief Overview

The Information Systems Technology curriculum is part of the larger Information Sciences, Systems, and Operations (ISSO) discipline. The ISSO curricula consist of the Professional Practice Core and seven degree tracks: Computer Sciences; Joint C4I Systems; Information Systems and Technology; Information Warfare; Intelligence Information Management; Modeling, Virtual Environments, and Simulation; and Space Systems Operations. The Professional Practice Core consists of material in Information Sciences and Technology; Command and Control; C4ISR Systems; Acquisition; C4ISR System Evaluation; Information Operations/Warfare; and Enterprise Policy, Strategy, and Change. This specialization satisfies the ISSO Educational Skill Requirements as established by CNO-N61.

This curriculum provides officers with knowledge of information systems technology to include computer and telecommunications systems, software engineering, networked and distributed applications, database management systems, and decision support systems in the military services. Students will also gain proficiency in information systems, economics, and management necessary for the critical management decisions needed in the development and utilization of complex and evolving computer-based military systems.

Information Systems Technology is an interdisciplinary, graduate-level, master’s program integrating mathematics, accounting, economics, statistics, computer science, information systems, communications engineering, networks, and management disciplines.

Requirements for Entry

A baccalaureate degree, or the equivalent, with above-average grades in mathematics (including differential and integral calculus) resulting in an academic profile code (APC) of at least 325 is required for direct entry. Students lacking these quantitative prerequisites may be acceptable for the program, through a twelve-week refresher, providing their undergraduate records and/or other indicators of success, such as the Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT), indicate a capability for graduate-level work. While previous computer, communications, or information systems experience is certainly helpful, it is not essential. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Entry Date

Information Systems Technology is an eight-quarter course of study with entry dates in March and September (Spring and Fall Quarters). Those requiring the twelve-week refresher will begin study prior to those entry dates. If further information is needed, contact the Academic Associate or Program Officer for this curriculum.

Degree

Requirements for the Master of Science in Information Technology Management degree are met as a milestone en route to satisfying the Educational Skill Requirements established by the curricular program’s sponsor.

Master of Science in Information Technology Management

The Master of Science in Information Technology Management degree will be awarded at the completion of the appropriate interdisciplinary program in Curriculum 370. The Master of Science in Information Technology Management requires:

- Completion or validation of core courses in each of the following disciplines:
  - Information Systems
  - Computer Science
  - Electrical and Computer Engineering
  - Systems Management
- Completion of a minimum of 52 hours of graduate-level courses, at least 20 hours of which are at the 4000 level.
- Completion of an acceptable thesis.
- Approval of the candidate’s program by the Chairman, Information Sciences Department.

Subspecialty

Completion of this curriculum qualifies a Navy officer as an Information Technology Management Subspecialist with a subspecialty code of 6201P. Other services have analogous coding. The curriculum sponsor is the Commander, Naval Network Warfare Command.

Typical Subspecialty Jobs

CO/XO, Naval Computer and Telecommunication Station/Master Station
Staff Comm/Fleet Communications Officer, Numbered Fleets
Information Systems Officer, USS George Washington
ADP Plans Readiness Assessment Officer, COMNAVSURFLANT
ADP Systems Officer, Director Strategic Systems Procedure
SNAP System Officer, SPAWARSYSCOM
OIC, NAVMEDINFORMGMTCENDET
Data Base Management Officer, Naval Security Group Plans and Programs, COMNAVCOMTELCOM

Typical Course of Study

Quarter 1
IS3201 (4-2) Fundamentals of Database Management Systems
CS3600 (4-2) Introduction to Computer Security
IS3200 (3-2) Systems Analysis and Design
OS3105 (4-1) Statistical Analysis for Management I

Quarter 2
CC3000 (4-0) Introduction to Command and Control
IS4925 (V - V) Special Topics in Information Systems
IS3502 (3-2) Network Operations I
NW3230 (4-2) Strategy & Policy: The American Experience

Quarter 3
MO1901 (3-0) Mathematics for ISSO
IS3301 (3-2) Computer-Based Tools for Decision Support
MN4125 (4-0) Managing Planned Change in Complex Organizations
NW3275 (4-0) Joint Maritime Operations (Part 1)

Quarter 4
IS3202 (3-2) Web-Enabled Database Management Development
IS3333 (0-2) Introduction to Thesis Research
EO3502 (4-0) Telecommunications Systems Technology
NW3276 (4-0) Joint Maritime Operations (Part 2)
Track Course Track Specialization #2

Track Specialization Course 1

Quarter 5
IW3101 (4-1) Introduction to Information Warfare
IS4031 (4-0) Information Systems Economics
NW3285 (4-0) National Security Decision Making
Track Course Track Specialization #2

Track Specialization Course 2

Quarter 6
IS0810 (0-8) Thesis Research
CC4250 (4-0) Enterprise Architecture
IS4220 (3-2) Business Process Reengineering with E-Business Technologies
Track Course Track Specialization #3

Track Specialization Course 3

Quarter 7
IS4300 (3-2) Software Engineering and Project Management
IS0810 (0-8) Thesis Research
IS4182 (4-0) Information Systems Management
MN3331 (5-1) Principles of Acquisition and Program Management

Quarter 8
SS3011 (3-0) Space Technology and Applications
IS0810 (0-8) Thesis Research
IS0810 (0-8) Thesis Research
MN3154 (3-0) Financial Management in the Armed Forces

Each student in the Information Systems and Technology Curriculum will choose a specialization track no later than the start of the third quarter of study. Current track specializations offered by the Information Sciences Department are:

Network Management Track
Prerequisites
IS3502 Network Operations I
CS3502 Computer Communications and Networks

Network Track Courses (Choose 3)
CS3690 Network Security
IS4926 Network Operating Centers
IS4188 Collaborative Technologies
IS4925 Special Topics in Information Systems

Other Supporting Courses
CC4250 Enterprise Architecture

Information Assurance Track
Prerequisite
CS3600 Introduction to Computer Security

Information Assurance Track Courses
CS3670 Information Assurance: Secure Management of Systems
CS3695 Internet Security Resources and Policy
CS3690 Network Security

Communications Systems Engineering Track
Prerequisite
MO1901 Mathematics for ISSO

Communications Systems Engineering Track Courses
EO2513 Introduction to Communications Systems Engineering
EO3513 Communications Systems Engineering II
EO4513 Communications Systems Analysis

**Other Requirements**
Remove from Matrix:
EO3502 Telecommunications Systems Engineering
Add to Matrix:
PH3052 Physics of Space and Airborne Sensor Systems (USN) or SS3613 Military Satellite Communications (USMC)

**Software Engineering Track**

**Prerequisites**
IS4300 Software Engineering/Project Management

**Software Engineering Track Courses**
(Choose 3)
SW3460 Software Methodology
SW4500 Introduction to Software Engineering
SW4530 Software Engineering R&D in DoD
SW4591 Requirements Engineering

Students with a strong educational or experience background in information systems or computer science may be eligible to validate certain requirements. Students who have validated certain courses will be required to substitute additional courses into their educational plan. These courses may include additional courses of study within their specialization track or other courses offered within the Information Sciences Department or other related fields of study. The Academic Associate and the Program Officer must approve all changes to the matrix.

**Educational Skill Requirements (ESR)**

**Information Systems Technology - Curriculum 370 Subspecialty Code: 6201P - (Previously XX89P)**

The Information Systems Technology graduate shall have the knowledge, skills, and competencies to engineer information systems afloat and ashore; manage information systems, centers, and commands afloat and ashore; and solve information systems engineering and management problems individually and in teams. These general Educational Skill Requirements are supported by the following topical Educational Skill Requirements.

1. **Strategy and Policy:** Graduates will develop an ability to think strategically, analyze past operations, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s political interests and goals and the ways military power may be used to achieve them. This requirement is fulfilled by completing the first of three Naval War College courses leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit. (Required only for USN and USMC students.)

2. **Space, Information Warfare and Command and Control Professional Practices**:

3. **Software Development**: The officer must have a thorough knowledge of modern software development to include: an understanding of the software development process; the ability to plan and implement a major programming project and develop the appropriate documentation; the ability to utilize object-oriented techniques in system design; and the ability to use modern software development tools in the construction of modeling, virtual environment, and simulation systems.

4. **Information Systems Technology**: The officer must have a thorough knowledge of information systems technology to include: computer system components, computer networks, communication systems and networks, software engineering, database management systems, decision support and expert systems.

5. **Information Systems Analysis and Management**: The officer must master the following concepts to effectively manage information system assets: managerial concepts, evaluation of information systems, systems analysis and design, management of information systems, adapting to technological, organizational, and economic changes, and military use of commercial telecommunications systems.

6. **Military Applications**: The officer must be able to combine analytical methods and technical expertise with operational experience for effective military applications to include: DoD decision-making process on information systems, information technology acquisition management, DoD computer and telecommunications, C4ISR, and C2W.

7. **Independent Research**: The graduate will demonstrate the ability to conduct independent research analysis, and proficiency in communicating the results in writing and orally by means of a thesis and a command-oriented briefing. The research in information technology and its management will include problem formulation, decision criteria specification, decision modeling, data collection and experimentation, analysis, and evaluation.
**Curriculum Sponsor and ESR Approval Authority**

Director, Space, Information Warfare, Command and Control Directorate, OPNAV (N6), March 2000.

**Doctor of Philosophy in Information Sciences - Curriculum 474**

FAX (831) 656-3679
abordets@nps.edu

**Brief Overview**

The Department of Information Sciences at the Naval Postgraduate School will award the Doctor of Philosophy in Information Sciences degree as a result of meritorious and scholarly achievement in a particular field of information sciences (IS). This program includes course work, scholarly socialization, written and oral examinations, research, and a written dissertation. A candidate must exhibit scholarly application to the entire course of study, achieve a high level of scientific advancement, and establish ability for original investigation leading to the advancement of fundamental knowledge.

IS broadly encompasses the design, implementation, use, promotion and evaluation of organizations, processes and systems associated with knowledge, information, data and communication. It includes areas of concentration in information systems, information technology, information warfare, information operations, and command and control.

The study of IS is multidisciplinary, and no single theory or perspective dominates the field. In general, the field can be divided into technical and behavioral approaches. The technical approach to IS emphasizes mathematically based, normative models to study capabilities of systems and processes, in addition to emphasis on the technological artifacts that enable and support organizations, processes and systems associated with knowledge, information, data and communication. The behavioral approach to IS emphasizes behavioral problems associated with design, implementation, use, promotion and evaluation of organizations, processes and systems associated with knowledge, information, data and communication. A great part of IS research involves integrating these two, complementary approaches.

The Ph.D. in Information Sciences prepares scholars to conduct original research that contributes new knowledge in the domain of information systems, information technology, information warfare, information operations, or command and control. With such ability to conduct original research and contribute new knowledge, the IS Ph.D. helps to prepare scholars also to teach effectively.

**Requirements for Entry**

U.S. military officers, foreign military officers, U.S. Government civilians, and employees of foreign governments may apply. Applications should begin with the Office of Admissions (see www.nps.edu/admissions/index.html). In addition to a completed application form, the complete application should include: an application letter describing your general background, your interests and experience in research, and your career goals; Official or Certified copies of all academic transcripts; results of a GRE general examination taken within the past five years; and letters from three references relating to your suitability to pursue a doctoral degree. These materials should be sent directly to the Admissions Office. Foreign students who are not native speakers of English must provide scores from the Test of English as a Foreign Language (TOEFL) examination.

An applicant should have a master's degree in any Information Sciences Department program or in a closely related field from another NPS school or civilian institution. Generally, an acceptable Ph.D. applicant must have above-average grades (GPA > 3.5) in a typical master's degree program. The Ph.D. Committee will also take other evidence of research or academic ability into account in making a recommendation as to whether to admit an applicant. Final acceptance will be based on the professional discretion of the Chairman, Ph.D. Committee.

**Entry Date**

The Ph.D. Program Committee will evaluate each applicant to gauge the minimum amount of time the applicant will need to complete the program (normal time is three years of full-time study). The Information Sciences Department may impose the condition that the applicant obtain authorization for at least four years to complete the Ph.D. Admitted Ph.D. students may begin in any quarter.
Program of Study

Each student's Doctoral Committee will guide the student in designing a program suitable for his/her special interests and background, alert them to opportunities both within the Department of Information Sciences and other departments at NPS, and monitor the student's progress. The doctoral program is based on a core of courses designed to provide the student with the broad knowledge, analytic skills, and proficiency in research methods necessary for advanced course work and dissertation research. Additional course work in application areas may be required and is based on the discretion of the student's primary advisor.

Core Courses

<table>

</tr>
</tbody>
</table>

Students who have taken the equivalent of these courses may waive one or more of these core requirements by the Departmental Ph.D. Committee.

Sample Ph.D. Program in Information Sciences

First Year: Complete the core program course and residency requirements for the Ph.D. program. Complete additional course work in accordance with the student's specific program requirements. Have a faculty advisor for course work appointed.

A diagnostic review will be conducted following the first year of study. The review will consider indicators of scholastic achievement, including performance in master's- and Ph.D.-level courses, as well as other indicators deemed appropriate by the examining faculty. The review culminates in a formal report to the Chairman of the Departmental Ph.D. Committee; includes a recommendation as to whether or not the student should continue in the program; and, if so, makes recommendations regarding how the student can improve his or her performance. A professor from the student's chosen academic unit then discusses the report with the individual, making a careful assessment of demonstrated strengths and weaknesses in order to help the student to progress more effectively.

Second Year: Finish course requirements, and prepare for the Written and Oral Qualifying Examinations. Take Qualifying Examinations, in residence, near the middle of the second year. Upon successful completion of both examinations, the student will establish a Dissertation Committee, defend a dissertation proposal, and then advance to candidacy. Students who fail either of the qualifying examinations can petition the Departmental Ph.D. Committee Chair for one additional attempt at passing it.

Third Year: Concentrate primarily on dissertation research, with perhaps a course or two related to the dissertation.

The dissertation culminates the student's academic endeavors. Working closely with faculty members from his or her committee during all phases of research, the student is expected to complete a dissertation of substantial magnitude, and to make a significant contribution to the advancement of knowledge in the Information Sciences field. It should be of sufficient originality and quality to merit publication, either in whole or in part, in a scholarly journal.

The dissertation is defended, in residence, at a final oral examination. It must be completed and accepted within five years of advancement to candidacy. The dissertation defense is held before an examination committee, and is open to the public. The defense will normally consist of a one-hour public segment and a one-hour private segment, but should, in no case, exceed two hours in length.

The pursuit of the Ph.D. is both challenging and rewarding. A Ph.D. is not a more in-depth version of the Master's Degree. It requires high-level, integrative, critical thinking; extended, independent research; self-motivated effort; and a commitment to expand one's perspective of the world. It is difficult to assess one's likelihood of success throughout its various stages. Applicants should be aware that admission to the program does not guarantee completion. It is anticipated that a number of candidates will not be allowed to continue after the diagnostic review (approximately one year), and that a number of candidates will self-select out of the program throughout its various stages. Applicants should seriously consider the effort that will be required for successful completion prior to applying.

Master of Science in Remote Sensing Intelligence - Curriculum 475

Program Manager
Richard Christopher Olsen, Ph.D.
Code PH, Spanagel Hall, Room 122
(831) 656-2019, DSN 756-2691
FAX (831) 656-2834
olsen@nps.edu

Brief Overview

The Master of Science in Remote Sensing Intelligence (MS-RSI) curriculum focuses on improving the technical skills of the intelligence image analyst, allowing them to address more sophisticated problems and make use of the newest available technology. The student will develop a deeper understanding of how imagery is acquired,
processed, and exploited as part of the intelligence cycle. The degree program requires a research thesis which explores, evaluates or develops new or significant contributions to the Remote Sensing field. Curriculum focus is on foundation technical skills, different Remote Sensing technologies currently available for imagery, processing techniques, and intelligence applications.

Requirements for Entry

A baccalaureate degree or the equivalent resulting in an academic profile code (APC) of at least 234 is required for acceptance into the program. TOP SECRET security clearance with access to SPECIAL COMPARTMENTED INFORMATION (SCI) is also required (eligibility only required to apply and be accepted to the program. However, it must be cleared and granted prior to beginning coursework). Additional specific pre-requisite classes are college level Linear Algebra (equivalent to MA2043) and a college level Basic Physics sequence (calculus level not required).

Entry Dates

The MS-RSI is a four quarter course of study with a start date at the beginning of the academic year, October session.

Degree

Master of Science in Remote Sensing Intelligence

The degree of Master of Science in Remote Sensing Intelligence will be awarded at the completion of the appropriate interdisciplinary program in Curriculum 475. The Master of Science in Remote Sensing Intelligence requires:

- Completion or validation of core courses in each of the following disciplines: Information Systems, Computer Science, and National Security;
- Completion of the approved and required course sequence, with optional components approved by the Department Chair, a total of 46 graduate level credits;
- Completion of an acceptable thesis, approved by the sponsoring agency; and
- Approval of the candidate’s program by the Chairman, Information Sciences Department.

The MS-RSI students must satisfy these degree requirements using the following approved courses:

- SS3011 (3-0) Space Technology and Applications
- SS3001 (3-2) Military Applications of Space TS/SCI
- NS3159 (4-0) Principles of Joint Operational Intelligence TS/SCI
- CS3600 (4-2) Introduction to Computer Security
- CS4330 (3-2) Video Imaging and Surveillance (Photogrammetry possible substitution)
- OS3101 (4-1) Statistical Analysis for Management
- IS3201 (4-2) Fundamentals of Database Management Systems
- IS3302 (3-2) Fundamentals of Database and Decision Support Systems
- IS3502 (4-2) Network Operations I
- IS3052 (3-2) Remote Sensing I - Introduction
- IS4053 (3-2) Spectral and Polarimetric Tools and Analysis Techniques TS/SCI
- IS4054 (3-1) Remote Sensing 111 - Analysis Techniques for Passive Imaging Systems TS/SCI
- IS4055 (3-1) Analysis Techniques for Active Imaging Systems
- IS4060 (3-1) Geospatial Intelligence Applications TS/SCI
INFORMATION (SCI) is required for U.S. students. Applicants not meeting the mathematics requirements may be considered for entry via a refresher quarter.

**Entry Date**

The Information Warfare curriculum is an eight-quarter course of study with a single entry date in October. For further information, contact the Program Officer or Academic Associate for this curriculum.

**Degree**

Requirements for the MSIWSE degree are met en route to satisfying the Educational Skill Requirements of the curricular program.

**Master of Science in Information Warfare Systems Engineering**

The MSIWSE degree will be awarded at the completion of a multidisciplinary program in Curriculum 595. The MSIWSE degree program has not been reviewed by ABET. The MSIWSE requires:

- Completion of a minimum of 45 quarter-hours of graduate-level work, of which at least 15 hours must represent courses at the 4000 level, and in two (or more) discrete disciplines.
- Graduate courses in at least four discrete academic specialization sequences, minimum, and in two disciplines, a course at the 4000 level must be included.
- One Systems Engineering class.
- In addition to the 45 graduate hours of course work, an acceptable thesis must be completed.
- The candidate’s program must be approved by the Chairman, Information Sciences Department.

**Subspecialty**

Graduates are designated Information Warfare Subspecialists with a 6205P code.

**Typical Subspecialty Jobs**

Joint, Combined, Fleet, and Group Staffs Systems Commands
Navy Information Warfare Activity (NIWA)
Fleet Information Warfare Centers (FIWC)
The Joint Staff
Joint Command and Control Warfare Center (JC2WC)

**Educational Skill Requirements (ESR)**

**Information Warfare - Curriculum 595 Subspecialty Code: 6205P**

1. **Mathematics, Science, and Engineering Fundamentals:**
   The officer will have a solid foundation in
mathematics, physics, and engineering underpinning Information Warfare disciplines to support theoretical and experimental aspects of the technical courses in the curriculum.

2. Communications and Electromagnetic Systems Engineering: The officer will have an in-depth systems level understanding of (a) digital and analog communication systems including wireless, spread spectrum, satellite and fiber optic systems, and (b) electromagnetic principles including antenna design, radio-wave propagation, radar and EW systems.

3. Information Networks and Systems: The officer will have a systems-level understanding of information systems, networking fundamentals, network protocol architecture designs and their vulnerabilities as well as capabilities.

4. Organizational Processes and Structure: The officer will understand the organizational decision process, as well as the structure and other processes of organizations with emphasis on their vulnerabilities and capabilities.

5. IW Integration: The officer will understand the integration of IW as a weapon and its role in modern warfare; understand the integral roles of EW, psychological operations, military deception, OPSEC, and physical destruction; understand INFOSEC and nodal attack in this warfare area; employ real-time intelligence, tactics, and EW systems; understand the physical principles of generation, transmission, propagation, reception, processing, and suppression of detection and surveillance information.

6. Problem Solving and Practical Applicability: The officer will demonstrate the ability to conduct independent analysis in IW/C2W, and proficiency in presenting the results in writing and orally by means of a thesis and command-oriented briefings.

7. Strategy and Policy: Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns, and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation’s policies and goals and the ways military power may be used to achieve them. Fulfilled by completing the first of the Naval War College course series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.

8. Research Development, Test and Evaluation: Apply principles of project scoping, planning, design, and execution to investigate a current research, development, test, or evaluation problem of interest to the Department of Defense that culminates in the publication of a thesis of academic quality.

Brief Overview
This curriculum provides officers that are thoroughly knowledgeable in the technical and operational aspects of the role of electronic warfare as an integral part of modern warfare. The breadth of coverage includes Electronic Attack (EA), Electronic Protection (EP), and Electronic Warfare Support (ES). It is designed to provide an understanding of the principles underlying the broad field of using electronic warfare to control and manipulate the electromagnetic spectrum during military operations.

Requirements for Entry
Candidate students have a minimum academic profile code (APC) of 324 and receive approval by the Director of Admissions at the Naval Postgraduate School. The procedures for application are contained under the Admissions heading in this catalog. International students should refer to the Admissions section for current TOEFL and entrance requirements.

Entry Date
The Electronic Warfare curriculum is an eight-quarter course of study with an entry date in October. If further information is needed, contact the Program Officer or Academic Associate.

Degree
Requirements for the Master of Science in Electronic Warfare Systems Engineering (MSEWSE) degree are met en route to satisfying the specified curricular program and complying with the following requirements:
Master of Science in Electronic Warfare Systems Engineering

The MSEWSE degree will be awarded at the completion of a multidisciplinary program in Curricula 596. The MSEWSE degree program has not been reviewed by ABET. The Master of Science in Electronic Warfare Systems Engineering degree requires:

- Completion of a minimum of 45 quarter-hours of graduate-level work, of which at least 15 hours must represent courses at the 4000 level, and in two (or more) discrete disciplines.
- Graduate courses in at least four discrete academic specialization sequences, minimum, and in two disciplines, a course at the 4000 level must be included.
- One Systems Engineering class.
- In addition to the 45 graduate hours of course work, an acceptable thesis must be completed.
- The candidate’s program must be approved by the Chairman, Information Sciences Department.

Typical Course of Study

Quarter 1
MA2121 (4-0) Differential Equations
PH1322 (4-2) Electromagnetism
IT1500 (4-0) Informational Program Seminar for International Officers
MA1115 (4-0) Multi Variable Calculus

Quarter 2
OS3104 (4-0) Statistics for Science and Engineering
MA3139 (4-0) Fourier Analysis and Partial Differential Equations
EO2652 (4-1) Fields, Waves, and Electromagnetic Engineering
EO2102 (4-2) Basic Electronics and Electrical Machines

Quarter 3
OS3003 (4-0) Operations Research for Information Operations
EO3602 (4-2) Electromagnetic Radiation, Scattering, and Propagation
CS2971 (4-2) Fundamental Object-Oriented Programming in C++
EO2512 (4-2) Telecommunications Engineering

Quarter 4
EO4612 (4-2) Microwave Devices and Radar
CS3030 (4-0) Computer Architecture and Operating Systems
IW3502 (4-2) Information Warfare Networks
EO3512 (4-1) Communications and Countermeasures

Quarter 5
CS3600 (4-2) Introduction to Computer Security
PH3204 (4-2) Electro-Optic Principles and Devices
EC3700 (3-2) Joint Network-Enabled Electronic Warfare
EO4911 (2-0) Advanced Interdisciplinary Studies in Electrical and Computer Engineering

Quarter 6
PH4209 (3-2) EO/IR Systems and Countermeasures
MR3419 (2-1) Assessment of Atmospheric Factors in EM/EO Propagation
IW0810 (0-8) Thesis Research for IW Students
OA4603 (4-0) Test and Evaluation

Quarter 7
(4-0) Approved Elective
EC4010 (3-2) Principles of System Engineering
EC4690 (3-2) Joint Network-Enabled Electronic Warfare II
IW0810 (0-8) Thesis Research for IW Students

Quarter 8
(4-0) Approved Elective
IW0810 (0-8) Thesis Research for IW Students
IW0810 (0-8) Thesis Research for IW Students

* The year of joining the Naval Postgraduate School faculty is indicated in parentheses.

David L. Alderson, Assistant Professor (2006); Ph.D., Stanford University, 2003.

Jeffrey Appleget, Senior Lecturer (2009); Ph.D., Naval Postgraduate School, 1999.

Michael Atkinson, Assistant Professor (2009); Ph.D., Stanford University, 2009.

Andrew H. Bellenkes, Senior Lecturer (2010); Ph.D., University of Illinois, 1999.

Gerald G. Brown, Distinguished Professor (1973); Ph.D., University of California at Los Angeles, 1974.

Robert Burks, COL, USA, Associate Dean of the Graduate School of Operational and Information Sciences and Military Instructor (2009); Air Force Institute of Technology, 2005.

Samuel E. Buttrey, Associate Professor (1996); Ph.D., University of California at Berkeley, 1996.

W. Matthew Carlyle, Associate Professor (2002); Ph.D., Stanford University, 1997.

Timothy Chung, Research Assistant Professor (2008); Ph.D., California Institute of Technology, 2007.

Emily Craparo, Research Assistant Professor (2010); Ph.D., Massachusetts Institute of Technology, 2008.

Robert F. Dell, Chairman, Department of Operations Research and Professor (1990); Ph.D., State University of New York at Buffalo, 1990.

Ned Dimitrov, Assistant Professor (2010); Ph.D., University of Texas at Austin, 2008.

James N. Eagle, Professor (1982); Ph.D., Stanford University, 1975.

Paul Lee Ewing, Research Associate Professor (2005); Ph.D., Colorado School of Mines, 2002.

Ronald D. Fricker, Jr., Associate Professor (2005); Ph.D., Yale University, 1997.

Thomas E. Halwachs, Senior Lecturer and Director of Information Technology (1988); M.S., Naval Postgraduate School, 1976.

Gilbert T. Howard, Associate Professor and Director of Academic Planning (1967); Ph.D., Johns Hopkins University, 1967.

Wayne P. Hughes, Jr., Senior Lecturer (1979); M.S., Naval Postgraduate School, 1964.

Patricia A. Jacobs, Distinguished Professor (1978); Ph.D., Northwestern University, 1973.

Rachel Johnson Silvestrini, Assistant Professor (2009); Ph.D., Arizona State University, 2008.

David Kelton, Professor (2008); Ph.D., University of Wisconsin at Madison, 1980.

Quinn Kennedy, Lecturer (2007); Ph.D., Stanford, 2002.

Jeffrey E. Kline, Senior Lecturer (2005); M.S., Naval Postgraduate School, 1991.

Robert A. Koyak, Associate Professor (1998); Ph.D., University of California at Berkeley, 1985.

Moshe Kress, Professor (2003); Ph.D., University of Texas at Austin, 1981.

Kyle Y. Lin, Associate Professor (2004); University of California at Berkeley, 2000.

Thomas W. Lucas, Associate Professor (1998); Ph.D., University of California at Riverside, 1991.

Michael E. McCauley, Research Professor (2002); Ph.D., University of California at Santa Barbara, 1979.

Gordon R. Nakagawa, Adjunct Professor (1986); M.S., Naval Postgraduate School, 1966.

Scott Nestler, LTC, USA, Assistant Professor (2010); Ph.D., University of Maryland, 2007.

Daniel A. Nussbaum, Visiting Professor (2004); Ph.D., Michigan State University, 1971.

Douglas E. Otte, CAPT, USN, Military Associate Professor (2007); M.S., Naval Postgraduate School, 1989.

Steven E. Pilnick, Senior Lecturer (1999); Ph.D., Naval Postgraduate School, 1989.

Peter Purdue, Dean of the Graduate School of Operational and Information Sciences and Professor (1986); Ph.D., Purdue University, 1972.

Eva Regnier, Visiting Associate Professor (2001); Ph.D., Georgia Institute of Technology 2001.

Johannes O. Royset, Assistant Professor (2003); Ph.D., University of California at Berkeley 2002.

Anton Rowe, Research Associate (1999); M.S., Stanford University, 1997.

Javier Salmeron, Associate Professor (2000); Ph.D., Universidad Politecnica de Madrid, 1998.

Paul J. Sanchez, Senior Lecturer (1999); Ph.D., Cornell University, 1986.

Susan M. Sanchez, Professor (2000); Ph.D., Cornell University, 1986.

Chad Seagren, MAJ, USMC, Assistant Professor (2010); Ph.D., George Mason University, 2010.

John Schmidt, Associate Professor (2010); Ph.D., University of Houston, 1987.

Harrison Schramm, LCDR, USN, Military Instructor (2010); M.S., Naval Postgraduate School, 2006.

Lawrence G. Shattuck, Senior Lecturer (2005); Ph.D., The Ohio State University, 1995.

Nita Lewis Shattuck, Associate Professor (2000); Ph.D., University of Texas, 1982.

Robert L. Shearer, LTC, USA, Assistant Professor (2008); D.Sc., George Washington University, 2005.

Dash Singham, Research Assistant Professor (2010); Ph.D., University of California at Berkeley, 2010.

Christian Smith, Senior Lecturer (2009); Ph.D., University of Minnesota, 1996.

Roberto Szechman, Assistant Professor (2003); Ph.D., Stanford University, 2001.

Lyn R. Whitaker, Associate Professor (1988); Ph.D., University of California at Davis, 1985.

R. Kevin Wood, Distinguished Professor (1982); Ph.D., University of California at Berkeley, 1982.

Emeritus Professors

Gordon H. Bradley, Professor Emeritus (1973); Ph.D., Northwestern University, 1967.

Donald P. Gaver, Jr., Distinguished Professor Emeritus (1970); Ph.D., Princeton University, 1956.

Harold J. Larson, Professor Emeritus (1962); Ph.D., Iowa State University, 1960.

Peter A. W. Lewis, Distinguished Professor Emeritus (1971); Ph.D., University of London, 1964.

Kneale T. Marshall, Distinguished Professor Emeritus (1968); Ph.D., University of California at Berkeley, 1966.

Paul R. Milch, Professor Emeritus (1963); Ph.D., Stanford University, 1966.

Robert R. Read, Professor Emeritus (1971); Ph.D., University of California at Berkeley, 1958.

David A. Schrady, Distinguished Professor Emeritus (1965); Ph.D., Case Institute of Technology, 1965.

Michael G. Sovereign, Professor Emeritus (1970); Ph.D., Purdue University, 1965.

James G. Taylor, Professor Emeritus (1968); Ph.D., Stanford University, 1966.

Alan R. Washburn, Distinguished Professor Emeritus (1970); Ph.D., Carnegie Institute of Technology, 1965.

Brief Overview

Operations Research (OR) originated during World War II as a response to tactical problems relating to the effective and efficient operation of weapon systems, and to operational problems relating to the deployment and employment of military forces. Since then, OR has evolved
into a full-scale, scientific discipline that is practiced widely by analysts in industry, government, and the military.

OR is the science of helping people and organizations make better decisions. More formally, it is the development and application of mathematical models, statistical analyses, simulations, analytical reasoning, and common sense to the understanding and improvement of real-world operations. Improvement can be measured by the minimization of cost, maximization of efficiency, or optimization of other relevant measures of effectiveness.

The military uses OR at the strategic, operational, and tactical levels. OR improves decision making and facilitates insights into the phenomena of combat. OR applications cover the gamut of military activities including: national policy analysis, force composition and modernization, logistics, human resources (recruiting, retention, promotion, training, and personnel assignment), battle planning, flight operations scheduling, intelligence, command and control, weapon selection (weapon system effectiveness, cost, compatibility, and operability), engagement tactics (fire control, maneuver, target selection, and battle damage assessment), maintenance and replenishment, and search and rescue.

The Naval Postgraduate School's Operations Research Department offers M.S. and Ph.D. degrees. In 2001, it celebrated the 50th anniversary of its curriculum, which was the first educational program in OR in the United States. It is one of the oldest, largest, and highest-ranking OR departments in the country. It is without peer in terms of the extent to which graduate education is integrated with a commitment to solving real military problems. Our students and faculty use the latest mathematical modeling ideas and computing technology to penetrate deeply into the analysis of important real-world problems. Analysis is a key word; NPS operations researchers frequently influence decisions and serve as agents for change.

For further information, see the OR Department Web site: www.nps.edu/Academics/GSOIS.

Degree

Master of Science in Applied Science

Operations Research Course Descriptions

OA Refresher Courses

OAR100 Introduction to Computational Methods for Operations Research (2-2) As Required
(No credit) (Meets first 6 weeks of quarter.) Introduction to the Naval Postgraduate School computer laboratories and software. Windows operating system, files, Internet, editing, word processing, spreadsheets, data analysis, and presentation graphics. Review of selected topics in differential and integral calculus. Integration of functions of a single variable. Constrained and unconstrained optimization of functions of a single variable.

OAR160 Introduction to Operations Analysis II (2-2) As Required
(No credit) This course is the second half of OA1600.

OAR200 Introduction to Visual Basic for Operations Research (2-2) As Required
(No credit) (Meets last 6 weeks of quarter.) A first course in computer programming using Visual Basic as a high-level programming language. Primary emphasis will be on the planning, structuring, and debugging of computer programs for solving Operations Research problems. Prerequisite: None.

OAR100 Introduction to Computational Methods for Operations Research (2-2) As Required
(No Credit) (Meets first six weeks of quarter.) Introduction to the Naval Postgraduate School computer laboratories and software. Windows operating system, files, Internet, editing, word processing, spreadsheets, data analysis, and presentation graphics. Review of selected topics in differential and integral calculus. Integration of functions of a single variable. Constrained and unconstrained optimization of functions of a single variable.

OAR160 Introduction to Operations Analysis II (2-2) As Required
(No Credit) This course is the second half of OA1600.
GRADUATE SCHOOL OF OPERATIONAL AND INFORMATION SCIENCES (GSOIS)

OAR200 Introduction to Visual Basic for Operations Research (2-2) As Required
(No Credit) (Meets last six weeks of quarter.) A first course in computer programming using Visual Basic as a high-level programming language. Primary emphasis will be on the planning, structuring, and debugging of computer programs for solving operations research problems. Prerequisite: None.

OA Courses

OA0001 Seminar for Operations Analysis Students (0-2) As Required
(No credit) Guest lecturers. Review of experience tours. Thesis and research presentations. Prerequisite: None.

OA0810 Thesis Research for Operations Analysis Students (0-8) Fall/Winter/Summer/Spring
Every student conducting thesis research will enroll in this course. Prerequisite: None.

OA0820 Integrated Project (0-12) As Required
The Naval Postgraduate School provides many opportunities for students to participate in campus-wide interdisciplinary projects. These projects encourage students to conceptualize systems which respond to current and future operational requirements. An integral part of the project involves working with other groups to understand and resolve issues involved with system integration and to lend OR-specific expertise to these projects. This course is available to Operations Research students who are participating in a campus-wide integrated project. Course is graded on a Pass/Fail basis. Prerequisite: None. Classification: Security Clearance Required.

OA1600 Introduction to Operations Analysis I (2-2) As Required
(No credit) A first course in Operations Analysis, covering its origins in World War II to current practices. Introduces concepts, tools, and methods of analysis, with tactical examples. Emphasis on measuring combat effectiveness and developing better tactics. Prerequisite: None.

OA2801 Computational Methods for Operations Research (4-1) Fall/Spring
An introductory course in computation and procedural programming with an emphasis on the analysis and implementation of algorithms relevant to Operations Research. The course is taught using a general purpose programming language. The laboratory has weekly programming assignments. Prerequisite: None.

OA2900 Workshop in Operations Research/Systems Analysis (V-0) Fall/Winter/Spring/Summer
This course may be repeated for credit if course content changes. Graded on Pass/Fail basis only. Prerequisites: Department approval and a background in Operations Research.

OA2910 Selected Topics in Operations Analysis (V-4) Winter
(Variable hours 2-0 to 5-0.) Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. Prerequisite: A background in Operations Research.

OA3101 Probability (4-1) Fall/Spring
Introduction to data entry, manipulation, and graphing using spreadsheets and statistical packages. Graphical and tabular methods in descriptive statistics, measures of location and variability. Probability axioms, counting techniques, conditional probability. Discrete and continuous probability distributions: binomial, hypergeometric, negative binomial, Poisson, normal, exponential, gamma, and others. Joint probability distributions, conditional distributions and conditional expectation, linear functions. Random samples, probability plots. Prerequisites: Knowledge of single-variable calculus and MA1115 (may be taken concurrently).

OA3102 Statistics (4-2) Winter/Summer

OA3103 Data Analysis (4-1) Fall/Spring
Techniques for analyzing, summarizing, and comparing sets of real data with several variables. Computations are done in a statistical package and a common spreadsheet program. Model building and verification, graphical methods of exploration. Least squares regression, logistic and Poisson regression, introduction to categorical data analysis, principal components and/or classification. Prerequisite: None.

OA3105 Nonparametric Statistics (4-0) Winter
Tests based on the binomial distribution; confidence intervals for percentiles, tolerance intervals and goodness-of-fit tests; contingency tables; one-sample tests, two-sample tests, and tests for independence based on ranks and scores; nonparametric analysis of variance and regression. Applications will illustrate the techniques. Prerequisite: A course in statistical inference.

OA3201 Linear Programming (4-0) Spring
(Same as MA3301) Theory of optimization of linear functions subject to linear constraints. The simplex algorithm, duality, sensitivity analyses, parametric linear programming. Applications to resource allocation, manpower planning, transportation and communications, network models, ship scheduling, etc. Introduction to computer-based linear programming systems. Prerequisite: None.

OA3301 Stochastic Models I (4-0) Fall/Spring
Course objectives are to provide an introduction to stochastic modeling. Topics include the homogeneous Poisson process and its generalizations and discrete and continuous time Markov chains and their applications in modeling random phenomena in civilian and military problems. Prerequisite: OA3101 or consent of the instructor.

OA3302 Simulation Modeling (4-0) Winter/Summer
Discrete event simulation methodology. Monte Carlo techniques and use of simulation languages. Variance reduction techniques, design of simulation experiments, and analysis of results. Prerequisite: OA3103, OA3200, OA3301.

OA3304 Decision Theory (4-0) Winter/Summer
This course provides an introduction to modern theory and methods for decision making in both single and multiple person decision-making situations. Bayesian methods are emphasized in the single-person case, including decision trees, Bayesian networks, influence diagrams, and multicriterion decision making. Multiperson situations covered include two-person zero-sum games, voting, Nash bargaining, and the Shapley value. Applications are mainly to military problems. Prerequisite: None.
OA3401 Human Factors in Systems Design (3-1)  
Fall/Spring  
This course will provide an introduction to the field of human factors with an emphasis on military systems. Humans are the most important element of any military system. Consequently, the design of effective systems must take into account human strengths and limitations as well as considerations of human variability. The course surveys human factors and human-centered design and system effectiveness and safety. Topics include human cognition and performance as they are influenced by physiological, anthropometric, and environmental considerations. Prerequisite: None.

OA3402 Research Methods for Performance Assessment  
(3-1) Winter/Summer  
Well-constructed research is invaluable; informing and enabling decision makers to make better choices. This course covers the research process from beginning to end and explores the types of research conducted in a variety of laboratory and field settings. Topics include institutional approval and ethical use of human subjects; research reliability and validity; formulation of the research question; research designs ranging from experimentation to systematic observational techniques and subjective surveys; database management considerations; analytical approaches; and writing and presenting the research paper. Prerequisite: None.

OA3411 Introduction to Human Systems Integration (3-0)  
Fall/Spring  
This course serves as the framework for examining Human Systems Integration in the context of Department of Defense Systems Acquisition as mandated by DoD Instruction 5000.2, Enclosure 7. This course provides an overview of the HSI domains: human factors engineering, personnel, habitability, manpower, training, environment safety and occupational health, and survivability. Principles of individual physiological and psychological capabilities and limitations and team attributes are also introduced. Prerequisites: None.

OA3412 Human Systems Integration in the DoD Acquisition Lifecycle (3-0)  
Fall  
This course further expands on the role of Human Systems Integration within the context of the Department of Defense Systems Engineering Process in the DoD Acquisition Lifecycle. Students examine select acquisition activities (e.g., Joint Capabilities Integration Development System, or JCIDS) and the manner in which HSI practitioners influence these activities. This course also focuses on leveraging the unique activities of HSI practitioners to assist/support program managers and lead systems engineers in developing human-centered systems that optimize total system performance while minimizing cost and risk. Prerequisite: OA3411.

OA3413 Human Systems Integration Tools, Tradeoffs, and Processes (3-3)  
Winter  
This course provides a description and evaluation of tools and techniques available to facilitate the acquisition of human-centered military systems. It also provides an overview of techniques employed by practitioners within the sub-disciplines of HSI. The focus of this course is on tool inputs and outputs and their utility. This course also examines the manner in which HSI trade space analysis is performed — one of the most important roles of the HSI practitioner in the acquisition process. Prerequisite: OA3412.

OA3501 Inventory I (4-0) As Required  
A study of deterministic and approximate stochastic inventory models. Deterministic economic lot size models with infinite production rate, constraints, quantity discounts. An approximate lot size reorder point model with stochastic demand. An approximate stochastic periodic review model. Single period stochastic models. Applications to Navy supply systems. Prerequisite: OA3101 or consent of the instructor.

OA3601 Combat Models and Games (4-0) Fall/Spring  
This course provides a discussion of measures of effectiveness and a quantitative introduction to dynamic programming, target coverage models, Kalman filters, Lanchester Systems, and two-person zero-sum games. Prerequisite: MA3110, OA3102.

OA3602 Search Theory and Detection (4-1) Winter/Summer  

OA3610 Introduction to Naval Logistics (4-0) As Required  
Presentation of the fundamental purposes, history, and components of the naval logistic system. Logistics is introduced as a command function necessary for sustaining combat operations. This concept is developed by looking at logistics resources and processes, unit and battle group logistics, in-theater support, strategic lift, and CONUS/system support. Prerequisite: None.

OA3650 Improvised Explosive Devices (IED) Seminar (4-0) As Required  
This seminar studies the improvised explosive device (IED) problem, with special emphasis on its use by insurgents in Iraq and Afghanistan. The seminar will discuss IEDs as one tactic in an insurgency and the goals and strategies with respect to the use of IEDs. The focus of the seminar will be the use of models, analysis, and systems technology to defeat the IED system. Topics include: short history of Iraq including demographics, religion, politics, and economics; access to SIPRNET data on IED incidents and analysis of attacks; geographic information systems (GIS) for display of incidents; a short overview of counterinsurgency methods that have been used in Iraq and elsewhere; systems engineering approaches to countering the use of IEDs; and operations research models of IED issues. There will be guest speakers with current knowledge of the IED threat. The seminar is open to all NPS students. Prerequisite: OS2103 or equivalent and U.S. citizenship. Classification: SECRET.

OA3801 Computational Methods for Operations Research II (3-1) As Required  
An advanced course in computation, with emphasis on data structures and algorithms particularly appropriate for military Operations Research. The course is taught using a general purpose programming language. The laboratory has weekly programming assignments. Prerequisite: OA2200.

OA3900 Workshop in Operations Research/Systems Analysis (V-0) As Required  
(Variable hours 2-0 to 5-0.) This course may be repeated for credit if course content changes. Graded on Pass/Fail basis only. Prerequisite: Departmental approval.
OA4103  Advanced Probability (3-0) As Required
(Same as MA4302.) Theory and application of the general linear hypothesis model. Analysis of variance and analysis of covariance. Planning experiments; traditional and hybrid experimental designs. Use of standard computer packages for analysis of experimental data. Prerequisite: OA3103 or equivalent.

OA4107  Categorical Data Analysis (3-1) As Required
Contingency tables in two, three, and higher dimensions. Exact procedures for small tables. The course will feature case studies and treat log-linear models, expanded logistic analysis, ordinal variables multinominal response methods. Poisson regression and the problems of sparse data sets. Applications and DoD case studies appear in the laboratory exercises. Prerequisite: OA3103.

OA4108  Data Mining (2-2) Spring
The art and science of finding real patterns in (usually very large) data sets as seen from a statistical perspective. Introduction to some of the techniques used in data mining and discussion of their implementation, their strengths and weaknesses, and some common and specific pitfalls. Algorithms for classification and regression include trees and neural networks as well as the a priori algorithm for rule generation. Techniques for clustering and visualization include hierarchical and k-means clustering and XGobi and lattice-type graphics. The Clementine and S-Plus software packages are used. Real datasets used in the past have included fraud detection data from the Defense Finance and Accounting Service. Prerequisite: OA3103.

OA4109  Survey Research Methods (4-2) Winter/Summer
The course will cover the basic principles of survey research methods. It will provide students with a practical grounding in all aspects of survey methodology, from survey instrument design, to sample design, to modes of data collection, to methods for survey data analysis. Students will be able to immediately apply course work to their theses and other real-world applications, including a class capstone project in which students will design, field, and analyze a survey on behalf of a DoD organization. Prerequisite: OA3103 and OS3101 or equivalent, or consent of the instructor.

OA4203  Mathematical Programming (4-0) Spring
Introduction to formulation and solution of problems involving networks, such as maximum flow, shortest route, minimum cost flows, and PERT/CPM. Elements of graph theory, data structure, algorithms, and computational complexity. Applications to capital budgeting, large-scale distribution systems, weapon systems allocation, and others. Prerequisite: OA3201.

OA4204  Games of Strategy (4-0) Summer
Mathematical models of conflict situations, emphasizing the theory of decision making against a completely opposed enemy. Topics include matrix games, Blotto games, stochastic games, and the Shapley value. Applications to combat, resource allocation, cost sharing, etc. Prerequisites: OA3103, OA3201.

OA4205  Advanced Nonlinear Programming (4-0) As Required
Continuation of OA4201. Advanced topics in nonlinear programming, including duality theory, further consideration of necessary and sufficient conditions for optimality, additional computational methods examination of recent literature in nonlinear programming. Prerequisite: OA4201.
Course objectives are to discuss methods of stochastic modeling beyond those presented in OA3301 and give students the opportunity to apply the methods. Topics include conditioning; renewal processes; renewal reward processes; length-biased sampling, semi-Markov models, and novel queuing, reliability and maintenance models. The topics are illustrated by DoD applications. This course also is offered as MA4305. Prerequisite: None.

OA4302 Reliability and Weapons System Effectiveness Measurement (4-0) Winter/Summer
Component and system reliability functions and other reliability descriptors of system effectiveness. Relationships between system and component reliability. Point and interval estimates of reliability parameters under various life testing plans. Prerequisite: OA3301.

OA4303 Sample Inspection and Quality Assurance (4-0) Winter/Summer
Attribute and variables sampling plans. Military Standard sampling plans with modifications. Multilevel continuous sampling plans and sequential sampling plans. Structure and implementation of quality assurance programs and analysis of selected quality assurance problems. Prerequisite: OA3101 or consent of the instructor.

OA4305 Stochastic Models III (4-0) As Required
Lecture topics include nonstationary behavior of Markov processes, point process models, regenerative processes, Markovian queuing network models, and non-Markovian systems. Applications include reliability, computer system modeling, combat modeling, and manpower systems. Students are given exercises entailing data analysis, formulation of probability models, and application of models to answer specific questions concerning particular phenomena. Prerequisites: OA3103, OA3301, and OA4301.

OA4308 Time Series Analysis (4-0) As Required

OA4321 Decision Support Systems (3-1) Winter
An introduction to the topic; includes an overview of organizational decision making, discussion of Operations Research techniques integral to Decision Support Systems, relationships to artificial intelligence and expert systems, specialized computer languages, and nontraditional techniques for handling uncertainty. Current operational systems, both military and civilian, will be used as examples. Prerequisites: OA3101 and OA3200.

OA4333 Simulation Analysis (4-0) As Required
Advanced techniques of model development and simulation experimentation. Discussion of current research. Actual topics selected will depend on the interests of the students and instructor. Prerequisite: OA3302.

OA4401 Individual Performance & Personnel Considerations (3-1) Winter/Spring
This course provides students with a working knowledge of current theories regarding individual human performance and the methods used to measure individual states and traits that affect that performance. In addition, the course includes familiarization with tests and procedures used by the DoD and industry for personnel selection and job/task assessment procedures. The course builds on information covered in OA-3401, Human Factors in Systems Design. Prerequisite: OA3401, specifically, knowledge and basic understanding of human information processing, sensation, perception, attention, vigilance, and memory OR permission of instructor.

OA4402 Training and Simulation (3-1) As Required
This course will provide an overview of learning principles, training system development and evaluation, the Instructional System Development approach, Navy training practices, and simulation training systems. Tradeoffs among personnel selection, training, and other domains of HSI will be addressed. Prerequisite: None.

OA4406 Survivability, Habitability, Environmental Safety, and Occupational Health (4-0) Summer
This course will provide an overview of personnel survivability methodology in safety, health hazards, and occupational health concepts. The evaluation of new and modified military systems and equipment for safety and potential health hazards will be addressed through reviewing models, methods, and processes available to help identify and mitigate the potential harm from accidents and hostile environments. Occupational health concerns will be addressed and methods of alleviating or minimizing workplace hazards will be analyzed. Risk analysis and mitigation models also will be examined for their contribution to increased safety and operational effectiveness. Prerequisite: None.

OA4407 Human Anthropometry and Biomechanics (3-1) Spring
This course will cover current techniques for combining anthropometric and biomechanical data to model the relationships among people, tasks, equipment, and the workplace. The historical development of anthropometric databases and human engineering models will be reviewed and current techniques and multivariate models will be introduced. Both military and commercial guidelines for ergonomic design will be covered and emphasis will be given to software tools for 3-D modeling, visualization, and workstation design. Prerequisite: None.

OA4408 Macroergonomics and Organizational Behavior in Human Systems Integration (3-1) Winter/Summer
This course systematically examines the application of macroergonomic concepts and organizational processes in orchestrating human systems integration (HSI) efforts in acquisition programs. The key concepts, principles, and theories of macroergonomics are defined and then applied to analyze organizational structures, policies, and processes that impact effective HSI efforts. Specific attention will be paid to leadership, organizational, group, and team behaviors as they impact HSI strategy, planning, program execution, and risk assessment. The material covered will then be applied to manning, training, and safety challenges in current acquisition programs. Prerequisite: None.

OA4411 Human Systems Integration Case Studies and Applications (4-0) Spring
This is the capstone course in the Human Systems Integration Certificate Program. This course provides students the opportunity to integrate and apply the materials from previous courses through the examination of actual military acquisition programs. One of the course objectives is to provide an historical analysis of both small and large military acquisition programs. The lessons learned from these historical case studies will reinforce best practices for HSI practitioners. Prerequisite: OA3413.
OA4415 HSI Case Studies and Applications (Capstone II) (4-0) Summer
This is the final course in the Naval Postgraduate School’s distance learning Master of Homeland Security Integration (MHSI) program. Students will engage in a capstone project that builds on the activities in the OA4414 HSI Case Studies and Applications (Capstone I) and all other previous courses. A typical capstone project would require a student to create a detailed HSI process document for his or her organization. This document would describe the HSI processes and activities that should be employed by that organization to design, develop, produce, deploy, operate, and support a system with an appropriate focus on the operators, maintainers, supporters, and trainers. Prerequisite: OA4414.

OA4501 Seminar in Supply Systems (3-0) Summer
A survey of the supply system for the U.S. Navy. Topics include inventory models at all levels for consumables and repairables, budget formulation and execution, provisioning and allowance lists, planned program requirements, transaction item reporting, and current topics of research such as stock migration and material distribution studies. Prerequisite: OA3501.

OA4600 Information in Warfare (4-0) As Required
Quantitative approaches to measuring and assessing the value of information in warfare, with emphasis on tradeoffs between information and firepower. Major components are on information as precision (Bayesian filtering, data association, and fusion), and information as a guide to decision making (decision theory, Markov models, optimization). Prerequisite: OA3102, OA3201, OA3301.

OA4601 Models for Decision Making (4-0) As Required
The objective is to be able to formulate and analyze operational and executive decision problems, where a lack of clear problem definition and data, sequential timing of decisions, uncertainty, and conflicting objectives, are all normal features of such problems. Understanding and applying influence diagrams and decision trees form the core part of the course. Emphasis is on building models and determining data requirements. Specific areas include the use of policy space analysis in sensitivity. Prerequisite: OA3304.

OA4602 Joint Campaign Analysis (4-0) Winter/Summer
This course studies the development, use, and recent applications of campaign analysis in actual procurement, force structure, and operations planning. Emphasis is on formulating the problem, choosing assumptions, structuring the analysis, and measuring effectiveness. Interpreting and communicating results in speech and writing is an important part of the course. In the last three weeks, students conduct a broad gauge, quick reaction campaign analysis as team members. Prerequisites: A course in basic probability and statistics theory, and operational experience in military environments.

OA4603 Test Evaluation (4-0) Winter/Summer
This course is designed to cover Developmental and Operational Test and Evaluation and Military Experimentation, including statistical concepts and methods frequently used in weapon system testing and experimentation environments. The course is taught from the perspective of the Program Manager, Test Project Officer, Test Engineer, Test Analyst, and Statistician. A number of actual military cases are used for examples. Topics include the Role of Test and Evaluation in Systems Engineering and Acquisition Management, Test Planning and Design, Development of Measures of Effectiveness and Measures of Performance, Conduct of Tests, Data Analysis, and Reporting of Test Results. A detailed group test planning project and design exercise are included. Upon successful completion of this course, students receive DAWIA Level II and Level III Intermediate and Advanced Test and Evaluation certification. Prerequisite: A previous course in probability and statistics, or consent of the instructor.

OA4604 Wargaming Applications (4-0) Winter/Summer
War-game techniques, design, and construction for application in manual, computer and interactive gaming. Emphasis is on wargaming as a means to assess aspects of current and future operations in joint warfare. Introduction and use of current joint simulation tools are integral to course goals. Prerequisite: OA3302.

OA4605 Operations Research Problems in Naval Warfare (3-0) Winter
Analysis of fleet exercises. Changes in tactics and force disposition arising from the introduction of nuclear weapons and missiles. Relationship of air defense to strike capability and USW. Current radar, sonar, communications, and ECM problems. Prerequisite: OA4604, OA4655.

OA4607 Tactical Decision Making (4-0) Spring
This course deals with computer-aided decision making. Topics include the human-computer interface, the construction of effective graphics, verification/validation, and theoretical frameworks for competitive and noncompetitive decision making. Kalman filters are introduced as an important fusion and tracking tool. The primary classroom application areas are information fusion, search/track, and mine warfare. A project is required. Prerequisites: OA3602, OS2103, OS3604 or equivalent. OS3301 or equivalent, and a working knowledge of a programming language such as MATLAB, C++, Java, or Visual Basic.

OA4608 Foreign Military Operations Research (4-0) Spring
This course considers military operations research of foreign countries that are of current concern to DoD. Because many of these have been military clients of the former Soviet Union, the course will take Soviet military operations research as a point of departure for study. Asymmetries between Soviet and American military operations research are emphasized. Exploitation of such information is discussed. Prerequisite: None.

OA4610 Mobilization (4-0) As Required
Introduction to the military and civilian systems for mobilization, linear programming, and simulation formulations of strategic mobility and munitions scheduling. Planning and controls of the logistics systems, including planning factors and joint operations planning. Integration of mobilization with Navy operational logistics. Prerequisite: None.

OA4611 Joint and Combined Logistics (4-0) As Required
Presentation of the role of logistics and logisticians in war planning and strategy development, with emphasis on jointness. Introduction to JCS, unified, and Navy command and staff structures, and participation in deliberate and crisis action-planning process. Emphasis on the transition to war, mobilization, strategic lift, and the weapon system acquisition process as related to logistics planning. Prerequisite: OA3610.

OA4612 Logistics Models (4-0) As Required
Mathematical modeling of most of the processes in unit/battle group or battle force logistics. Computation of fuel consumption, underway replenishment scheduling, shuttle ship requirements, measures of effectiveness, formations and their supportability, sustainability, engagement models, and ordnance prediction, and implementation of such models in microprocessor-based logistics
decision aids. Also ordnance programming models. Only for U.S. students enrolled in curricula 360 or 361. Prerequisite: Consent of the instructor.

**OA4655 Introduction to Joint Combat Modeling (4-0)**
*Winter/Summer*

(Also as MV4655.) This course covers the basic tools and concepts of joint combat modeling. Both the science and the art are emphasized. Topics include: the role of combat modeling in analyses, taxonomies of models, an introduction to some important models and organizations, measures of effectiveness, approaches to effectively using models to assist decision making, object-oriented approaches to designing entities to simulate, firing theory, one-on-one and few-on-few engagements, introduction to aggregated force-on-force modeling (including the basic Lanchester model and some of its derivatives), sensing algorithms, simulation entity decision making, simulating C4ISR processes, terrain and movement algorithms, verification, validation, and accreditation (VV&A), stochastic versus deterministic representations, hierarchies of models, and variable resolution modeling. The primary course objective is for you to understand the enduring fundamentals of how combat models are built and used to support decision making. This will be done, in part, through several small projects that will require students to design, implement, and analyze models. Prerequisites: Probability and Statistics (through third course in the sequence), familiarity with a programming language (Java recommended), Stochastic Models (OA3301), Calculus, and concurrent instruction in computer simulation (e.g., OA3302).

**OA4656 Advanced Combat Modeling (4-1)**
*As Required*

The objective of this course is to educate and train model-builders (as opposed to model-users). The phenomena and situations that are modeled in this course range from fundamental shooting processes to force-on-force engagements, and from minefields to air-defense systems. Special attention is given to contemporary issues such as the effect of information in the presence of precision-guided weapons and UAVs, and the war against terror. The focus of the course is on analytic models that are based on probability and optimization techniques. The primary course objective is for you to understand the enduring fundamentals of how combat models are built and used to support decision making. This will be done, in part, through several small projects that will require students to design, implement, and analyze models. Prerequisites: OA4655 and OA3301 (or OS3311).

**OA4658 Survey of Joint Combat Models (1-0)**
*Winter/Summer/Fall/Spring*

The purpose of the course is to introduce the student to a wide variety of models that are being used throughout DoD. A broad cross section of models are envisioned to be taught—characteristics of the models will include both large and small models; analytical models as well as those for experimentation and/or training; theater-level as well as strategic- and tactical-level models; ground as well as air models. Prerequisite: None.

**OA4701 Econometrics (4-0)**
*Winter*

Construction and testing of econometric models, analysis of economic time series, and the use of multivariate statistical analysis in the study of economic behavior. Prerequisite: OA3103.

**OA4702 Cost Estimation (4-0)**
*Winter/Summer*

This course provides a broad-based understanding of the cost analysis activities involved in the acquisition and support of DoD weapon systems. In addition, it introduces operations research techniques fundamental to the field of cost estimation. The course covers the defense systems acquisition process, time value of money, and economic analysis; it develops, uses, and analyzes estimating techniques commonly encountered in both the DoD and industry, including statistical and nonstatistical cost estimating relationships, inflation indices, cost improvement curves, time phasing, and uncertainty analysis. Prerequisite: None.

**OA4703 Defense Expenditure and Policy Analysis (4-0)**
*As Required*

A presentation of the major components of defense budgeting and policy formulation, from the standpoint of the three major institutions involved—the agency, executive, and congress. The use of quantitative models of institutional behavior is emphasized when examining both individual institutions and the interaction between them. Prerequisite: OA3103.

**OA4704 Operations Research Techniques in Manpower Modeling (4-0)**
*Fall/Spring*

The objective of this course is to introduce the student to the major types of manpower and personnel models for estimating the effects of policy changes on the personnel system. Topics include longitudinal and cross-section models, optimization models, data requirements, and validation. Application in the form of current military models are included. Prerequisite: OA3103 or consent of the instructor.

**OA4801 Spreadsheet Modeling for Military Operations Research (3-2)**
*As Required*

Implementation of a wide variety of military operations research topics on software accessible in any typical Department of Defense (Fleet) environment. This course highlights military spreadsheet applications of operations research methods (e.g., discrete event simulation, optimization, queueing, Markov chains), discusses limitations, and demonstrates methods to supplement and customize spreadsheet analytical functions. Prerequisites: OA3103, OA3301 and OA3302.

**OA4910 Selected Topics in Operations Analysis (V-0)**
*As Required*

(Variable hours 2-0 to 5-0.) Presentation of a wide selection of topics from the current literature. This course may be repeated for credit if course content changes. Prerequisites: A background of advanced work in operations research and departmental approval.

**OA4930 Readings in Operations Analysis (V-0)**
*As Required*

(Variable hours 2-0 to 5-0.) This course may be repeated for credit if course content changes. Graded on Pass/Fail basis only. Prerequisite: Departmental approval.

**OA5810 Dissertation Research (0-8)**
*All Quarters*

Dissertation research for doctoral students. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council. Prerequisite: Advancement to Candidacy.

**OS Courses**

**OS2080 Probability and Statistics I (3-0)**
*Fall/Spring*

Fundamentals of probability and statistics useful in military modeling. Topics include probability laws and calculation methods, conditional probability, Bayes' Theorem, discrete and continuous random variables, the binomial, geometric, Poisson, exponential, and normal distributions, expectation, variance, and covariance, confidence intervals, hypothesis testing, and simple linear regression. Emphasis is on understanding uncertainty and developing computational skills for military systems analysis. Prerequisite: Single variable calculus.
OS2101. Analysis of Experimental Data (4-0) As Required

OS2103. Applied Probability for Systems Technology (4-1)
Fall/Winter/Summer
A first course in probability for students in operational curricula. Topics include probability laws and calculation methods, discrete and continuous random variables, common probability distributions, introduction to modeling, expectation, variance, covariance, and rudiments of discrete time processes. Emphasis is on understanding uncertainty and developing computational skills in probability. Prerequisites: Single variable differentiation and integration at the MA1113 level and multiple integration at the MA1115 level.

OS3000. Introduction to Management Science (3-0) As Required
A survey of techniques for making decisions quantitatively. Utility theory, linear programming, decision trees, networks and graphs, games, simulation, and waiting lines. Prerequisites: OS2103.

OS3002. Operations Research for Naval Intelligence (4-0)
Fall
This course provides an introduction to the approach and methods of operations research, with special emphasis on military applications of interest to intelligence. It focuses on the mathematical modeling of combat operations and considers intelligence aspects. Students develop basic skills in such modeling. Topics include: analytical process models, graphical data analysis, simple and multiple regression analysis. Computation for these applications are carried out on a computer, using commercial software packages. Topics in class discussion of decision and analysis problem cases and spreadsheet analysis using Excel are applied to problem solving using methods in decision theory, linear programming, network flow, simulation, queuing, forecasting, and project management techniques. Students will practice defining a problem, formulating a model, attaining a solution and evaluating the results using operations research techniques. Subject Matter Experts in cost estimation will provide an overview and background in cost estimation. Cost estimation examples are provided as part of homework exercises. Prerequisites: Single-variable calculus (MA1117).

OS3008. Analytical Planning Methodology (4-0)
Spring
A one-quarter survey of operations research techniques of particular interest to students in the C4I curriculum, with emphasis on model formation. Topics include linear and nonlinear programming, integer programming, networks, shop flow and project scheduling, decision analysis, queuing, and simulation. Prerequisite: MA2300.

OS3080. Probability and Statistics II (3-0)
Summer/Winter
Additional topics in probability and statistics for systems analysis, including conditional probability and conditional expectation, basic analytical process models, graphical data analysis, simple and multiple regression, and basic time-series analysis. This course is a follow-on to OS2080 for Master of Systems Analysis students. Prerequisite: OS2080.

OS3081. Systems Analysis Cases I (3-0)
Summer/Winter
This is the first course in a three-course sequence in systems analysis practice. This course focuses on learning from real defense systems analysis case histories through readings, discussion, and writing point papers. Emphasis is on understanding the pitfalls of systems analysis, highlighting critical assumptions, and recognition of the strengths and weaknesses of applied analytical methodologies. Case histories include actual defense studies conducted with large-scale warfare simulations, seminar wargaming, and other methodologies common in DoD studies and analysis. Prerequisites: Graduate standing in Systems Analysis, Operations Research, or Systems Engineering; completion of courses in probability, statistics, simulation, uncertainty modeling, cost-benefit, decision analysis, and optimization.

OS3082. Systems Analysis Cases II (3-0)
Spring/Fall
This is the second course in a three-course sequence in systems analysis practice. This course focuses on learning from participating in class discussion of decision and analysis problem cases and writing concise systems analysis proposals. Cases are drawn from scenarios in defense planning, programming, and budgeting of weapons systems and forces. Emphasis is on systems analysis problem formulation, identification of objectives, measures of effectiveness, articulation of critical assumptions, and outlining of appropriate analytical methodologies. Special emphasis is placed on cases that are typical of quick turn-around, limited-resources Pentagon programming analysis and budget drills. Prerequisite: OS3081.

OS3101. Statistical Analysis for Management (4-1)
Winter/Summer
A specialized course covering the basic methods of probability and statistics with emphasis on managerial applications. The course includes applications of probability models, statistical inference, and regression analysis. Computation for these applications are carried out on a computer, using commercial software packages. Topics in
probability include the binomial, geometric, Poisson, and normal distributions, risk, and expected value. Parametric statistical techniques include significance testing and confidence intervals, together with point estimation of model parameters. Regression analysis includes simple linear regression and multiple regression, with estimation of parameters and tests of hypothesis and confidence intervals for regression coefficients and the variance of the error term. Prerequisite: College algebra.

**OS3104 Statistics for Science and Engineering (4-0)**
Winter/Summer
Acquaint the engineering student with the techniques of statistical data analysis with examples from quality control, life testing, reliability, and sampling inspection. Histograms and empirical distributions and random variables are introduced, along with their probability distributions and associated characteristics such as moments and percentiles. Following a brief introduction to decision making, standard tests of hypotheses and confidence intervals for both one- and two-parameter situations are treated. Regression analysis is related to least squares estimation and associated tests of hypotheses and confidence intervals are treated. Prerequisite: Calculus.

**OS3105 Statistics for Technical Management (4-1)**
Fall/Spring
The course emphasizes management applications of probability models, statistical inference, and regression analysis. Those aspects of probability germane to distributions such as the binomial and normal are covered. Statistical inference for one and two variables is introduced in the settings of both hypothesis testing and confidence interval estimation. Students develop problem solving and numerical computation skills during laboratory periods using commercial software packages. Prerequisite: None.

**OS3111 Probability and Statistics for HSI and MOVES (4-0)**
Fall/Spring
Noncalculus-based introduction in the context. Descriptive statistics and graphical techniques. Probability rules including Bayes Rule and independence. Discrete and continuous probability distributions, expected values, quantiles, variance, covariance, correlation, expected values, and variance of linear combinations of random variables, notably the sample mean. Fundamentals of statistics in one-sample setting including the ideas of estimation, confidence intervals, and hypothesis testing. Use and comparison of parametric and nonparametric approaches. Prerequisite: None.

**OS3112 Statistics and Design of Experiments (4-2)**
Winter/Summer
This course reviews the basic concepts of data collection, data description, and graphical displays. It covers fundamentals of experimental design and analysis of categorical data. Students will learn how to set and analyze experiments using basic experimental design starting with two-sample methods and advancing to designs such as factorials, fractional factorials, and randomized block designs. Designs appropriate for human research (such as repeated measure designs) and/or large-scale simulation experiments (such as Latin hypercube designs) are included. Parametric and nonparametric approaches are compared and contrasted. Methods for analyzing categorical data are introduced: one- and two-sample inference for proportions, and contingency tables. Datasets and motivational examples are drawn from recent research relevant to HSI and/or MOVES. Prerequisites: College algebra and OS3111.

**OS3113 Data Analysis for HSI and MOVES (4-1)**
Winter
Regression techniques using hands-on experience. Emphasis throughout is on real problems and real data. Topics covered include Simple Linear Regression, Multiple Regression, and Logistic and Loglinear Regression. Special topics include regression trees, principle components, and factor analysis. Prerequisite: None.

**OS3180 Probability and Statistics for Systems Engineering (4-1)**
Winter/Summer
This course introduces the systems engineering and analysis student to probability, descriptive statistics, inferential statistics, and regression. The modeling and analysis of the stochastic behavior of systems provides the context for the course. Topical coverage includes the normal, binomial, Poisson, exponential, and lognormal distributions; probabilistic measures of system performance; graphical and numerical data summaries; confidence intervals and hypothesis tests based on one or two samples; regression with one or more predictors; and single factor analysis of variance. The lab portion of the class uses spreadsheets to support the modeling and analyses. The course is delivered in block format. Prerequisite: SE1001 or equivalent.

**OS3211 Systems Optimization (4-0)**
Fall
This course is an application-oriented introduction to optimization. It introduces models (linear, integer, and nonlinear programs), modeling tools (sensitivity and post-optimality analysis), and optimization software and solution techniques (including heuristics). It presents many military and private sector optimization applications in production planning and scheduling, inventory planning, personnel scheduling, project scheduling, distribution systems planning, facility sizing and capacity expansion, communication systems design, and product development. Prerequisite: None.

**OS3301 Simulation Modeling and Analysis (3-1)**
Fall
OS3301 is a simulation and analytical course that provides students with a foundation in simulation theory and process modeling, random number generation concepts, basic queuing theory in process modeling, applied data analysis, an introduction into experimental design, hypothesis testing, and hands-on system simulation using a simulation modeling package. Students will use these concepts in class projects to simulate systems, evaluate system performance, and compare alternative systems. Prerequisites: OS2080, or OS2103 and OS3604, or equivalent.

**OS3302 Quality Assurance and Reliability (4-0)**
Winter/Summer
This course is a technical treatment of a contractor's quality assurance program with attention to Sampling Inspection, Statistical Process Control, and Reliability. Topics include attribute and variables sampling plans, MILSTD/ANSI/ASQC and sequential sampling plans, quality control chart development and utilization, and manufacturing process capability estimation. Process management analytical tools are introduced using Minitab Quality Control software applications. Structure and implementation of quality assurance programs and quality improvement measures are discussed. Fundamentals of reliability modeling, life testing, reliability growth, estimation, and assessment are presented. Time and failure censored life-testing methods for Exponential and Weibull reliability models and Bayesian reliability estimation techniques are introduced. Best Management Practices and Program Managers Workstation are reviewed. Prerequisite: A previous course in probability and statistics.

GRADUATE SCHOOL OF OPERATIONAL AND INFORMATION SCIENCES (GSOIS)
OS3303 Computer Simulation (4-1) Fall/Spring
Design, implementation and use of digital simulation models will be covered with special emphasis on features common to USW problems. Wargaming will be discussed and a game using the digital computer will be played and critiqued by the class. Exercise planning and analysis will be treated. Basic topics are explained including computer generation of random variates, statistical design and monitoring of model progress, machine representation of dynamic data structures, model verification and validation on special purpose simulation and gaming languages. Prerequisites: OS2103 and OS3604, or equivalent.

OS3307 Modeling Practices for Computing (4-1) Fall/Spring
An applied course in modeling and understanding systems where randomness plays a significant role. Topics include basic probability and statistics, queuing models, Monte Carlo and discrete-event simulation, least squares curve fitting, and elements of statistical design of experiments. The focus will be on applications of these techniques in a computer science context. Prerequisites: Discrete Math and Introductory Programming.

OS3311 Probability Models for Military Applications (4-0) Fall/Spring
An intermediate course in probability focused on military systems and combat situations. Following a review of random variables, probability distributions, expected values and variance, we will present a selection of probability models that range from elementary models that describe static and simple dynamic military (mostly combat) related situations, to Markov models that represent more complex combat situations (e.g., tactical battle) and processes (e.g., surveillance and employment of UAVs). Prerequisite: None.

OS3380 Combat Systems Simulation (3-1) Fall/Spring
This course provides an introduction to discrete and continuous time modeling of systems, especially combat systems. Students learn the fundamentals of simulation modeling and analysis, and construct increasingly sophisticated models of combat behavior. Students are introduced to Lanchester equations and other abstract models, as well as JANUS and other high-resolution, commercial combat simulation programs. Students reinforce and extend statistical skills by learning the principles for design and analysis of simulation experiments for estimation and comparison. The primary course objective is for the student to understand the enduring fundamentals of how combat models are built and used to support decision making. Prerequisites: SE1002 and OS3180.

OS3401 Human Factors in System Design (3-1) Summer
This course will provide an introduction to the field of Human Factors for Systems Engineering students with an emphasis on military systems. Humans are the most important element of any military system. Consequently, the design of effective systems must take into account human strengths and limitations as well as considerations of human variability. The course surveys human factors, human-centered design, and system effectiveness and safety. Topics include system design in light of human cognition and performance as they are influenced by physiological, anthropometric and environmental considerations. Emphasis is given to the responsibility of Systems Engineers to assure human performance and system effectiveness. Prerequisite: None.

OS3403 Human Factors in Information Warfare (3-1) Winter
This course will provide the student with the ability to evaluate and predict human performance in specified operational environments.

The effects of stress factors such as noise, temperature, motion, work load, etc., on various aspects of human performance will be studied. Students will identify the control and display requirements or an EW system and design a work space to accommodate an EW data reduction/analysis system. Prerequisite: OS3604.

OS3404 Human-Machine Interaction (3-2) Fall/Winter/Spring
An introduction to the man-machine interface problems in C3. Information, display, and human communication requirements for effective C3. Applied orientation involving message handling systems, query languages, computer-to-computer communications, command and control applications programs, file transfer between host computers, etc. Prerequisite: Enrollment in the Joint C4I curriculum.

OS3603 Simulation and Wargaming (3-1) Fall/Summer
This course introduces students to systemic and interactive wargame simulation models. The students will understand and play two interactive war games and will run an existing systemic combat model to conduct output and sensitivity analysis on the results. Basic topics include measures of effectiveness, Monte Carlo processes for generating simulation events, decision and utility models, high resolution versus aggregated combat models, scenario development, and analysis objectives. Prerequisites: Basic Probability, Statistics, and Data Analysis at the level of OS2103 and OS3604 or equivalent, and a working knowledge of a computer programming language.

OS3604 Statistics and Data Analysis (4-1) Fall
An introduction to statistics and data analysis for students in the operational curricula. Topics include point and interval estimation, hypotheses testing, analysis of variance, multiple regression techniques, and categorical data analysis. Emphasis is placed on decision rules and in the analysis of data sets from operational environments. Computations are done in a statistical analysis package. Prerequisite: A course in probability (OS2103 or equivalent).

OS3640 Framework for Countering Improvised Explosive Devices (2-0) Spring/Fall
The course describes the use of improvised explosive devices in contemporary warfare with emphasis on how to organize to counter an IED campaign. The course begins with descriptions of IED devices, why and how they are used, methods and technology to counter IEDs, the IED organization, how to organize to counter an IED campaign, and how to target organizations that control IED violence. A framework is developed to understand and address the many interlocking aspects of countering an IED campaign including: insurgency and civil war; recruiting, training, and financing of IED makers; data collection; geospatial analysis; crime forensics; intelligence; detainee interrogations; reconstruction; political and economic development; society and culture; information operations; training local police, security forces, and military personnel; reconciliation; and negotiations. The class will be taught in the accelerated mode with four hours per week for the first six weeks of the quarter. There will be extensive reading, weekly homework, and a short paper. Graded on a Pass/Fail basis. Prerequisite: None.

OS3661 Introduction to Modeling and Simulation in Test and Evaluation (4-0) (DL)
This course introduces the use of modeling and simulation as a complement to physical testing in support of systems evaluation. The general relationships among modeling, simulation, test, and
evaluation are introduced in context of systems acquisition lifecycle management. Forms of Live, Virtual and Constructive simulation in support of test planning, test execution, and systems analysis will be described, characterized, and illustrated with real-world examples. VV&A issues and opportunities relevant to the integrated use of simulation and testing in Systems Engineering and Acquisition will be identified. Strategies to optimize the use of scarce resources in executing test and evaluation programs will be provided. Methodologies for identifying and developing test MOEs, MOPs, and test scenarios will be introduced. Appropriate statistical concepts for evaluating Performance Guarantees and Specifications will be presented. Students in groups will develop a detailed T&E and Simulation Plan for a weapons system or future systems of systems concept. Prerequisite: None.

**OS3680 Naval Tactical Analysis (4-0) Fall/Spring**

This course surveys and applies various tools of operational and decision analysis to naval tactical problems. Topics include basic operational and tactical problem formulation, tactical decision analysis, and the application of uncertainty models for tactical problems in search and detection and weapons effectiveness. Prerequisite: A course in calculus-based probability and statistics (OS2080, OS3104, OS3180 or equivalent) or permission of the instructor.

**OS3701 Cost Estimation I: Methods and Techniques (3-0) Fall/Spring (DL)**

This course provides a broad-based understanding of the cost analysis activities involved in the acquisition and support of DoD systems. It introduces operations research techniques fundamental to the field of cost estimation. The course covers the defense systems acquisition process, time value of money, cost processes, data collection and sources, and economic analysis; it develops, uses, and analyzes cost estimating techniques commonly encountered in both the DoD and industry, including statistical and nonstatistical cost estimating relationships, inflation indices, cost improvement curves, time phasing, wrap rates, and uncertainty analysis. Prerequisite: OS3080 or equivalent.

**OS3703 Systems Assessment (4-0) Winter/Summer**

It introduces operations research techniques fundamental to the evaluation of concepts, processes and systems. Topics include cost estimation, effectiveness estimation through the T&E process, techniques for conducting design trades, and managing the risk involved. Development of communication skills is accomplished through oral presentations and written reports. Prerequisite: A graduate course in probability and statistics or consent of the instructor.

**OS4001 Introduction to Probabilistic Modeling for HSI (4-0) Fall/Spring**

This course will introduce the student to desktop modeling of humans, particularly emphasizing models that are relevant to military systems. The course will demonstrate current software tools designed around models of human stature, movement, and behavior. We will focus on the utilization of existing modeling techniques, which are useful for system design or evaluation, e.g., JACK, MicroSAINT, and SAFTE/FAST. Prerequisite: None.

**OS4010 Engineering Risk Benefit Analysis (3-2) As Required**

This course emphasizes three methodologies: Decision Analysis (DA), Reliability and Probabilistic Risk Assessment (RPRA), and Cost-Benefit Analysis (CBA). The course is designed to give students an understanding of how these diverse topics can be applied to the decision-making process of product design, which must take into consideration significant risk. The course will present and interpret a framework for balancing risks and benefits to applicable situations. Typically, these involve human safety, potential environmental effects, and large financial and technological uncertainties. Concepts from CBA and RPRA are applied to real-world problems, resulting in decision models that provide insight and understanding, and consequently lead to improved decisions. Prerequisite: None.

**OS4011 Risk Benefit Analysis (3-2) Fall/Spring**

This course emphasizes decision analysis, probabilistic risk assessment, and cost-benefit analysis in systems analysis and systems acquisition contexts. The course is designed to give students an understanding of how these diverse topics can be applied to a decision-making process that must take into consideration significant technological and financial risk. The course will present and interpret a framework for balancing risks and benefits to applicable situations. Typically, these involve large financial and technological uncertainties. Concepts are applied to real-world problems resulting in decision models that provide insight, understanding, and improvement of acquisition decisions. Prerequisite: OS3080 or an equivalent graduate-level course in probability modeling.

**OS4012 Cost Estimation IV: Risk and Uncertainty Analysis (3-0) Winter/Summer**

Risk and Uncertainty Analysis provides the foundation for an understanding of risk management as it relates to cost estimation. It addresses program risks that help ensure program costs, schedule, and performance objectives are met. Students are given an overview of how to model the cost/risk associated with a defense acquisition program. Topics covered include basic probability concepts, correlation, cost drivers, subjective probability assessment, goodness-of-fit testing, and simulation concepts using spreadsheet-based simulation packages. Monte Carlo simulation based cost risk case reinforce the techniques taught. Prerequisites: OS3080 and OS3701.

**OS4080 Cost Estimating and Analysis Capstone V: Cost Estimating and Analysis Cases (3-0) Summer/Winter (starting Summer 2012)**

This course focuses on learning from real cost estimation case histories through readings, discussion, and writing point papers. Emphasis is on understanding the capabilities and limitations of cost estimation and analysis, highlighting critical assumptions, and recognition of the strengths and weaknesses of applied analytical methods. Case histories include actual department of defense cost studies conducted that have been considered successes and those that have been considered failures. These cases provide the lessons learned for future cost estimation and analysis studies. Prerequisite: OS4703.

**OS4081 Cost Estimating and Analysis Capstone I (3-4) Fall/Spring (starting Fall 2013)**

This course focuses on learning from participating in a cost estimation team project. Small-teams (4-6 students) will be given an actual cost estimating analysis project drawn from actual cost problems compiled by the major systems commands and Service Cost Agencies from the departments of the Army, Navy, and Air Force. Emphasis is on cost problem formulation, identification of objectives, measures of effectiveness, articulation of critical assumptions, and outlining of appropriate analytical methods. Class time during the quarter is used for team progress briefings and critical class discussion. Prerequisite: OS4080.
OS4082 Cost Estimating and Analysis Capstone II (3-4) Winter/Summer (starting Winter 2013)
This course continues the on hands-on experience of OS4081, completing the cost estimation project. Student teams will develop the cost model and analyze alternative cost estimations of the problems presented in the previous course; they will develop and test the estimate, and then document and defend their estimate. Students provide concise written reports, which include the analytical results, and a presentation to decision makers. Class time during the quarter is used for team progress briefings and critical class discussion. Prerequisite: OS4081.

OS4083 Systems Analysis Cases III (3-4) Summer/Winter
This is the third course in a three-course sequence in systems analysis practice. This course focuses on hands-on experience conducting rapid quantitative systems analysis. Emphasis is on small-team (2-3 students) systems analysis projects and presentations. Typical projects are based on analysis proposals developed in the preceding course. Class time during the quarter is used for team progress briefings and critical class discussion. The projects culminate with a concise written report, including analytical results, and a presentation to decision makers. Prerequisite: OS3082.

OS4580 Logistics Systems Analysis (4-0) Fall/Spring
This course is about military logistics systems. It includes processes employed during system acquisition, chiefly reliability and maintainability analyses, which contribute, along with other aspects of a military logistics system, to determining the operational support costs and operational availability of military systems. In-service support includes the supply system for repair parts for organizational-level maintenance and the provision of military or contractor support of depot-level maintenance. Operational logistics includes logistics planning and predicting the sustainability of deployed forces. Prerequisites: OS3180 and SE3100.

OS4661 Advanced Modeling and Simulation in Test and Evaluation (4-0) (DL)
This course addresses advanced issues in the application of modeling and simulation as a compliment to physical testing in support of systems evaluation. It introduces pre-test simulation using experimental designs to identify the most important factors to be used in live testing scenarios. Detailed analysis methods of testing and simulation results including military and statistical significance are addressed. Additional topics include reliability modeling and life testing and various enabling architectures in distributed simulation. Applications to Analysis of Alternatives and rapid acquisitions are discussed. Various forms of simulation in support of test planning, test execution, and systems analysis are described including simulation facilities and test ranges. Students in groups will conduct a comparative analysis of competing systems using experimental design and simulation methods. Prerequisite: OS3661 Introduction to Modeling and Simulation in Test and Evaluation.

OS4680 Naval Systems Analysis (4-0) Winter/Summer
This course covers the techniques for the analysis of proposed and existing systems. It includes analysis of alternatives and models in decision making, optimization in design and operations, queuing theory and analysis, Markov analysis, and selected topics to support the project work. Students analyze case studies and complete a course project. Students also use spreadsheet software for modeling and analyzing design alternatives, and develop communication skills by writing reports of analyses. Prerequisites: OS2080 or OS3180, OS3380 and OS3680.

OS4701 Manpower and Personnel Models (4-0) Winter/Summer
The objective of this course is to introduce the student to the major types of manpower and personnel models for estimating the effects of policy changes on the personnel system. Topics include longitudinal and cross-section models, optimization models, data requirements, and validation. Application in the form of current military models is included. Prerequisites: GB3040 and GB4043, or OA3103, or consent of the instructor.

This course is the second of three sequential cost estimation courses. It provides a broad-based understanding of the cost estimating principles applied to various fields of the acquisition and support of DoD systems. It introduces topics such as Cost Estimating Relationships, non-Ordinary Least Squares methods, Software Cost Estimating, Labor Pricing, Source Selection Process, Cost Management, EVMS, and higher level Regression Applications. Prerequisite: OS3701 or OA4702.

OS4703 Cost Estimation III: Applied Cost Analysis (3-0) Spring/Fall
This course is the third of three sequential cost estimation courses. It provides a broad-based understanding of the cost estimating principles applied to various fields of the acquisition and support of DoD systems. It focuses on the analysis of cost methods and topics such as Specialized Cost Estimating, Portfolio Analysis, Cost Benefit Analysis, Industrial Base Analysis, Supply Chain Management, and Labor Rates. Prerequisite: OS4702 or OA4702.

Human Systems Integration Certificate - Curriculum 262

Program Manager
Lawrence G. Shattuck, Ph.D.
Code OR, Glasgow Hall, Room 234
(831) 656-2473, DSN 756-2473
FAX: (831) 656-2595
lgshattu@nps.edu

Brief Overview
The Human Systems Integration Certificate program is a distance learning, graduate-level, non-degree program designed to enable acquisition professionals, program managers, engineers and scientists of the DoD to effectively implement Human Systems Integration (HSI) as required by the DoD.

Students will learn the fundamentals in applying usability assessments, modeling, optimization, and decision making to demonstrate cost-benefit trade-offs for technical, cost, and schedule modifications in systems acquisition.

The program consists of four online courses taken over a 12 month period. The course content and projects address problems of interest to the DoD.
Requirements for Entry
A baccalaureate degree with above average grades and an academic profile code of 345. Two or more pre-calculus courses with B or better average. Completion of DAU ACQ 101 and ACQ 201A.

Entry Dates
Summer quarter.

Program Length
Four quarters.

Graduate Certificate Requirements
Requirements for the certificate are met by successful completion of all four courses, in succession.

Brief Overview
The Cost Estimating and Analysis certificate program is a distance learning, graduate-level, non-degree program designed to provide cost estimating and analysis training to Navy and other DoD personnel. The program consists of four courses delivered one per quarter via distance learning over a one-year period.

Requirements for Entry
A baccalaureate degree is required. Recent completion (within five years) of mathematics through single variable differential and integral calculus is considered minimal preparation. An academic profile code (APC) of 335 is required.

Program Length
Four quarters

Graduate Certificate Requirements
Requirements for the graduate-level certificate in Cost Estimating and Analysis are met by successful completion of all four required courses.

spilnick@nps.edu

Brief Overview
The Systems Analysis Certificate program is a distance learning, graduate-level, nondegree program designed to meet the needs of the Navy and other services in the Department of Defense (DoD) for nondegree technical education in systems analysis as a basis for aiding key decisions on force requirements, weapon systems, and other defense matters. Students learn and apply modeling, optimization, simulation, and decision making under risk and uncertainty.

The Certificate Program consists of four, fully-accredited courses delivered entirely online over a one-year period. The course content and projects will challenge the student academically and address problems of interest to the
Department of Defense. The courses are paced week-to-week by the instructors, but the students have great flexibility to do their course work at times of their choosing during each week.

**Requirements for Entry**

A baccalaureate degree is required. Completion of mathematics through single variable differential and integral calculus is considered minimal preparation. An academic profile code (APC) of 335 is required.

**Entry Dates**

At the beginning of the spring and fall quarters, with start dates in late March/early April and late September/early October, respectively.

**Program Length**

Four Quarters.

**Graduate Certificate Requirements**

Requirements for the graduate certificate in Systems Analysis are met by successful completion of all four courses.

dell@nps.edu

**Brief Overview**

Operations Analysis (OA) is the development and application of mathematical models, statistical analyses, simulations, analytical reasoning, and common sense to the improvement of real-world operations. Practitioners are called on to advise military and civilian decision makers on the allocation of scarce resources, the selection of new equipment and processes, and the optimal deployment of given resources to achieve required missions. The OA curriculum was founded by the Navy in 1951, in order to retain, develop, and promulgate the methods that were used so successfully in World War II.

Mathematics, probability, statistics, economics, human factors, and optimization supply the theoretical background for analyzing alternative choices in tactical and strategic warfare, and in planning, budgeting, and procurement of systems and forces. The student learns computational methods and develops skills to identify relevant information, formulate decision criteria, and select alternatives. This education enhances performance in all duties throughout a military career including operational billets, technical management assignments, and policy-making positions.

**Requirements for Entry**

A baccalaureate degree with above-average grades is required. Completion of mathematics through single variable differential and integral calculus with above-average grades is considered minimal preparation. Students without these quantitative prerequisites will be accepted in cases where their undergraduate records indicate that they are exceptional students and there are other indicators of potential. An academic profile code (APC) of 325 is required. Waivers may be obtained with a one-quarter refresher.

**Entry Date**

Operations Analysis is a seven-quarter course of study (eight quarters including JPME) with entry dates in March and September. In general, students attend a one-quarter mathematics “refresher” prior to entering the OA curriculum. This refresher sequence begins in January or July, for the March or September start dates, respectively. If further information is needed, contact the Academic Associate or the Program Officer for this curriculum.
Degree
Requirements for the Master of Science degree are met en route to satisfying the Educational Skill Requirements of the curricular program as well as Service Intermediate-level PME and Phase I Joint PME credit.

Master of Science in Applied Science
Students with acceptable academic backgrounds may enter a program leading to a degree in Applied Science with a major in Operations Research. The program of each student seeking this degree must contain a minimum of 20 quarter-hours in operations research at the graduate level, including work at the 4000 level. Additionally, the program must contain a minimum of 12 graduate quarter-hours in an approved sequence of courses outside the Department of Operations Research. A total minimum of 12 quarter-hours at the 4000 level, plus an acceptable thesis, is required. This program provides depth and diversity through specially arranged course sequences to meet the needs of the Navy and the interests of the individual. The Department Chairman’s approval is required for all programs leading to this degree. Applications to include this degree in dual master’s programs will not be approved.

Master of Science in Operations Research
The Master of Science in Operations Research degree requires:
- Completion of a minimum of 40 quarter-hours of graduate-level courses with:
  - At least 20 quarter-hours of 4000 level courses, of which at least 16 are OA.
  - An elective sequence approved by the Chairman, Department of Operations Research.
- Submission of an acceptable thesis on a subject previously approved by the Chairman, Department of Operations Research.

Doctor of Philosophy in Operations Research
The department offers the Doctor of Philosophy in Operations Research degree. The program begins with advanced course work guided by the student’s doctoral committee and leading to qualifying examinations in optimization, statistics, and stochastic processes as well as completion of a minor field of study outside of operations research. The primary emphasis then shifts to the student’s research program, culminating in the Ph.D. dissertation.

An applicant to the Ph.D. program who is not already a student at NPS should submit transcripts of previous academic and professional work, plus results of a current Graduate Record Examination (GRE) general test, to the Director of Admissions, Code 01C3, Naval Postgraduate School, Monterey, CA 93943-5100. Detailed admission procedures may vary depending on the individual’s location and position. However, in all cases, the student must fulfill the general school requirements for the doctoral degree. Residency for this program generally requires three years beyond completion of a master’s degree.

Subspecialty
Completion of this curriculum qualifies an officer as an Operations Analysis Subspecialist with a subspecialty code of 3211P and JPME Phase I education certification for students whose orders include the extra quarter for JPME. The community manager for the OA subspecialty is the Office of the Chief of Naval Operations, Assessment Division (OPNAV N81).

Typical Subspecialty Jobs
Defense Resources Management OPNAV Analyst
JCS Analyst Director, OPS Research: SACLANT
Assistant Staff OPS and PLANS: COMCARGRU Staff
OPS and PLANS: COMTHIRDFLT
BUPERS OSD Analyst
OPS Analyst: Naval War College Instructor: NPS
Cost Analyst Warfare Analyst

Educational Skill Requirements (ESR)

Operations Analysis - Curriculum 360

Subspecialty Code: 3211P

1. **Basics**: The graduate will possess the mathematical and computer programming skills required to support graduate study in operations research and have the ability to use computers as a tool to aid in analysis.

2. **Probability, Statistics, and Data Analysis**: The graduate will be well-versed in the fundamentals of probability, statistics, and data analysis for application to modeling, simulation, and analysis of military decision problems.

3. **Optimization**: The graduate will be able to formulate and solve a wide variety of optimization problems and also be conversant with the major uses of such models in DoD and the private sector.

4. **Stochastic Modeling**: The graduate will be able to formulate and solve problems involving stochastic processes (processes with uncertainty over time) and also be familiar with the major applications of such models.

5. **Simulation**: The graduate will be able to construct and utilize simulations of combat and other processes that evolve in time, and will be able to deal with statistical issues associated with the need for replication.

6. **Analysis of Military Operations**: The graduate will be familiar with U.S./allied and potential enemy capabilities, doctrine, tactical, and logistical support concepts. The graduate will be able to model and analyze military operations using operations analysis techniques, and be able to develop new tactical concepts based on theory and exercise reconstruction and analysis.

7. **Systems Analysis**: The graduate will understand the basic principles of systems analysis as a basis for making key decisions on force requirements, weapon systems, and other defense problems.

8. **Practice**: The graduate will have gained experience working on all aspects of an analytical study, and will demonstrate the ability to conduct independent analytical studies and proficiency in presenting the results both orally and in writing.

**Curriculum Sponsor and ESR Approval Authority**

Curriculum sponsor is Director, Assessment Division (N81), Office of the Chief of Naval Operations. ESR approval authority is Director, Total Force Training and Education (N15), Office of the Chief of Naval Operations. (OA Curriculum Review conducted 18 February 2011.)

**Joint Operational Logistics - Curriculum 361**

**Program Officer**

**Academic Associate**

Steven E. Pilnick, Ph.D.
Code OR/Ps, Glasgow Hall, Room 291
(831) 656-2283, DSN 756-2283
FAX (831) 656-2595
spilnick@nps.edu

**Brief Overview**

This program provides education in mathematics, probability and statistics, physical science, economics, logistics, and computer science. These disciplines supply the theoretical background for planning and analysis of naval and joint logistics.

The course of study develops skills in computational capability, identifying relevant information, generating decision criteria, and selecting alternatives. This education enhances performance in all duties throughout a military career, including operational billets, technical management assignments, and policy-making positions.

**Requirements for Entry**

A baccalaureate degree with above-average grades is required. Completion of mathematics through single variable differential and integral calculus with above-average grades is considered minimal preparation. Students without these quantitative prerequisites will be accepted in cases where their undergraduate records indicate that they are exceptional students and there are other indicators of potential. An academic profile code (APC) of 325 is required. Waivers may be obtained with a one-quarter refresher.
Joint Operational Logistics (JOL) is an eight-quarter course of study (including JPME) with entry dates in March and September. In general, students attend a one-quarter mathematics “refresher” prior to entering the JOL curriculum. The refresher sequence begins in January or July, for the March or September start dates, respectively. If further information is needed, contact the Academic Associate or Program Officer for this curriculum.

**Degree**

Requirements for the Master of Science in Operations Research degree are met en route to satisfying the Educational Skill Requirements of the curricular program as well as Service Intermediate-level PME and Phase I Joint PME credit.

**Subspecialty**

Completion of this curriculum qualifies an officer as an Operational Logistics Subspecialist with a subspecialty code of 3212P and JPME Phase I education certification. The community manager for this subspecialty is CNO N4, Deputy Chief of Naval Operations (Fleet Readiness and Logistics).

**Typical Subspecialty Jobs**

Joint Chiefs of Staff: Joint Logistics Planning, Mobility Analyst
OPNAV: Operational Logistics Analyst, Logistics Assessment
Fleet Forces Command: Ordnance Planning Analyst
Commander Pacific Fleet: Logistics Plans Officer
Commander, U.S. Naval Forces Europe: Logistics Plans Officer
TRANSCOM: Operations and Plans Officer, Sealift Analyst
Afloat Staffs: Logistics Planning Officer

**Educational Skill Requirements (ESR)**

**Operational Logistics - Curriculum 361**

**Subspecialty Code 3212P**

1. **Basics**: The graduate will possess the mathematical and computing skills to support quantitative analysis.
2. **Modeling Uncertainty**: The graduate will be well-versed in probability and statistics and their application to operations research (OR) problems.
3. **Optimization**: The graduate will be able to formulate and solve a wide variety of optimization problems and also be conversant with the major uses of such models in DoD and the private sector.
4. **Stochastic Modeling**: The graduate will be able to formulate and solve problems involving stochastic processes (processes with uncertainty over time) and be familiar with the major applications of such models.
5. **Simulation**: The graduate will be able to construct and utilize discrete event and Monte Carlo simulations of combat and other processes, particularly logistics-themed, which evolve in time and space, and will be able to deal with analysis issues associated with stochastic simulation models.
6. **Analysis of Military Operations**: The graduate will be familiar with U.S., allied, and potential enemy capabilities, and will be able to model and analyze joint military operations using OR techniques. The graduate will also be able to develop and evaluate new tactical and logistic concepts for a variety of operations ranging from humanitarian assistance/disaster relief to combat.

7. **Joint Logistics**: The graduate will understand naval and joint logistics systems; joint planning systems; military and commercial transportation systems of all types; supply systems; maintenance, engineering, and health services; and the use of analysis in all aspects of planning for the logistics support of joint forces.

8. **Systems Analysis**: The graduate will understand the basic principles and applications of system analysis, as a basis for making key decisions on force requirements, weapon systems, and other defense problems.

9. **Joint Military Operations, Strategy and Planning**: Graduates will be prepared to transition from specialized technical duties to assignments that require a broad understanding of national policy and strategy, resource allocation and management, and joint and combined operations. This ESR is fulfilled by completing the NWC course sequence leading to Service Intermediate-level PME and Joint PME Phase I credit. Navy students take the NWC course sequence; the sequence is open to other students as desired.

10. **Joint OL Practice**: The graduate will have gained experience working on all aspects of an analytical study in the field of joint operational logistics. Specifically, the graduate will demonstrate the ability to conduct independent analytical studies, and proficiency in presenting the results both orally and in writing.

**Curriculum Sponsor and ESR Approval Authority**

Curriculum sponsor is Deputy Chief of Naval Operations for Fleet Readiness and Logistics (N4), Office of the Chief of Naval Operations. ESR approval authority is Director, Total Force, Training and Education (N15), Office of the Chief of Naval Operations. (Joint OL Curriculum Review conducted 28 July 2010.)

**Brief Overview**

Human Systems Integration (HSI) is an interdisciplinary program that emphasizes human considerations as a priority in systems design and acquisition, to reduce life cycle costs, and improve total system performance. HSI has been divided into several distinct domains that include human factors engineering, manpower, personnel, training, human survivability, health hazards, system safety, and habitability. HSI is based on the understanding that people (operators, maintainers, and support personnel) are critical elements of the system and that a human-centered design perspective promotes system effectiveness, safety, and cost savings. This degree will provide students with the knowledge, skills, and abilities to be effective leaders in the assessment, design, testing, and management of a total human machine system throughout its life cycle.

**Requirements for Entry**

A baccalaureate degree with above-average grades is required. Students without these quantitative prerequisites will be accepted in cases where their undergraduate records indicate that they are exceptional students and there are other indicators of potential. An academic profile code (APC) of 335 is required for the resident program, and 345 for the distance learning program.
Entry Date

Human Systems Integration is an eight-quarter course of study (including Joint Professional Military Education (JPME)) with entry in the Fall Quarter. If further information is needed, contact the Academic Associate or the Program Officer for this curriculum.

Degree

Master of Human Systems Integration

The degree of Master of Human Systems Integration requires:
1. Eleven 3000-level courses (approx. 43 quarter credits)
2. Five 4000-level courses (approx. 20 quarter credits)
3. Two-part (two-quarter) capstone project

Master of Science in Human Systems Integration

The degree of Master of Science in Human Systems Integration requires:
1. Completion of a minimum of 40 quarter-hours of graduate-level courses with:
   · At least 20 quarter-hours of 4000 level courses.
   · An elective sequence approved by the Chairman, Department of Operations Research.
2. Submission of an acceptable thesis on a subject previously approved by the Chairman, Department of Operations Research.

### Provisional Learning Outcomes

**Human Systems Integration- Curriculum 359 (DL)**

The goal of the distance learning program is to educate eligible personnel within the federal government and defense contractor organizations in the discipline of Human Systems Integration (HSI). Graduates of this program will possess the skills necessary to function as practitioners of HSI.

1. **SYSTEMS APPROACH:** Graduates will be able to positively influence the activities of Program Management (PM), Systems Engineering (SE), and
Test & Evaluation (T&E) communities as they function within the Department of Defense (DoD) Acquisition Lifecycle.

2. **HSI DOMAIN KNOWLEDGE**: Graduates will demonstrate a basic knowledge of all HSI domains: Human Factors Engineering, Manpower, Personnel, Training, Environmental Safety and Occupational Health, Survivability, and Habitability. Graduates will be familiar with the primary approaches and techniques used by each HSI domain.

3. **HUMAN PERFORMANCE**: Graduates will be able to apply their knowledge of the cognitive and physiological capabilities and constraints on human performance in operational settings. Graduates will be able to assess factors that affect human performance such as attention, memory, workload, situation awareness, stress, fatigue, and human error.

4. **IMPLEMENTING HSI TRADEOFFS**: Graduates will be able to conduct elementary tradeoffs across HSI domains, as well as tradeoffs involving engineering, acquisition, and T&E disciplines. They will be able to articulate the impacts and risks associated with these tradeoffs to technical and non-technical audiences.

5. **ANALYTICAL TECHNIQUES**: Graduates will be able to conduct fundamental quantitative and qualitative research in both field and laboratory settings within the context of the defense acquisition process.

6. **MODELING and SIMULATION**: Graduates will be familiar with basic modeling and simulation (M&S) techniques to explore tradeoffs across HSI domains and tradeoffs involving engineering, acquisition, and T&E disciplines.

**Provisional Educational Skill Requirements (ESR)**

**Human Systems Integration - Curriculum 362 (RES)**

The goal of this curriculum is to educate Naval Officers of the United States Navy in Human Systems Integration. The delivery method is an in-resident course at the Naval Postgraduate School. Human Systems Integration (HSI) acknowledges that the human is a critical component in any complex system. It is an interdisciplinary approach that makes explicit the underlying tradeoffs across the HSI domains, and other engineering disciplines, logistics, acquisition, and T&E, optimizing total system performance while minimizing total ownership costs. The graduate of this program will possess the skills necessary to function as a practitioner in HSI.

**HSI DOMAIN KNOWLEDGE**: Graduates will possess a thorough background in all HSI domains: Human Factors Engineering, Manpower, Personnel, Training, Environment, Safety, and Occupational Health, Survivability, and Habitability. Graduates will understand the basis for the decisions made by individual domain specialists and will be familiar with the primary approaches and techniques used by each of the HSI domains.

1. **ANALYTICAL TECHNIQUES**: Graduates will be able to perform tradeoff analysis across domains and other engineering disciplines, logistics, acquisition, and T&E, and to conduct empirical analysis within the domains of human systems integration. They will be able to apply, at the right place and at the right time, these analytical methods and tools in both field and laboratory settings within the context of the defense acquisition process.

2. **MODELING and SIMULATION**: Graduates will be able to apply Modeling and Simulation (M&S) techniques to explore HSI domain tradeoffs and tradeoffs within other engineering disciplines, logistics, acquisition, and T&E. They will demonstrate the ability to apply M&S techniques within and across the HSI domains to facilitate the development, T&E, operations, and sustainment of military systems.

3. **HUMAN PERFORMANCE**: HSI maintains that the human is a critical component in any complex system. Graduates will understand the basis of both individual and team performance in military settings including human information processing, perception, cognition, decision making, and motor control. Graduates will understand current theory and practice in assessing cognitive factors that affect human performance such as attention, memory, situation awareness, stress, fatigue, and motivation. Graduates will understand current scientific knowledge of factors affecting human performance and human error.

4. **SYSTEMS APPROACH**: Graduates will comprehend the principles and practices of the fields of PM, SE, and logistics, and T&E as related to the DoD Acquisition Lifecycle. Knowledge of HSI influences on PM, SE, and logistics, and T&E will enable graduates to positively influence the DoD Acquisition Lifecycle at appropriate times and in the right manner.

5. **IMPLEMENTING HSI TRADEOFFS**: Graduates will learn techniques to develop domain level trades, trades within other engineering disciplines, logistics, acquisition, and T&E, impacts, and risk assessments, and the ability to negotiate and communicate to both technical and non-technical audiences. Graduates will understand the political, organizational, social, and economic issues associated with integrating human-machine systems into organizational cultures and environments.

6. **JOINT PROFESSIONAL MILITARY EDUCATION**: Students will be encouraged to
complete the Joint Professional Military Education (JPME) program. This sequence of courses develops an understanding of warfighting within the context of operational art. Topics include: national military capabilities and command structure, joint and service doctrine, joint planning and execution, and joint multinational forces and integration at the operational level of war. JPME includes coursework in wargaming designed to develop an appreciation of the art of war.

Brief Overview

The Master of Systems Analysis (MSA) program is a distance learning, graduate degree program, designed to meet the needs of the Navy and other services in the Department of Defense (DoD) for technical graduate education in systems analysis as a basis for aiding key decisions on force requirements, weapon systems, and other defense matters. Students acquire foundation skills and hands-on experience in all aspects of analytical studies, which includes the skills to formulate problems, use the analytical process to design study requirements, highlight critical assumptions, recognize strengths and weaknesses of applied analytical methodologies, and evaluate study recommendations.

This program is especially tailored to students whose career pattern will not allow them to get away for a full-time, graduate education program. The entire degree program can be completed at the student's current duty station. This program consists of a blend of approximately 50% web-based, online instruction, and 50% synchronous distance learning, mainly video-tele-education (VTE). The web-based instruction is paced week-to-week by the instructors, but the students have great flexibility to do their course work at times of their choosing during each week. The synchronous classes, mainly VTE, meet at a scheduled time, once per week, during the workday, with the agreement of the student's current command. Some of the synchronous classes use a web-based interface known as Elluminate Live in lieu of VTE.

Requirements for Entry

A baccalaureate degree is required. Completion of mathematics through single variable differential and integral calculus is considered minimal preparation. An academic profile code (APC) of 335 is required.

Entry Dates

The MSA an eight-quarter course of study with start dates in late March/early April and late September/early October. If further information is needed, contact the Academic Associate or the Program Officer for this curriculum.

Degree

Master of Systems Analysis

The Master of Systems Analysis degree requires:

- Completion of a minimum of 32 quarter-hours of graduate-level courses with:
  - At least 16 quarter-hours of 4000 level courses.
  - Systems analysis core courses and a Systems Analysis context sequence approved by the Chairman, Department of Operations Research.
- Students are required to demonstrate mastery of Systems Analysis practice through satisfactory completion of the thesis-equivalent three-course sequence in Systems Analysis Cases culminating in a final project approved by the Chairman, Department of Operations Research. The quarter-hours earned in the Systems Analysis Cases courses are applied towards satisfying the minimum graduate-level quarter-hours for the degree.

Program Description

The MSA program is a 24-month, part-time program. Students take two courses per quarter, for eight quarters. The curriculum consists of four blocks. Two of the blocks comprise stand-alone, web-based sequences. One is a four-course sequence leading to a Certificate in Systems Analysis, the second online sequence is a track approved by the student's service sponsor in a particular defense systems area in which systems analysis may be applied. The other two blocks round out the master's program with additional systems analysis core courses and a sequence of systems analysis case studies and projects that are an approved
equivalent of a master’s thesis. All students who successfully complete the distance-learning course of study will receive:

· A Certificate in Systems Analysis awarded after completion of the first four quarters.
· A Master of Systems Analysis degree awarded upon completion of the two-year program.

The approved systems analysis context track for Navy Unrestricted Line Officer students is a four-course sequence in Defense Resources Management. The student’s service sponsor may approve another track based on course availability and needs of the sponsor and student. Some currently available distance learning certificate alternatives include:

· Information Systems Technology (IST)
· Space Systems (SS)
· Anti-Submarine Warfare (ASW)
· Information Systems and Operations (ISO)

Subspecialty

Completion of this curriculum is designed to qualify an officer as an Operations Research Analysis Subspecialist with a subspecialty code of 3210P. The curriculum sponsor is Director, Assessment Division (N81), Office of the Chief of Naval Operations.

Typical Subspecialty Jobs

OPNAV staff
JCS staff
Fleet staff
Type Commander staff
Battle Group staff
OSD staff

Typical Course of Study (Navy URL Track)

Quarter 1, Spring/Fall
OS2080 (3-0) Probability and Statistics I (SA Cert)
MO1180 (3-2) Topics in Mathematics for Systems Analysis

Quarter 2, Summer/Winter

MN3222 (3-0) Systems Acquisition and Program Management II (DRM track)

Graduation week at NPS

Educational Skill Requirements (ESR)

Master of Systems Analysis (MSA) - Curriculum 363
Subspecialty Code: 3210P

1. Systems Analysis: The graduate of this curriculum will understand and be able to apply the basic principles of systems analysis as a basis for aiding key decisions on force requirements, weapon systems, and other defense matters. The following specific Educational Skill Requirements support this high-level objective.

2. Basics: The graduate will possess the mathematical skills required to support graduate study in systems analysis.

3. Uncertainty Fundamentals: The graduate will be well versed in uncertainty fundamentals for systems analysis, including applications of probability, statistics, data analysis, and modeling uncertainty.

4. Simulation: The graduate will be able to construct and utilize Monte Carlo simulations of combat and other processes that evolve in time, and will be able to deal with statistical issues associated with the need for replication.

5. Tactical Analysis: The graduate will be able to apply operations analysis methods to tactical and operational problems, including tactical decision analysis, search and detection, and weapons effectiveness.

6. Cost Analysis: The graduate will understand the methods and practice of cost analysis including various cost models, with particular emphasis in the relationship of effectiveness models and measures to cost, and applications in cost-benefit analysis.

7. Risk-Benefit Analysis: The graduate will be able to apply the principles of probabilistic risk assessment in the context of systems analysis decision problems. This
includes a framework for balancing risks and benefits, and analysis under conditions of large financial and technological uncertainties.

8. **Optimization**: The graduate will be able to formulate and solve a wide variety of optimization problems with particular emphasis on applications in optimum allocation of scarce resources and multi-year capital budgeting.

9. **Practice**: The graduate will have gained experience in all aspects of analytical studies, including review, critique, and oversight of the work of others, as well as participation in the conduct of an analytical study. Review, critique, and oversight include the ability to highlight critical assumptions, recognize strengths and weaknesses of applied analytical methodologies, and evaluate study recommendations. Practice in the design and conduct of an analytical study includes the skills to formulate problems, use the analytical process to define study requirements, and apply appropriate analytical methodologies. Practice also includes demonstrating proficiency in presenting results both orally and in writing.

10. **Systems Analysis Context**: The graduate will have completed an approved option sequence in Defense Resource Management, or another approved option sequence in a particular defense systems area in which systems analysis may be applied.

**Curriculum Sponsor and ESR Approval Authority**

Curriculum sponsor is Director, Assessment Division (N81), Office of the Chief of Naval Operations. ESR approval authority is Director, Total Force Training and Education (N15), Office of the Chief of Naval Operations. (MSA Curriculum Review conducted 18 February 2011.)

**Master of Cost Estimating and Analysis (CEA) - (Distance Learning) - Curriculum 379**

**Program Description**

The Master of Cost Estimating and Analysis (CEA) is a 24-month, distance learning graduate degree program designed to increase the accuracy and proficiency of DoD cost estimates and cost estimators. Students will learn cost estimating techniques commonly used in both DoD and industry, and acquire foundation skills and hands-on experience in all aspects of cost estimation, including shipbuilding, aircraft, software, and many other areas. Students take two courses per quarter for eight quarters. Case studies and a capstone project will complete the program. This program blends web-based, online instruction, with video tele-education (VTE), and is especially tailored to students whose careers will not allow them to get away for a full-time graduate education program. While web-based courses are paced week-to-week by the instructors, students have the flexibility to do their coursework at times of their choosing during each week. The VTE classes meet at a pre-determined time, once per week for three hours during the workday.

**Requirements for Entry**

A baccalaureate degree is required. Recent completion (within five years) of mathematics through single variable differential and integral calculus is considered minimal preparation. An academic profile code (APC) of 335 is required.

**Entry Dates**

The MCEA program is an eight-quarter course of study with start dates in late March. If further information is needed, contact the Academic Associate or the Program Manager for this curriculum.

**Degree**

The Master of Cost Estimating and Analysis is a professional degree awarded for completing a curriculum focused on the practice of the profession rather than the more general arts or sciences behind the profession. It is analogous to the professional focus of an MBA (Master of Business Administration) compared to the more academic focus of an MS (Master of Science) in Management Science.

**Required Courses**

**Quarter 1, Spring**

Educational Skill Requirements (ESR)

Master of Cost Estimating and Analysis (MCEA) - Curriculum 379

1. Basics: The graduate will possess the mathematical skills required to support graduate study in Cost Analysis/Cost Estimating.

2. Cost Analysis: The graduate will understand the methods and practice of cost analysis including various cost models, with particular emphasis in the relationship of effectiveness models and measures to cost, and applications in cost-benefit analysis.

3. Statistics and Probability: The graduate will have a firm understanding of statistics and probability analysis and be able to apply that knowledge in the development of cost estimating relationships. The graduate will also be able to correctly interpret statistical measures of any data set.

4. Uncertainty Fundamentals: The graduate will be well versed in uncertainty fundamentals for cost analysis, including applications of probability, statistics, data analysis, and modeling uncertainty.

5. Simulation: The graduate will be able to construct and utilize Monte Carlo simulations in cost estimates of cost and schedule drivers, and will be able to deal with statistical issues associated with estimating costs of programs with limited financial resources.

6. Rates Development: The graduate will be able to construct a rate-set for direct labor, overhead, general and administrative costs, and inflation. The graduate will also be able to construct costs for various contract types, such as cost-plus, fixed-fee plus incentive, etc.

7. Cost-Benefit Analysis: The graduate will be able to apply the principles of probabilistic cost assessment in the context of resource allocation problems. This includes a framework for balancing costs and benefits, and analysis under conditions of large financial and technological uncertainties.

8. Optimization: The graduate will be able to formulate and solve a wide variety of optimization problems with particular emphasis on applications in optimum allocation of scarce resources and multi-year capital budgeting.

9. Systems Engineering and Analysis: The graduate of this curriculum will understand and be able to apply the basic principles of systems analysis as a basis for aiding key decisions on force requirements, weapon systems, and other defense matters.

10. Practice: The graduate will have gained experience in all aspects of analytical studies, including review, critique, and oversight of the work of others, as well as participation in the conduct of an analytical study. Review, critique, and oversight include the ability to highlight critical assumptions, recognize strengths and weaknesses of applied analytical methodologies, and evaluate study recommendations. Practice in the design and conduct of an analytical study includes the skills to formulate problems, use the analytical process to define study requirements, and apply appropriate analytical methodologies. Practice also includes demonstrating proficiency in presenting results both orally and in writing.

11. Cost Analysis Context: The graduate will have completed an approved option sequence in Naval Sea Systems, Air Force Systems, Naval Air Systems, or another approved option sequence in a particular defense systems area in which systems analysis may be applied.

Department of National Security Affairs  NS
Defense Resource Management Institute  DR
Center for Civil-Military Relations  CM
Center for Contemporary Conflict  NS
Center for Stabilization and Reconstruction Studies  CM
International Graduate Programs Office  IGPO

Overview
The School of International Graduate Studies (SIGS) conducts research and offers Master's and Ph.D. degrees in Security Studies. Its programs seek to identify and address current and emerging security challenges, and to strengthen multi-lateral and bilateral defense cooperation between the United States and other nations. SIGS offers innovative interdisciplinary curricula, both in-residence and via distance learning, in regional and international security studies, civil-military relations, defense resource management, and homeland security.

Programs Offered

Doctor of Philosophy in Security Studies
The Ph.D. in Security Studies awarded by the Department of National Security Affairs requires one year of in-residence course work beyond the Master's plus at least two years to develop and execute a satisfactory dissertation. While the entirety of the dissertation need not be written in-residence, candidates for the Ph.D. should plan on a three-year tour, which is the norm for doctoral work at NPS.

Master of Arts in Security Studies (in-residence)
The Department of National Security Affairs offers Master of Arts degrees in a variety of regional and topical specialties within the field of Security Studies. MA programs require between twelve and eighteen months of in-residence study to complete.

Master of Arts in Security Studies (hybrid distance learning)
The Department of National Security Affairs and the Center for Homeland Defense and Security offer a Master of Arts in Security Studies (Homeland Security and Defense), which may be obtained via a combination of web-based distance learning and brief periods of intense in-residence study.

Short Courses and Executive Education (in residence)
The Department of National Security Affairs, the Center for Civil-Military Relations, the Center for Homeland Defense and Security, and the Defense Resource Management Institute offer a variety of in-residence, non-degree short courses, ranging from one to four weeks length. Topics vary from year to year, and are chosen to provide senior leaders with a concise, academically-grounded understanding of matters of particular current importance.

Mobile Education Teams
Mobile education teams comprised of or led by SIGS faculty provide a wide range of off-site short courses, senior executive seminars, and lecture series, similar in character to our in-residence short courses. Such programs may be delivered overseas, at other locations in the United States, or afloat and in-country with deployed forces.

Christopher Twomey, Associate Professor (2004); Ph.D., Massachusetts Institute of Technology, 2004.

James J. Wirtz, Professor (1990); Ph.D., Columbia University, 1989.

David Scott Yost, Professor (1979); Ph.D., University of Southern California, 1976.

Thomas-Durell Young, Senior Lecturer (2009), Ph.D., University of Geneva (CH), 1988.

Brief Overview

The Department of National Security Affairs (NSA) specializes in the study and teaching of international relations, regional politics and security, international and military history, international political economy, and United States security policy. NSA brings together a faculty comprised of historians, political scientists, and economists, with students from all the U.S. armed forces, from various defense agencies, and officers and civilians from more than 60 countries around the world.

Requirements for Entry

Applicants for MA programs must have obtained a Bachelor’s degree from a regionally accredited academic institution. Graduate Record Examination (GRE) scores are not required for Navy and Marine Corps applicants, but Army and Air Force applicants must include scores from the GRE, taken within five years of the date of application. Ph.D. admissions requirements are described under curriculum 694, below.

International students whose native language, or language of prior instruction, was other than English, are required to have obtained a minimum total score of 90 on the internet-based Test of English as a Foreign Language (TOEFL), or a score of 560 on the written test.

Degree

NSA offers Master of Arts and Ph.D. programs in Security Studies. Master of Arts degrees always entail concentration in a particular regional or topical specialty, which is noted as part of the degree.

Regional Security Studies

NSA Regional Security curricula meet the high standards set by the U.S. armed forces for Foreign Area Officer education. Students can enroll in one of four curricula:

· Curriculum 681 - Middle East, South Asia, and Sub-Saharan Africa
· Curriculum 682 - Far East, Southeast Asia, and the Pacific
· Curriculum 683 - Western Hemisphere
· Curriculum 684 - Europe and Eurasia

International Security Studies

NSA offers a number of degree programs focusing on topics or problems with broad application to international security generally:

· Curriculum 685 - Civil-Military Relations
· Curriculum 686 - Stabilization and Reconstruction
· Curriculum 687 - Defense Decision Making and Planning
· Curriculum 691 - Homeland Security and Defense
· Curriculum 693 - Combating Terrorism: Policy and Strategy
· Curriculum 694 - Doctor of Philosophy in Security Studies

Curricular Structure

All NSA curricula share a common structure, which is designed to provide a firm foundation in the basics of security studies, along with in-depth exposure to a particular regional or topical specialty. This structure varies slightly depending on whether or not a degree program requires a Master’s Thesis.

1. Disciplinary core courses. All NSA students are expected to complete five disciplinary core courses. These provide a basic familiarity with the underlying academic disciplines that constitute the multidisciplinary field of security studies: history, international relations, comparative politics, and economics. A course in writing and research methods is also required. Because of their
foundational purpose, disciplinary core courses should be completed early in a student’s stay at NPS.

2. Curricular core courses and elective courses. All NSA curricula require students to complete at least eight graduate-level courses in their subject of concentration. These are divided between curricular core courses and curricular electives. The ratio of core and elective course varies from one curriculum to the next, but the minimum total is always eight, of which at least three (12 hours minimum) must be at the 4000-level.

3. General Electives. NSA degree programs usually afford some opportunity for students to take courses in subjects outside their area of specialization. Such courses are called “general” electives, and they may be chosen from among all courses offered at NSA. General electives exist to provide an opportunity for students to take courses relevant to their thesis research, but which may lie outside their particular regional or topical area of concentration. They are not optional. Curricula that provide scope for general electives also require that a certain number must be taken in order to complete the degree. The number of general electives available to students in a given program will vary, depending on sponsor requirements. In some cases such requirements may preempt a student’s choice of general electives.

4. Thesis research. Students who are required to write a thesis must complete NS4080, Thesis Proposal, no later than six months prior to graduation. Afterward, they may take NS0810, Thesis Research, up to three times. NS4080 is a Pass-Fail course. It does not count toward the minimum of 12 credit hours of 4000-level course work described above.

4a. Comprehensive examination. NSA’s regional curricula allow successful completion of language training at the Defense Language Institute to serve as a partial substitute for a Master’s thesis. Curriculum 687 allows students the option of substituting significant additional course work at the 4000 level in lieu of thesis research. In addition to either language training or additional course work, students who do not write a thesis also must take a comprehensive examination, for which they prepare by enrolling in NS0811 during their final quarter. NS0811 counts as a regular course, and should not be taken as an overload.

Additional Requirements

1. SECNAV Requirement. The Secretary of the Navy has ordered that all DoN students at NPS take at least four hours of graduate-level course work addressing:

…the historical, current, and evolving elements of maritime strategy. Instruction in developments in naval warfare will include an analysis and comparison of present and emerging tactical and strategic naval doctrine as well as an analysis of emerging technical developments and their potential effect upon the prosecution of tactical and strategic naval warfare by the United States, our allies, and our potential adversaries.

Navy and Marine officers who complete the JPME program offered by the Naval War College satisfy this requirement automatically. Those who do not must take NW3230, Strategy and War, in lieu of a general elective. Marine officers who either have attended or will attend the Command and Staff College may validate this requirement.

2. Naval Intelligence Requirement. All Naval Intelligence officers in NSA are required to take NS4159, Seminar on Joint Intelligence Support to Crisis Operations, in lieu of a general elective. This course does not count toward the requirement of three 4000-level courses in a student’s area of concentration, unless it is actually included among the curricular electives of a particular program.

3. JPME. Students at NPS have the opportunity to complete a sequence of Naval War College courses that convey JPME Phase I Credit. Completion of JPME is not a requirement for any NSA degree, but is available as an option for curriculum sponsors, and for students whose programs afford sufficient time (one additional academic quarter) to complete the work. JPME courses may not be taken as an overload and do not satisfy any curricular requirements in NSA.

Additional information about NSA academic programs, including an up-to-date schedule of course offerings, can be found on the NSA web site, www.nps.edu/nda.

National Security Affairs Course Descriptions

FL Courses

FL0001-0009 Language As Required
This course is a generic identifier for a foreign language course taken at the Defense Language Institute (DLI). Prerequisites: None.

NS Courses

NS0810 Thesis Research (0-8) Quarterly
Students conducting thesis research will enroll in this course. Prerequisites: NS4080, or permission of the Academic Associate.

NS0856 Cultural Immersion Experience Tour (0-2) Quarterly
This course provides overseas cultural immersion experience for designated FAO/RAS officers. Enrollment requires prior authorization by the FAO/RAS proponent of the student’s service, and permission from the cognizant Academic Associate of the student’s curriculum. A trip report prepared in line with the requirements of each student’s service branch is required. Course is graded Pass/Fail, and may be repeated.

NS0811 Preparation for Comprehensive Examination (0-8) Quarterly
Students preparing for comprehensive examinations will enroll in this course. Prerequisites: None.

NS2013 Policy Analysis and Research Methodology (2-0) Quarterly
The purpose of the research sequence (NS2013 and NS4081) is to advance your critical thinking, research and inquiry skills; you will
use these skills to produce a strong thesis proposal (in this course sequence), and then later for the final thesis. We will identify and practice the main steps and modalities of good research. This will include exposure to a variety of research methods from which you will choose at least one for your thesis project and develop with the help of your thesis committee. Prerequisites: None.

NS2079 Foreign Language Maintenance (2-0) As Required
Intended for students with beginning or intermediate proficiency in a foreign language. Such students may maintain or improve their proficiency by arranging for individualized instruction with appropriately qualified faculty at NPS or DLI. Such arrangements must be made by the student. Enrollment in NS2079 requires the approval of the cognizant Academic Associate and the Department Chairman, and is accomplished using the same procedure required for enrollment in NS3079 and NS4079.

NS3000 War in the Modern World (4-0) Quarterly
This course provides an introduction to war as a political and social phenomenon, and as a force in the international system. Major themes include: the development of leading ideas about war; the mutual interactions of politics, society, and warfare; the impact of military doctrine on war fighting; allocation of resources and coordination of effort among land, sea, and air forces; national strategic cultures, and their implications for strategic practice. Prerequisites: None.

NS3001 War and Its Impact on Post-Conflict Reconstruction (4-0) Annually
The problem of post-conflict reconstruction is hardly a new one. In the past, victors in wars frequently had to manage and rebuild societies shattered by conflict. This course will examine historical examples of post-conflict reconstruction. War creates a competitive environment exploited by groups who seek political power. This competition begins while the war is under way. Competitors seek to place themselves in a position to take advantage of the new post-war environment by choosing allies and enemies, perhaps also arming themselves. On the new post-war playing field, old antagonisms assume new guises. Groups who might have been insignificant or repressed before the conflict can often exploit the new post-war environment to seek power. The military may also be strengthened by war, posing challenges to civilian governments or occupying powers. Social disorder, economic dislocation, and the de-legitimization of old political groups or ideas may invite chaos and even civil war. Prerequisites: None.

NS3003 Nationalism and Revolution (4-0) As Required
This course surveys the history of revolution in modern times, with particular emphasis on their role in the creation and development of modern nation states, and on the role of nationalism, more broadly, in the development of modern society. Prerequisites: None.

NS3011 Research and Writing for National Security Affairs (4-0) Quarterly
This course provides students with the basic tools to understand and produce research in relevant areas of history, social science and policy analysis. The general objectives of the course are to make you a more critical reader and thinker and better writer and researcher. The course is designed to help you with your other classes at NPS, which require you to read and write research papers. The course will also introduce students to basic elements of research design and methodology. In addition, the course will provide information on the thesis process at NPS. By the end of the course, every student should be able to produce a well-designed and well-written research paper or thesis. Prerequisite: None.

NS3021 Defense Capability Development (4-0) Annually
This course examines Service, Joint, and Multinational Concept Development and Experimentation programs for developing defense capabilities that are necessary to meet the anticipated operational challenges of the future security environment. The course explores the capabilities-based approach to defense planning that assesses how to effectively counter transnational, regional, and emergent peer competitors. The course considers what innovative capabilities are required to defeat adversaries who wage warfare across the maritime, land, air, space and cyberspace domains. The course analyzes emerging operational concepts, organizational configurations, technological advances, and people innovations, including doctrinal and training adjustments, for shifting the conduct of warfare to maintain competitive advantage in the 21st Century. Prerequisites: None.

NS3023 Introduction to Comparative Politics (4-0) Quarterly
This course is designed to introduce students to the major intellectual approaches to the study of comparative politics. Readings will be drawn from major theorists and leading schools of thought. Students will confront the central questions on the nature of economic, political, and cultural development. Prerequisites: None.

NS3024 Introduction to International Relations (4-0) Quarterly
This course provides an overview of the prominent theories of international relations. It surveys explanations based on decision-making, organizational behavior, domestic politics, international regimes and international systems, especially in terms of the insights they offer into the conduct of international relations in the post-Cold War world. Prerequisites: None.

NS3025 Introduction to Civil-Military Relations (4-0) Annually
This course introduces students to the basic concepts and issues in civil-military relations. It offers a historical and comparative analysis of different patterns of military participation in politics, defense policy making and national development. The course also introduces alternative models for structuring civil-military relations, and examines the problems associated with the models adopted by the United States and other nations. Prerequisites: None.

NS3026 Introduction to Post-Conflict Security Building (4-0) Annually
This course introduces students to the fuller program, intended to prepare them to work together in operations that build security in post-conflict environments. As such, it provides both conceptual tools for thinking about post-conflict security building and empirical referents to ground later study. Military strategists have written much about going to war, but have given less consideration to the movement from war to peace. How can one think strategically about the post-conflict environment? This course introduces students to characteristics of post-conflict environments and the diverse actors seeking to shape it. The course draws upon real-world cases to identify patterns of conflict and their consequences for post-conflict transition. In particular, the course will focus on interventions by external actors, civilian and military, in peace implementation. What are the typical components of post-conflict security building programs? This course covers practical issues in, and normative dimensions of, post-conflict security building. Prerequisites: None.
NS3028 Comparative Government for Homeland Security (4-0) Annually
Offered through the Center for Homeland Defense and Security. The objectives of the NS3028 course are: (1) to understand the trans-national nature of terrorism, organized crime, pandemics and other homeland security threats, (2) to assess homeland security strategies employed by liberal democracies around the world; (3) to distill and extrapolate policy implications from these examples; and (4) to apply these lessons to the organizational and functional challenges faced by homeland security leaders in the United States. The course will focus both on a discussion of shared threats such as the global Jihadi movement, Al-Qaeda activity in Afghanistan and Pakistan, Middle Eastern groups such as Hamas and Hizbullah as well as policies and strategies employed by a range of democratic countries to cope with terrorism and other homeland security related threats. In addition to looking at specific countries, the course will also look at issue areas such as bio-threats, health system preparedness, airport security and anti-radicalization policies across countries. This course will provide students with a knowledge base and methodology with which to learn from the practices of other countries and translate those practices into policies applicable in the United States. The course will also enable students to better understand the threats that other countries face (many of which are likely to affect the United States in the near term) and how they cope with those threats. Finally, the course will enable students to be prepared to engage with their international partners at the local, state or federal levels as Homeland Security becomes an increasingly global undertaking and all levels of government in the United States move toward conducting greater international outreach. Prerequisites: None.

NS3030 American National Security Policy (4-0) As Required
An overview of U.S. national security policy formulation. Covers the processes and actors involved, both governmental and non-governmental. At instructor’s discretion, course might also address recent developments in U.S. national security strategy. Prerequisites: None.

NS3037 The Role of Congress in U.S. National Security Policy (4-0) As Required
Survey of the roles, processes and orientations of the U.S. Congress in making national security policy. The course examines the powers and responsibilities granted to Congress by the Constitution, how the role of Congress has changed over time, and the way the role may evolve in the future. Specific topics include the budget process, War Powers, security assistance, and the problems of executive-legislative coordination in foreign and military policy making. Prerequisites: None.

NS3040 The Politics of Global Economic Relations (4-0) Quarterly
Examination of the world economy. Focuses on implications for the United States over changes in the world trading and financial systems. Topics covered include trade patterns, economic integration, trade blocs, new international economic order, and international economic organizations. Prerequisites: None.

NS3041 Comparative Economic Systems (4-0) As Required
Examination of the economic systems and development problems in developing countries, including post-communist states. The course focuses on the political and ideological bases of economic organizations, and the nature of basic economic problems in these regions. Special attention is given to the socio-economic strategies and tactics used in the management of the economy, and institutions and techniques of decision making. Attention is also given to problems of economic stabilization in the developing world. Prerequisites: None.

NS3042 Economics of Insurgencies for Security Building (4-0) As Required
The course examines the economic issues related to civil wars and insurgencies, and reconstruction and development after conflict. Prerequisites: None.

NS3077 Practicum in Regional Security Studies (4-0) As Required
This course supports student research conducted under the auspices of the Center for Civil-Military Relations and the Joint Foreign Area Officer Sustainment Program. Students work overseas under NSA faculty supervision, and participate in seminars, exercises, and other programs offered in Monterey or abroad, dealing with the region that is the focus of the research. The Practicum is open to students in any NSA curriculum, but is limited to those selected for participation by the organization supervising the program. Grading is Pass/Fail. Prerequisite: Permission of the instructor.

NS3079 Directed Studies in National Security Affairs (4-0) As Required
(Credit 1-0 to 4-0) Format and content vary. Normally involves extensive assigned readings, individual discussions with the instructor, papers and/or examinations. Prerequisites: None.

NS3155 Intelligence and Democracy (4-0) As Required
This course examines the methods civilian authorities in emerging democracies can use to establish strong, effective controls over their intelligence agencies. The course begins by examining the intelligence process in the United States and the United Kingdom, and the potential problems that intelligence activities can pose to democratic governance. Next, students will analyze the mechanisms used by the U.S., the U.K., France and other long-established democracies in Latin America, Central Europe, Africa, and Asia to establish their own democratic controls over intelligence, and the challenges that such nations will face in the future. Prerequisites: None.

NS3159 Principles of Joint Operational Intelligence (4-0) As Required
This course examines the intelligence process, organizational structure and related C4I architecture within the context of intelligence support to the planning and conduct of joint and combined operations at the operational level of war. This course addresses the conduct of intelligence to include the development of requirements, collection management, threat analysis, assessments, and dissemination of intelligence to the decision maker. The course includes an overview of intelligence data systems and associated connectivity. Students are required to prepare and present intelligence briefings and staff intelligence studies, incorporating the knowledge gained in the course. Classification: U.S. citizen holding a TOP SECRET clearance with eligibility for access to SCI.
NS3160 Human Intelligence (4-0) As Required
This course familiarizes students with the concepts, principles, and methodology of Human Intelligence collection. Additionally, students will comprehend the capabilities and limitations of various collectors and programs, learn the organizational architecture and understand the collection management process of Human Intelligence. This course is a requirement for all students in the Regional Intelligence Track of the Joint Intelligence Curriculum. Classification: Student must be a U.S. citizen holding a TOP SECRET clearance with eligibility for access to Sensitive Compartmented Information.

NS3161 Principles of Open Source Intelligence (4-0) As Required
This course examines open source intelligence (OSINT) with a focus on the following areas: definition and nature of OSINT, OSINT policy and management, history and development of OSINT, current OSINT trends, OSINT-focused organizations, challenges, reform, and future prospects. Classification: SECRET NOFORN. Prerequisites: None.

NS3180 Introduction to Homeland Defense (4-0) Winter
Offered through the Center for Homeland Defense and Security. This course provides an overview of the essential ideas that constitute the emerging discipline of homeland security. It has two central objectives: to expand the way participants think, analyze and communicate about homeland security; and to assess knowledge in critical homeland security knowledge domains. Prerequisites: None.

NS3181 Introduction to Homeland Defense and Security (4-0) Annually
This course surveys the distinctive features and challenges of homeland defense and security, with emphasis on the interagency process by which the contributions of the armed forces and defense agencies are integrated with those of civilian federal agencies and state and local governments.

NS3225 Civil-Military Relations and Defense Budgeting (4-0) As Required
Accelerated course, offered through the Defense Resource Management Institute. This course provides a detailed analysis of the budget process used by the United States and other democracies to allocate defense resources. Students will become familiar with the planning, programming and budgeting system (PPBS) and other budgeting models and techniques. Students will also examine the sources of civil-military conflict in defense budgeting, and analyze different structures to resolve those conflicts.

NS3230 Strategic Planning and the Military (4-0) Annually
This course provides an introduction to and critical examination of the role the military plays in U.S. strategic planning and national security policy formulation. The focus will be on the institutions and actors involved in strategic planning, the planning process itself, and the outputs of that process. Theory and process meet through case study and analysis of the evolution of U.S. military planning practices, including the changing roles of the Joint Staff, combatant commands and service components, joint task forces, and service staffs following passage of the Goldwater-Nichols Act and post-Cold War international security developments. Prerequisites: None.

NS3245 Comparative Defense Organization and Management (4-0) Annually
This course is intended to introduce students to contemporary best practices in defense organization and management. Topics include the identification of appropriate military roles and missions within a framework of constitutional and budgetary constraints; the periodic defense "review" process as a basic tool of defense management; and the application of contemporary "best practices" in the reform and removal of legacy bureaucratic structures that no longer serve national ends. Prerequisite: None.

NS3246 Comparative Defense Planning (4-0) Annually
The course seeks to acquaint students with the historical development and contemporary requirements of effective defense planning. It is organized around comparative case studies of defense planning as practiced by small and medium-sized states at varying stages of economic and military development, and seeks to provide students with firm understanding of the essential methodologies of both defense budget management and operational level war planning. Prerequisite: None.

NS3260 Drug Control Strategy and Policy (4-0) As Required
This course provides an overview of the challenges posed by the production, trafficking, and consumption of illegal drugs, both in the U.S. and abroad, and evaluates government drug control efforts. It addresses the presidential, congressional, and bureaucratic politics that shape the formulation of domestic and international drug control policies. The challenges of implementing drug control policies will be analyzed, in particular the need for interagency coordination and international cooperation to address this complex threat. Both supply-side and demand-side policies will be discussed in detail and their effectiveness assessed. Prerequisites: None.

NS3280 Nuclear Strategy and National Security (4-0) Annually
This course surveys the history of U.S. nuclear weapons policies and explores deterrence and arms control theories. The course also evaluates the challenges posed by the proliferation of weapons of mass destruction and advanced delivery systems. Prerequisite: None.

NS3285 Nuclear, Biological, and Chemical Weapons: Proliferation and Nonproliferation (4-0) Annually
This course examines the proliferation of nuclear, biological, and chemical (NBC) weapons. It is an introductory survey course that covers the history and causes of NBC proliferation, the impact of proliferation on U.S. and international security, and the range and effectiveness of past efforts to restrain and/or mitigate proliferation. The class focuses on the changing nature of NBC proliferation problems, evaluating contemporary challenges and assessing potential future policy responses. It assumes no specialized prior knowledge of the subject matter. For this reason, it reviews the basic technologies of NBC weapons and current perspectives on proliferation problems and debates on means to overcome them. Prerequisite: None.

NS3300 Islam (4-0) Annually
Islam is one of the great monotheistic faiths of the modern world. This survey course examines the history and tenets of Islam and the breadth of Muslim cultures and civilizations. Prerequisites: None.

NS3301 African History and Cultures (4-0) Annually
This course provides a broad overview of African history, with an emphasis on understanding the historical foundations of important contemporary issues. In addition, it examines the process of cultural change in Africa over the course of the twentieth century, through an in-depth study of the fiction of Chinua Achebe. Prerequisites: None.

355
NS3310 Middle Eastern History to 1918 (4-0) Annually
This course surveys the history of the Middle East from the founding of the Ottoman Empire through the end of the First World War. Also included in this period is the history of the Safavid and Qajar dynasties that ruled Iran and maintained rivalry with the Ottomans. Given the nature of Egypt's special status within the Ottoman Empire as of the 19th century, Egypt will be studied independently within this course. Prerequisites: None.

NS3311 Government and Politics in Sub-Saharan Africa (4-0) Annually
This course is designed for graduate students with little or no background in the study of African government and politics. It introduces students to the main structures and processes of contemporary African politics, and to important theoretical debates in the field of African studies. The emphasis is less on formal institutions of government and more on the informal practices that comprise the primary arena of African government and politics. Prerequisites: None.

NS3315 Modern Arab History (4-0) Annually
This course studies the history of the Arab Middle East from the end of the First World War to the present. It will examine Western engagement in the region and the eventual creation of the current nation-states. The political and social evolution of the region and its relations with the West will be broadly surveyed. Prerequisites: None.

NS3320 U.S. Foreign Policy in the Middle East (4-0) Annually
The course reviews the historical background and current status of American interests and policies in the Middle East. The course focuses on how different U.S. administrations in the post-World War II era defined American interests in the Middle East, and on the major policies enacted to pursue those interests. Prerequisites: None.

NS3330 Comparative Politics of the Middle East (4-0) Annually
Focuses on the Middle East region's role in world events in the post-World War I era, including the impact of great power rivalries in the region, transnational movements, and envoir-strategic considerations. Prerequisites: None.

NS3340 Middle East in the International Economy (4-0) As Required
This course explores timely international and regional economic development issues. We will examine both international and regional economic interactions and possibilities, including regional trade agreements, negative and positive international agreements (sanctions, foreign aid, the WTO, etc.) and shared international resources such as water. We will tackle the problem of late development, the effects of oil, labor migration, and tax regimes on the economies and business-government relations, privatization moves, and current prospects for employment and poverty alleviation. Prerequisites: None.

NS3351 Anthropology of Africa (4-0) As Required
Examines various facets of African anthropology. Prerequisites: None.

NS3360 Politics and Security in North Africa (4-0) As Required
A survey course on the politics and security of North Africa in the post-World War I era. The geographic focus is on the countries of Egypt, Libya, Tunisia, Algeria and Morocco. Prerequisites: None.

NS3361 Politics and Security in Levant (4-0) As Required
A survey course on the politics and security of the Levant in the post-World War I era. The geographic focus is on the countries of Syria, Jordan, Lebanon, Israel and Palestine. Prerequisites: None.

NS3362 Politics and Security in the Northern Tier (4-0) As Required
A survey course on the politics and security of the Northern Tier in the post-World War I era. The geographic focus is on the countries of Turkey, Iran and Afghanistan. Prerequisites: None.

NS3365 Politics and Security in the Persian Gulf (4-0) As Required
A survey course on the politics and security of the Persian Gulf in the post-World War I era. The geographic focus is on the countries of Iraq, Saudi Arabia, Kuwait, Bahrain, Qatar, Oman and the UAE. Prerequisites: None.

NS3366 Modern Turkish History (4-0) As Required
This course surveys the history of the Turkish people and state from Ottoman times to the present. Important topics include the continuing influence of pre-Islamic Turkish culture; Turkish responses to colonialism, nationalism, and modernity; secularism and Westernization; the place of ethnic minorities in modern Turkey; and the tension between Kemalism and Islamism in contemporary Turkish culture and politics.

NS3400 History of Russia and Eurasia (4-0) Annually
An examination of the history of Russia, Eastern Europe, and Central Asian nations. The emphasis is on historical influences, political institutions, ethnic and social problems, and the economy. Prerequisites: None.

NS3401 Contemporary Politics of Russia (4-0) Annually
This course introduces students to the contemporary politics of Russia focusing on the post-Soviet. Prerequisites: None.

NS3412 Government and Security in the Central Asian Republics (4-0) As Required
With China and Russia taking an ever-increasing greater interest in central Asia, U.S. policy makers face the challenge of maintaining an influential presence in the region. Over a decade since the breakup of the Soviet Union, the five Central Asian Republics have emerged as a critical security issue as WMD, terrorists and hard-line regimes have come to dominate the landscape. In a land where Islam is more cultural than religious, communism more trusted than capitalism, and ethnic divisions a Soviet invention, how can stable democracies emerge? This course will represent a comprehensive assessment of the newly formed states of central Asia that were formerly parts of the Soviet Union. Through examination of the complex historical, ethnic, religious, and linguistic factors that unite and divide the Central Asian Region, we will better understand the challenges of political modernization, economic reform, and integration into the international community. The course topics will include: the history of the region; the relationship between Islam and Central Asia; environmental issues; economic development and emerging energy markets in the region; the contemporary political scene; and the role of the region in world affairs. Special emphasis will be placed on the contemporary crises in the region. Prerequisites: None.

NS3450 Military Strategy in Russia, Eastern Europe and Central Asia (4-0) As Required
The course examines the international factors that condition military strategy and doctrine in Russia, Eastern Europe, and Central Asia. It focuses on contemporary strategic concepts and
strategy: conventional war fighting capabilities, strategy for nuclear war, roles played by the fleets in military strategy, threat and net assessment, and arms control. Emphasis is on the strategic and operational levels of warfare. Prerequisites: None.

NS3460 Government and Security in Eastern Europe (4-0) As Required
This course examines the countries of east central Europe that fell in the Soviet sphere of influence after World War II. It is concerned in particular with the complex relationship of Marxism and nationalism, the nature of communist revolution from abroad, revolutions against communist states including Hungary in 1956 and Poland in 1980, and the present situation of the Central European states in the transition from communism to democracy. Prerequisites: None.

NS3466 Modern Central Asian History (4-0) As Required
This course studies the history of Central Asia from the late Russian empire to post-Soviet independence. Topics to be covered include Turkic and Persian cultural influences and Russian political influences in the region. The political and social changes experienced during the Soviet era and the major issues of independence that will be discussed, including relations among ethnic groups, the role of Islam in everyday life and politics, and the politics and economics of energy. Prerequisites: None.

NS3501 History and Cultures of Latin America (4-0) Annually
This introductory course examines the heritage of Latin America from pre-Columbian Indian traditions and Iberian colonial patterns, through the independence movements of the early 19th century, and the global economic relationships that re-oriented the region toward Northwestern Europe and the United States. Prerequisites: None.

NS3510 Government and Politics in Latin America (4-0) Annually
This introductory course is designed to familiarize students with the politics of contemporary Latin America. The course will cover such topics as the various types of political systems found in Latin America, the political economy of development and the issue of regime transition. Prerequisites: None.

NS3520 Latin American International Relations (4-0) Annually
This course surveys the international relations of Latin American nations. It analyzes the relations of Latin America with the United States and other nations, both within and outside of the region. Attention is given to political, economic, and cultural issues. Prerequisites: None.

NS3560 Political and Social Change in the Andes (4-0) Annually
This course focuses exclusively on the Andean sub-region, which is currently experiencing the highest levels of social change, political volatility, and institutional distress in all of Latin America. The course is structured around the in-depth examination of similar challenges in five different countries: Bolivia, Colombia, Ecuador, Peru and Venezuela. These challenges include the mobilization of indigenous populations, the breakdown of traditional party systems, tensions in civil-military relations, and illicit flows of drugs across national borders. Prerequisites: None.

NS3578 Society, Politics, and Security in Contemporary Brazil (4-0) Annually
Brazil is the largest county in South America, a major regional power that is rapidly emerging as an important global actor. This course will provide students with the historical and social background required to better understand contemporary Brazil. It will survey its recent history and current condition as a consolidating democracy, and focus on security issues both as perceived by the Brazilian elite, and as projected upon Brazil by the United States and Brazil's neighbors in South America. Prerequisites: None.

NS3580 Comparative Border Security (4-0) Annually
This course offers a thorough introduction to the border as a geopolitical construct that materializes in territories of linear configuration the balance of power among nations or regions (both internal and supranational). We will study and compare the elements that make borders a singular geographic space with unique management challenges and institutions, its relation with conflict, security and war. Prerequisites: None.

NS3600 History of Modern East Asia (4-0) Annually
This course surveys the interaction between the traditional civilizations of east Asia and the Western great powers since the early 19th century. It emphasizes the evolution of the modern international system in the region, beginning with the imposition of the treaty port system on China, Japan, and Korea, and follows the separate responses of those countries to Western influences through the era of the world wars and down to the present. Prerequisites: None.

NS3601 History and Cultures of Southeast Asia (4-0) As Required
This course addresses the historical development of the peoples of mainland and island Southeast Asia from their origins to the end of the nineteenth century. It focuses on the political, military, social and economic development of these societies and on their belief systems, including Hinduism, Buddhism, and Islam. Prerequisites: None.

NS3602 U.S.-Asiatic Relations: 18th Century to WWII (4-0) As Required
Examines U.S. Asian relations during the 18th Century through WWII. Prerequisites: None.

NS3605 History and Traditional Cultures of East Asia (4-0) As Required
This course offers a general introduction to the history and cultures of China, Japan and Korea down to the early 19th century. It presumes no previous acquaintance with this subject. It highlights those themes that are useful for understanding these countries' modern development, and it focuses in particular on the foundations for modern state-making in these traditional societies. It also provides a glimpse of the historiographic controversies that carry implications for interpretations of these countries' behavior today. Prerequisites: None.

NS3607 South Asian History and Contemporary Conflict (4-0) As Required
Overview of South Asian history and conflicts. Prerequisites: None.
NS3620 Survey of Asian Politics (4-0) Annually
This course surveys the major themes of Asian politics. The goals of the course are to introduce students to major debates and various modes of political interaction and patterns of political development in Asia. Half of the course is devoted to Northeast Asia and the other half to Southeast Asia. Prerequisites: None.

NS3621 International Relations of Southeast Asia (4-0) Annually
This course focuses on the contemporary international relations of Southeast Asia, including Thailand, Malaysia, Singapore, Indonesia, and Oceania. Prerequisites: None.

NS3645 Political Economy of Asia (4-0) Annually
This course explores the reasons for the different timing and paths of economic development in Japan, China, Taiwan and South Korea. It examines the reasons for the lateness of development of East Asia relative to the West, and especially the lateness of development of China compared to Japan. Emphasis will be on the evolution of institutions in the course of state building, and the international geopolitical context of Asian development. Prerequisites: None.

NS3661 Government and Security in China (4-0) As Required
An examination of the rise of the Chinese Communist Party and the establishment of the Communist state; its domestic achievements and problems; the special problem of Taiwan; changing foreign policies and the current role of the People’s Republic of China in world affairs. Includes an examination of U.S. relations with China. Prerequisites: None.

NS3662 Government and Security in Japan (4-0) As Required
An examination of Japan in the contemporary world, focusing on Japan’s political dynamics, economic evolution, social transformation, the National Self Defense Forces and alternatives for ensuring national security. Includes examination of U.S. relations with Japan. Prerequisites: None.

NS3663 Government and Security in Korea (4-0) As Required
An examination of the division of the Korean nation into two states; the aftermath of the Korean war; domestic political, economic and social problems of North Korea and South Korea; the prospects for reunification; the military balance and the changing strategic environment; and the relations of Pyongyang and Seoul with their key allies. Includes an examination of U.S. relations with Korea. Prerequisites: None.

NS3664 Government & Security in Southeast Asia (4-0) Annually
This course examines the development of Southeast Asian politics from decolonization to the present day. Prerequisites: None.

NS3665 US-Japan Security Relations (4-0) Annually
This course is designed to explore the history and contemporary politics of the US and Japan security relationship. Prerequisites: None.

NS3667 Chinese Foreign Policy (4-0) As Required
This course provides a systematic examination of contemporary Chinese foreign policy. It reviews the evolution of Beijing’s international goals and policies since 1949, but focuses of Beijing’s contemporary foreign policy goals, its policy-making process, and the foreign relations instruments at its disposal including military force. Prerequisites: NS3661 or consent of instructor.

NS3668 Politics and Security in South Asia (4-0) Annually
This course traces the history and evolution of South Asian politics leading up to the partition of the Subcontinent. It familiarizes students with the key debates and future trajectories in contemporary South Asia. This course creates a sound base for advance seminars on NS4668, which should be a logical follow-up and other regional security seminars. Prerequisites: None.

NS3700 History of Modern Europe (4-0) Annually
Review and analysis of the political and military history of Europe, including Russia, from the Congress of Vienna to the present. Prerequisites: None.

NS3710 Government and Security in Western Europe (4-0) Annually
Survey and analysis of government and security issues in contemporary Western Europe. The course emphasizes the post-1945 history, government, political system, and security policies of Britain, France, Italy, and Germany. Major topics include relations with the United States and policies concerning the future of NATO and the European Union.

NS3720 European Security Institutions (4-0) Annually
Survey and analysis of the main international institutions dealing with European security: the North Atlantic Treaty Organization (NATO), the Organization for Security and Cooperation in Europe (OSCE), the European Union (EU), and the United Nations (UN). The survey includes selected challenges facing each organization, particularly NATO, and their relation to specific European countries and to U.S. foreign and defense policy.

NS3730 The Balkans: History & Politics (4-0) Annually
A survey of the historical background of and contemporary developments in the Balkans region, with a special focus on the collapse of the former Yugoslavia, the various conflicts that followed, including that in Kosovo, the role of other regional actors in these events, and the prospects for future stability and progress in the region. Prerequisites: None.

NS3801 Introduction to Terrorism (4-0) Annually
This course provides an in-depth examination of the origins, nature, and political/military roles of contemporary international terrorism. It briefly examines the early history of terrorism, the contending theories that purport to explain the sources of terrorist behavior, the different types of terrorism and terrorist actions, and the challenge international terrorism poses for American interests and foreign policy. Functional topics, such as the special problems posed by state-sponsored terrorism, the relationship between terrorism and the media, and the range of possible military responses to terrorism are also examined. The course will conclude by comparing and contrasting different national responses to the problem of international terrorism, and examining the difficulties faced by the United States in its efforts to find an effective policy response. Prerequisites: NS3023 or consent of instructor.

NS3802 Counterterrorism Policy in Comparative Perspective (4-0) Annually
This course studies counterterrorist policy in a variety of countries, including the United States. It considers the means by which policies are formulated, and their effectiveness evaluated, as well as the implementation of counterterrorist policies as they affect human rights, civil liberties, and the population at large. We also look at issues such as oversight of institutions charged with internal
security, executive power, and the impact of international law on domestic politics. Prerequisites: None.

**NS3900 International Law and Organizations (4-0) Annually**
An introduction to the principles of international law including origins, sources, sovereignty, states, territory, jurisdiction, persons, treaties, settlement of disputes and the Law of the Sea. The course also traces the evolution of international organizations from the Concert of Europe, through the League of Nations, United Nations, European Economic Community, NATO, and various forms of multi-national and transnational organizations. Prerequisites: None.

**NS3903 Ethical Theory for Military Officers (4-0) As Required**
This course is a philosophical survey of major ethical theories that individuals or societies use to form their moral worldview. One presupposition of the course is that, as moral agents by virtue of being in various relationships with others, everybody has a philosophy—a way of thinking about and engaging others—that is, our social behavior. Thus, the course will also seek to move the student, as a military officer and a moral agent, beyond an external understanding of the major ethical theories and ask them to articulate their moral worldview and the ethical framework (theory) that forms the skeleton of that worldview. Such introspection is also vital for engaging other cultures when deployed as operators, analysts, or staff officers. In short, this course is designed to enable military officers to gain that inner knowledge and engage others from positions of ethical strength rather than of weakness. Prerequisites: None.

**NS3904 Comparative Ethics in Five World Religions (4-0) As Required**
This course will examine where the concept of something being right began and how it has evolved over the ages, paying particular attention to the religions and philosophies of various cultures and how they have influenced that society’s sense of what is right. We will explore the distinctive characteristics of the world’s major religions and the cultures we are most likely to deal within the military, as well as the significance of fundamentalism in all religions. We will look at tools for planning, negotiation, and meaningful dialogue in many settings. Prerequisites: None.

**NS4021 Seminar on Europe and the United States (4-0) As Required**
A historical-political advanced seminar on the evolution of U.S. policy towards Europe from the end of the 19th century until the present; the character of anti-European ideas in U.S. political and strategic culture; the role of leading personalities in the formulation of U.S. policy towards Europe in the critical periods of the twentieth century; the character of anti-U.S. sentiment in continental Europe; U.S. alliance cohesion and cultural diplomacy in continental Europe. The seminar analyzes readings in common and requires a larger independent research project. Prerequisites: None.

**NS4022 Soldiers and Politics in the Euro-Atlantic Region (4-0) As Required**
A comparison in an advanced seminar format via historical case studies of the evolution of the soldier and the state in the Anglo-Saxon countries and their continental European counterparts. The evolution of civil-military relations from dynastic, absolutist Europe to the era of total war in the twentieth century, with special attention to the German, British and U.S. cases of the evolution of state, national and military institutions, alliance cohesion, and wars of ideology. Further attention is also paid to the proliferation of warfare, ideology, and mass politics and the professional soldier in modern history. An analysis of common readings as well as an independent research paper round out the seminar. Prerequisites: None.

**NS4023 State, Nation, and Nationalism in Europe, 1500-1945 (4-0) As Required**
An advanced seminar on the evolution of the state, nation, and nation-state in western, central and eastern Europe from the seventeenth century until the middle of the twentieth. Special emphasis falls on the rise of national ideas in the eighteenth century, case studies of nation building and the propagation of nationalism in the nineteenth and twentieth centuries, as well as the transformation of nationalism into a force of total war and genocide in the twentieth century. An analysis of the common readings as well as an independent research project is required. Prerequisites: None.

**NS4024 Political Economy of China (4-0) As Required**
This course explores how state, society and politics impinge on the Chinese economy in its transition from planned to market economy and examines what political and economic adjustments China has to make as the country becomes increasingly integrated with the world economy. Prerequisites: None.

**NS4025 Special Topics: East Asia (4-0) As Required**
We use a paired comparative method in order to assess some of the leading theories on market transformation, and examine the geopolitical context, the strategies, process of institutional adjustment, and the coalition of interests formed to support or resist change as Japan, North and South Korea, China and Russia undertake market reform. Prerequisites: None.

**NS4026 Capstone Seminar: Reconstruction of Civil Society (4-0) As Required**
This course pulls together empirical, experiential and theoretical student learning in the post-conflict security building track. It employs multiple approaches to reconstruction and the conditions under which they tend to work in post-conflict transitions. Fundamental questions are addressed. From the perspective of international financial institutions, how can societies experiencing humanitarian emergencies make transition from relief to development? From the perspective of external actors, civilian and military, what patterns of interventions emerge in peace implementation? Considering perspectives of the host nation and external implementers of peace agreements, what are the costs and benefits of outside intervention? How can program responsibility shift effectively from military officials to civilians? What institutions and processes are vital to reconstruction of civil society, and how might military demobilization, reconstitution programs and police reform programs fit with those institutions and processes? How can indigenous stakeholders “own” the reconstruction in the face of outside intervention? Students participating in this course will share their insights from case analyses and build a data set for future students and researchers. Prerequisites: None.

**NS4028 Vietnam (4-0) Annually**
Seminar on the history, and culture of Vietnam. A series of contemporary issues are also covered. Prerequisites: None.

**NS4032 Special Topics: International Relations (4-0) As Required**
This course will focus on current topics in the broader international system. The list of issues to be analyzed for the seminar is announced at least one quarter prior to the offering of the seminar.
Advanced study and research is conducted on topics not covered in other seminars. A major, graded research paper is required. Prerequisites: Consent of instructor.

**NS4035 Special Topics: Joint Intelligence (4-0) As Required**
This seminar will focus on contemporary topics involving joint intelligence and related areas. The list of issues to be analyzed for the seminar is announced one quarter prior to the offering of the seminar. Advanced study and research is conducted on topics not covered in other seminars. Prerequisites: Consent of instructor. Classification: U.S. citizen holding a TOP SECRET clearance with eligibility for access to SCI.

**NS4036 Comparative Strategic Cultures (4-0) As Required**
Overview of strategic cultures around the world and the manner in which they affect defense/military strategies.

**NS4037 NATO (4-0) As Required**
This advanced seminar is a colloquium on the past and present policy and strategy of NATO via an examination of its leading crises from 1949 until 2003 in an effort to understand the nature of alliances in the Euro-Atlantic world, their strategies and issues of cohesion amid crisis. The class examines such themes as: a.) the evolution of ideas in the formulation of alliance statecraft and strategy; b.) the dimension of burden sharing in alliance statecraft and bi-lateral relations; c.) the problems of defense and military transformation in the past, especially connected with alliance politics and political biography; d.) the past instances of severe discord in national strategy and alliance statecraft with enduring importance for the essence of NATO; the modalities of NATO enlargement in the era 1989-1999 and beyond; the post-1990 shift from forward defense in central Europe to the rise of peace enforcement operations in S.E. Europe. Finally, attention is also given to the issues of the present connected with the role of NATO in ongoing security operations on a wide front. This class is taught in a colloquium format; further, it requires an additional book report and the preparation of large synthetic essay on the sum of the readings. Prerequisites: None.

**NS4040 Conflict in Africa (4-0) As Required**
This course examines multiple aspects of ethnic conflict in Africa. In the first half, we consider theoretical approaches to ethnicity, ethnic conflict, cross border contagion, and regional conflict. The second half of the course is dedicated to case studies, to be prepared and presented by the students. Prerequisites: None.

**NS4051 Special Topics: Comparative Politics (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of NS3023, or permission of the instructor.

**NS4052 Special Topics: International and Military History (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of NS3000, or permission of the instructor.

**NS4053 Special Topics: Political Economy (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of NS3040 or NS3041, or permission of the instructor.

**NS4054 Special Topics: Strategic Studies (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of NS3000 or NS3023, or permission of the instructor.

**NS4055 Special Topics: Africa (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of at least one 3000-level course on Africa, or permission of the instructor.

**NS4056 Special Topics: South Asia (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of at least one 3000-level course on South Asia, or permission of the instructor.

**NS4057 Special Topics: Southeast Asia (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of at least one 3000-level course on Southeast Asia, or permission of the instructor.

**NS4058 Special Topics: Eurasia (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of at least one 3000-level course on Eurasia, or permission of the instructor.

**NS4059 Special Topics: Latin America (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling...
documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: Prior completion of at least one 3000-level course on Latin America, or permission of the instructor.

**NS4060 Special Topics: Stabilization and Reconstruction (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: NS3026 or permission of the instructor.

**NS4061 Special Topics: Homeland Security and Defense (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: NS3181 or permission of the instructor.

**NS4062 Special Topics: Terrorism (4-0) As Required**
This course introduces students to specialized subjects or problems within its particular field of study. The topic of each segment will be specified via a subtitle in departmental course scheduling documents. Detailed information should be sought from the professor offering the course. Special Topics courses with the same number may be repeated with different subtitles. Prerequisites: NS3181 or permission of the instructor.

**NS4079 Advanced Directed Studies in National Security Affairs (V-0) As Required**
(Variable credit, from 1-0 to 4-0.) Format and content vary. Normally involves extensive individual research under direction of the instructor and submission of a substantial paper of graduate seminar quality and scope. Prerequisites: Consent of instructor.

**NS4080 Thesis Proposal (0-8) Quarterly**
This course is intended to assist students in the preparation of their Master's thesis proposals. A completed proposal, endorsed by the thesis advisors, the Academic Associate, and the department chair, is required to pass this course. Grading: Pass/Fail. Prerequisites: None.

**NS4081 Research Colloquium (2-0) Quarterly**
The purpose of the research sequence (NS2013 and NS4081) is to advance your critical thinking, research and inquiry skills; you will use these skills to produce a strong thesis proposal (in this course sequence), and then later for the final thesis. We will identify and practice the main steps and modalities of good research. This will include exposure to a variety of research methods from which you will choose at least one for your thesis project and develop with the help of your thesis committee. Prerequisites: NS2013.

**NS4133 The Psychology of Fear Management and Terrorism (4-0) Winter**
Offered through the Center for Homeland Defense and Security. This course serves as an introduction for homeland security professionals to terrorism as a psychological phenomenon. Government agencies involved in homeland security need to understand the psychological consequences of mass-casualty terrorist attacks and other disasters. This course provides a broad overview of psychological effects of terrorism. Prerequisite: NS3180.

**NS4141 Economic Intelligence (4-0)**
Economic intelligence. Requires instructor permission for add request. Prerequisites: None.

**NS4156 Intelligence for Homeland Security: Organizational and Policy Challenges (4-0) Spring**
Offered through the Center for Homeland Defense and Security. This course examines key questions and issues facing the U.S. intelligence community and its role in homeland security and homeland defense. Students will have the opportunity to fully address policy, organizational and substantive issues regarding homeland intelligence support. Prerequisites: None.

**NS4157 Intelligence for Homeland Defense and Security (4-0) Annually**
This course will provide students with a fundamental knowledge of U.S. operational intelligence capabilities to detect and deter terrorist and other unconventional threats to the United States. Topics will include the structure and function of U.S. intelligence organizations, systems, architecture, and capabilities. Issues in intelligence oversight, joint and inter-agency intelligence sharing, intelligence community administration, and intelligence support to national decision-making will be discussed. Classification: SECRET. Prerequisites: NS3181 or consent of the instructor.

**NS4159 Seminar on Joint Intelligence Support to Crisis Operations (4-0) As Required**
Advanced seminar on intelligence support to military commanders and national-level policy makers. Using case studies, the course examines concepts of individual and organizational factors affecting the analytic process. Students will identify near-to-mid-term regional events with force employment implications, develop associated intelligence support requirements, and create collection planks in support of indications and warnings, crisis shaping and identified operational mission areas. Prerequisites: NS3159, or consent of instructor. Open to intelligence specialists. Classification: U.S. citizen holding a TOP SECRET clearance with eligibility for access to SCI.

**NS4160 Foreign Intelligence Services (4-0) As Required**
This course examines selected foreign intelligence services. It emphasizes their organization, missions, and functions. This course is intended for students in the Joint Intelligence Curriculum and others upon consent of instructor. Prerequisites: NS3160 or consent of instructor. Classification: U.S. citizen holding a TOP SECRET clearance with eligibility for access to SCI.

**NS4225 Civil-Military Relations and Transitions to Democracy (4-0) As Required**
A seminar which reviews selected cases of transitions from authoritarian rule in the post-1945 period. The course compares the various roles played by the military and other actors in these transitions, examines the participation of the military in the consolidation of democracy and the problem of democratic consolidation. Students will also examine different theories and concepts of democratic transition and consolidation. Prerequisites: NS3025 or consent of instructor.

**NS4231 Seminar on Terrorism Financing and State Response (4-0) As Required**
This course examines exactly how far we have come in understanding how terrorists raise, store, and transfer funds. It also
evaluates challenges facing the U.S. government and international community in responding to this problem. In each module, we use a mix of official reports, academic papers, and other works to explore the subject and identify problems with the received wisdom about terrorist financing. Prerequisites: None.

**NS4232 Knowledge into Practice: A Homeland Security Capstone Course (4-0) As Required**
Offered through the Center for Homeland Defense and Security. This course is intended to provide participants the opportunity to expand their ability to enact the knowledge and technical learning acquired in the courses leading up to the capstone. This course will provide students with the motivation and skills to perform their professional roles in new ways, ways that will initiate and sustain change even at the level of the broader institutional context of governance in which they must function. Prerequisites: NS4156, CS3660, DA3210.

**NS4235 Seminar in Peace Operations (4-0) As Required**
This seminar examines the issues and the outcomes related to employing military forces to conduct peace operations and post-conflict stability operations. Theories of conflict and conflict resolution, the evolution of modern peacekeeping, peace enforcement, and stability operations, and the ongoing debates on the use force and diplomacy in contemporary international relations will be critically analyzed. Prerequisites: None.

**NS4239 Special Topics in American Government for Homeland Security (4-0) Quarterly**
Offered through the Center for Homeland Defense and Security. The purpose of this course is to provide participants with an insight into the structural, conceptual and intellectual underpinnings and implications of the homeland security project. Looking at a wide range of topics and problems, the course seeks to stimulate a comprehensive discussion of how homeland security professionals and the general public think about homeland security; whether/why there may be significant differences in professional and public perceptions of homeland security; and how those differences constrain/leverage various elements of the homeland security effort. By incorporating a selection of key texts in Western political and social thought alongside current topical writings, the course seeks to equip participants with a deeper understanding of the prevailing discourse and its impact on the homeland security project. Prerequisites: NS4156, NS3180, and DA3210.

**NS4240 Seminar on Regional Security Planning Problems (4-0) As Required**
This seminar, which is the national security policy capstone course in the Resource Planning for Management and International Defense (RePMID) curriculum, provides advanced study of regional and inter-regional security problems which are likely to confront emerging democracies in the immediate and mid-range future. Potential roles of individual countries and coalitions are explored to develop new and innovative strategies for dealing with both common and unique security problems in diverse regions. Through the course readings, students critically analyze the implications of the most likely future security environment challenges and opportunities for each region. Prerequisites: Completion of previous RePMID courses, or consent of instructor.

**NS4251 Seminar on Net Assessment (4-0) As Required**
The seminar examines the methodology of comparative threat analysis (net assessment), including: security policies, forces, the RMA, and capabilities of the world's military superpowers. The course introduces the student to original source material, Prerequisites: NS3024. Classification: U.S. citizen holding a TOP SECRET clearance with eligibility access to SCI.

**NS4253 Seminar on Technology and Strategic Planning (4-0) As Required**
This course is intended to develop an understanding of the interrelationship of technology and strategic planning. Issues include technological risk, affordability, institutional impediments to innovation, and a strategy for long range technology investments. Prerequisites: consent of instructor.

**NS4285 Counter-proliferation (4-0) As Required**
This course will prepare students to counter nuclear, biological, and chemical (NBC) weapons threats in future operational or staff assignments by improving their understanding of the causes and consequences of NBC weapons proliferation and use and the strategies and capabilities available to counter these threats. Prerequisites: None. Classification: U.S. citizen holding a TOP SECRET clearance with eligibility access to SCI.

**NS4300 Special Topics: Middle East (4-0) As Required**
A research seminar on politics in contemporary Middle East. Students conduct and present original research on selected issues concerning Middle Eastern politics. Since the topic of the seminar will vary, the registrar will be provided with the full title each quarter the course is taught. Sample subject areas include the Arab-Israeli conflict, the politics of oil, and the revolution in the Middle East. This course may be repeated as long as the subject material and title of the class is different. Prerequisites: Two 3000 level Middle East courses or consent of instructor.

**NS4305 Military, Polity and Society in the Middle East (4-0) As Required**
Seminar in Middle East military affairs, politics and society. Prerequisites: None.

**NS4310 Seminar on Middle Eastern Security Issues (4-0) As Required**
A research seminar on security issues in the contemporary Middle East. Students conduct and present original research on selected issues concerning Middle Eastern security. Since the topic of the seminar will vary, the registrar will be provided with the full title each quarter the course is taught. Sample subject areas include the domestic security implications of Middle East peace, environmental security in the Middle East, and terrorism in the Middle East. This course may be repeated as long as the subject material and title of the class is different. Prerequisites: Two 3000 level Middle East courses or consent of instructor.

**NS4311 Contemporary Issues in African Politics (4-0) As Required**
This course will survey the major issues confronting African states today: the HIV/AIDS epidemic, endemic civil wars, dimensions of ethnicity and ethnic conflict, issues of democratization and authoritarian rule, the nature of states and the phenomenon of state collapse, and patterns of trade and economic development. The focus will cover the entire sub-Saharan region, while utilizing country case studies to elaborate each of the main issue areas.
Designed as an upper-level seminar, the course will focus on discussion and debate of weekly reading assignments. Prior coursework in African Politics is desired, but not required.

NS4313 Government and Security in West Africa (4-0) As Required
This course introduces students to government and politics in West Africa, with an emphasis on political, economic, and social change since the end of the Cold War. Why are some countries in the sub-region making peaceful progress toward democratic consolidation while others are dissolving into violent conflict? How does the coexistence of zones of conflict and peace affect regional security? Prerequisites: None.

NS4315 Security and Politics in Iran (4-0) As Required
Iran has been one of the most important countries in the Middle East region. It is located strategically, connecting the Caucasus and Central Asia to the Persian Gulf on the one side, and South Asia to the Arab Middle East on the other. Iran is home to one of the principal languages and cultures of the region. It is also one of the most populous countries in the Middle East with one of the largest economies. Iran has been a politically and strategically significant country for most of the past century. It was a frontline state during the Cold War. It was the scene of a major revolution that changed the face of the Muslim world and the relations between the United States and regional powers. Since 1979, Iran has been an avowedly Islamic state that has been engaged in a protracted war with the West. However, Iran has also witnessed profound political, social, and cultural changes that can be consequential for the future of the region. This course provides an overview of Iranian politics. It also uses social science theory to examine what factors have determined the evolution of Iranian politics, and how those developments in turn change our views on political change in the Muslim world and beyond. Prerequisites: None.

NS4320 Islamic Fundamentalism (4-0) Annually
A research seminar on the ideology and practice of Islamic fundamentalists in the Middle East. Students read primary source translations of major fundamentalist ideologues, such as Ayatollah Khomeini and Sayyid Qutb, in addition to focusing on the strategies and histories of specific fundamentalist groups. Students will conduct and present original research on this topic. Prerequisites: NS3000 or consent of instructor.

NS4321 U.S. Foreign Policy towards Africa (4-0) Annually
This course examines U.S. foreign policy in Sub-Saharan Africa since 1960, with emphasis on the post-Cold War period. Prerequisites: None.

NS4322 Seminar on U.S. Security Strategy in the Middle East and Persian Gulf (4-0) As Required
Examines current United States security strategy in the Middle East and Persian Gulf region. Prerequisites: None.

NS4325 War in the Middle East (4-0) As Required
This course studies the international history of the Middle East and North Africa since the fall of the Ottoman Empire, with a particular focus on the origin, conduct, and consequences of the region’s major wars. Prerequisites: Prior completion of NS3000 and at least one 3000 level Middle East course, or permission of the instructor.

NS4326 Social Mobilization and Conflict in the Middle East (4-0) As Required
This course analyzes the organization, incentives, and goals of non-state actors. Subjects include protest and mobilization of civil society and their relations with violent actions, how available alternatives shape the form for opposition action takes, and the effects of repression and political inclusion. Prerequisites: Prior completion of at least one 3000 level Middle East course, or permission of the instructor.

NS4327 Southern African Politics (4-0) As Required
The goals of this course is to examine issues of ethnicity and ethnic identity as they relate to conflict and democracy in the non-Western world. This course will be offered as an elective that will fit in with the regional studies curricula for students in the Africa, Latin America, Middle East, and Asian curricula in the NS department. The course will provide students with the theoretical tools and approaches to the study of ethnicity and ethnic conflict in multiple-country contexts. The course is divided into three main subject areas: (1) the nature of ethnicity, (2) the nature of and explanations for ethnic conflict, and (3) solutions to ethnic conflict. Weekly course readings present a mix of theoretical approaches and case studies, and will cover all the major areas of the world: Africa, the Middle East, Latin America, Asia, and Eastern Europe. Prerequisites: None.

NS4332 Ethnicity and Ethnic Conflict in the Developing World (4-0) As Required
The goal of this course is to examine issues of ethnicity and ethnic identity as they relate to conflict and democracy in the non-Western world. This course will be offered as an elective that will fit in with the regional studies curricula for students in the Africa, Latin America, Middle East, and Asian curricula in the NS department. The course will provide students with the theoretical tools and approaches to the study of ethnicity and ethnic conflict in multiple-country contexts. The course is divided into three main subject areas: (1) the nature of ethnicity, (2) the nature of and explanations for ethnic conflict, and (3) solutions to ethnic conflict. Weekly course readings present a mix of theoretical approaches and case studies, and will cover all the major areas of the world: Africa, the Middle East, Latin America, Asia, and Eastern Europe. Prerequisites: None.

NS4361 Politics in Egypt (4-0) As Required
Course investigates contemporary Egyptian politics, including the roles of institutions, personalities and external forces, and the socio-economic context. Prerequisite: None.

NS4362 The Arab-Israeli Conflict (4-0) Annually
This course studies the evolution and current state of the Arab-Israeli conflict from the end of the 19th century to the present, including a consideration of its historical development, the principal individual and institutional actors involved, and an
assessment of current prospects for conflict resolution. Prior completion of at least one NSA course on the Middle East.

**NS4410 Seminar on Security Issues in Russia, Eastern Europe and Central Asia (4-0) Annually**

This advanced seminar addresses the security problems of the successor states to the former Soviet Union, focusing on the military, the security environment, political culture, Russian and non-Russian nationalism, and the relationship between domestic and foreign policies. Prerequisites: NS3400 or NS3410, or NS3450, or consent of instructor.

**NS4415 Seminar on Security Issues in Central Asia (4-0) As Required**

For the purpose of this course, Central Asia refers to Kazakhstan Kyrgyzstan, Tajikistan, Turkmenistan and Uzbekistan. The seminar will consist of three parts. In the first part, the students will gain a general background in history of Central Asia. In the second part, the students will survey the current situation in Central Asia. The seminar sessions in the third part of the course will be dedicated to presentations of students’ research. Prerequisites: None.

**NS4420 Seminar on History & Politics of Central Europe (4-0) As Required**

**NS4425 Russian Foreign Policy (4-0) Annually**

This advanced seminar introduces theoretical approaches to the study of foreign policy and focuses on the content of post-Soviet Russia’s foreign policy. Students will learn what Russia’s foreign policy consists of and who or what makes it. The course aims to give students a greater ability to analyze the critical determinants of foreign policy and an in-depth understanding of the various aspects of contemporary Russia’s foreign policy interests. Prerequisites: None.

**NS4501 Politics, Film and Fiction in Latin America (4-0) As Required**

This course explores how Latin American film and fiction has portrayed politics. Specific novels, short stories and films (all with a political context) will be compared with social scientific readings analyzing the same topics. All movies will be in Spanish with English subtitles. All readings will be available in Spanish and English versions. Prerequisites: NS3501.

**NS4502 Russian Film and Fiction (4-0) As Required**

Examination of Russian culture through that country's film and fiction. Prerequisites: None.

**NS4510 Seminar on Latin America Government and Politics (4-0) As Required**

An advanced seminar on Latin American politics in government. The topics analyzed include those of most current relevance including political transitions, the changing role of different political movements and institutions, and the prospects for economic growth and political stability. Prerequisites: NS3510 or NS3520, or consent of instructor.

**NS4540 The Political Economy of Latin America (4-0) As Required**

This course examines the complex relationship between politics and economics in Latin America. The course is structured around two overarching sets of questions. First, how can political science help us understand the economic development strategies that Latin American countries have pursued at different points in time? How have political actors and forces shaped the paths of economic development and what national patterns have emerged in the conflict over economic policy making? Second, reversing the direction of causation, when these economic development strategies succeed or fail, what is the impact on politics across Latin America? How has the pursuit of different economic ideologies, ranging from Marxism to neo-liberalism, altered politics in the region? Prerequisites: None.

**NS4550 Government and Politics in Mexico (4-0) Annually**

The purpose of this course is to explore the complexities of the Mexican political environment, its power structure, its profound contradictions and the multi stakeholder conflicts that shape Mexican decision making today. While a certain historical perspective is always necessary and unavoidable, this class is about Mexico’s current political environment, its security ecosystem and how those two elements affect the homeland security enterprise and North American security in general. Prerequisites: NS3510 or NS3181, or permission of the instructor.

**NS4560 Seminar on Latin American Security Issues (4-0) Annually**

A research seminar on security issues in contemporary Latin America. Students focus on challenges to regional security, regime stability, and public safety. Students conduct and present original research on selected issues concerning Latin American security. Prerequisites: NS3510 or NS3520, NS3024 or consent of instructor.

**NS4610 Asian Seminar: United States-Asian Relations (4-0) As Required**

Overview of the current state of U.S.-Asia relations. Prerequisites: None.

**NS4620 Seminar on the Chinese People's Liberation Army (4-0) As Required**

This course is a reading seminar on the evolution of the PRC’s military and its domestic and foreign policy roles. It reviews the evolution of Maoist and post-Mao security strategies, military decision making, professionalism versus politicization of the army, the calculus of deterrence and the use of force in PRC foreign policy, and party-army and civil military relations. Prerequisites: None.

**NS4630 Seminar on Northeast Asian Security (4-0) Annually**

Advanced research on national, regional, and global security dynamics among the states of Northeast Asia. The course explores policy options facing North Korea, South Korea, Russia, Japan, and China, their regional interaction, and the likely implications for the United States. Non-traditional security topics such as energy and space will be covered along with questions of military modernization, weapons, proliferation, alliance behavior, and deterrence. Prerequisites: Prior completion of at least one course in Asian politics and security (NS3620, NS3661, NS3662 or NS3663) or consent of the instructor.

**NS4640 Seminar on Wars In Asia (4-0) As Required**

This course studies the history of war and international relations in South Asia and the Asia-Pacific region in the nineteenth and twentieth centuries. It emphasizes the relationship between military action and political developments within the region, and also seeks to explore the impact of regional developments on the larger world system. Students will write an independent research paper in this class. Prerequisites: Consent of instructor.
This course will examine the sources of political and ethnic violence in the Southeast Asia region. Prerequisites: NS3024.

**NS4661 Contemporary Afghan Politics (4-0) As Required**

This seminar examines the complex historical, ethnic, religious, and linguistic factors that unite and divide Afghanistan as it struggles with the challenges of political modernization, economic reform, and integration into the international community. The seminar places a fundamental emphasis on current Afghan politics as well as questions of U.S. interests and policy options. Prerequisites: None.

**NS4662 Seminar on the Politics of Southeast Asia (4-0) As Required**

Advanced seminar on the contemporary politics of Southeast Asia. Prerequisites: None.

**NS4663 Politics and Security in Pakistan and Afghanistan (4-0) As Required**

This course focuses on the political and security dynamics of Pakistan and Afghanistan. In recent history the region has been a hotbed of instability and a focal point of terrorism. The course will explore the complex interplay of history, geography and ethnoreligious politics of the two contiguous countries, analyze its impact on regional stability, and examine the implications for global security.

**NS4664 Religious Activism in South Asian Politics (4-0) As Required**

The events of September 11 have underscored the importance of religious activism in South Asian politics. These movements have impacted regional politics and international security and are likely to continue to do so in the years to come. This course aims to provide students with an in-depth understanding of the role of religion in South Asian politics by familiarizing them with the historical context for religion's involvement in South Asian politics, introducing the important actors, key ideas and major events. The course will deal with both Islamic and Hindu religious movements in the Afghanistan-Pakistan-India arc. This will provide a comprehensive approach to the topic and will provide students with a comparative framework to analyze relevant issues. The course will use important works in the disciplines to provide a historical framework for the study of religion and politics in South Asia. Prerequisites: None.

**NS4666 Seminar on U.S. Policy in South Asia (4-0) Annually**

Overview of U.S. Policy in South Asia. Focus is on current issues. Prerequisites: None.

**NS4667 Political Development in South Asia (4-0) Annually**

This course covers a selected range of topics for understanding current South Asian political developments and towards answering the larger question of why South Asia is the way it is: What are the internal and external structures and institutions in South Asian countries that shape their political activities and stance? In this course we study contemporary issues in the context of regional, national, and local political developments in India, Pakistan, Bangladesh, Nepal, and Sri Lanka. This will assist in thinking relationally and comparatively across nations of the region, as well as provide an understanding of different movements and events that shape this region. Prerequisites: None.

**NS4668 Security in South Asia (4-0) Annually**

The seminar places particular emphasis on the conditions affecting the occurrence, conduct and aftermath of war in the region. Topics covered in the seminar include the independence of India and Pakistan in 1947 and the creation of political, ethnic, religious, and territorial disputes between the two countries; ethnic and religious sources of instability in the region; civil-military relations; South Asia during the Cold War; South Asia and the global war against terrorism; the foreign relations of India and Pakistan with the United States, Russia, China and neighboring countries; the origins and military conduct of the three India-Pakistan wars; and the acquisition of nuclear weapons by India and Pakistan and their impact on regional security and international stability. Depending on student interest, the course also will cover security dynamics of smaller South Asian states (Afghanistan, Bangladesh, Nepal, Sri Lanka, and Bhutan). Prerequisites: None.

**NS4669 Conflict and Cooperation in World Politics (4-0) As Required**

This course introduces students to representative literature on key topics in the fields of strategic studies and security studies. The course is taught as a research seminar. It is organized around four main topic areas: the parameters of strategic studies and security studies, and alternative definitions of security; alternative approaches to maintaining order at a regional or global level, with the main focus on the prospects for stability when there is a hegemonic power; the concept of strategic culture; and the effectiveness of alternative strategies for influencing states in bilateral relations so as to reduce security threats and the chances of military conflict. Prerequisites: NS3024.

**NS4677 Space and International Security (4-0) Annually**

This course studies the political history of the space age from the perspective of U.S. national security, as well as U.S. relations with other major, space-faring countries. It also covers arms control treaties, legal issues, international negotiations, and space management questions from a current policy perspective. An independent research paper or policy memo on an assigned topic is
SCHOOL OF INTERNATIONAL GRADUATE STUDIES (SIGS)

required. Prerequisites: NS3011 and NS3024 or consent of instructor.

NS4690 Seminar on International Security Issues of Asia (4-0) As Required
Advanced study of Asian security issues with special emphasis on the balance of forces, regional and external alliances, prospects for conflict, and Asian concepts of security and strategy. Prerequisites: A NS3000 level course on Asia or consent of instructor.

NS4710 Seminar on European Politics (4-0) Annually
A research seminar on politics in contemporary Europe. Students conduct and present original research on selected issues concerning European politics, with an emphasis on defense and security problems. Prerequisites: NS3710 or consent of instructor.

NS4720 Seminar on European Security Issues (4-0) Annually
A research seminar on security issues in contemporary Europe. Students conduct and present original research on selected issues concerning European security. Prerequisites: NS3720 or consent of instructor.

NS4722 Special Topics: Europe (4-0) As Required
Upper level seminar that debates advanced issues in European Security. Specifics topic vary by instructor. Prerequisites: None.

NS4755 Strategic Planning and Budgeting for Homeland Security (4-0) Summer
Offered through the Center for Homeland Defense and Security. Homeland security requires programs in such disparate areas as counter-terrorism, information security, border security, counter-drug activities, etc. This course will provide students with an analytical framework useful for translating long-term plans into programs and budgets. Prerequisites: NS3180.

NS4801 Seminar on Terrorism (4-0) As Required
This course attempts to provide a broad sweep of the field of terrorism. We explore general issues — the structure of terrorist groups, the motivation of those who join, the patterns of authority and decision making within groups, and the impact of different types of operations on governments and the public. In the second portion of the course, we discuss in greater depth the campaigns of a few selected terrorist organizations. We will also look at what some scholars call the "new" terrorism. Prerequisites: None.

NS4805 Modeling Terrorism: New Analytical Approaches (4-0) Spring/Summer
Terrorism and the groups that foment it are at the forefront of concern for policymakers and defense analysts worldwide. This seminar and associated lab will focus on applying a variety of proven analytic techniques to terrorism for the purpose of understanding it, building actionable models of it, and suggesting policy alternatives aimed at successfully deterring, disrupting and defeating it. The course will use as a test bed a particular global terrorist organization. Appropriate readings and background materials will be augmented with hands-on lab exercises analyzing group, organization, environment, process and narrative-related dimensions of terrorism. Instruction will be augmented by subject matter experts and guest speakers. Approaches to be covered include system dynamics, game theory, Bayesian analysis, cross-impact analysis, and rhetorical modeling and simulation. Prerequisite: None.

NS4806 Seminar on Applied Terrorism/Insurgency Research Methods (4-0) Annually
This course studies the use and application of advanced methodologies for investigating the organizational dynamics of terrorist and insurgent movements. A significant independent research paper is required. Prerequisite: Prior completion of NS4805 or consent of instructor.

NS4880 Legal and Military Responses to Political Violence (4-0) Annually
This course will first review the variety of legal and military policy options open to any state that confronts political violence, with particular attention to short versus long-term consequences of different policy options. It then analyzes a few individual cases (the British in Ulster, violence in Spain) in depth, in order to assess how different policy options combine or cancel each other. Prerequisites: Consent of instructor.

NS4881 Multi-Disciplinary Approaches to Homeland Security (4-0) Summer
Offered through the Center for Homeland Defense and Security. Homeland security efforts in the United States constitute a project framed by the rule of law. Constitutional concerns, civil rights issues and the roles if the various disciplines engaged in the effort are driven and impacted by the various local, state, and federal systems of law. This course allows students to explore the homeland security project in relation to the laws that support and constrain it. Prerequisites: None. 

NS4920 Special Topics: Civil-Military Relations (4-0) As Required
Selected special issues in Civil-Military relations. Prerequisites: None.

NS4930 Media and War (4-0) As Required
This seminar will analyze the interaction between the media, in the United States and abroad, and society during wartime. Prerequisites: None. 

NS4940 Seminar on International Political Economy (4-0) Annually
This course addresses how governance is and can be created at the global level. It examines how states are coping with the multiplicity of global issues that affect them and how these issues and efforts impact state sovereignty. It will address how political actors respond to and create the drivers of globalization — the global processes, such as the spread of ideas such as neo-liberal market economic theory and universal human rights, as well as environmental, demographic and resource changes, that make actors dependent on each other for their management. Prerequisites: NS3024 and NS3040 or consent of instructor.

NS4941 National Security Law for Homeland Security and Defense (4-0) As Required
The course studies the legal framework within which defense strategy is formulated and executed, with emphasis on the identification and resolution of jurisdictional conflicts, the interaction of municipal and international law governing the use of force, and the organization challenges presented by the coordination of military activities with those of civilian law enforcement agencies and the judiciary. Prerequisites: NS3000, NS3023, or NS3024 or consent of the instructor.

NS4990 Seminar in Strategic Studies (4-0) Annually
This course studies the theory and practice of national defense strategy, approached by means of selected theoretical texts and
historical case studies in military and political decision-making. Topics include combined-arms land warfare, maritime strategy, strike warfare, nuclear strategy, and revolutionary insurgency. A significant independent research paper is required. Prerequisites: NS3000, plus at least one other 4000-level seminar in National Security Affairs.

**NS4991 Seminar in United States Foreign Policy (4-0)**  
**Annually**  
This course studies the conduct of foreign policy by the United States from the founding of the American Republic through the end of the Cold War. A significant research paper is required. Prerequisites: NS3024, plus at least one 4000-level seminar in National Security Affairs, or consent of instructor.

**NS5810 Dissertation Research (0-8) As Required**  
Dissertation research for doctoral studies. Required in the quarter following advancement to candidacy and then continuously each quarter until dissertation is approved by the Academic Council.

### International Defense Planning Certificate - Curriculum 245

**Program Officer**  
Bernie Wang, CDR, USN  
Herrmann Hall Room 307A  
(831) 656-3782, DSN 756-3782  
bpwang@nps.edu

**Academic Associate**  
Thomas-Durell Young, Ph.D.  
Code 38, Bldg. 259, Room 220  
(831) 656-2011, DSN 756-2011  
tdyoung@nps.edu

**Brief Overview**  
The Certificate Program in International Defense Planning is intended to provide international students with a compact introduction to the processes and methods of effective defense planning, as well as analytical tools they can employ to evaluate and improve defense planning in their own countries. Students are required to have completed a Bachelor's degree at an accredited university, and to possess substantial fluency in English, as demonstrated by a minimum total score of 90 on the internet-based Test of English as a Foreign Language (TOEFL), or a score of 560 on the written test.

**Entry Date**  
Summer

**Required Courses**

- NS3000 War in the Modern World  
- NS3230 Strategic Planning and the Military  
- NS3245 Comparative Defense Organization and Management  
- NS3246 Comparative Defense Planning

### Regional Security Studies (Middle East, South Asia, and Africa) Certificate - Curriculum 246

**Program Officer**  
Bernie Wang, CDR, USN  
Herrmann Hall Room 307A  
(831) 656-3782, DSN 756-3782  
bpwang@nps.edu

**Academic Associate**  
Ryan Gingera, Ph.D.  
Code 38, Glasgow Hall, Room 355  
(831) 656-2863, DSN 756-2863  
rgingera@nps.edu

**Brief Overview**  
The Academic Certificate Program in Regional Security Studies (Middle East, South Asia, and Sub-Saharan Africa) is designed primarily to support senior Foreign Area Officers (O-5s and O-6s) who will benefit from a renewed period of serious engagement with current academic and policy work on their region of specialization. The Certificate requires successful completion of a minimum of three graduate courses focusing on the region (12 credit hours), of which at least one course (4 credit hours) must be at the 4000-level. Each student's required course work is developed individually under the direction of the cognizant Academic Associate, based on the relevant regional courses available during the quarter(s) when the student is in residence. Language maintenance courses at the Defense Language Institute may be taken simultaneously in conjunction with the Certificate Program, but do not count toward the Certificate. Students may begin their course of study in any academic quarter.

**Entry Date**  
All quarters

**Required Courses**

Course offerings in NSA vary from year to year. The following illustrate what a (minimum) acceptable combination of courses might look like. Many other combinations are possible.

**Example 1 (Middle East concentration)**

- NS3220, United States Foreign Policy in the Middle East 4-0
- NS3330, Comparative Politics of the Middle East 4-0
East
NS4315, Security and Politics in Iran 4-0

Example 2 (South Asian concentration)
NS3668, Politics and Security in South Asia 4-0
NS4661, Contemporary Afghan Politics 4-0
NS4664, Religious Activism in South Asian Politics 4-0

Example 3 (Sub-Saharan Africa concentration)
NS3301, African History and Cultures 4-0
NS3311, Government and Politics in Sub-Saharan Africa 4-0
NS4328, Government and Security in the Horn of Africa 4-0

Regional Security Studies (East & South East Asia) Certificate - Curriculum 247

Program Officer
Bernie Wang, CDR, USN
Herrmann Hall Room 307A

(831) 656-1118, DSN 756-1118
rgingera@nps.edu Mailto:rgingera@nps.edu

Brief Overview
Curriculum 681 studies politics and security in the Middle East, South Asia and Sub-Saharan Africa. Degree requirements vary somewhat depending upon which of these sub-regions is the focus of effort. Separate tracks, with their own sets of requirements, exist for each of these three regions, as indicated in NSA’s on-line course schedule. Depending upon sponsor requirements, study at NPS may be preceded or followed by language instruction at the Defense Language Institute, co-located on the Monterey Peninsula. In addition, courses conveying Phase I JPME certification, as well as selected U.S. Marine Corps PME courses, are available to NSA students while in residence at NPS.

Entry Date
For thesis students who wish to complete JPME Phase I while in residence, curriculum 681 is a six-quarter (18-month) program. For non-thesis students who wish to complete JPME Phase I in residence, curriculum 681 is a five-quarter (15-month) program. For non-thesis student who do not wish to complete JPME Phase I in residence, curriculum 681 is a four-quarter (12-month) program. In all cases, students may enter in any quarter, with study commencing in January, April, July or October.

Degree
Master of Arts in Security Studies (Middle East, South Asia, and Sub-Saharan Africa).

Subspecialty
Navy P-Codes: 2101P

Typical Subspecialty Jobs
Defense Attaché
Foreign Area Officer
Intelligence Officer
Plans Officer, Staff Planner
Various joint command positions
Service Headquarters - Political / Military officers
Major staff jobs in Combatant Commands and Fleet Commands

Curriculum Requirements
Students in curriculum 681 must complete five (5) disciplinary core courses, as follows:

- NS3011 Research and Writing in National Security Affairs
- NS3023 Introduction to Comparative Politics
- NS3024 Introduction to International Relations
  - One of the following two:
  - NS3000 War in the Modern World
  - NS3001 War and its Impact on Post-Conflict Reconstruction
- NS3040 Politics of Global Economic Relations
- NS3041 Comparative Economic Systems
- NS3042 Economic Development for Security Building

In addition, students must complete a minimum of eight (8) curricular core and elective courses in their regional specialization, of which at least three (3) must be at the 4000-level. The courses that satisfy these requirements, and the quarters when they are offered, can be found on the NSA web site at www.nps.edu/Academics/SIGS/NSA/teaching/schedule.h
Students are also required to take sufficient general electives to maintain a full-time course load (16 hours). The number of general elective slots will vary somewhat depending upon service affiliation and sponsor requirements.

Students who write a thesis must also complete NS4080, Thesis Proposal, no later than six months prior to intended graduation. NS4080 does not count as one of the three 4000-level courses required above. Thereafter thesis students may enroll in NS0810, Thesis Research, up to three times; or they may take additional course work in their area of specialization, if they prefer.

Students in curriculum 681 who substitute language training plus a comprehensive examination for the thesis must enroll in NS0811, Preparation for Comprehensive Examination, during their final quarter.

Educational Skill Requirements (ESR)

1. Basic Graduate Level Skills:
   a. Conduct Research: Assemble information from the full range of data sources to understand international political, economic, and military issues.
   b. Analyze Problems: Frame issues as research questions; logically combine evidence and theory to analyze and explain international political, economic, and military developments; and formulate innovative solutions to strategic problems.
   c. Communicate Information: Clearly summarize large quantities of information and persuasively present positions and courses of action using a broad range of verbal and written communications formats, including short oral arguments, visual briefs, policy memos, position papers, and comprehensive student theses.

2. General Political Science, International Relations, and Security Studies:
   a. International and Comparative Politics: Understand international relations theories, including realist, liberal, and cultural paradigms; the conditions and worldviews that shape state interactions in the international system; the history of modern nationalism and the state system; and the roles of domestic politics, non-state actors, and transnational social movements in shaping international politics.
   b. International Economy: Understand the economic factors that shape the international security environment, including the economic dimensions of national security policy and the ways in which economic policies and interests affect military strategy and force structure.
   c. International and Military History: Grasp the principal causes of war in the modern era, and understand the political, technological, economic, and other influences that have governed its conduct; understand the social, political, economic, and cultural forces that have contributed to periods of stable peace; and analyze relations between states, including negotiations of peace settlements, military alliances, arms limitation agreements, economic arrangements, and human rights accords.
   d. International Organizations: Understand the history of international organizations and their role in world politics, including international mediation and negotiations, formal and informal security arrangements, treaty regimes, and the role of international institutions and non-governmental organizations in peacekeeping and humanitarian operations.
   e. U.S. Security Policy and Strategy: Understand how U.S. national security policy and strategy are formulated. Understand the roles of nuclear forces in the security policies of the United States and other nuclear powers; U.S. nuclear force acquisition, planning, deterrence policy, and employment concepts from the Second World War to the present; and the role of nuclear weapons in alliance politics and international relations.

3. Regional Security Studies:
   a. Identities, Interests, and Politics: Grasp the most significant political, economic, historical, cultural, and religious drivers that shape national identities and interests within their region of concentration.
   b. Emerging Security Challenges: Know the regional sources of political and social instability and become familiar with the roots of ethnic conflict, insurgencies, and terrorism, and their effect on regional and U.S. security.
   c. Regional Conflicts: Understand the patterns of violent conflicts, the likely sources and character of regional wars in the present and future, and the historical and prospective impact of such wars on the international system.
   d. Military Forces and Strategic Posture: Understand the main factors determining the strategic postures of countries in the region, including strategic culture and goals, threat perceptions, and military force structures.
   e. U.S. Regional Security Policy: Understand U.S. foreign policy objectives in a given region and be able to explain U.S. political, economic, and military strategy in the region, including U.S.
engagement policy and security assistance programs.

f. Economic Factors: Grasp the importance of underlying economic conditions on regional stability and conflict, as well as the tools of economic statecraft that the United States and international organizations may employ to try to influence these conditions.

Regional Security Studies - Far East, Southeast Asia, and the Pacific - Curriculum 682

Educational Skill Requirements (ESR)

1. Basic Graduate Level Skills
   a. Conduct Research: Assemble information from the full range of data sources to understand international political, economic, and military issues.
   b. Analyze Problems: Frame issues as research questions; logically combine evidence and theory to analyze and explain international political, economic, and military developments; and formulate innovative solutions to strategic problems.
   c. Communicate Information: Clearly summarize large quantities of information and persuasively present positions and courses of action using a broad range of verbal and written communications formats, including short oral arguments, visual briefs, policy memos, position papers, and comprehensive student theses.

2. General Political Science, International Relations, and Security Studies
   a. International and Comparative Politics: Understand international relations theories, including realist, liberal, and cultural paradigms; the conditions and worldviews that shape state interactions in the international system; the history of modern
nationalism and the state system; and the roles of domestic politics, non-state actors, and transnational social movements in shaping international politics.

b. **International Economy:** Understand the economic factors that shape the international security environment, including the economic dimensions of national security policy and the ways in which economic policies and interests affect military strategy and force structure.

c. **International and Military History:** Grasp the principal causes of war in the modern era, and understand the political, technological, economic, and other influences that have governed its conduct; understand the social, political, economic, and cultural forces that have contributed to periods of stable peace; and analyze relations between states, including negotiations of peace settlements, military alliances, arms limitation agreements, economic arrangements, and human rights accords.

d. **International Organizations:** Understand the history of international organizations and their role in world politics, including international mediation and negotiations, formal and informal security arrangements, treaty regimes, and the role of international institutions and non-governmental organizations in peacekeeping and humanitarian operations.

e. **U.S. Security Policy and Strategy:** Understand how U.S. national security policy and strategy are formulated. Understand the roles of nuclear forces in the security policies of the United States and other nuclear powers; U.S. nuclear force acquisition, planning, deterrence policy, and employment concepts from the Second World War to the present; and the role of nuclear weapons in alliance politics and international relations.

d. **Military Forces and Strategic Posture:** Understand the main factors determining the strategic postures of countries in the region, including strategic culture and goals, threat perceptions, and military force structures.

e. **U.S. Regional Security Policy:** Understand U.S. foreign policy objectives in a given region and be able to explain U.S. political, economic, and military strategy in the region, including U.S. engagement policy and security assistance programs.

f. **Economic Factors:** Grasp the importance of underlying economic conditions on regional stability and conflict, as well as the tools of economic statecraft that the United States and international organizations may employ to try to influence these conditions.

### Regional Security Studies - Europe and Eurasia - Curriculum 684

**Program Officer**
Bernie Wang, CDR, USN
Herrmann Hall Room 307A
(831) 656-3782, DSN 756-3782
bpwang@nps.edu

**Academic Associate**
Mikhail Tsypkin, Ph.D.
Code 38, Glasgow Hall, Room 313
(831) 656-2218, DSN 756-2218
mtsypkin@nps.edu

**Brief Overview**
Curriculum 684 studies politics and security in Europe and Eurasia. Depending upon sponsor requirements, study at NPS may be preceded or followed by language instruction at the Defense Language Institute, co-located on the Monterey Peninsula.

Curriculum 684 distinguishes between Europe and Eurasia based on the designations used in the Army FAO program as follows:

**Europe:** United Kingdom, Ireland, France, Norway, Netherlands, Belgium, Sweden, Denmark, Luxembourg, Germany, Austria, Switzerland, Italy, Spain, Portugal, Hungary, Bulgaria, Czech Republic, Slovak Republic, Poland, Albania, Croatia, Bosnia–Herzegovina, Serbia Montenegro, Macedonia, Finland, Romania, Greece, Liechtenstein, Malta, Monaco, Andorra, San Marino, Slovenia, and Iceland.
Eurasia: Russia, Belarus, Ukraine, Moldova, Armenia, Georgia, Kazakhstan, Uzbekistan, Kyrgyzstan, Turkmenistan, Tajikistan, Azerbaijan, Estonia, Latvia, and Lithuania.

Separate tracks, with their own sets of requirements, exist for these two regions, as indicated in NSA’s on-line schedule of classes.

Entry Date

For thesis students who wish to complete JPME Phase I while in residence, curriculum 684 is a six-quarter (18-month) program. For non-thesis students who will be completing JPME Phase I in residence, curriculum 684 is a five-quarter (15-month) program. For non-thesis student who will not be completing JPME Phase I in residence, curriculum 684 is a four-quarter (12-month) program. In all cases, students may enter in any quarter, with study commencing in January, April, July or October.

Degree

Master of Arts in Security Studies (Europe and Eurasia)

Subspecialty

Navy P-Codes: 2104P

Typical Subspecialty Jobs

Defense Attaché
Foreign Area Officer
Intelligence Officer
Plans Officer, Staff Planner
Various joint command positions
Service Headquarters - Political / Military officers
Major staff jobs in Combatant Commands and Fleet Commands

Curriculum Requirements

Students in curriculum 684 must complete five (5) disciplinary core courses, as follows:
NS3011 Research and Writing in National Security Affairs
NS3023 Introduction to Comparative Politics
NS3024 Introduction to International Relations
One of the following two:
NS3000 War in the Modern World
NS3001 War and its Impact on Post-Conflict Reconstruction
One of the following three:
NS3040 Politics of Global Economic Relations
NS3041 Comparative Economic Systems
NS3042 Economic Development for Security Building

In addition, students must complete a minimum of eight (8) curricular core and elective courses in their regional specialization, of which at least three (3) must be at the 4000-level. The courses that satisfy these requirements, and the quarters when they are offered, can be found on the NSA web site at www.nps.edu/Academics/SIGS/NSA/teaching/schedule.html. Students are also required to take sufficient general electives to maintain a full-time course load (16 hours). The number of general elective slots will vary somewhat depending upon service affiliation and sponsor requirements.

Students who write a thesis must complete NS4080, Thesis Proposal, no later than six months prior to intended graduation. NS4080 does not count as one of the three 4000-level courses required above. Thereafter thesis students may enroll in NS0810, Thesis Research, up to three times; or they may take additional course work in their area of specialization, if they prefer.

Students in curriculum 684 who substitute language training plus a comprehensive examination for the thesis must enroll in NS0811, Preparation for Comprehensive Examination, during their final quarter.

Educational Skill Requirements (ESR)

1. Basic Graduate Level Skills
   a. Conduct Research: Assemble information from the full range of data sources to understand international political, economic, and military issues.
   b. Analyze Problems: Frame issues as research questions; logically combine evidence and theory to analyze and explain international political, economic, and military developments; and formulate innovative solutions to strategic problems.
   c. Communicate Information: Clearly summarize large quantities of information and persuasively present positions and courses of action using a broad range of verbal and written communications formats, including short oral arguments, visual briefs, policy memos, position papers, and comprehensive student theses.

2. General Political Science, International Relations, and Security Studies
   a. International and Comparative Politics: Understand international relations theories, including realist, liberal, and cultural paradigms; the conditions and world views that shape state interactions in the international system; the history of modern nationalism and the state system; and the roles of domestic politics, non-state actors, and transnational social movements in shaping international politics.
   b. International Economy: Understand the economic factors that shape the international security
environment, including the economic dimensions of national security policy and the ways in which economic policies and interests affect military strategy and force structure.

c. **International and Military History:** Grasp the principal causes of war in the modern era, and understand the political, technological, economic, and other influences that have governed its conduct; understand the social, political, economic, and cultural forces that have contributed to periods of stable peace; and analyze relations between states, including negotiations of peace settlements, military alliances, arms limitation agreements, economic arrangements, and human rights accords.

d. **International Organizations:** Understand the history of international organizations and their role in world politics, including international mediation and negotiations, formal and informal security arrangements, treaty regimes, and the role of international institutions and non-governmental organizations in peacekeeping and humanitarian operations.

e. **U.S. Security Policy and Strategy:** Understand how U.S. national security policy and strategy are formulated. Understand the roles of nuclear forces in the security policies of the United States and other nuclear powers; U.S. nuclear force acquisition, planning, deterrence policy, and employment concepts from the Second World War to the present; and the role of nuclear weapons in alliance politics and international relations.

3. **Regional Security Studies**

   a. **Identities, Interests, and Politics:** Grasp the most significant political, economic, historical, cultural, and religious drivers that shape national identities and interests within their region of concentration.

   b. **Emerging Security Challenges:** Know the regional sources of political and social instability and become familiar with the roots of ethnic conflict, insurgencies, and terrorism, and their effect on regional and U.S. security.

   c. **Regional Conflicts:** Understand the patterns of violent conflicts, the likely sources and character of regional wars in the present and future, and the historical and prospective impact of such wars on the international system.

   d. **Military Forces and Strategic Posture:** Understand the main factors determining the strategic postures of countries in the region, including strategic culture and goals, threat perceptions, and military force structures.

e. **U.S. Regional Security Policy:** Understand U.S. foreign policy objectives in a given region and be able to explain U.S. political, economic, and military strategy in the region, including U.S. engagement policy and security assistance programs.

f. **Economic Factors:** Grasp the importance of underlying economic conditions on regional stability and conflict, as well as the tools of economic statecraft that the United States and international organizations may employ to try to influence these conditions.

**Civil-Military Relations - Curriculum 685**

**Program Officer**

Bernie Wang, CDR, USN
Herrmann Hall Room 307A

Code 38, Glasgow Hall, Room 348
(831) 656-2798, DSN 756-2798
acsotoma@nps.edu Mailto:acsotoma@nps.edu

**Brief Overview**

The Civil-Military Relations curriculum is an interdisciplinary program tailored to the needs of international officers and civilians. It is open to members of the U.S. armed services as well. The program is designed to meet three related requirements. First, it gives international students the skills needed to resolve the security problems confronting new and emerging democracies. Second, the program offers an in-depth understanding of civil-military relations. Finally, the program prepares students to resolve the civil-military issues raised by participation in U.N. peacekeeping operations, membership in the Partnership for Peace and other alliances, and security cooperation between other nations and the United States.

**Entry Date**

For students who wish to complete JPME Phase I while in residence, curriculum 685 is a six-quarter (18-month) program. For all other students, curriculum 685 is a five-quarter (15 month) program. International students must enter in Winter Quarter, with study commencing in January. American officers may enter in any quarter.

**Degree**

Master of Arts in Security Studies (Civil-Military Relations)
Subspecialty

Navy P-Codes: None

Typical Subspecialty Jobs

Defense Attaché
Foreign Area Officer
Intelligence Officer
Plans Officer, Staff Planner
Various joint command positions
Service Headquarters - Political / Military officers
Major staff jobs in Combatant Commands and Fleet Commands

Curriculum Requirements

Students in curriculum 685 must complete five (5) disciplinary core courses, as follows:

<table>

**Stabilization & Reconstruction - Curriculum 686**

**Program Officer**
Bernie Wang, CDR, USN
Herrmann Hall Room 307A
(831) 656-3782, DSN 756-3782
bpwang@nps.edu

**Academic Associate**
Arturo C. Sotomayor, Ph.D.
Code 38, Glasgow Hall, Room 348
(831) 656-2798, DSN 756-2798
acsotoma@nps.edu

**Brief Overview**
The curriculum on Stabilization and Reconstruction is based on a very simple premise. Sustainable economic and political development can go forward only when effective, democratically-controlled institutions can provide security for a nation’s people. In nations where U.S. and international forces are providing this security, those forces need to work with civilian development agencies and NGOs to help build indigenous security institutions. Otherwise, military forces risk creating a climate of dependency, in which continued local reliance on those forces slows their exit and impedes progress towards broader political and economic development.

The purpose of the program is the creation of a security environment within which economic and political development can flourish. By building indigenous capacities to provide security, military forces can “work themselves out of a job” and facilitate their own exit. Moreover, by conducting operations in close cooperation with civilian development agencies and NGOs, forces can facilitate the hand-off to these partners and contribute directly to their development work. In short: the Security Building program is designed to help the United States and its allies win and maintain the peace long after their military forces have returned home.

The program will accomplish its purpose by providing the specialized expertise, problem-solving skills, and management tools required by civilians and military officers (U.S. and international) operating in the post-conflict environment.

**Entry Date**
For students who wish to complete JPME Phase I while in residence, curriculum 686 is a six-quarter (18-month) program. For all other students, curriculum 686 is a five quarter (15-month) program. Students may enter in any quarter, with study commencing in January, April, July, or October.

**Degree**
Master of Arts in Security Studies (Stabilization and Reconstruction)

Navy P-Codes: 2700

**Typical Subspecialty Jobs**
Defense Attaché
Foreign Area Officer
Intelligence Officer
Plans Officer, Staff Planner
Various joint command positions
Service Headquarters - Political / Military officers
Major staff jobs in Combatant Commands and Fleet Commands

**Curriculum Requirements**
Students in curriculum 686 must complete five (5) disciplinary core courses, as follows:

- NS3011 Research and Writing in National Security Affairs
- NS3023 Introduction to Comparative Politics
- NS3024 Introduction to International Relations

One of the following two:
- NS3000 War in the Modern World
- NS3001 War and its Impact on Post-Conflict Reconstruction

One of the following three:
- NS3040 Politics of Global Economic Relations
- NS3041 Comparative Economic Systems
- NS3042 Economic Development for Security Building

In addition students must to complete a minimum of eight (8) curricular core and elective courses, of which at least three (3) must be at the 4000-level. The courses that satisfy these requirements, and the quarters when they are offered, can be found on the NSA web site at www.nps.edu/Academics/SIGS/NSA/teaching/schedule.html. 686 students have the option of substituting four (4) courses in a single region for four of the curricular electives.
that would otherwise be required. At least one of the regional courses must be at the 4000-level.

Students are also required to take sufficient general electives to maintain a full-time course load (16 hours). The number of general elective slots will vary somewhat depending upon service affiliation and sponsor requirements.

Students in curriculum 686 must complete NS4080, Thesis Proposal, no later than six months prior to intended graduation. Thereafter thesis students may enroll in NS0810, Thesis Research, up to three times; or they may take additional course work in their area of specialization, if they prefer.

**Educational Skill Requirements (ESR)**

1. **Basic Graduate Level Skills**
   a. **Conduct Research:** Assemble information from the full range of data sources to understand international political, economic, and military issues.
   b. **Analyze Problems:** Frame issues as research questions; logically combine evidence and theory to analyze and explain international political, economic, and military developments; and formulate innovative solutions to strategic problems.
   c. **Communicate Information:** Clearly summarize large quantities of information and persuasively present positions and courses of action using a broad range of verbal and written communications formats, including short oral arguments, visual briefs, policy memos, position papers, and comprehensive student theses.

2. **General Political Science, International Relations, and Security Studies**
   a. **International and Comparative Politics:** Understand international relations theories, including realist, liberal, and cultural paradigms; the conditions and world views that shape state interactions in the international system; the history of modern nationalism and the state system; and the roles of domestic politics, non-state actors, and transnational social movements in shaping international politics.
   b. **International Economy:** Understand the economic factors that shape the international security environment, including the economic dimensions of national security policy and the ways in which economic policies and interests affect military strategy and force structure.
   c. **International and Military History:** Grasp the principal causes of war in the modern era, and understand the political, technological, economic, and other influences that have governed its conduct; understand the social, political, economic, and cultural forces that have contributed to periods of stable peace; and analyze relations between states, including negotiations of peace settlements, military alliances, arms limitation agreements, economic arrangements, and human rights accords.
   d. **International Organizations:** Understand the history of international organizations and their role in world politics, including international mediation and negotiations, formal and informal security arrangements, treaty regimes, and the role of international institutions and non-governmental organizations in peacekeeping and humanitarian operations.
   e. **U.S. Security Policy and Strategy:** Understand how U.S. national security policy and strategy are formulated. Understand the roles of nuclear forces in the security policies of the United States and other nuclear powers; U.S. nuclear force acquisition, planning, deterrence policy, and employment concepts from the Second World War to the present; and the role of nuclear weapons in alliance politics and international relations.

3. **Stabilization and Reconstruction**
   a. **Civil-Military Relations:** Understand the core concepts of civil-military relations, particularly as they relate to the establishment of domestic order and the development of democratic politics.
   b. **Operations:** Recognize the military, political, economic, and social contexts that make successful stabilization and reconstruction operations possible.
   c. **Non-Governmental Actors:** Understand the role of non-governmental actors in the development and sustainment of a stable civil society in post-conflict environments.
   d. **Analysis of Post-Conflict Situations:** Know how to analyze problems in post-conflict situations and understand the role of military and non-military actors in constructing multidisciplinary solutions for stabilization.
   e. **Democratic Transitions:** Understand the challenges societies face in the process of making democratic transitions and the role of consensus building strategies for crafting sustainable solutions.
   f. **Role and Limits of Force:** Recognize the comparative contributions (and specific limitations) of using national military, U.N. forces, regional forces, and private entities in the process of stabilizing post-conflict societies.
**Historical Context:** Students will be familiar with past practices relating to post-conflict stabilization and reconstruction across the world, and understand the relevance and application of those historical practices to conditions today.

**Legal Context:** Understand the basic international legal and treaty framework that affects stabilization and reconstruction efforts.

### Defense Decision-Making & Planning - Curriculum 687

**Program Officer**

Bernie Wang, CDR, USN  
Herrmann Hall Room 307A  
(831) 656-3782, DSN 756-3782  
bpwang@nps.edu

**Academic Associate**

Mikhail Tsypkin, Ph.D.  
Code 38, Glasgow Hall, Room 313  
(831) 656-2218, DSN 756-2218  
mtsypkin@nps.edu

**Brief Overview**

The curriculum prepares future strategists by providing an understanding of the domestic and international variables involved in the formulation of defense and security policy. It combines the interrelated areas of general strategic studies, international organization, and negotiation to address the dynamic challenges of the future security environment.

This interdisciplinary curriculum emphasizes the strategic interests and objectives of the United States Armed Forces, their allies, and potential adversaries; the roles, structures, and effectiveness of international organizations and international law as they affect national security policy; the effects of military transformation and threat proliferation; and the process of U.S., allied, and adversary strategic decision-making.

The program will accomplish its purpose by providing the specialized expertise, problem-solving skills, and management tools required by U.S. military officers to address current and emergent strategic problems. The NSA department is a unique environment in which to pursue this course of studies since its student body is inherently joint and combined, providing students with both a stimulating intellectual environment and an opportunity to establish networks and life-long working relationships with fellow officers from other services and countries.

While fulfilling academic requirements, students in the five-quarter program have an option of either completing a thesis or taking three additional 4000-level courses and writing a departmental Comprehensive Exam. This means non-thesis students must take seven classes total (counting core courses) at the 4000 level.

### Entry Date

For students who wish to complete JPME Phase I while in residence, curriculum 687 is a six-quarter (18-month) program. For all other students, curriculum 687 is a five-quarter (15-month) program. Students may enter in any quarter, with study commencing in January, April, July, or October.

### Degree

Master of Arts in Security Studies (Defense Decision-Making)

### Subspecialty

Navy P-Codes: None

### Typical Subspecialty Jobs

Defense Attaché  
Foreign Area Officer  
Intelligence Officer  
Plans Officer, Staff Planner  
Various joint command positions  
Service Headquarters - Political / Military officers  
Major staff jobs in Combatant Commands and Fleet Commands

### Curriculum Requirements

Students in curriculum 687 must complete five (5) disciplinary core courses, as follows:

- **NS3011** Research and Writing in National Security Affairs
- **NS3023** Introduction to Comparative Politics
- **NS3024** Introduction to International Relations  
  *One of the following two:*
- **NS3000** War in the Modern World
- **NS3001** War and its Impact on Post-Conflict Reconstruction  
  *One of the following three:*
- **NS3040** Politics of Global Economic Relations
- **NS3041** Comparative Economic Systems
- **NS3042** Economic Development for Security Building

In addition, students who elect to write a thesis must complete a minimum of eight (8) curricular core and elective courses, of which at least three (3) must be at the 4000-level. Students who elect to complete additional course work and take a comprehensive examination in lieu of a thesis must complete a minimum of eleven (11)
curricular core and elective courses, of which at least six (6) must be at the 4000-level. The courses that satisfy these requirements, and the quarters when they are offered, can be found on the NSA web site at www.nps.edu/Academics/SIGS/NSA/teaching/schedule.html.

Students are also required to take sufficient general electives to maintain a full-time course load (16 hours). The number of general elective slots will vary somewhat depending upon service affiliation and sponsor requirements.

Students in curriculum 687 who elect to write a thesis must complete NS4080, Thesis Proposal, no later than six months prior to intended graduation. Thereafter thesis students may enroll in NS0810, Thesis Research, up to three times; or they may take additional course work in their area of specialization, if they prefer.

Students who elect to complete additional course work and a comprehensive examination in lieu of a thesis must enroll in NS0811, Preparation for Comprehensive Examination, during their final quarter.

Educational Skill Requirements (ESR)

1. Basic Graduate Level Skills
   a. Conduct Research: Assemble information from the full range of data sources to understand international political, economic, and military issues.
   b. Analyze Problems: Frame issues as research questions; logically combine evidence and theory to analyze and explain international political, economic, and military developments; and formulate innovative solutions to strategic problems.
   c. Communicate Information: Clearly summarize large quantities of information and persuasively present positions and courses of action using a broad range of verbal and written communications formats, including short oral arguments, visual briefs, policy memos, position papers, and comprehensive student theses.

2. General Political Science, International Relations, and Security Studies
   a. International and Comparative Politics: Understand international relations theories, including realist, liberal, and cultural paradigms; the conditions and world views that shape state interactions in the international system; the history of modern nationalism and the state system; and the roles of domestic politics, non-state actors, and transnational social movements in shaping international politics.
   b. International Economy: Understand the economic factors that shape the international security environment, including the economic dimensions of national security policy and the ways in which economic policies and interests affect military strategy and force structure.
   c. International and Military History: Grasp the principal causes of war in the modern era, and understand the political, technological, economic, and other influences that have governed its conduct; understand the social, political, economic, and cultural forces that have contributed to periods of stable peace; and analyze relations between states, including negotiations of peace settlements, military alliances, arms limitation agreements, economic arrangements, and human rights accords.
   d.    e. U.S. Security Policy and Strategy: Understand how U.S. national security policy and strategy are formulated. Understand the roles of nuclear forces in the security policies of the United States and other nuclear powers; U.S. nuclear force acquisition, planning, deterrence policy, and employment concepts from the Second World War to the present; and the role of nuclear weapons in alliance politics and international relations.

Homeland Security and Defense - Curriculum 691

Program Officer
Bernie Wang, CDR, USN
Herrmann Hall Room 307A
(831) 656-3782, DSN 756-3782
bpwang@nps.edu

Academic Associate
Carolyn C. Halladay, Ph.D.
Code 38, Glasgow Hall, Room 352

Brief Overview
Homeland Security and Defense provides military officers with a theoretical and practical understanding of
unconventional threats within the framework of the U.S. domestic security environment, and organizational strategies to deal with such threats. It explores the Department of Defense’s primary role in deterring and preventing attacks on the territory of the United States and in consequence management should such attacks occur. The strategic interests and objectives of the United States; the roles, missions, structures, and effectiveness of U.S. Homeland Security organizations and intelligence organizations, as well as potential threats to U.S. domestic security are examined.

**Entry Date**

For U.S. Navy students who wish to complete JPME Phase I while in residence, curriculum 691 is a six-quarter (18-month) program. For all other students, curriculum 691 is a five-quarter (15-month) program. In all cases, students may enter in any quarter, with study commencing in January, April, July, or October.

**Degree**

Master of Arts in Security Studies (Homeland Security and Defense)

**Subspecialty**

Navy P-Codes: 2600P

**Typical Subspecialty Jobs**

Intelligence Officer
Plans Officer, Staff Planner
Various Joint Command Positions
Service Headquarters—Homeland Defense/Critical Infrastructure Protection
Major Staff Jobs in Combatant Commands and Fleet Commands

**Academic Certificate Program**

NSA offers an Academic Certificate in Homeland Security and Defense to students in other curricula at NPS. The program is designed to provide organizational and strategic dimensions of homeland security and defense, and to facilitate scientific and technical research in the field by providing those engaged in such projects with a useful understanding of the specialized challenges that arise in this relatively new area of public policy. The Certificate may be obtained by successful completion of five curricular core courses required for the MA program as indicated on the schedule published on the NSA web site. Successful completion of the program is recorded on a student’s transcript.

**Curriculum Requirements**

Students in curriculum 691 must complete five (5) disciplinary core courses, as follows:

<table>

In addition, students must complete a minimum of eight (8) curricular core and elective courses, of which at least three (3) must be at the 4000-level. The courses that satisfy these requirements, and the quarters when they are offered, can be found on the NSA web site at www.nps.edu/Academics/SIGS/NSA/teaching/schedule.html.

Students are also required to take sufficient general electives to maintain a full-time course load (16 hours). The number of general elective slots will vary somewhat depending upon service affiliation and sponsor requirements.

Students in curriculum 691 must complete NS4080, Thesis Proposal, no later than six months prior to intended graduation. Thereafter students may enroll in NS0810, Thesis Research, up to three times; or they may take additional course work in their area of specialization, if they prefer.

**Educational Skill Requirements (ESR)**

1. **Basic Graduate Level Skills**
   a. **Conduct Research:** Assemble information from the full range of data sources to understand international political, economic, and military issues.
   b. **Analyze Problems:** Frame issues as research questions; logically combine evidence and theory to analyze and explain international political, economic, and military developments; and formulate innovative solutions to strategic problems.
   c. **Communicate Information:** Clearly summarize large quantities of information and persuasively present positions and courses of action using a broad range of verbal and written communications formats, including short oral arguments, visual briefs, policy memos, position papers, and comprehensive student theses.
2. General Political Science, International Relations, and Security Studies
   a. International and Comparative Politics: Understand international relations theories, including realist, liberal, and cultural paradigms; the conditions and world views that shape state interactions in the international system; the history of modern nationalism and the state system; and the roles of domestic politics, non-state actors, and transnational social movements in shaping international politics.
   b. International Economy: Understand the economic factors that shape the international security environment, including the economic dimensions of national security policy and the ways in which economic policies and interests affect military strategy and force structure.
   c. International and Military History: Grasp the principal causes of war in the modern era, and understand the political, technological, economic, and other influences that have governed its conduct; understand the social, political, economic, and cultural forces that have contributed to periods of stable peace; and analyze relations between states, including negotiations of peace settlements, military alliances, arms limitation agreements, economic arrangements, and human rights accords.
   d. International Organizations: Understand the history of international organizations and their role in world politics, including international mediation and negotiations, formal and informal security arrangements, treaty regimes, and the role of international institutions and non-governmental organizations in peacekeeping and humanitarian operations.
   e. U.S. Security Policy and Strategy: Understand how U.S. national security policy and strategy are formulated. Understand the roles of nuclear forces in the security policies of the United States and other nuclear powers; U.S. nuclear force acquisition, planning, deterrence policy, and employment concepts from the Second World War to the present; and the role of nuclear weapons in alliance politics and international relations.
3. Homeland Security and Defense
   a. Analytical Skills: Graduates will be able to logically combine data and theory to analyze and explain political, economic, and military events in the context of the Department of Homeland Security. Students will demonstrate writing, briefing, and computer skills in preparing and presenting their findings.
   b. National Security Issues: Graduates will be aware of the economic, political, social, and military characteristics of homeland security, homeland defense, and national security issues. These issues include: intelligence gathering and information sharing, posse comitatus, and the interaction of law enforcement with military command
   c. Critical Infrastructure Vulnerability: Graduates will be familiar with the full range of critical infrastructure sectors within the United States. They will know what their vulnerabilities are, and how to "harden" the critical nodes in each sector. Particular emphasis will be placed on networked infrastructure and the protection of critical nodes.
   d. Threat Analysis: Graduates will learn about domestic and international terrorism as they pertain to homeland security, as well as plans and capabilities to respond to such threats at the state, local, and federal levels.
   e. Civil-Military Relations: Graduates will understand the field of civil-military relations as it applies to homeland security within the framework of the U.S. Constitution and the history of American civil-military relations. Students will be able to identify key players in homeland security at the various levels of government within and beyond the DoD, including the Department of Homeland Security, Northern Command, FBI, CIA, etc.
   f. Law Enforcement and the Judicial System: Graduates will understand the interface between domestic law enforcement, state and local police, emergency response teams, military support of civilians, and investigations by various agencies such as the U.S. Postal Service, etc. Graduates will know the roles and responsibilities of various law enforcement agencies. Finally, graduates will understand how the judicial system interfaces with the military, at the state and local levels.
   g. Intelligence in Homeland Security: Graduates will understand the role of intelligence in defense of the homeland, including the restraints imposed upon intelligence-gathering within the United States. Graduates will recognize what can be learned from military intelligence and applied to homeland security. Graduates will understand the complexities of information gathering, analysis, and sharing in the context of homeland security.

Brief Overview
This curriculum provides an understanding of the nature and dynamics of terrorist organizations, and the domestic and international variables involved in the formulation of counter-terrorist policy. The curriculum allows the students to combine a regional focus with comparative courses that discuss terrorist organizations and operations, the financing of terror, legal and policing developments in counter-terrorism, intelligence, and the military role in homeland defense.

The NSA department is a unique environment in which to pursue this course of studies since its student body is inherently joint and combined, providing students with both a stimulating intellectual environment and an opportunity to establish networks and life-long working relationships with fellow officers from other services and countries.

Entry Date
For students who wish to complete JPME Phase I while in residence, curriculum 693 is a six-quarter (18 month) program. For all other students, curriculum 693 is a five-quarter (15 month) program. Students may enter in any quarter, with study commencing in January, April, July, or October.

Degree
Master of Arts in Security Studies (Combating Terrorism Policy and Strategy)

Subspecialty
Navy P Codes: None

Typical Subspecialty Jobs
Defense Attaché
Foreign Area Officer
Intelligence Officer
Plans Officer, Staff Planner

Course Requirements
Students in curriculum 693 must complete five (5) disciplinary core courses, as follows:

- NS3011 Research and Writing in National Security Affairs
- NS3023 Introduction to Comparative Politics
- NS3024 Introduction to International Relations
  One of the following two:
  - NS3000 War in the Modern World
- NS3001 War and its Impact on Post-Conflict Reconstruction
  One of the following three:
  - NS3040 Politics of Global Economic Relations
- NS3041 Comparative Economic Systems
- NS3042 Economic Development for Security Building

In addition, students must complete a minimum of eight (8) curricular core and elective courses, of which at least three (3) must be at the 4000-level. The courses that satisfy these requirements, and the quarters when they are offered, can be found on the NSA web site at www.nps.edu/Academics/SIGS/NSA/teaching/schedule.html.

Students are also required to take sufficient general electives to maintain a full-time course load (16 hours). The number of general elective slots will vary somewhat depending upon service affiliation and sponsor requirements.

Students in curriculum 693 must complete NS4080, Thesis Proposal, no later than six months prior to intended graduation. Thereafter students may enroll in NS0810, Thesis Research, up to three times; or they may take additional course work in their area of specialization, if they prefer.

**Brief Overview**

Security Studies is a multidisciplinary field based on the traditional academic disciplines of Political Science, History, and Economics. The doctoral program in Security Studies seeks to equip students with the skills and knowledge required to do work of the highest professional quality in these areas, with emphasis on understanding the challenges and characteristics of modern security and defense policy. Doctoral training is inherently open-ended, being dependent upon completion of a Ph.D. dissertation of significant scope and originality. Successful completion of the program requires one year of in-residence course work beyond the Master’s degree, and the completion of a doctoral dissertation of sufficient scope and quality to constitute an original and independent contribution to knowledge. A normal Ph.D. tour is three years, of which the last two are spent conducting research and writing the dissertation. Given the open-ended nature of dissertation research, however, there can be no assurance that the program can be completed in three years.

**Requirements for Entry**

Admission to the Ph.D. program in Security Studies is available to officers of all the U.S. armed services, civilian federal employees, a limited number of Department of Defense contractors, and to individuals sponsored by selected allied nations. Applicants must possess a Master’s Degree in Security Studies or a closely-allied field (Political Science, History, Economics, etc.) by the time doctoral instruction begins.

Admissions decisions are made twice per year. Deadlines are March 15 (for a decision in late March) and September 15 (for a decision in late September). The following materials are required:

- A completed online application, which may be accessed at [http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html](http://www.nps.edu/Academics/Admissions/ApplyOnline/ApplyNow.html).
· Certified transcripts of prior graduate and undergraduate work. Transcripts of work completed at NPS are not necessary.
· Scores from the Graduate Record Examination, taken within the last five years.
· At least two (2) letters of recommendation, either from former professors or from others in a position to judge the candidate’s academic potential.
· Attestation by the student’s sponsoring agency or nation that it is committed to provide tuition and salary support during the student’s residence at NPS.
· A sample of expository writing (e.g. a paper written for a graduate seminar, a Master’s thesis, an article published in an academic or service journal) chosen by the applicant to demonstrate his or her ability to do advanced academic work.
· International applicants who are not currently enrolled at NPS, and whose native language or language of prior instruction is other than English, must submit current results of the Test of English as a Foreign Language (TOEFL) and the Test of Written English.

Domestic applicants should forward the materials just described, to the NPS Director of Admissions. International students should forward their materials to the International Graduate School Programs Office.

Entry Date

Once a student has been admitted, doctoral study may begin in any subsequent quarter during the following twelve months.

Degree

Doctor of Philosophy in Security Studies.

Curriculum Requirements

General Degree Requirements: The NSA doctoral program requires one year of course work beyond the Master’s degree. Required courses include a core sequence of five seminars in strategic theory, international relations, international political economy, comparative politics, and American foreign policy, supplemented by a program of directed reading intended to prepare the student to take required written and oral qualifying examinations. Additional courses, chosen to assist students in developing their dissertation topic, or to satisfy specific sponsor requirements, will be incorporated based on individual requirements.

A student is expected to have completed written and oral qualifying exams, and secured approval of the dissertation proposal by the committee that will supervise its completion, by the end of the fifth quarter in residence.

Degree Candidacy and Dissertation Research: Doctoral students are admitted to candidacy for the Ph.D. following successful completion of written and oral qualifying examinations, and the submission of a satisfactory dissertation proposal. Students admitted to candidacy for the degree are thereafter expected to be engaged full-time in dissertation research and writing. Once a completed dissertation has been submitted the student must defend it before the dissertation committee. A representative of the Academic Council and other interested observers will also be present for the defense.

Overview

As the research arm of the Naval Postgraduate School’s Department of National Security Affairs, the Center for Contemporary Conflict conducts research on current and emerging security concerns of the United States, its allies and its adversaries. Projects range from tightly focused investigations that engage one or two center members, to broad collaborative efforts that bring in outside experts from the United States, its allies, and other cooperating nations.

Activities

Publications

CCC members regularly publish research on current and emerging security issues. Recent books, book chapters, monographs, and journal articles are listed on the CCC webpage listed in the above. A number of edited books listed on those pages have grown out of collaborative efforts begun at the Center. The center’s quarterly online journal, Strategic Insights, features conference reports, debates, and working papers on issues such as foreign policy, international relations, asymmetric warfare, internal conflict, governance, and weapons of mass destruction.
Conferences, Forums, and Lectures

The CCC hosts and participates in conferences and forums that advance understanding of contemporary security challenges facing the United States and its allies, including track two diplomacy and simulations. The topics are wide ranging and include: subnational actors in international security, strategic culture, nuclear proliferation, the rise of Asia, and the like. Reports can be found on the Center's page, as listed above.

Student Research

Naval Postgraduate School students completing master's theses in National Security Affairs conduct in-depth research into critical security issues in the United States, the Middle East, Eurasia, Latin America, northern and sub-Saharan Africa, and East, Southeast and South Asia. Award-winning student theses are made available on the Center's website. Students also work closely with faculty on selected diplomatic and research projects.

**Overview**

CHDS is the nation’s homeland security educator. Established in 2002, CHDS is focused on producing graduate-level education programs designed to meet the immediate and long-term leadership needs of organizations responsible for homeland defense and security. The graduates of the program will return to key positions in federal, state, and local government organizations and the military with the education, skills and ability to expand national homeland security capacity.

**Our Approach**

CHDS is a unique organization that is the result of a partnership between DHS National Preparedness Directorate, FEMA, and the Department of the Navy. CHDS conducts a wide range of graduate education programs to assist current and future homeland security leaders develop the strategies, policies, and organizational elements to defeat terrorism in the U.S. Through graduate and executive-level course work, seminars and research, government leaders gain the analytical skills and substantive expertise to prevent, deter, and respond to terrorist attacks and to bridge gaps in interagency and civil-military cooperation. Participants are actively engaged in full-time missions and duties in local, state and federal homeland security agencies. The programs under CHDS are custom-built to accommodate the challenges of these officials. All programs are aimed at developing leaders with a prevention-focused approach to homeland defense and security.

**Mission**

To strengthen the national security of the United States by providing graduate level educational programs and services that meet the immediate and long-term leadership needs of organizations responsible for Homeland Defense and Security.

**Vision**

The Center is the nation’s leading educational institution for the innovation and refinement of highly relevant curricula, the creation of depositories of applicable knowledge and the national center for the distribution, transfer and exchange of Homeland Defense and Security information and educational products.
Program Goals

Strengthen national capacity for Homeland Security by advancing the study of Homeland Security as a substantive field of research, scholarship, and professional discipline. To create a "multiplier effect" to maximize federal investment - share program content, research results, and educational resources with organizations across the nation to build national Homeland Security preparedness through education.

Programs Offered

Master of Arts Degree

Participants: U.S. students only.

This 18-month program is offered at no cost to eligible senior and fast-track local, state, tribal and federal officials and NORTHCOM-sponsored officers with significant homeland security responsibilities.

Program: Designed to accommodate busy officials, the Master of Arts degree program requires participants to be in residence (at the Naval Postgraduate School in Monterey, California or at the Office of Personnel Management's Eastern Management Development Center facility in Sheperdstown, West Virginia) two weeks each quarter (for a total of 12 weeks). Participants complete the remainder of their coursework via network-based distance learning methods. The curriculum and research are focused on current policy, strategy and organizational design challenges. Participants complete research papers and a thesis on policy development issues confronting their city, state, or sponsoring organization.

The program graduated its first class in June 2004 (class started in January 2002) and graduates approximately 30 officials three times a year. A military variant of the program, including classified courses, is available through the Department of National Security Affairs.

Homeland Security Executive Education Programs

Executive Education Seminar

Participants: U.S. students only.

Program: Executive Education Seminars are intensive, half-day seminars, designed for state governors and their homeland security team. It is also available for major urban area leaders, and focuses exclusively on enhancing the capacity of top government officials to address new homeland security challenges. Topics are discussed in an interactive roundtable format and may include: Local/State/Federal Responsibilities and Coordination, Intelligence Collection, Assessment, and Dissemination and Information Sharing and Critical Infrastructure Protection.

Homeland Security Executive Leaders Program

Participants: U.S. students only.

Program: The Executive Leaders Program is a non-degree graduate-level program for the nation’s most senior homeland defense and security leaders. There are a total of four one-week sessions over 9 months. The goal of this program is to enhance senior leaders' capacity to identify and resolve problems as well as to build networks among the nation’s local, state, federal, and private sector homeland security officials. Participants consider complex issues and case studies. They work through problems and scenarios that enable them to strengthen working relationships across regions, agencies, and jurisdictional lines, and to develop innovative strategies and policies.

Army National Guard Certificate Program - (INACTIVE)

Participants: U.S. students only.

Program: CHDS has launched a certificate program in Homeland Defense and Security (HD/S) specifically for the National Guard (NG). The new program is designed to help the NG to fulfill its critical roles, responsibilities and tasks in conducting HD/S and Defense Support to Civil Authorities. Additionally, it will provide an avenue to degree completion for NG personnel at all levels, to raise the level of education across the force, to provide leadership education as personnel progress through their careers, and to help them think critically in dealing with the asymmetric threats faced in the Global War on Terror.

Homeland Security Online Courses

Participants: U.S. students only.

Program: Non-credit versions of the CHDS master's degree courses are available online. The courses are designed for homeland defense and security professionals who wish to enhance their understanding of key homeland security concepts and require the flexibility of self-paced instruction. NPS does not provide credit for the courses. Participants are encouraged to inquire with their professional associations regarding continuing education units/credits.

University and Agency Partnership Initiative

Participants: U.S. students only.

Program: The partnership initiative increases the number and diversity of students receiving homeland security education by accelerating the establishment of high-quality academic programs nationwide. It provides an opportunity for all those engaged in thinking about and teaching homeland security to collaborate, and to create an intellectual multiplier effect that furthers the study of homeland security. CHDS makes available through the partnership its curriculum, distance learning technology, Homeland Security Digital Library, and all other resources. In return, partners share their curriculum, and specialized expertise with CHDS and other partners. This provides a cost-effective way to educate thousands of students nationwide.
by reducing the expense and difficulty of universities and agencies having to "reinvent the wheel" and build their own curricula and programs from scratch.

Resources

Homeland Security Digital Library

Participants: U.S. students only.

The Homeland Security Digital Library (HSDL) is the nation's premier collection of homeland security policy and strategy related documents. It supports local, state and federal analysis and decision making needs and assists academics of all disciplines in homeland defense and security related research. It provides quick access to important U.S. policy documents, presidential directives, and national strategy documents as well as specialized resources such as theses and reports from national universities and organizations as well as local and state agencies. The resources are selected and reviewed by a team of homeland security researchers and organized in a unique homeland security taxonomy. HSDL content includes state-of-the-art multi-media offerings and other valuable assets identified by CHDS master's degree participants and instructors.

Homeland Security Affairs Journal

Homeland Security Affairs is the online journal of CHDS and is the nation's preeminent peer-reviewed journal, providing a forum to propose and debate strategies, policies, and organizational arrangements to strengthen U.S. homeland security. CHDS instructors, participants, alumni, and partners represent the leading subject matter experts and practitioners in the field of homeland security. E-published quarterly, it captures the best of their collective work, as well as that of scholars and practitioners throughout the nation. These articles constitute not only the "smart practices" but also the evolution of homeland security as an emerging academic and professional discipline.

Center for Homeland Defense and Security Courses

CS3660 Critical Infrastructure: Vulnerability Analysis and Protection (4-0) Spring

Critical Infrastructure is one of the cornerstones of homeland security. At the completion of the course, students will be able to apply the model-based vulnerability technique to any critical infrastructure within their multi-jurisdictional region, and derive optimal strategies and draft policies for prevention of future terrorist attacks. Prerequisites: NS3180.

IS4010 Technology for Homeland Security (4-0) Spring, Fall, Winter

Government agencies in today's information age are more dependent than ever on technology and information sharing. This course provides individuals involved in homeland security a broad overview of homeland security technology. This course focuses on technology as a tool to support homeland security personnel regardless of functional specialty. The ultimate objectives are to show students how homeland security professionals can exploit technology and to use it in the most efficient, innovative and productive manner. Prerequisites: None.

NS2013 Policy Analysis and Research Methodology (2-0) Quarterly

This course provides an overview of the steps of the research process and methods used in social-scientific inquiry. Students review various policy research designs, including hypothesis construction and comparative case studies. They also are introduced to literature review and the appropriate use of evidence and warrants. Prerequisite: None.

NS3028 Comparative Government for Homeland Security (4-0) Quarterly

The objectives of the NS3028 course are: (1) to assess important counterterrorism strategies employed by liberal democracies around the world; (2) to distill and extrapolate policy implications from these examples; and (3) to apply these lessons to the organizational and functional challenges faced by homeland security leaders and first responders in the United States. Prerequisites: None.

NS3180 Introduction To Homeland Security (4-0) Winter

This course provides an overview of the essential ideas that constitute the emerging discipline of homeland security. It has two central objectives: to expand the way participants think, analyze and communicate about homeland security and to assess knowledge in critical homeland security knowledge domains. Prerequisites: None.

NS4081 Research Colloquium (2-0) Quarterly

This course provides an overview of the steps of the research process and methods used in social-scientific inquiry. Students review various research methods, including policy options and analysis, modeling, qualitative data analysis, and case study. The primary deliverable of the course is the thesis proposal. Grading: Pass/Fail. Prerequisite: NS2013.

NS4133 The Psychology of Fear Management and Terrorism (4-0) Winter

This course serves as an introduction for homeland security professionals to terrorism as a psychological phenomenon. Government agencies involved in homeland security need to understand the psychological consequences of mass-casualty terrorist attacks and other disasters. This course provides a broad overview of psychological effects of terrorism. Prerequisites: NS3180.

NS4156 Intelligence for Homeland Security: Organizational and Policy Challenges (4-0) Spring

This course examines key questions and issues facing the U.S. intelligence community and its role in homeland security and homeland defense. Students will have the opportunity to fully address policy, organizational and substantive issues regarding homeland intelligence support. Prerequisites: None.

NS4232 Knowledge into Practice: A Homeland Security Capstone Course (3-0) As Required

This course is intended to provide participants the opportunity to expand their ability to enact knowledge and technical learning acquired in the courses leading up to the capstone. This course will provide students with the motivation and skills to perform their
professional roles in new ways, ways that will initiate and sustain change even at the level of the broader institutional context of governance in which they must function. Prerequisites: NS4156, CS3660.

**NS4239 Seminar on American Government for Homeland Security (4-0) Spring, Summer, Fall, Winter**

The purpose of the Special Topics course is to provide students with an extra focus on 2 or 3 major issues that have current visibility in debates about homeland security. Currently, those topics focus on dilemmas in the evolving relationships between civil and military authority and between government and community. Prerequisites: NS4156, NS3180, SO3210.

**NS4755 Strategic Planning and Budgeting for Homeland Security (4-0) Summer**

Homeland security requires programs in such disparate areas as counter-terrorism, information security, border security and counter-drug activities. This course will provide students with an analytical framework useful for translating long-term plans into programs and budgets. Prerequisites: NS3180.

**NS4881 Multi-Disciplinary Approaches to Homeland Security (4-0) Summer**

Homeland security efforts in the United States constitute a project framed by the rule of law. Constitutional concerns, civil rights issues and the roles if the various disciplines engaged in the effort are driven and impacted by the various local, state, and federal systems of law. This course allows students to explore the homeland security project in relation to the laws that support and constrain it. Prerequisites: None.

**DA3210 The Unconventional Threat to HLS (4-0) Spring**

The purpose of this course is to provide an introduction to the operational and organizational dynamics of terrorism. It considers those who act as individuals, in small groups or in large organizations. By the end of the course, students should be able to design effective measures for countering and responding to terrorism based on an understanding of its organizational and operational dynamics. Prerequisites: None.

### CHDS Course Calendar

#### Spring 2011

- **Apr 21 - Jul 13**
  - NS4133: The Psychology of Fear Management and Terrorism
  - NS4755: Strategic Planning and Budgeting for Homeland Security

- **May 9 - Aug 3**
  - NS3180: Introduction to Homeland Defense and Security
  - NS4755: Strategic Planning and Budgeting for Homeland Security

- **Jun 9 - Sep 28**
  - DA3210: The Unconventional Threat to HLS
  - NS4133: The Psychology of Fear Management and Terrorism

#### Summer 2011

- **Jun 22 - Sep 28**
  - NS4881: Multi-Disciplinary Approaches to Homeland Security
  - NS3028: Comparative Government for Homeland Security

#### Fall 2011

- **Sep 12 - Nov 30**
  - NS3180: Introduction to Homeland Defense and Security
  - NS4755: Strategic Planning and Budgeting for Homeland Security

- **Sep 29 - Jan 11**
  - DA3210: The Unconventional Threat to HLS
  - NS4133: The Psychology of Fear Management and Terrorism

- **Sep 29 - Dec 15**
  - NS4232: Knowledge into Practice: A Homeland Security Capstone Course

- **Oct 13 - Jan 11**
  - NS2013: Policy Analysis and Research Methodology
  - NS4156: Intelligence for Homeland Security: Organizational and Policy Challenges

- **Oct 27 - Jan 26**
  - CS3660: Critical Infrastructure Protection
  - IS4010: Technology in Homeland Security

#### Winter 2012

- **Jan 12 - Mar 7**
  - NS4232: Knowledge into Practice: A Homeland Security Capstone Course
  - IS4010: Technology in Homeland Security

- **Jan 12 - Apr 4**
  - NS4081: Research Colloquium
  - CS3660: Critical Infrastructure Protection

Academic Associate
Rudy Darken, D.Sc.
(831)656-7588, DSN 756-7588, FAX (831) 656-2575
darken@nps.edu

Requirements for Entry
Applicants eligible for sponsorship must be full-time state, local, tribal or federal DHS officials. All others, including military and NORTHCOM, are eligible to apply but must obtain financial sponsorship from their command. A baccalaureate degree or its equivalent is required. A minimum grade point average of 3.0 or its equivalent is required. A complete application is available online at www.chds.us.

Entry Date
This is an 18-month program with entry dates in spring and fall for Monterey cohorts; summer and winter entry dates for NCR cohorts.

The program requires 12 weeks of in-residence attendance, with the balance of coursework conducted online.

Degree
Master of Arts in Security Studies (Homeland Defense and Security)

Typical Subspecialty Jobs (Executive Level)
Homeland Security
Emergency Management

Public Health
Public Safety (Law, Fire Enforcement)
Public Policy

Subspecialty Code
Navy P-Code: 2600P

Typical Course of Study

Quarter 1
NS3180 Introduction to Homeland Security
DA3210 The Unconventional Threat to Homeland Security

Quarter 2
IS4010 Technology for Homeland Security
NS4156 Intelligence for Homeland Security: Organizational and Policy Challenges
NS2013 Policy Analysis and Research Methodology

Quarter 3
CS3660 Critical Infrastructure: Vulnerability Analysis & Protection
NS4239 Special Topics in American Government for Homeland Security
NS4081 Research Colloquium

Quarter 4
NS4881 Multi-Disciplinary Approaches to Homeland Security
NS3028 Comparative Government for Homeland Security

Quarter 5
NS4755 Strategic Planning and Budgeting for Homeland Security
NS4133 Psychology of Fear Management and Terrorism

Quarter 6
NS4232 Knowledge into Practice: A Homeland Security Capstone Course

Educational Skill Requirements (ESR)

1. Analytical Skills: Graduates will be able to logically combine data and theory to analyze and explain political, economic, and military events in the context of the new Department of Homeland Security. Students will demonstrate writing, briefing, and computer skills in preparing and presenting their findings. Each course requires individual students to present a significant project to the entire class.

2. National Security Issues: Graduates will be aware of the economic, political, social, and military characteristics of homeland security, homeland defense, and national security issues. These issues include: intelligence gathering and information...
sharing, posse comitatus, and the interaction of law
enforcement with military command

3. **Critical Infrastructure Vulnerability**: Graduates will gain
an understanding of how the eight major critical
infrastructure sectors within the United States work,
what are their vulnerabilities, and how to "harden" the
critical nodes in each sector. Particular emphasis will
be on the Internet and "networks of all kinds" that
contain critical nodes.

4. **Threat Analysis**: Graduates will learn about domestic
threats and asymmetric conflict and how they pertain
to homeland security, NORCOMM, and state, local,
and federal responses. What is the nature of the threat,
and who are the terrorists?

5. **Civil-Military Relations**: Graduates will understand the
field of civil-military relations as it applies to
homeland security and security building within the
confines of the U.S. Constitution and civil-military
history. Students will be able to identify key players in
homeland security at the various levels of government,
and understand the dynamics of political institutions
in homeland security: office of homeland security,
Northern Command, FBI, CIA, etc.

6. **Law Enforcement and the Judicial System**: Graduates
will understand the interface between domestic law
enforcement, state and local police, emergency
response teams, military support of civilians, and
investigations by various agencies such as the U.S.
Postal Service, etc. Graduates will know the roles and
responsibilities of various law enforcement agencies.
Finally, graduates will understand how the judicial
system interfaces with the military, at the state and
local levels.

7. **Intelligence in Homeland Security**: Graduates will
understand the role of intelligence in defense of the
homeland, and how it is different from military
intelligence. Graduates will recognize what can be
learned from military intelligence and applied to
homeland security. Graduates will understand the
complexities of information sharing, gathering, and
analysis in the context of homeland security.

8. **Comparative Politics**: Graduates of the program will
use the knowledge gained in the Civil-Military
Relations, Comparative Governments, and
Introduction to Homeland Security courses to make
policy for local, state, and federal level programs

9. **Information Technology for Homeland Security**: 
Computers, the Internet, software for law
enforcement, data collection, information sharing, and
analysis are key technologies for successful homeland
security building. Graduates will become familiar with
the tools and techniques of information technology in

various sectors ranging from critical infrastructure
protection to intelligence gathering and analysis.

**Homeland Security Executive Education
Seminars**

**Participants**: U.S. students only.

**Program**: Executive Education Seminars are intensive,
half-day seminars, designed for state governors and their
homeland security team. It is also available for major
urban area leaders, and focuses exclusively on enhancing
the capacity of top government officials to address new
homeland security challenges. Topics are discussed in an
interactive roundtable format and may include:
Local/State/Federal Responsibilities and Coordination,
Intelligence Collection, Assessment, and Dissemination
and Information Sharing and Critical Infrastructure
Protection.

**Homeland Security Executive Leaders Program**

**ELP**

**Participants**: U.S. students only.

**Program**: The Executive Education Seminar is a multi-day
program designed to help senior local, state, and federal
officials build U.S. capacity to defeat terrorism. Each
program offers presentations on selected topics such as:
intelligence, critical infrastructure, or public health issues.
Participants consider complex issues and case studies and
work through problems and scenarios that will enable them
to strengthen working relationships across regions,
agencies, and local-state-federal jurisdictional lines. This
program is designed to bridge the education gap between
the 18 month Master's Degree Program and the half-day
MET Seminar.

**Homeland Security Certificate Program**

**Participants**: U.S. students only.

**Program**: Program provides “first preventers” in homeland
security the knowledge and skills necessary to execute the
national homeland security mission. Conducted
exclusively online with cutting-edge distance learning
technologies, the program is tailored to the needs of each
discipline involved in homeland security, especially at the
state and local levels. The Certificate Program is being
conducted by the Center for Rural Development with
support from NPS’ Center for Homeland Defense and
Security.
Defense Resources Management Institute (DRMI)

Website
www.nps.edu/drmi

Executive Director
Francois Melese, Ph.D.
Code DRMI, Halligan Hall, Room M4
(831) 229-3179
FAX (831) 656-2139
fmelese@nps.edu

Overview
DRMI conducts professional education programs in analytical decision making and resources management for military officers of all services, and senior civilian officials of the United States and 162 other countries. Established in 1965 as an educational institution by the Secretary of Defense, DRMI is located at the Naval Postgraduate School in Monterey, California.

Our Approach
The focus of all programs conducted by DRMI is developing an understanding and appreciation of the concepts, techniques, and analytical decision making skills related to defense resources management. Our courses provide a multi-disciplinary program which encourages participants to develop an understanding of concepts, principles, methods, and techniques drawn from Management Theory, Economic Reasoning, the basic language and analytic tools which are the foundation of modern decision theory. Our goal is to enhance the effective allocation and use of resources in modern defense organizations.

The mission, objectives and responsibilities of DRMI are set forth in Department of Defense Directive 5010.35.

Programs Offered

Defense Resources Management Course - Four weeks in length; presented five times a year
International Defense Management Course - Eleven weeks in length; presented twice a year
Senior International Defense Management Course - Four weeks in length; presented once each year; normally starting the last week of June
Multi-Criteria Decision Making Course - Ten days in length; presented as scheduled
Budget Preparation, Execution and Accountability Course - Eight days in length; presented as scheduled
Streamlining Government - Five days in length; presented as scheduled

Performance Management and Budgeting - Five days in length; presented as scheduled
Risk Management - Two weeks in length; presented as scheduled
Mobile Education Courses - Normally one to two weeks in length, for U.S. military services and defense agencies, and for foreign governments upon specific request and approval.
Courses for Other Agencies - Programs are from one to two weeks duration, resident or on-site, for non-defense federal governments upon specific request and approval.

DRMI Curricula
Provides a multi-disciplinary program which encourages participants to develop an understanding of concepts, principles, methods, and techniques drawn from Management Theory, Economic Reasoning, the basic language and analytic tools which are the foundation of modern decision theory. All courses are E-IMET certified.

Course Descriptions

In-Resident Courses

Defense Resources Management Course (DRMC)
Participants: U.S. and international military officers and civilians.
(U.S.): Military officers from all services (grades O-4 and above); DoD civilians GS-11 and above.
(International): Equivalent military and civilians as above. English language capability required.

This course is presented in English.
Integrates analytical concepts, principles, methods, and techniques drawn from the disciplines of management, economics, and quantitative methods, and applies them to decisions involving the allocation of financial, logistic, and human resources. A variety of analytical frameworks are presented that will enhance the participants’ competence at recognizing and evaluating the risk assessments and tradeoffs that must be made among competing alternatives at both the strategic and operational levels of defense organizations.

DRMI faculty teach this course using a mix of lectures, small group discussions and real world case studies. This approach provides a dynamic learning environment designed to develop the analytical decision making skills necessary in today’s challenging environment. Contemporary issues such as the global war on terror, regional and international instability, infrastructure protection and multinational defense cooperation are used to illustrate the environment in which current defense resource allocation decisions must be made.
CPE: 116 points. Graduate Education Credit: 4 units (requires passing a test at the end of weeks 2 and 4)

**IRAQ Resources Management Course (IRMC)**

**Participants:** Iraqi military officers (grades 0-4 and above) and civilians (equivalent to GS-11 and above). English Language Capability not required.

This course is presented in Arabic

The objective of this four-week course is to provide an appreciation of the concepts, principles, and methods of defense management as they concern planning, programming, budgeting, and related activities. Emphasis is placed on the analytical aspects of management, stemming from the disciplines of management systems, economics, and quantitative analysis.

Course methodology includes lectures, small group discussions reinforced by case studies and problem sets, as well as selected daily reading assignments.

**International Defense Management Course (IDMC)**

**Participants:** International students only. Military grades of O-4 (Major/Lieutenant Commander) through O-6 (Colonel/Captain) and defense-related civilians of equivalent rank.

This course is presented in English.

The course provides a series of lectures in three major areas: the defense management environment, quantitative and economic analysis, and management systems in the context of strategy, implementation, and operations. A major curricular concept of this course is comparative resources management, i.e. the examination of how different countries allocate resources. In order to enhance the comparative aspects of the curriculum, DRMI leadership encourages broad national representation with a diversity of both military services/agencies and civilian government officials. In addition to the small-group discussions that are a key part of the learning environment, each country’s participants are required to give a presentation on national security issues faced by their country. These presentations allow for class-wide discussion of key security issues around the world.

During the course, DRMI conducts a field trip to selected military and government agencies in the Washington D.C. area. This trip provides an opportunity for the participants to receive special briefings on management techniques and problems, and to observe actual practices at the operating level.

**Senior International Defense Management Course (SIDMC)**

**Participants:** Senior international students only. Enrollment is restricted to military flag and general officers (grades O-7 and above) and defense-related civilians of equivalent rank, except for countries where the O-6 grade is comparable to flag/general rank, in which case officials may be enrolled on a waiver basis.

Participation in this course is normally 50-54 senior officials from as many as 45 countries.

This course is presented in English.

The lecture, small discussion group, case study, and problem format and content described above for the International Defense Management Course also apply, but are compressed in time. Two or three senior U.S. guest speakers are invited to address the class and a short field trip is conducted.

**Multiple Criteria Decision Making Course (MCDM)**

**Participants:**

U.S. and international military officers and civilians.

Military grades of O-4 (Major/Lieutenant Commander) through O-6 (Colonel/Captain) and defense-related civilians of equivalent rank.

This course is presented in English.

This course develops a method of approach to support decision making by managers in defense organizations. The focus is on practical application to management decisions involving many organizational objectives. Emphasis is placed on formulating the problem, understanding the analytical process involved in evaluating potential solution alternatives, and interpreting the results of the analysis in support of choosing a solution. We will provide practical examples from defense resource allocation problems. Each participant will be required to apply the multi-criteria decision approach taught during this course to a decision problem of current interest to their own MoD. The problem can be one that is already being analyzed, or a new problem. Participants will have the opportunity to work in depth on this problem with a faculty member during the course. A final presentation will be delivered on the last day of the course. This exercise will link the theoretical environment with the real world through a practical and relevant application of course concepts. It is also hoped that this will serve as a foundation for further work on this problem once the participants return to their own organizations.

**Budget Preparation, Execution and Accountability Course**

**Participants:**

U.S. and international military officers and civilians.

Military grades of O-4 (Major/Lieutenant Commander) through O-6 (Colonel/Captain) and defense-related civilians of equivalent rank.

This course is presented in English.
This course examines the preparation, execution and accountability of defense budgets. We provide the foundation for preparing and executing the budget by discussing the overall budget process beginning with planning and programming. Planning and programming are the stages where policy formulation and allocation of resources support national priorities, goals and objectives. This course reviews these concepts, and then illustrates how to take the programming decisions from the Ministry of Defense (MOD) through the budget cycle. We begin with a section on budget preparation using MOD programming guidance, integrating programs with budget guidance to create a budget. We then provide information, tools and techniques, and exercises on estimating budget submissions, funds control, performance management and feedback, all components of preparing, executing, and providing accountability for defense budgets.

**Streamlining Government**

**Participants:**

U.S. and international military officers and civilians. 

Military grades of O-4 (Major/Lieutenant Commander) through O-6 (Colonel/Captain) and defense-related civilians of equivalent rank.

This course is presented in English.

This course weaves economic decision-making and contract theory together with U.S. and international defense examples to offer participants an overview of the current state of knowledge and experience in streamlining government operations. Multiple-Criteria Decision Making (MCDM) techniques are applied to evaluate the costs and benefits of Outsourcing, Privatization, and Public-Private Partnerships, while recognizing legal, political, and regulatory realities. The last day is dedicated to writing a project proposal that participants will develop for their country with the help of DRMI instructors. The expectation is that, upon their return, participants will present their proposal to their Ministry of Defense.

**Risk Management**

**Participants:**

U.S. and international military officers and civilians.

Military grades of O-4 (Major/Lieutenant Commander) through O-6 (Colonel/Captain) and defense-related civilians of equivalent rank.

This course is presented in English.

This course focuses on the question of risk and how to incorporate risk analysis into public sector policymaking. The course examines the question of uncertainty and how to quantify uncertainty. The course then moves into the question of how to quantify risk. Questions of acceptable and unacceptable risk are examined and participants are challenged with a series of case studies to manage risk in a public sector decision making environment.

**Performance Management and Budgeting**

**Participants:**

US Officers (Active or Reserve) and International Military Officers, of Grades 0-4 thorough 0-6; Civilian officials of Grades GS-11 through GS-15 or equivalent; individuals participating in accelerated career development programs; and foreign officials of similar rank or grade.

This course is presented in English.

This course examines performance management and budgeting beginning with planning-to-budgeting and government accounting systems, and different types of and uses for budgets. We provide a foundation for performance management and budgeting by developing top-level goals and objectives, examining indicators of performance and performance hierarchies, and showing how indicators can be used in budgeting systems. Faculty present real world and teaching examples of measures of efficiency and effectiveness, and how those measures impact budget decisions and implementation. Participants then create performance measures for a defense organization and discuss how they can be used in a defense budget. Participants should bring examples of performance measurements for their own organizations and how that information is implemented in their own budget systems.

Mobile Education Courses

Mobile International Defense Management Course (MIDMC)
MASL P319016

The Mobile International Defense Management Course (MIDMC) is suitable for professionals concerned with the economic, efficient and effective allocation and use of scarce defense resources in today’s complex and uncertain security environment. Participants normally come from a broad spectrum of fields, to include logistics, operations, personnel, acquisition, financial management, program management, planning, engineering, and program evaluation. This course is designed for military officers rank O-4 to O-6 and equivalent civilian officials.

Analytical Decision Making Course (ADMC)

The ADMC is suitable for professionals concerned with the economic, efficient and effective allocation and use of scarce defense resources in today’s complex and uncertain security environment. Participants usually come from a broad spectrum of fields, to include logistics, operations, personnel, acquisition, financial management, program management, planning, engineering, and program evaluation. This course is designed for military officers rank O-3 to O-6 and equivalent civilian officials.

Center for Civil-Military Relations (CCMR)

ccmr@nps.edu

Overview

Established at NPS in 1994, the Center for Civil-Military Relations (CCMR) provides graduate level education to foreign civilian and military participants through resident and nonresident courses. Its programs assist foreign nations in resolving civil-military issues resulting from defense transformation, stability and support operations, combating terrorism, and other security challenges.

Our Approach

CCMR has a long record of meeting the unique civil-military requests and requirements of the security cooperation community and partner countries. The CCMR employs seminars, workshops and courses, encouraging active and applied learning to:

- Provide high quality, graduate-level educational experience, custom-designed and built to meet the specific objectives and conditions of a recipient country.
- Teach multiple, international best-practice approaches to achieving the educational objectives of each program.
- Use world-class civil-military faculty teams with international expertise that bring both academic and practical backgrounds to each program.

Our Programs

Civil-Military Relations

The Civil-Military Relations (CMR) program is tailored to the needs of the recipient country and addresses general or in-depth aspects of civil-military relations, including challenges of democratic consolidation, formulating national defense strategy, civilian control of the military, military professionalism, media-military relations, building linkages between the military and the legislature, intelligence and democracy, and defense transformation.

Peace Operations

The Global Peace Operations Initiative (GPOI) program builds peace support operations (PSO) capability and capacity through education and training worldwide. CCMR supports the USG GPOI effort across a spectrum of capabilities, ranging from traditional institutional capacity-building to development of education and training programs centered on senior leadership (both civil and military), instructor cadres, and functional area specialists. Central to this base of expertise is the Center’s robust history of providing global programs of education and training to friends and allies in every region of the world.

The Leader Development and Education for Sustained Peace (LDESP) program prepares U.S. military leaders and units deploying to Stability Operations, to accomplish the mission in cooperation with multinational partners, other U.S. Agencies and civil authorities. LDESP provides an educational foundation enabling leadership and units to establish a frame of reference for understanding the complex, ambiguous, and rapidly changing stability operations environment.

International Defense Acquisition

The International Defense Acquisition Resource Management (IDARM) program offers a wide range of defense acquisition resource management courses that address acquisition, project management, logistics, procurement and contracting.

Combating Terrorism

In support of The "Counter Terrorism Fellowship Program" (CTFP), CCMR developed a series of custom-built courses for bilateral, regional, and global audiences. The program provides a comprehensive approach to
countering ideological support to terrorism and international homeland defense.

Stabilization and Reconstruction

The Center for Stabilization and Reconstruction Studies (CSRS) is a teaching institute created in September 2004 to educate the full-spectrum of stabilization and reconstruction (S&R) actors, including U.S. and foreign military officers, civilian government officials, and representatives from non-governmental organizations, and international organizations.

Long Term Education Projects

CCMR's unique capacity-building programs provide recipient countries with Department of Defense expertise in the area of defense management. These programs respond to, and facilitate the spread of, democratic defense management norms throughout the world in order to improve legitimacy, effectiveness and efficiency of defense and security institutions.

Program Administration

All courses will be administered in accordance with the applicable laws, policies, and regulations of the U.S. funding provided for course execution. International participation is arranged through the Office of the Secretary of Defense and individual service security cooperation agencies. Overall quota control and programming is exercised by the Naval Education and Training Assistance Field Activity (NETSAFA).

Programs are designed for mid- to senior-grade military officers, civilian officials, legislators, and personnel from non-governmental organizations, both in residence and overseas. All programs provide participants with insights and analytical tools for enhancing civil-military cooperation at all levels.

Overview

The Center for Stabilization and Reconstruction Studies (CSRS) is dedicated to building more effective responses to failed or failing states. The Center conducts short-course learning events for practitioners in the broad functional area of stability and reconstruction (S&R). The challenge of stabilization and reconstruction is a central feature of contemporary international relations - and is likely to remain so for some time. These activities are inherently difficult, conducted by multiple actors, and are extremely dynamic. The best learning in stabilization and reconstruction occurs when the curriculum is multi-disciplinary and interactive among a diverse participant mix. The programs of CSRS incorporate practitioners from the complete range of actors that are involved in these activities, including:

- U.S. and foreign military officers;
- U.S. and foreign government civilian officials;
- Civilians from non-governmental organizations; and,
- Representatives of inter-governmental organizations and non-governmental organizations.

Our Programs

Short Courses

CSRS courses are designed based on the educational needs of practitioners. Courses are typically three to five days in length and can be conducted in Monterey or elsewhere. CSRS uses a variety of teaching methods to help practitioners learn, including role-playing scenarios, practical exercises, and facilitated problem-solving. Current topics of instruction fall into five themes: conflict prevention; humanitarian relief; economic recovery and development; institution building and security sector reform; and cross-community understanding.

Course Schedule

Please consult our website (www.csrs-nps.org) for the most current listing of CSRS courses and application procedures.

Program Administration

CSRS seeks partners and sponsors for specific activities and events. Please let us know if you have an educational requirement related to S&R, or are interested in partnering in some fashion.
International Defense Acquisition Resource Management (IDARM)

Website
www.nps.edu/IDARM/

Program Manager
Dr. Elisabeth Wright
Code CCMR-IDARM, Glasgow Hall, Room 343
(831) 656-2469 or (831) 656-2415, FAX (831) 656-7680 ewright@nps.edu

Overview
Established in 1997, the International Defense Acquisition Resource Management Program (IDARM) is intended to strengthen democratic relationships and international security cooperation through acquisition education, research and professional service.

Education: To develop problem solving and decision-making skills through analysis and critical review.

Research: To conduct studies that support policy making and improve acquisition processes.

Professional Service: To provide leadership and professional expertise in support of international partners.

Our Approach
The primary focus of the program is to strengthen the managerial competencies of the military and civilian leaders responsible for a nation’s defense acquisition processes. For many countries, particularly in emerging democracies, acquisition processes are evolving, and the question of developing a structured approach to defense acquisition resource management has not been fully addressed. In other nations, improving the existing defense acquisition process is important to achieving international security goals.

Additionally, the understanding of other nations’ resource management processes can lead to increased opportunity for cooperative development programs and the associated reduction in risk and costs. The benefits can also be extended to the relationship of defense acquisition management to multi-national defense agreements, such as NATO.

IDARM Course Offerings

In Residence Courses
Twice yearly, we offer a two-week resident course, Principles of Defense Acquisition Management (MASL P159200). The target audience is international military offers and civilian officials working in any of the professional fields supporting defense acquisition programs. We also offer Principles of Defense Procurement and Contracting (MASL P159202). It will immediately follow the Principles of Acquisition Management Course. The target audience is international military officers and civilian officials working in the policy or operational aspects of tendering and contracting. We offer our third resident course every fall, International Defense Acquisition Negotiations (MASL P179069). This course is designed for U.S. and international military officers and civilian equivalents who directly or indirectly contribute to the development of negotiation positions, conduct analysis of information, or participate in negotiations. Please visit our website for additional course descriptions and scheduled course dates.

Mobile Education Teams (MET)
The IDARM program at NPS offers a wide range of defense acquisition resource management courses to our worldwide customers under the Expanded-IMET program. These courses are delivered via METs with two or more faculty members, depending on the subject matter covered and length of the course, augmented by expert practitioners in the field. The courses are arranged in three general career fields: Defense Acquisition and Program Management, Defense Contract/Procurement Management, and Defense Logistics Management. As is the case with all IDARM programs, the goal is to meet the host country’s requirements to the fullest extent possible.

The courses combine both classroom lectures and group exercises supplemented by case studies designed to highlight specific learning objectives involving defense acquisition management decision making. Our education programs are developed by NPS faculty and are tailored to the specific government organizational structures, national acquisition statutes and regulations, and defense acquisition objectives in place in each country we visit.

Each course in the IDARM series is developed using a phased approach, in partnership with the host country’s military and civilian leadership and managers, consisting of:

- Phase I - Needs Assessment (in-country) (MASL P309130)
  Course development begins with a survey of a nation's needs in a specific resource management area. This phase involves IDARM program team members visiting the host country to meet with those executives and managers responsible for determining defense requirements and qualifications for acquisition program managers and decision makers.

- Phase II - Curriculum Development (in Monterey, CA) (MASL P309132)
The program design phase of the program is conducted at the Naval Postgraduate School (NPS), Monterey, CA. During Phase II, an overview of the proposed curriculum will be presented for the participating country's approval.

- Phase III - Course Delivery (in-country) (MASL P309131)

  The graduate education program course is delivered during Phase III. Course duration varies depending on the country's preferences and decisions made during Phase II. The course delivery will improve the host country's ability to utilize their resources with maximum effectiveness, thereby contributing to great stability and self-reliance in the international security environment.

Some of the recommended topics include but are not limited to: Principles of Defense Systems Acquisition Management, Software Acquisition Management, Test and Evaluation Management, Capabilities-Based Requirements, Logistics, Systems Engineering, Supply Chain Management, etc.

Additionally IDARM offers the following METs:

- Project Management (Managing Complex Defense Projects) (MASL P309104)

  This eight day course provides project managers and project team members with the tools and techniques necessary to successfully manage complex projects. Emphasis is placed on cost control, schedule management and project scope of work.

- Contracting for Pre-Deployment and Deployment Operations (MASL P309136)

  This one week course examines the fundamental concepts and challenges associated with contingency contracting. It is designed to provide course participants with an understanding of the complexities associated with planning and negotiating contracts in "conflict areas".

  Transparency is a central characteristic of all public resource management and decision making systems. This five day course examines the characteristics of procurement and other decision making systems that are defined by integrity, accountability and transparency.

Program Development

IDARM develops and conducts defense acquisition courses designed to educate both military officers and senior civilian officials in the management principles necessary to support development of a needs-driven acquisition system. Please let us know if you have an education requirement, as we look forward to the opportunity to present an IDARM course in your country and/or welcoming your students to our resident courses. Please visit our website and/or contact the IDARM staff for more information.
Overview

The Systems Engineering Analysis (SEA) curriculum and program at NPS provides a unique education bridging the knowledge bases of both Systems Engineering and Operations Analysis. The Chair Professor of SEA, supported by the Academic Associate and Program Officer, manages execution of the program. The Deans of GSEAS and of GSOIS jointly exercise overall executive responsibility, with the chairs of the Systems Engineering and Operations Research Departments being jointly responsible for ensuring the quality of the program. The Chair Professor of SEA acts as a liaison point-of-contact for the collaborative efforts between the curriculum sponsor, OPNAV N8F and the SEA curriculum and program at NPS, and collaborates with the two department chairs in professional development, supports team-oriented research and analysis that links technical solutions to tactical problems, enhances understanding of the Navy's Requirements-Setting, Planning, Programming, Budgeting and Execution (PPBE) and acquisition processes, and the manner in which they impact warfighting acquisition programs.

The responsibilities of the faculty team are:
1. To maintain the military relevance and academic excellence of the SEA program;
2. To foster close relationships with the appropriate officers in OPNAV and the Fleet and with a curriculum sponsor, emphasizing the curriculum goal of improving the technical-tactical-operational prowess of the unrestricted line;
3. To draw on the best qualified and most knowledgeable faculty to serve as instructors and curriculum/course advisors;
4. To work through the Academic Associate, to ensure the interdisciplinary nature of the program is maintained, and that the best possible use is made of existing courses and faculty;
5. Working with the Director of MISE, to enhance the availability of suitable student capstone projects, the professionalism of faculty advisors, and the quality of written project reports;
6. To foster the selection and matriculation of well-qualified students who have intellectual and professional promise of being future leaders of the Navy; and,
7. To advise the Chair Professor in the management of SEA courses, administration of SEA students, and supervising the SEA Capstone project.

Degrees Awarded

The Systems Engineering and Operations Research departments jointly award the Master of Science in Systems Engineering Analysis (MS SEA) degree. The SEA curriculum is designed for unrestricted line officers who aspire to command and seek a graduate degree tailored to enhance their value as combat officers. The hallmark of the curriculum is a strong scientific and
technical content that offers a balanced blend and breadth in systems thinking and analysis of current and future military operations.

Candidates normally are expected to have studied mathematics and science in their undergraduate work. Undergraduate engineering study is advantageous, but not required.

The Master of Science degree in Systems Engineering Analysis requires a minimum of 48 quarter-hours of graduate-level course work. The candidate must take all courses in an approved study program, which must also satisfy the following requirements: A minimum of 32 quarter-hours of credit in 3000 and 4000 level courses, including a minimum of 12 quarter-hours at the 4000 level.

A student seeking the Master of Science in Systems Engineering Analysis must also demonstrate knowledge in systems design and integration, systems analysis and application, combat technology, and familiarity with professional military education in strategy and policy. This may be accomplished by completing all courses in an approved study program.

Participation in a capstone project with a minimum of 16 credits is required for the degree. An acceptable thesis for a minimum of 16 credits, may be substituted in lieu of a team project. The Academic Associate and the Program Officer must endorse such a request, which will be subject to final approval by the Chair Professor.

**Systems Engineering Analysis Program – Curriculum 308**

**Program Officer**

CDR Doug Burton  
Code OR, Glasgow Hall, Room 251  
(831) 656-2284, DSN 756-2284  
FAX (831) 656-2595  
dburton@nps.edu

**Academic Associate**

Mark Stevens  
Code SE/ST, Bullard Hall, Room 201  
(831) 656-7545, DSN 756-7545  
FAX (831) 656-3129  
mstevens@nps.edu

This interdisciplinary curriculum provides a foundation in systems thinking, technology, and operations analysis for warfighters. Graduates will be able to understand how to develop and fight new systems of combat systems, and have a more thorough understanding of current combat systems.

Students normally complete group projects in lieu of theses. These “capstone” projects are chosen to allow students to gain a thorough understanding of a critical warfare area and to provide the Navy and other services insights about future systems options to meet emerging needs.

The program is designed as a highly integrated graduate education. Lectures, team projects, and individual research are provided, as well as seminars from visiting experts. The length of this program is eight quarters.

**Requirements for Entry**

For entry, the officer must have at least a C+ undergraduate grade point average, with at least one calculus course with a C or better and at least one calculus-based physics course with a C or better (APC 334). If an officer is an outstanding performer, but lacks the necessary academic preparation, NPS offers refresher and transition courses before the program starts.

**Systems Engineering Analysis Subspecialty**

Completion of this curriculum qualifies a naval officer as a Systems Engineering Sub-specialist, subspecialty code 6500P.

**Entry Dates**

The Systems Engineering Analysis curriculum is an eight-quarter curriculum with entry dates in July. If it is necessary, due to APC requirements, a 12-week refresher will begin prior to this entry date. If further information is needed, contact the Program Officer or Academic Associate for this curriculum.

**Degrees**

**Master of Science in Systems Engineering Analysis**

This degree is proposed for all students completing the 308 curriculum. The System Engineering and Operations Research departments are the approving authority for the degree.

**Master of Science in Systems Engineering**

To be considered for this degree, a student must enter the curriculum with an ABET-accredited engineering BS degree and complete all the requirements of curriculum 308. The chair of the Department of Systems Engineering is the approving authority for the degree.

**Master of Science in Systems Analysis**

Selected students may elect to earn a degree in Systems Analysis from the Department of Operations Research. This involves a thesis in lieu of project and an extended analysis sequence. The chair of the Department of Operations Research is the approving authority for the degree.
Typical Course of Study

The first quarter of the SEA curriculum reflects a review of mathematics and physics, from a systems perspective. Subsequent quarters present a balance of courses in systems engineering, operations analysis, technology, joint professional military education, and project work. The students gain additional knowledge and insight through seminars and project related travel.

Educational Skill Requirements

**Systems Engineering Analysis Curriculum**

**Broad Objective**

This curriculum teaches U.S. Navy Unrestricted Line Officers how the Navy builds and operates large combat systems of systems. The primary objective is to prepare officers to serve afloat and in key operational staff billets by giving them the technological and analytical understanding to fight the fleet today and in the future. The emphasis is on integration of complex warfare systems with compatible tactics. In addition, graduates with experience afloat will be prepared to serve ashore as program managers and in technical/analytical billets on headquarters staffs.

1. **Basics.** Introduction to the mathematics, physics, and computer skills needed to understand the technical aspects of combat, information, and decision systems.

2. **Systems Engineering.** Understand the systems engineering process and how to perform systems engineering studies, to include a knowledge of system design, development, and deployment; technical and cost trade-offs; human-in-the-loop issues and project management. Be able to integrate relevant technological disciplines that bear on weapons, sensor and information systems. Understand responsiveness to realistic military requirements, specifications and cost limitations. Study the linkage between strategic planning, requirements, project organization, and technology.

3. **Operations Analysis.** Learn how to apply advanced management and operations research ideas to defense problems, to include cost–benefit and cost-effectiveness analysis. Understand uncertainty and risk and their impact on military planning, decision making and operations. Become familiar with complexity and the modeling of competitive systems. Gain a basic knowledge of modeling, simulation and gaming. Learn how Operations Research techniques, including experimental design, are applied to operational test and evaluation; planning and analyzing fleet battle experiments; and to military decision making.

4. **Sensor and Weapon Systems.** Gain a solid understanding of the scientific, mathematical and engineering principles behind existing and future
military systems. Understand the elements that impact sensor system performance. Understand the principles behind existing and emerging sensor technologies, including radar, sonar, electro-optical sensors, and other sensors. Understand the technologies underlying weapons systems, and the principles that guide successful integration of weapons and sensors with platforms.

5. **Information Systems Technology.** Develop knowledge of information systems technology including computer systems; computer networks and communications systems; software engineering; and data base management. Demonstrate awareness of the capabilities, limitations, design and operation, and vulnerabilities of information systems. Understand the concepts of defensive and offensive Information Warfare.

6. **Independent Study.** Each student must demonstrate the ability to conduct independent and team oriented research and analysis on problems that link technical solutions to tactical problems, and to present the results in writing and oral briefings. A substantive project report or thesis will be required of all students.

7. **Department of Defense Resource Allocation.** Develop a working knowledge of resource allocation within the Department of Defense including the PPBE, JCIDS, and Acquisition processes. It is imperative that students understand key issues regarding the scheduling of budget delivery to, and the related interface with Congress, as well as the critical milestones involved in development of the President’s Budget. In addition, a working knowledge of the interfaces between PPBE and Acquisition is necessary to gain an appreciation for the synergies and disconnects between these two processes and in particular to understanding the manner in which they impact warfighting acquisition programs.

**Joint Professional Military Education**

Completion of Joint Professional Military Education (JPME) is required for all USN officers enrolled in the 308 curriculum. Graduates will develop understanding of warfighting within the context of operational art, to include: national military capabilities and command structure, joint and service doctrine, joint planning and execution, and joint and multinational forces and systems integration at the operational level of war.
Brief Overview

Cyberspace is now a primary warfare area. Establishing US Tenth Fleet/Fleet Cyber Command, combined with the Deputy Chief of Naval Operations for Information Dominance (N2N6) forms an enterprise able to address the opportunities and challenges for Cyber Systems and Operations (CSO) within the Navy’s vision for the Information Dominance Corps (IDC). Reflecting a growing cognizance of the importance of cyber operations, other elements of the U.S. military and U.S. Government, such as the Department of Homeland Security, have created similar or complementary organizations. Optimization of the military and U.S. Government value of cyber for future operations will require leaders who both understand how to defend our networks from penetration and employ cyber capabilities to ensure an advantage in future operations. Essential to this objective is a cadre of officers able to address the broad range of cyber operations: computer network attack, defense, and exploitation; cyber analysis, operations, planning and engineering; and cyber intelligence operations and analysis.

The Cyber Academic Group (CAG) is an interdisciplinary association of faculty and academic professorships representing six different academic disciplines. Established by the Naval Postgraduate School (NPS) on 23 September 2011, The Cyber Academic Group has responsibility for the academic content of the Cyber Systems and Operations curriculum. Instruction in this interdisciplinary program is carried out by the members of this academic group and by faculty primarily from the following academic departments: Computer Science, Electrical and Computer Engineering, Defense Analysis, and Information Systems. The group chair approves the thesis topics and final theses for students in the Cyber Systems and Operations curriculum.

Degree

Master of Science in Cyber Systems and Operations

The Cyber Systems and Operations students are awarded the Master of Science in Cyber Systems and Operations degree. Eighteen courses and a thesis are required. The plan of study includes graduate-level courses emerging from four different academic disciplines. As a new and rapidly evolving discipline that intersects a variety of traditional studies, the degree program has been carefully constructed with a large number of unique courses under the cyber purview.
Complementing focused, technically deep programs in the traditional departments, the MS in CSO degree addresses the broad range of cyber topics needed by leaders, managers, and operators serving DOD and U.S. Government missions.

Graduates will be prepared to lead offensive and defensive operations and optimally employ the GIG in support of all Navy missions. Immersed in the active challenges facing the Navy, graduates will return to the fleet equipped with the tools and foresight to recognize and solve current and future cyber-related challenges.

Fax 831-656-2760
degoshor@nps.edu

**Brief Overview**
The Cyber Systems and Operations (CSO) degree addresses a broad range of cyberspace operations: computer network attack, defense, and exploitation; cyber analysis, operations, planning and engineering; and cyber intelligence operations and analysis. Complementing focused, technically deep programs in the traditional departments, the Master of Science in Cyber Systems and Operations degree addresses the broad range of cyber topics needed by leaders, managers, and operators serving military missions.

Designed for a cadre of students with diverse backgrounds, this degree program is intended to provide a deep understanding of the national and military application of integrated lines of operation including operation of the global information grid (GIG), defensive and offensive cyber operations, and the required technical and nontechnical intelligence operations underpinning these. Students will learn how to seize and sustain an information advantage through all stages of operations, from early warning through detection, planning, targeting, cyber fires, assessing effects and resetting for follow-on plans and operations.

Site visits, laboratory exercises, seminars, guest speakers, and practical workshops complement traditional instruction. A semiannual cyber exercise is integrated into the curriculum. Thesis research will allow students to address topics of interest to stakeholders under the supervision of faculty experts. Tight integration with the front line war fighter and with relevant U.S. Government elements will ensure that thesis research is on target and rapidly integrated.

**Requirements for Entry**
This curriculum is open to officers of the U.S. Armed Forces and civilian employees of the U.S. Federal Government. A baccalaureate degree, or the equivalent, with grades resulting in an APC of at least 344 is required for direct entry. A TOP SECRET clearance is required with SPECIAL INTELLIGENCE clearance obtainable for all students.

**Entry Date**
Cyber Systems and Operations is a six-quarter resident course of study with entry dates in March and September. Future offerings are expected to provide the curriculum via web-based and hybrid learning options for non-resident students. The duration will depend upon the number of simultaneous courses taken. If further information is needed, contact the Academic Associate or Program Officer for this curriculum.

**Degree**
The Master of Science in Cyber Systems and Operations degree is comprised of eighteen courses involving 66 credit hours of graduate-level work, which, in combination, provide a coherent, logical approach to a complex and rapidly evolving military and government domains. In addition to course work, each student must complete a Master’s thesis.

The Master of Science in Cyber Systems and Operations is awarded after the satisfactory completion of a program meeting, as a minimum, the following degree requirements:
- All courses must be satisfied through the course of study or through validation prior to graduation.
- Minimum degree requirements of the NPS must be met.
- Completion of an acceptable thesis in addition to the course requirements.

**Program Length**
Six Quarters with JPME.

**Typical Course of Study**

**Quarter 1**
CY3000 (3-0) Introduction to Cyber Systems and Operations
CY3100  (4-1)  Introduction to Communications Networks
CY3110  (3-1)  Internet Protocols
CS3030  (4-0)  Fundamentals of Computer Architecture and Operating Systems
CY4900  (1-0)  Cyber Systems and Operations Seminar

Quarter 2
IS3502  (3-2)  Network Operations I
CS3600  (4-2)  Introduction to Computer Security
CY3300  (4-0)  Cyber Communications Architectures
DA3105  (4-1)  Conflict and Cyberspace
CY4900  (1-0)  Cyber Systems and Operations Seminar

Quarter 3
CY4600  (3-2)  Network Operations II
CY4100  (3-0)  Signals Operations
CY4700  (2-5)  Cyber Wargame: Blue Force Operations
NW3230  (4-2)  Strategy and War
CY4900  (1-0)  Cyber Systems and Operations Seminar

Quarter 4
CY4650  (4-0)  Information Management for Cyber Operations
CY4710  (2-5)  Cyber Wargame: Red Force Operations
NW3275  (3-1)  Joint Maritime Operations- Part I
CY0810  (0-8)  Thesis
CY4900  (1-0)  Cyber Systems and Operations Seminar

Quarter 5
CY4750  (3-1)  Advanced Cyber Systems and Operations
CY4410  (3-0)  Cyber Policy and Strategy
NW3276  (4-0)  Joint Maritime Operations- Part II
CY0810  (0-8)  Thesis
CY4900  (1-0)  Cyber Systems and Operations Seminar

Students not required to complete the JPME course of study while working on a degree at NPS may omit NW3230, NW3285, NW3275, and NW3276.

Curriculum Major Area Sponsor
DCNO for Information Dominance (N2/N6).

Educational Skill Requirements

1. **Cyber Functions and Fundamentals.** In order to provide Officers skilled in the applications of Cyberspace to military needs, the Officer will have competence in the following functional areas:
   - Securely Provision
   - Operate and Maintain/Network Operations/DoD Global Information Grid Operations (DGO)
   - Active Defense/Defensive Cyberspace Operations (DCO)
   - Operate and Collect/Cyber Intelligence/DCO
   - Analyze and Advise
   - Offensive Cyberspace Operations (OCO)
   - Investigate
   - Communications Electronic Attack (Comms EA)
   - Red and Blue Team Assessments
   - To achieve breadth of understanding, the goal for each Officer is to acquire a system of systems level understanding of the above topics, in context of friendly and adversarial GIG infrastructures.

2. **Military Applications and Cyberspace Operations.** The Officer will have a thorough knowledge of problem identification, formulation, and application of tools necessary to support decision making through all stages of operations in support of National and Military objectives in the cyberspace domain to include DGO, DCO, and OCO. Attention will be given to military applications, with particular focus on the ways in which Cyber active defensive mechanisms and offensive effects can be assimilated at a high speed in conjunction with other warfare areas and can be applied to achieve Assured Command and Control, Freedom of Maneuver in Cyberspace, support to the Targeting Cycle and the ability to deliver COCOM Desired Effects.

3. **Organizational Construct and Policy.** The Officer will have an in-depth understanding of the administrative and operational structure of the various organizations and Commands that will either be operating in a supported or supporting role. Additionally, the Officer will have a detailed and conceptual understanding of doctrine and the contingent use of non-kinetic force based on Rules of Engagement (ROE) and ultimately National policy.

4. **Cyber System of Systems Engineering, Acquisition and Program Management.** The officer will understand system of systems engineering for creating a new cyber system in the GIG (which may be an upgrade to existing system) upon identification of a cyber
The Officer will learn how to perform such problem solving skills in GIG operations that augment manpower with intelligence automation analytics for the automated processing of large varieties of high volume data and automated production of high value alerts and actions at large velocities for command and control. Lastly, the Officer will apply such problem solving skills to GIG operational scenarios in a denied or compromised environment.

8. **Space.** The Officer will have a thorough understanding of the nature of Space Warfare as it is applied within the realm of Cyber operations; distinguish between the four JP 3-14 defined Mission Areas (Space Control, Space Support, Force Enhancement, Force Application) and interpret how current and planned space capabilities contribute to the satisfaction of these mission areas.

### CY Courses

**CY0810 Thesis Research (0-8)**

Every student conducting thesis research will enroll in this course.

**CY3000 Introduction to Cyber Systems and Operations (3-0) As Required**

This course provides an overview of the national and military application of integrated lines of operations including operation of the Global Information Grid (GIG), defensive cyber operations, offensive cyber operations and the required technical and non-technical intelligence underpinning these. Through a series of guest lectures, students will be exposed to all aspects of cyber systems and operations ranging from the best in industry to actual plans and operations at the national and Combatant Command and component levels. This course is classified SECRET. Prerequisites: None.

**CY3100 Introduction to Communications Networks (4-1) As Required**

The purpose of this course is to develop literacy and familiarity with the technologies, techniques, and systems that provide the physical communications and point-to-point communications control upon which all communications networks are based. Physical layer topics include concepts in signals, information, analog and digital signals, signal corruption, signal reception, binary and non-binary data communications, communications channels, and radio communications concepts, IEEE standards 802.11 and 802.16, network interface controllers, switches, Repeaters, multiplexers, antennas, A/D & D/A converters, and vocoders. Data Link layer concepts include connection vs. connectionless oriented, packet vs. circuit mode, error control, flow control, synchronization, framing, logical link control, media access control, Ethernet, Point-to-Point Protocol (PPP), and High-Level Data Link Control (HDLC). Emphasis is on military communications systems to include Link 16, DSCS, Milstar, and WNW. Prerequisites: None.

**CY3110 Internet Protocols (3-1) As Required**

This course covers basic device (computers, smart-phones and PDAs) communications and networking through the study of the fundamental principles and technologies employed to implement the upper three layers of the TCP/IP protocol stack. The lower
two-physical (1) and link (2)-layers are addressed only insofar as to provide a complete bit-level to message-level overview regarding each layer's role in supporting end-to-end communications. For the three upper layers, the course delves into analysis of the dominant protocols employed (e.g., IP, DNS, ICMP, HTTP, DHCP, TCP, UDP, RIP, OSPF, BGP, MobileIP, VoIP, and MPLS). In addition to understanding the basic operation, each protocol is also considered in the context of basic security challenges (confidentiality, integrity, availability) encountered in a distributed, internetworked environment. Prerequisites: None.

**CY3300 Cyber Communications Architectures (Same as E03730) (4-0) As Required**
The purpose of this course is to develop literacy and familiarity with Navy, DoD, and allied enterprise information systems and emerging technology trends. It presents basic concepts in conventional and military telephony and telecommunication networks; examines DoN implementations from intra-ship, ship-to-ship and long haul and discusses architectures and components of the GIG including both classified and unclassified networks. It discusses interoperability of diverse network architectures and the impact of mobile platforms on operations. Prerequisites: CY3100, CY3110, CS3030. Classification: SECRET.

**CY3602 Network Operations II (3-2) As Required**
This course is a sequel to Network Operations I, with a focus on how to deal with network attacks and compromises. The goal is a resilient network that can meet operational and mission needs even in the face of attacks. Students will learn how to detect and respond to attacks and compromises while keeping the network operational to the extent possible. Topics covered include self-assessment through vulnerability and penetration testing, using firewalls and intrusion detection and prevention systems to monitor network traffic and system activity; and an introduction to established processes for cyber forensics and attribution, incident response, and recovery. Prerequisites: IS3502, CS3600. Corequisites: CY4700.

**CY3800 Topics in Signals Operations (3-0) Fall/Spring**
Students will be introduced to concepts and systems for managing and ensuring effective deployment of the electromagnetic spectrum (EMS). Topics include DoD, other government and Intelligence Community systems for communications; Signals Intelligence (SIGINT), Radio Frequency (RF) exploitation, electronic counter measures, electronic counter-counter measures, Precision Navigation and Timing (PNT), and EMS management. Students will better understand the role of these in building to and ensuring Naval Information Dominance and a US strategic and operational electronic advantage. Prerequisites: CY3100, CY3300. Classification: U.S. citizenship and TOP SECRET clearance with eligibility for SCI access.

**CY4400 Cyber Mission Planning (3-0) Winter/Summer**
This course details the process of mission planning in the cyber warfare domain and its integration of cyber with other warfare domains. All phases of mission planning and execution for cyber missions in both direct and supporting roles are covered. Topics include requirements development/solicitation, managing expectations, targeting considerations, munitions development and selection, preparation of the environment, mission deconfliction in the cyber battlefield, balancing the needs of offensive and defensive stakeholders, and cyber battle damage assessment. Classification: U.S. citizenship and TOP SECRET clearance with eligibility for SCI access. Prerequisites: CY4700. Co-requisite: CY4600.

**CY4410 Cyber Policy and Strategy (3-0) As Required**
This course explores the emerging strategies, policies and doctrine associated with cyber operations and military operations affected by cyberspace. The student will review the latest guidance provided by the US government at the national, interagency, DOD, and naval levels and relate these materials to the national strategy of the US. Special emphasis is provided for the products of US Cyber Command and Fleet Cyber Command/Tenth Fleet. These materials are compared to the emerging strategies and doctrine of other countries. Prerequisites: CY3000, CY3130. Classification: TS/SCI.

**CY4600 Network Operations in a Contested Environment (3-2) Winter/Summer**
This is a course in offensive cyber operations and effects achievable by cyber means in a contested environment. It examines the network environment as a domain under contention and related information operations. Existing architectures and infrastructures for conducting offensive operations are studied. This course develops the literacy and competencies necessary to understand potential problems and realistic solutions for critical non-kinetic, cyber-related warfare issues for the United States. Classification: U.S. citizenship and TOP SECRET clearance with eligibility for SCI access. Prerequisites: CY3602. Co-requisite: CY4400.

**CY4650 Information Management for Cyber Operations (4-0) As Required**
This course covers the acquisition and management of information for timely and effective decision-making. Topics include the collection, storing and processing of large amounts of data; autonomous processing including mining, matching, filtering and translating data; issues relating to scalability, performance and real-time requirements; and identification of appropriate data sources and tools. Prerequisites: CY3130, CY4400, CY4600.

**CY4700 Cyber Wargame: Blue Force Operations (2-5)**
This course explores the development of cyber-oriented war games and exercises from the perspective of maintaining a high state of readiness in the face of hostile action. Topics include fundamentals of game theory, scenario selection, scenario development, and execution. Following scenario definition, students will develop a strategy for defending and operating their networks while responding to hostile activities. Emphasis is placed on risk assessment, employment of forces and assets, early detection of threats and maintaining services in an increasingly degraded environment. This course is designed to be offered simultaneously with Cyber Wargame Red Force Operations and culminates in a week-long cyber exercise in which the students participate in the blue force role. Prerequisites: CS3600, DA3104.

**CY4710 Cyber Wargame: Red Force Operations (2-5)**
This course explores the development of cyber-oriented war games and exercises from the perspective of maintaining a high state of readiness in the face of hostile action. Topics include fundamentals of game theory, scenario selection, scenario development, and execution. Following scenario definition, students will develop a strategy for defending and operating their networks while responding to hostile activities. Emphasis is placed on risk assessment, employment of forces and assets, early detection of threats and maintaining services in an increasingly degraded environment. This course is designed to be offered simultaneously with Cyber Wargame Blue Force Operations and culminates in a week-long cyber exercise in which the students participate in the red force role. Prerequisites: CY4600 and CY4700; or any one of:
CS3695, CS4678, CS4558, EC4755, EC4765, EC4785; or consent of the instructor.

**CY4750 Advanced Cyber Systems and Operations (3-1) As Required**

This course serves as a capstone experience in which the students are immersed in a current operational or policy challenges related provided by the Information Dominance Corps community stakeholders. The assigned task will involve proposed cyber operations in support of an existing or anticipated operational plan. Student teams will develop courses of action (COA) that address legal, ethical, political, technical, tactical, operational and strategic implications. The recommended COA will be presented to the stakeholders. Prerequisites: CY4100, CY4400, CY4600. Classification: TS with eligibility for SCI.

**CY4900 Cyber Systems and Operations Seminar (1-0) As Required**

This seminar is designed to help students determine, shape and explore the foundational research for their theses and to introduce them to advances in cyber technologies and research. Students are expected to register for this seminar each quarter.

Maria Pineda, Visiting Professor (UCLA).

Marc Ventresca, Associate Professor.

Brief Overview
The Global Public Policy Academic Group was established by the Naval Postgraduate School (NPS), 1 January 2009, as an inter-disciplinary group to study the national security implications of globalization. The group conducts research and develops research-led educational programs. By broadening the understanding of the forces of globalization and their potential impact on U.S. national security policy, NPS endeavors to not only inform, but to also shape, national policy.

A core competency of NPS is the linking of traditional disciplines to national security and defense applications. NPS faculty provide a wide-range of relevant expertise on leadership, program management, economic development, strategy and planning, cross-cultural communications, conflict resolution, metrics, organizational learning and other relevant subjects. A core mission of the Naval Postgraduate School is to prepare security practitioners for the emerging security environment.

Program Development
In support of the National Security Strategy of the United States, the National Defense Strategy, the National Strategy for Homeland Defense, and the Navy’s Maritime Strategy, the GPPAG develops a broad-based, interdisciplinary research program to investigate the interaction of globalization and national security. Initially, the GPPAG focuses on these key areas in the globalization and national security area: energy security, global governance and development, critical defense technologies, and terrorism.

The GPPAG also develops curricula for Master’s and PhD level degrees in Global Public Policy. The GPPAG will integrate on-going efforts to provide certificate and Master’s degree programs now resident in the Cebrowski Institute Security and Global Environment program with talent resident on campus.

Program Manager
Robert McNab, Ph.D.
Halligan Hall Room 233

rmmcnab@nps.edu

Brief Overview
The purpose of the program is to provide a professional education program to the civil affairs community focusing on the relevant, requisite skills identified by the Department of Defense, as necessary for implementing Irregular Warfare, on a global scale. NPS faculty have studied post-9/11 shifts in operational environments and adaptations in the various CA doctrines, force structure, training and deployments. This program develops a conceptual framework for analyzing key civil affairs and psychological operations and provides graduate level education to participants in order to enhance their effectiveness as they plan and execute complex operations. The program aims to capture civil affairs and psychological operations operational and tactical innovations, and resulting lessons.
Requirements for Entry

A baccalaureate degree with above-average grades is desired. An academic profile code of 365 is required.

Program Length

One Quarter

Graduate Certificate Requirements

Requirements for the Certificate in Stability, Security, and Development in Complex Operations are met by successful completion of all three courses.

Program Phases

Phase one of the certificate involves distance learning over a three to four week period.

Phase two entail four weeks of intensive in-residence coursework.

Phase three of the certificate includes three to four weeks of distance learning to complete required coursework for course grade (as opposed to a pass/fail).

The program content and projects challenges the student academically and addresses problems of interest to the DoD with specific emphasis on the challenges of civil-military relations and human dynamics.

Required Courses

GP3100  (4-0)  Global Change and International Governance

GP3200  (4-0)  Security and Development

GP3300  (4-0)  Introduction to Analytic Methods

GP3100 Global Change and International Governance (4-0)

Winter/Summer

This course addresses principles that drive globalization and how and where the military and civilians address the civil dimension in pre-conflict, conflict, and post-conflict environments. Theories of regional economic development, location and trade are applied to the contemporary process known as "globalization" and used to decipher its effects on regional and national patterns of development, employment, income distribution, political institutions, and policymaking. Specific topics of discussion are: globalization and the production of risks, climate and environmental change, division of labor, power and governance, regional and international development, risks as drivers of change, financial and information flows, and capitalism and globalization.

GP3200 Security and Development (4-0) Winter/Summer

Complex security challenges including state failure, transnational terrorism, energy crisis and pandemics compel us to think about prevention and stability operations in new ways. The course seeks to develop analytic skills and empirical knowledge needed to assess requirements and capacities for stability, security and development,

Gary J. Ohls, Professor (2009); COL USMC (ret); Ph.D., Texas Christian University (2008, 2004); M.A., Naval War College (1994); M.B.A., California State University, Long Beach (1977).

David F. Overton, Associate Professor (2007); LtCol USMC (ret); M.S., Naval Postgraduate School (2003); B.S., East Carolina University (1994).

Joyce Sampson, Professor (2001); Ph.D., M.A., Florida State University (2001).

Donald J. Stoker, Professor (1999); Ph.D., Florida State University (1997); M.A., B.A., Valdosta State University.

Professional Military Education (PME) and Joint Professional Military Education (JPME)

The U.S. Naval War College curricula offered at NPS meets all of the requirements for Navy PME (as established by the Chief of Naval Operations) and for JPME (as established by the Chairman, Joint Chiefs of Staff) for Intermediate Level Professional Military
Education. The importance of offering a program that blends graduate-level study with Joint Professional Military Education was recognized by NPS in the early 1990s. Originally called the Joint Education Electives Program (JEEP) when it began in 1993, the program's name was changed to the Program for Joint Education (PJE) to make its name consistent with current military education terminology. In academic year 1999-2000, NPS partnered with the U.S. Naval War College (NWC), Newport, RI to provide NPS students with a tailored program leading to a Naval War College diploma and JPME phase I certification.

It should be recognized that the courses described below are Naval War College courses, which are taught by Naval War College faculty. As such, course content, teaching methodology and program management are the sole responsibility of the Naval War College. The entire sequence of courses including Strategy and Policy, National Security Decision Making and Joint Maritime Operations (parts 1&2), has been reviewed and approved through the Process for Accreditation of Joint Education (PAJE) process conducted by the Joint Chiefs of Staff at the Naval War College's College of Distance Education.

The three-course NWC program provides coverage of all mandatory “learning areas” outlined in CJCS's Officer Professional Military Education Policy (OPMEP), CJCSINST 1800.01 (series). The NWC program, both at NPS and on the College’s main campus in Newport, RI, provides instruction in three course areas: Strategy and War (S&W), Theatre Security Decision Making (TSDM), and Joint Maritime Operations (JMO). Effective in September 1999, the S&P curriculum replaced the NPS course Joint Maritime Strategy NS-3252, which had been required for all department of the Navy (DoN) students since 1989. Completion of the NWC S&P course is now the mandatory course requirement fulfilling the Secretary of the Navy's maritime strategy requirement which must be met by all DoN students.

Note: Only those students who complete the entire sequence (S&W, TSDM and JMO) will earn JPME phase I certification.

Transcripts of those students who complete all NWC courses (S&W, TSDM and JMO) through any methodology – Fleet Seminar, correspondence, NWC Monterey courses – will be annotated to verify their JPME phase I certification.

All versions of NWC courses are academically rigorous and will require significant effort on the part of each student. The goal is to enable each student to earn both their NPS degree and the NWC diploma (with JPME phase I). It should be recognized, however, that students who cannot complete all of the NWC requirements while in Monterey can enroll in the remaining NWC courses, by Fleet Seminar or other DL course offerings, at their next duty station.

Naval War College Course Descriptions

**NW3230 Strategy & War (4–2)**

The S&W course is designed to prepare the military officer for the mid-level to advanced stages of a professional career in which he or she may be intimately involved in the interplay between military power and the political process – that is, between strategy, policy, and major operations. The course uses historical examples to demonstrate the military officer's urgent need for a joint and combined warfare perspective on the military profession. That perspective significantly enhances the ability of strategic thinkers and war-fighters to wield the military instrument in support of national goals. In the early stages of an officer's career he or she is trained in tactics. The S&W curriculum, in contrast, is designed to teach officers to think strategically. The course illustrates the relationship between a nation's political interests and goals and the ways military force may be used to achieve them. It focuses on a series of studies that begins with interests, continues through conflict and ends with the final post-war settlement. Academic disciplines of history, political science, military studies, and international relations are woven into a coherent analysis of how wars begin, how they are fought and how they end. The Strategy & War course hones the officer’s ability to analyze past operations and apply historical lessons to future joint and combined operations. Three facets of the course develop strategic thought. First and foremost, the course focuses extensively on the strategic analyses that are the cornerstone of strategic thought, particularly the works of Clausewitz and Sun Tzu. Second, the master’s work is used to analyze strategic decisions made during several historical conflicts. Collectively these case studies sharpen the student's understanding of the essence of strategy. Clear, objective and imaginative thinking is the framework for the final part of the course where students consider recent wars as well as conflicts that may occur in the future.

**NW3275 Joint Maritime Operations (Part 1) (4–0)**

The Joint Maritime Operations curriculum develops the ability to translate contemporary national and regional military strategies into naval, joint and multinational operations, with particular emphasis on the operational art and employment of the Sea Services. Thus, it enables officers to make sound operational decisions in both command and staff positions. JMO is an executive development course that emphasizes planning and decision making factors at the joint task force level for operations in the maritime environment. Planning and executing military/maritime operations requires military officers to make increasing use of many disciplines. This differs from the past where application of a single discrete discipline was more often the norm. Officers must have a firm grasp of military strategy, an understanding of joint and combined operations, and a thorough background in the essential elements of the military planning and decision making process to deploy, employ and sustain U.S. military forces efficiently and successfully. Consequently, the JMO course employs a multi-disciplinary approach, providing the student the opportunity to synthesize various ideas that include maritime strategy, joint and service doctrine, military decision-making, operational planning, naval warfare, military warfare, threat assessment, and war gaming techniques. JMO applies these ideas to military problems requiring decisions in dynamic situations. The integrating themes of the courses are joint maritime operations, the operational level of war, and military-decision making. Emphasis is placed on the ability to identify the military conditions required to achieve strategic goals, the required sequence of actions, resources and associated costs or risks in that process. NW-3275 is the first of a sequence of two
classes required to complete the JMO curriculum; it must be
followed by NW-3276 to earn credit for the course.

**NW3276 Joint Maritime Operations (Part 2) (4–0)**
This class is the second in a sequence of two classes required to
complete the JMO curriculum. PREREQUISITE: NW-3275.
(See NW-3275 for info.)

**NW3285 Theater Security Decision Making (4–0)**
The Naval War College course in Theater Security Decision
Making (TSDM) is designed to engage intermediate-level military
officers and U.S. Government civilians in a study of the challenging
complexities of the contemporary national security environment.
While security policy developments since the 1947 National
Security Act have emphasized increasingly centralized USG
decision making in national security affairs, the evolving Unified
Command Plans (UCP) have also enabled de-centralized
implementation of those national security decisions. Although the
course offers a broad security studies curriculum that encompasses
the strategic and theater-strategic levels, particular emphasis is
given to understanding decision making challenges and processes at
the theater-strategic level of the combatant commands.

TSDM utilizes an active learning methodology through the
application of course concepts in the analysis and discussion of
complex real-world security issues. Selection of these concepts and
materials is predicated on the belief that an individual in a
command position or serving in a large, complex national security
organization cannot simply rely on discrete disciplines, but rather
needs to apply many disciplines relevant to different situations. For
this reason, the TSDM course employs a multi-disciplinary
approach, drawing on selected concepts from political science,
international relations, strategy, leadership, psychology,
management, economics, anthropology, and other cognate
disciplines. All instruction seeks to utilize the broad academic and
professional experience of our students and focuses on making and
implementing critical decisions within the command and staff
environment.

**Marine Corps Professional Military Education at NPS**
Marine Corps officers selected to attend NPS through the
Marine Corps' Special Education Program (SEP) can
participate in Marine Corps PME seminar programs
for captains and majors. The Marine Corps' College of
Continuing Education (CCE) designs, develops, and
delivers both of the Marine Corps' officer distance
education programs (DEP): the Expeditionary Warfare
School (EWSDEP) and the Command & Staff College
(CSCDEP). Interested officers can contact the CCE
regional coordinator for NPS through the CCE website:
USMC PME information is found at
www.mcu.usmc.mil/pme/Officer/officerpme.htm

**NPS JPME Requirement.** All naval officers (Navy and
Marine Corps) must take NW-3230 "Strategy and Policy:
The American Experience" while attending the Naval
Postgraduate School. This requirement is specified in
SECNAVINST 1524.2A in 1989. Credit for NW-3230
validates the first unit of Marine Corps Command and
Staff, 8901 "The Theory and Nature of War." As NW-
3230 is an NPS JPME requirement, validating NW3230
requires the full completion of the entire Command and
Staff 8900 series.

**Naval War College C&S option.** Marine Corps officers
attending NPS may enroll in the Naval War College
Command and Staff program in lieu of the Marine Corps
Command and Staff DEP. The Naval War College
courses needed to complete the Navy C&S requirement
while at NPS are: NW3230 (Strategy and Policy-one
quarter), NW3275 and NW3276 (Joint Maritime
Operations-two consecutive quarters), and NW3285
(National Security Decision Making-one quarter).

**Air Force Intermediate Development Education (IDE) at NPS**
Air Force officers selected for IDE programs at the NPS
are managed by the Air Force Institute of Technology,
Civilian Institution Programs (AFTT/CI) office at Wright-
Patterson AFB OH. Selected officers complete a master's
degree program at NPS in a field of study appropriate to
their careers.
Nonresident Education Opportunities (Distance Learning)

While courses are available to students in Monterey at its main campus, NPS Distance Learning (DL) enables students to earn certificates or degrees at locations across the nation or around the globe.

- Mission-funded seats are available to eligible active duty naval officers (USN & USMC). Additional course fees may be required.
- All Military and DoD/government civilians are eligible to enroll in NPS Distance Learning programs.
- Select DoD Contractors are also eligible for enrollment.
- Research associated with graduate studies may also include classified work.
- Although program length and costs vary, certificate programs are typically four courses (three to four credit hours each) while Master’s degrees typically run 12 to 16 courses.

NPS DL Certificate Programs

**Graduate School of Engineering and Applied Sciences**

265 – Modeling and Simulation Management
273 – Space Systems
274 – Anti-Submarine Warfare
282 – Systems Engineering
284 – Guidance, Navigation and Control Systems
285 – Fault Tolerant Computing
286 – Reconfigurable Computing
287 – Digital Communications
288 – Cyber Warfare
290 – Signal Processing
291 – Electric Ship Power Systems
292 – EW (Electronic Warfare) Engineer
293 – Journeyman EW Engineer
294 – Senior EW Engineer
295 – Network Engineering

**Graduate School of Operational and Information Sciences**

262 – Human Systems Integration
270 – Information Systems Security Engineering
271 – Information Systems & Operations
272 – Information Systems Technology
275 – Software Engineering
277 – Knowledge Superiority
281 – Systems Analysis

**Graduate School of Business and Public Policy**

211 – Advanced Acquisition Program
212 – Acquisition Management DL Program

**The Global Public Policy Academic Group**

210 – Stability, Security and Development in Complex Operations

NPS DL Master’s Programs

**Graduate School of Operational and Information Sciences**

363 – Systems Analysis
379 – Cost Estimating and Analysis
369 – MS in Software Engineering
376 – MS in Computer Science
357 – Computing Technology
377 – MA in Identity Management and Cyber Security

**Graduate School of Engineering and Applied Sciences**

311/721 – MS in Systems Engineering
721 – MS in Product Development
592 – MS in Electrical Engineering
592 – MS in Computer Engineering
592 – Master of Engineering (EW, IO, SIGINT, and Cyber focus areas)
570 – Master’s of Engineering (ME or AE)
571 – Mechanical/Electrical Engineering for Graduates of Bettis Engineering Reactor School
572 – Mechanical Engineering for Nuclear Trained Officers
316 – MS in Space Systems Operations
535 – MS/Master’s in Engineering Acoustics

**Graduate School of Business and Public Policy**

805/807 – Executive Master of Business Administration (EMBA)
807 – EMBA (Dual Degree with Virginia Tech)
835 – MS in Contract Management
836 – MS in Program Management

More DL programs, modes of delivery, and tuition information can be found at www.nps.edu/DL http://www.nps.edu/DL.

**Center for Educational Design, Development, and Distribution (CED3)**

CED3 website:  www.nps.edu/DL/CED3 http://www.nps.edu/DL/CED3

Center for Educational Design, Development, and Distribution (CED3) aspires to become the nation’s leading center for educational design, development, and distribution of graduate level educational products and is committed to ongoing excellence in its services.

CED3 uses its expertise in instructional design, media development/production, marketing/communications, student services and administrative services to support resident and non-resident instructional programs. Through collaboration with NPS schools, departments, and faculty, CED3 helps NPS use new and existing technologies to extend graduate level education to the total force.

Five operational teams support two functional areas: Course Development and Course Delivery. These five operational teams are:

- **Instruction Design** – Supporting effective instruction.
  - Contact at: ced3idd@nps.edu
  - Mailto:ced3idd@nps.edu

- **Media Development** – Enhancing the educational experience.
  - Contact at: ced3idd@nps.edu

- **Marketing and Communications** – Promoting programmatic awareness.
  - Contact at: ced3MARCOM@nps.edu
  - Mailto:ced3MARCOM@nps.edu

- **Student Support and Administrative Services** – Promoting student and stakeholder success.
  - Contact at: ced3studcoord@nps.edu
  - Mailto:ced3studcoord@nps.edu and ced3bursar@nps.edu Mailto:ced3bursar@nps.edu

**Air Force Institute of Technology—Distance Learning**

The Air Force Institute of Technology (AFIT), located at Wright-Patterson AFB, Ohio, is the Air Force’s graduate school of engineering and management as well as its institution for technical professional continuing education. AFIT is developing distance learning programs for government students who cannot enroll in one of AFIT’s resident programs. Detailed information about AFIT’s nonresident programs can be found at www.afit.edu/en/dl/

The Naval Postgraduate School maintains a Strategic Alliance with the Air Force Institute of Technology. A memorandum of agreement between the Secretary of the Navy and the Secretary of the Air Force forms this alliance to ensure the two institutions continuously work together to meet the educational needs of the Armed Forces of the United States. NPS and AFIT will continue to reflect the heritage and character of their respective services, meeting joint and service-unique needs, minimizing unnecessary redundancy, maintaining quality and realizing efficiencies and economies of scale.

NPS generally allows a maximum of 12 graduate-level, quarter-credits to be transferred for purposes of earning a graduate degree. However, an additional 12 quarter-credits may be transferred from the Air Force Institute of Technology (AFIT) in Dayton, Ohio. This is in addition to the normal transfer allowed (12), bringing the total to a maximum of 24 quarter-credits transferable from AFIT to NPS. Permission to transfer a specific course to serve as a substitute for a degree requirement will be determined by the Department Chairman or equivalent person responsible for nominating candidates for degrees at NPS and must be pre-approved in a coherent plan of study for the student. Regardless of transfer credits allowed, all NPS master’s degrees still require at least 20 quarter-credits be earned directly from NPS.
### Winter Quarter AY2012

- **Reporting Date (International)**: Sunday, 27 Dec 2011
- **New Years (Observed)**: Monday, 2 Jan 2012
- **Reporting Date**: Tuesday, 3 Jan
- **Instruction Begins**: Thursday, 5 Jan
- **Shift Day: Treat as Monday Schedule**: Thursday, 5 Jan
- **Martin Luther King's Birthday (Holiday)**: Monday, 16 Jan
- **President's Day (Holiday)**: Monday, 20 Feb
- **Pre-graduation Awards Ceremony**: Tuesday, 20 Mar
- **Final Examinations Begin**: Thursday, 22 Mar
- **Final Examinations End**: Saturday, 24 Mar
- **Academic Enrichment Week**: Monday–Thursday, 26–29 Mar
- **Graduation**: Friday, 30 Mar

### Spring Quarter AY2012

- **Reporting Date (International)**: Sunday, 18 Mar
- **Reporting Date**: Monday, 26 Mar
- **Instruction Begins**: Monday, 2 Apr
- **Memorial Day (Holiday)**: Monday, 28 May
- **Pre-graduation Awards Ceremony**: Tuesday, 5 Jun
- **Final Examinations Begin**: Tuesday, 12 Jun
- **Final Examinations End**: Thursday, 14 Jun
- **Graduation**: Friday, 15 Jun
- **Summer Break**: Friday, 18 Jun - 29 Jun

### Summer Quarter AY2012

- **Reporting Date (International)**: Sunday, 17 Jun
- **Reporting Date**: Monday, 25 Jun
- **Instruction Begins**: Monday, 2 Jul
- **Shift Day: Treat as Wednesday Schedule**: Tuesday, 3 Jul
- **Independence Day (Holiday)**: Wednesday, 4 Jul
- **Labor Day (Holiday)**: Monday, 3 Sept
- **Pre-graduation Awards Ceremony**: Tuesday, 11 Sept
- **Final Examinations Begin**: Thursday, 13 Sept
- **Final Examinations End**: Saturday, 15 Sept
- **Academic Enrichment Week**: Monday–Thursday, 17–20 Sept
- **Graduation**: Friday, 21 Sept 2012

### Fall Quarter AY2013

- **Reporting Date (International)**: Sunday, 9 Sept 2012
- **Reporting Date**: Monday, 17 Sept
- **Instruction begins**: Monday, 24 Sept
- **Columbus Day (Holiday)**: Monday, 8 Oct
- **Shift Day: Treat as Mon Class Schedule**: Wednesday, 10 Oct
- **Veteran's Day (Holiday)**: Monday, 12 Nov
- **Thanksgiving Day (Holiday)**: Thursday, 22 Nov
- **Pre-graduation Awards Ceremony**: Tuesday, 4 Dec
- **Final Examinations Begin**: Tuesday, 11 Dec
- **Final Examinations End**: Thursday, 13 Dec
- **Graduation**: Friday, 14 Dec
- **Christmas Break**: Friday, 17 Dec - 4 Jan 2013
