

Naval Postgraduate School

FIELD EXPERIMENTATION

February 26th – March 2nd
Camp Roberts National Guard Base
Paso Robles, CA

Event Focus: Integration of Unmanned/Autonomous Systems & Unmanned/Autonomous Systems in Humanitarian Assistance and Disaster Response Operations

We provide a realistic field environment with airspace, building, tunnels, forests and open plains

You provide an emerging technology to address challenges faced by the US Military Forces

Together we collaborate and learn about challenges and opportunities your technology may provide!

Experiment Proposals Due by
January 10, 2018
Visit www.NPS.edu/FX to submit a proposal

Integrated Experimental Scenario Focus:
Unmanned/Autonomous Systems in Fire Fighting Operations

FIELD EXPERIMENTATION 18-2

February 26th – March 2nd
Camp Roberts National Guard Base
Paso Robles, CA

The Field Experimentation (FX) program exists to provide an opportunity for NPS faculty and students to demonstrate and evaluate new technologies related to the Department of the Navy and the Department of Defense research in an operational field environment. It also provides the operational community the opportunity to experiment with these technologies to better understand the capabilities that they may represent.

The FX program consists of engineering/experimentation events. They are not a trade show or product demonstration. We target technologies in their early development stages to gain a better understanding of the state of the art to assess employment considerations and it is early enough in the development cycle for feedback and vulnerability assessments. New applications for existing technologies will also be considered to attend.

For more information about the FX Areas of Focus and information about how to conduct an experiment, please visit www.NPS.edu/FX and review the event's Request for Information (RFI). If you are interested in attending or submitting an experiment proposal, please preview the RFI document for experiment proposal submission instructions. Experiment proposals are submitted through a series of web fields.

Attendance at an FX event is by invitation only. The experiment proposals are reviewed by NPS staff and COCOM Science and Technology Advisors to select invitees.

There are no fees for participation in a NPS FX event.
